View Full Version: How to RIFE properly!

Title: How to RIFE properly!

craig-oxley - September 13, 2008 05:16 PM (GMT)

If your considering RIFEing Read this now & do it properly

by 2tuff

Personally I wouldn't bother with this RIFE/CES unit. Contact devices are okay but they are not the real deal Rife they are Crane and do not enter all over the body. The only way to emulated Royal Rife's work properly is to be able to enter the entire body with ease and this is through Radio Frequency. This method was brought to the public by James Bare and nothing is more powerful right now than this method although a warning do not go over 250-300 watts maximum. Another good method apart from R.F is Plasma Tubes.

Rife Technology Inc

You can get a much better set up and frequency generator unit from the states. I've even saw some excellent EMEM3 systems on ebay although hes not been on there as much recently so hes probably banned by orwellian ebay. What these systems are is a EMEM plasma tube system linked to a Atelier Robin frequency generator which is then addressed through your PC or Laptop. I have seen this type of set up for as low as 600-900 USD. The Frequency program by Jeff in the thread above for H.Pylori is what you put into the Robin units and it then runs through the plasma tubes. You could get a Rife/Bare unit as talked about above and link to a Robin if their own frequency generators are not fully programmable.

Rife Labs
Atelier Robin

Getting into RIFE isn't hard but you need to know a hell of a lot more than you do with zappers in order to have a powerful and truely health improving model. Rife style health to be successful will cost money and simple little crane type devices I wouldn't entertain

for serious health. Too many people ride on Rife's back and when some people aren't successful it makes the treatment look false when all they needed to do was part with more money and research harder.

Dr S.Nathan Berger saying a similar thing to myself on RIFEing

If you want a zapper go for a Terminator, Eldorado, The Ultimate Zapper or a Plasma tube setup with positive squarewave output like the old Forrest setup from Jaguar Enterprises which unforuntely has been busted by the Medical Mafia Matrix.

Terminator
Eldorado
The Ultimate Zapper

Why don't you try looking into Dr.Robert C Becks work and utilise his wonderful protocol of Blood Electrification, OZONE, Colloidal Ionic Silver & Magnetic Pulsing? Its proven time and time again! You can always go for Rife but to me unless you know what your attacking then you may miss out. If I were you I would utilise Bob Beck's work first then move onto the rest. You could always add a zapper with Becks work also. To diagnose yourself for the exact frequencies needed for YOU ready for a rife would cost you around 3000 USD+ for an Fscan 2 or similar and DIRP reading. So therefore for a good setup you would be paying around 3600-6000 USD and you would be on the professional level then diagnosing yourself and administering what you need. To be quite honest if you can't go that far then don't RELY on Rife work. If you do want to go for the Bob Beck protocol then I would strongly suggest looking to SOTA Instruments for the equipment.

S.O.T.A Instruments
Beck & Clark Resources

So my friend if you want to give your health a kick start, you should be looking towards:-

Cleansing methods & Zapping [Hulda Clark]
Protocol [Dr.Robert C Beck (Bob Beck)]
Pure Water [Dr.Fereydoon Batmanghelidj]
Vitamin C [Drs.Fredrick Klenner & Linus Pauling]

Dr Fereydoon Batmanghelidj
Vitamin C foundation

I promise you some awesome results if you could entertain doing the above. Make sure you add a good diet and light exercise to the above. Take care and let us know your routes and healing.

View Full Version: Tooth Infection Frequencies

Title: Tooth Infection Frequencies

craig-oxley - September 13, 2008 05:14 PM (GMT)

Tooth Infection Frequencies
(From Dr. Hulda Clark)

From Ken Adachi <Editor@educate-yourself.org>
http://educate-yourself.org/hc/huldaclarkt...qs02nov05.shtml
November 2, 2005

I need to explain in a separate article how to use a frequency generator, but for those of you who already have one and know how to use it, these frequencies are very useful to keep gum and teeth infections in check until you can get to a dentist and have your teeth fixed. I usually wrap a single layer of industrial strength paper towels (usually in a blue roll) around a 4" copper pipe electrode (3/4 or 1" diameter pipe) and wet the paper towel with tap water from a plastic squeeze bottle. I'll hold a plastic bag behind one electrode and touch the side of my cheek. I'll hold the other electrode in my opposite hand. If I can take it, I place both electrodes on each side of the jawbone for a while and then go back to one cheek and one hand electrode. The Staph Aureus and Clostridum are the most common bugs. I do 5-10 minutes at each frequency. I'll dowse the list first to see which ones I need. Use 100% positive DC offset square waves. Allow no part of the waveform to go into the negative voltage region; that's rather important according to Dr. Clark (you'll need an oscilloscope to check it). I run the frequencies shown with a range from "x" to "z" as a sweep, setting the center frequency of the sweep at exactly the middle frequency between the two shown (for those who don't know what I'm talking about, just wait for the article explaining the application and use of frequency generators).

Bacteria (KHz)

1. Staph. Aureus 378 and 381 KHz
2. Clostridium Botulinum 361.0-364.55 KHz
3. Beta Streptococcus 380.6- 387.4 KHz

4. Strep. Mitis 313.8 - 321.1 KHz
5. Strep. Pyogenes 360.5 - 375.3 KHz
6. Strep. Sp Group G 368.15- 368.85 KHz
7A. Bacillus anthracis 393.5 - 398.05 KHz
7B. Bacillus anthracis (2nd range).363.2 - 365.3 KHz
7C. Bacillus anthracis (3rd stage)..359.4 - 370.5 KHz
8. Lactobacillus acidolphius 346.05 - 351.65 KHz
9. Corynebacterium diptheriae 340.0 - 344.0 KHz
10. Bordetella Pertusis 329.85- 332.25 KHz

Unknown pathogens
11. 384.3 - 387.2 KHz
l1A. 367.9-375.05 KHz
11B. 326.95 - 331.5 KHz
l1C. 293.2.. 297.4 KHz

Plaque
12A. 378.8 - 383.05 KHz
12B. 294.7 - 298.25 KHz
12C. 233.1 - 238.2 KHz

Plaque II
13A. 384.95 - 387.05 KHz
13B. 278.75 - 284 KHz

Healing Energy, Part 1

by Jon Barron
http://jonbarron.org/newsletters/news050328.htm

Okay let's talk about energy and healing. Now to be sure, I've actually covered a number of aspects of this issue previously, most notably in Chapter 17 of Lessons from the Miracle Doctors (for any of you who haven't done so already, you can download a free copy at www.jonbarron.org) and in my special report on magnetizing water. But new variations of this theme have emerged of late, primarily vis-à-vis the rash of new MLM companies selling "energy patches."

There's only one way to cover this topic, and that's to back up and take a quick overview of the entire issue of energy. So let's begin, by repeating some of the material cited above.

All Life is Energy
All life is energy. Every nerve impulse in your body is an electric current. Our muscles are powered by chemical energy. Every cell in your body is a mini-battery pumping out 70-90 millivolts—when healthy.

The steak and potatoes that you eat for dinner are really just fuel for the fire. Eating is like throwing coal in a furnace. Digestion is nothing more than a slow form of burning that produces energy for your body to live on. In fact, death itself is defined as the absence of electrical activity in the brain. In the end, all life is energy.

Optimize that Energy and You Optimize Your Health.
Energy is neither good nor bad; it just is. The same electricity that is used by a chiropractor or a physical therapist to stimulate your muscles and promote healing with a TENS machine is the same electricity that is used in prisons to execute people in

electric chairs. So, is electricity good or bad? The answer is: neither. It's just a question of what frequency and amplitude you use and how you use it. And the same is true of all forms of energy.

Charge Your Body with the Right Frequencies and You Prevent Disease.
The same laser light that is used to shoot down enemy missiles or as a death ray in a movie is also used by your eye-doctor to improve your vision via Lasik surgery or by your plastic surgeon to remove facial hair and wrinkles. Again, the difference is merely one of frequency and amplitude.

The proper use of energy in the healing arts has a long and significant history. From the TENS machines and laser surgery that we've already mentioned to the use of sound waves to break up kidney stones, or X-rays and magnetic fields to see into the body and the use of light to clean the blood. (And, of course, the laying on of hands – a healing art that becomes a whole lot less arcane once you understand the working principle behind it.)

The Nature of Energy
All of the energy that we normally think of is characterized by both particle and wavelike properties. The waveform of all these energies can be graphed as a Hertzian wave (either in the form of a sine wave or a step wave).

user posted image

We're talking about everything from electricity to magnetism, from light to sound. The only difference between all of these forms of energy is how fast the waves rise and fall (the frequency) and how intense those rises and falls are (their amplitude).

Scalar Energy
Several years ago, I discovered and developed the Barron Effect, which incorporates the principle of energy enhancement to modify the physical structure of herbs during the tincture manufacturing process. The net result is herbal tinctures that are over 100% stronger than anything the world has previously seen. In a sense, the use of scalar energy to enhance the effectiveness of nutritional products or create healing devices out of pendants and patches is an extension of that effect—but at the same time is an entirely different animal. Understand, scalar energy has existed since the beginning of time; however, it's only recently that scientists have discovered and begun to make use of it.

It was actually back in the mid 1800's that the existence of scalar energy was first proposed in a series of 4 groundbreaking equations by the Scottish mathematician, James Clerk Maxwell. The key to his equations—what makes them remarkable in history -- is that they proposed for the first time the existence of scalar energy (one of several names since applied to the energy described in his equation).

It was almost a half century later before Nicola Tesla actually was able to demonstrate the existence of scalar energy. When Tesla died, he took the secret of scalar generation with him, and it took almost another full century before science was once again able to demonstrate, positively, the existence of scalar energy and begin an exploration of its potential.

What Are Scalar Waves?
The standard definition of scalar waves is that they are created by a pair of identical (or replicant) waves (usually called the wave and its antiwave) that are in phase spatially, but out of phase temporally. That is to say, the two waves are physically identical, but out of phase in terms of time. The net result is that scalar waves are a whole different animal from normal Hertzian waves. They even look different—like an infinitely projected mobius pattern on axis.

Different How?
Scalar energy is different from standard Hertzian electromagnetic fields in a number of important ways.

First, it's more field-like than wavelike. Instead of running along wires or shooting out in beams, it tends to "fill" its environment. This becomes very important in terms of developing the technology for embedding products and objects with scalar energy.
For many of the same reasons, it is capable of passing through solid objects with no loss of intensity. In fact, that is exactly what Tesla demonstrated over 100 years ago when he projected a scalar wave through the earth with no loss of field strength. Again, this is vital in the development of technology capable of embedding scalar energy in products and objects.
It implants its signature on solid objects. This is actually the heart of the issue. All electric fields can implant their signature on objects, but not to the degree that scalar energy can. This becomes extremely important when we actually talk about the mechanics of embedding the energy field in products, and then transferring that charge from the products into every cell of your body.
Scalar energy can regenerate and repair itself indefinitely. This also has important implications for the body. In other words, once the charge is implanted, you can keep it there with the regular ingestion of charged products.
In the "New Age" community there has been much talk of the benefit of things like Tachyons, Radionics, and Pyramids, etc. Analysis shows that these are all, at heart, most likely scalar generating (or harvesting) devices.

Healing Energy
Now that we have some background, we're ready to move on, but first, a quick review of what we now know.

It's all about energy. We are fundamentally energy beings.

The application of energy (its beneficial or harmful effects) are primarily determined by the frequency of that energy and its intensity.
There are essentially two different kinds of energy we're working with – standard electromagnetic energy (light, heat, sound, etc, that is most everything we're familiar with) and scalar energy as described above.
From here, it's an easy extrapolation to see that there are really only five different ways that you can apply healing energy to the body.

Wearing or using a device or patch that functions as an antenna and draws selected healing frequencies out of the "ether."
Direct application of energy to the human body.
Embedding energy in a supplement, pendant, or patch, etc.
Using specially designed materials to selectively concentrate and reflect back healing frequencies generated by the body itself.
The laying on of hands
So with that in mind, let's take a look at the five types of energy delivery systems in a little more detail.

Antennas
Theoretically, the idea is that there are all kinds of energies and sub atomic particles around us at all times, and by using/wearing the right kind of antenna, we can selectively extract, concentrate, and focus these beneficial energies into our bodies. Several devices on the market claim to do just this. For example, to quote from the marketing material for achy devices, "Tachyonization restructures certain natural materials at the sub-molecular level, creating permanent tachyon antennas that are able to focus tachyon energy."

I do have several problems with this explanation. First of all, tachyons are only theoretical particles with theoretical properties proposed several decades ago by some physicists. They have never actually been seen. (In 1973 one physicist claims to have identified one such particle in a particle collector in an experiment never since duplicated.) And in fact, most physicists have now abandoned the concept of tachyons. For those that still believe, it is supposed that tachyons exist within cosmic rays and that they could be produced from high-energy particle collisions.

So, to summarize, we have tachyon collection plates that you can buy, that are treated with a secret 14 day process that allows them to capture particles never seen by physicists and channel them into the body to produce healing benefits. That's a stretch. But it begs the question, "Do they work?" And the answer is "yes," they do appear to provide some benefit. And this brings up a problem that we see with so many healing energy devices on the market today: whether they work or not aside, the explanations surrounding them are often confusing, disjointed, and illogical – and in some cases, nothing more than mumbo jumbo. But that doesn't mean the devices don't work to some degree – just that they may not work in the way explained.

Direct Application
This is the easiest method to understand, and potentially the most powerful. Examples include

The TENS machine which use electric current to stimulate and relax muscles directly, magnetic field to improve blood flow and block pain
Another example (and far more controversial) of this type of device are the Rife Machines and their descendents. Back in the 1920s, Royal Rife found that by applying select frequencies to the human body he could destroy most viruses, bacteria, and even aberrant cells. The key to making this work was a microscope of his own invention that allowed him to identify the exact frequency that worked on each particular problem. That was the key. The frequencies were very specific. He achieved spectacular results – so much so that on November 20, 1931, forty-four of the nation's most respected medical authorities honored Royal Rife with a banquet billed as "The End to All Diseases." Like that would ever be allowed to continue. He was attacked by the authorities, discredited, and his laboratory sabotaged and burned. Nowadays, “updated” versions of his machines are available that try and work around the fact that we no longer have Rife’s ability to identify for each individual the exact frequency needed. This is usually done by having the device cycle through a number of frequencies – the idea being that one of them will be the frequency needed to destroy your particular problem. Do these devices work? Some do (or have) very well. The problem is that the ones that work the best tend to attract the attention of the authorities because the word of mouth starts spreading stories of cancer cures, which, of course gets the companies shut down. Incidentally, do they cure cancer? And the answer is, no. The best of them can definitely throw the cancer into remission, but if you don’t take care of the underlying health issues responsible for the cancer, it will tend to come back at some point – and no longer respond to the machine.
Another device is the scalar generating watch used to block unhealthy manmade EMFs. It works by using a special chip in the watch that generates an 8Hz standing wave that helps reinforce your body’s own bio-electric field protecting it from damage caused by disruptive manmade frequencies such as the 60 Hz current in our buildings. The watch, of course, merely serves as a “jewelry” setting for the embedded chip. These watches definitely work. You can actually verify improvements in the immune system while wearing the watch. The problem is that they are restricted to one healing frequency (at least as they are now manufactured) – whereas there are actually a number of different healing frequencies, each helping in a different way.
Probably the strongest and most effective way (but not the most convenient or least expensive) is to find a health practitioner who has a scalar energy chamber that you can enter and stay in for 30 minutes or longer once or more a week for direct high intensity application of the healing energy. Not only do these chambers provide greater intensity, but most allow for adjusting frequencies for different healing effects.

Embedding

It's quite easy to "embed" a set healing frequency in a product or object. If you use scalar energy, the frequency will tend to stay in the object indefinitely (unless overridden by a stronger frequency). This can be done with objects you wear and with supplements you ingest. And, in fact, we do this with the products I formulate for Baseline Nutritionals. If you read Chapter 17 in "Miracle Doctors," as mentioned at the start of the newsletter, you will see photographs demonstrating some of the effects associated with this kind of application. The main disadvantage of this kind of delivery system is that the frequency is preset. It's not variable. In exchange, it offers three huge advantages.

It's incredibly convenient
It delivers day in, day out
It tends to be very cost effective
Some of the new healing "patches" that we are seeing on the market now probably work in this way. It's hard to tell in most cases, because as with the tachyon example I mentioned earlier, the marketing explanations used to describe many of these products are often confusing, disjointed, and illogical – and in some cases, nothing more than mumbo jumbo. Just look for the buzzwords of the day: "holographic" and "nanotechnology." Again, bad descriptions aside, do they work? And the answer appears to be yes. Some barely, but others quite significantly. An indicator that a company may be using this type of technology is if a company tells you that you need to keep swapping out patches to refresh the charge. It also should be noted that since charges hold better in products that contain living matter and minerals. In other words, patches containing amino acids and supplements containing "foods" or ionic minerals are suitable for scalar charging.

Reflecting
One of the more interesting delivery systems are the reflecting devices such as the Q-Link pendant. The principle is simple. At all times, your body is generating a complete spectrum of energies and frequencies – from the very beneficial to the not so beneficial. What the reflecting devices do is selectively block a pre-chosen beneficial frequency from escaping, focus it, concentrate it, then feed it back into the body. Does this work? Absolutely. Several years ago I was given a metal pendant (that literally looked like a shiny 1" square of aluminum) that was to be worn on a chain over the center of the chest. I also received a set of electron microscope photos showing how the molecular structure of the metal had indeed been altered to accomplish its purpose. I wore it, and within 3 days I found that my lungs were irritated under the pendant and that I was coughing constantly. I took it off and put it away, and the condition cleared up immediately. Three times more over the next couple of months I repeated the experiment – each time with the same result.

Bottom line: it absolutely is possible to concentrate and reflect the body's own energy to promote healing (subject, of course, to the effectiveness of the design of the particular device). But as with everything else mentioned above, it has to be the right frequency.

(Incidentally, that's why so many devices use the 8 Hz resonant frequency of the earth known as the Schumann Resonance. This frequency absolutely works, and it's beneficial, and it always offers a "safe" choice." But you miss many positive results if you never explore any of the other beneficial frequencies. But if a company is getting creative with frequencies, it needs to know what it's doing before it arbitrarily starts selecting frequencies based on guesswork. A bad selection can produce a long term negative result (or even short term as with the metal pendant I played with).

Some of the new healing "patches" and pendants appear to be using this kind of delivery system.

Non Energy Patches
And of course, many patches have nothing to do with energy at all, but rather, rely on the transdermal adminstration of some substance applied to their surface.

Conclusion
As you will note, I have avoided making specific recommendations. That was deliberate. There are so many now, it's impossible to evaluate them all. And besides, all I am trying to do is arm you with information so that you can evaluate a product or device on your own – to see through the marketing mumbo-jumbo and make a reasoned assessment. Ultimately, the only relevant question is, "Does it work for you?"

Curiously enough, although the medical community has a particular antipathy when it comes to "new age" "healing energy devices," it uses similar devices itself.

What is radiation therapy itself but the direct application of high intensity energy to the body to achieve a specific healing result? Ultrasound, the same thing -- just a different form of energy with a different frequency.

How interesting that when the medical community uses energy for healing it's considered "science," but when alternative healers do the same thing, it's called "quackery."

That's enough for now. In the next issue of the newsletter, I will discuss the healing aspect of magnets, the laying on of hands, and the ways that we change water with the application of energy, and the nature of homeopathic medicine.

craig-oxley - September 13, 2008 05:13 PM (GMT)

Healing Energy, Part 2

by **Jon Barron**
http://jonbarron.org/newsletters/news050411.htm

Before We Begin
If you haven't already heard the news, last Wednesday, the Advocate General pronounced the European Food Supplements Directive, which effectively proposed to ban 75% of vitamin and mineral formulas in Europe, was invalid under European law. This effectively means that this proposed stifling of the Supplement industry will most likely be null and void come June – also probably spelling the end for the supplement aspect of Codex Alimentarius.

Although this is good news, it is hardly unexpected as I mentioned in my 3/14 newsletter. I've never believed, despite the panic in the alternative health community, that Codex and the European Health Directive had much chance of surviving in their current form. However, in the same way people overreacted to the negative aspects of the proposed European law, they are now likely to overreact to the positive side of the decision. There are still two reasons for concern.

The judge actually approved of the principle behind the proposed law. He just objected to its proportionality. That opens the door for redrafting
I've always said the more insidious dangers are co-option and the quiet dismembering of supplements through economic channels as has been done with ephedra and kava as opposed to in-your-face laws. If you haven't already done so, you should check out the 7/21/03 newsletter titled Don't Look at the Pinstripes.

Healing Energy
First a quick recap of what we've already covered (If you haven't already done so, you'll probably want to read Part 1 before continuing.)

We are fundamentally energy beings.
The application of energy (its beneficial or harmful effects) is primarily determined by the frequency of that energy and its intensity.
There are essentially two different kinds of energy we're working with – standard electromagnetic energy (light, heat, sound, etc, that is most everything we're familiar with) and scalar energy, which tends to be the better form for embedding in objects, supplements, and cells because it tends to stay where it's placed.
There are really only a handful of ways you can apply healing energy to the body.

Wearing or using a device or patch that functions as an antenna and that draws selected healing frequencies out of the "ether."
Direct application of energy to the human body.
Embedding energy in a supplement, pendant, patch, water, etc that you either wear or ingest.
Using specially designed materials to selectively concentrate and reflect back healing frequencies generated by the body itself.
The laying on of hands

Energizing Water
Water is a miraculous substance, but not all water is alike. There are so many things that can be done to it to enhance its potential in the human body that it is almost mind boggling. And as with everything else we've talked about so far, there is a great deal of nonsense circulating about concerning this issue.

Some of the things that can be done involve applying energy – everything from magnets to lasers to heat to sound – to give the water new properties. Other things involve adding substances to the water to change its structure or pH and using the water to carry set frequencies. There is not enough room in this issue of the newsletter to cover everything in detail. It really is a vast subject. In fact, I am currently working on a project with my friend, Michael Pedersen, President of Aquaspace Water Systems, testing some concepts concerning magnetizing water, and the draft paper Michael wrote on just this one specific aspect runs nine pages. What I am going to try and do, however, is touch on the different things that can be done and show how and why they work.

So what are some of these things?

It can be made wetter, more bioavailable
Its pH can be raised
It can be raised to a higher energy state
It can be made to carry the frequencies (and therefore some of the properties) of other substances

Making Water Wetter
As with most of the other things we've talked about so far in this series, there is a great deal of marketing hype and nonsense associated with it. Terms such as structured water and clustered water have loosely been thrown around and used in ways that have little connection with reality. In the end though, the concept is simple, easily implemented in a number of ways – and can make a profound difference in the state of your health. And in truth, the simple reality is no less remarkable than the pseudo science surrounding it.

To keep it simple, water molecules contain electrical forces that cause the molecules to cluster together. (In fact, the overall charge of the water molecule is neutral, but the charge is not uniform over the entire molecule meaning that it tends to create an electric dipole, carry a positive charge at one end and a negative charge at the other.) This is easily seen in the way water beads up on the surface of a car after you wash it. If you disrupt those electrical forces, fewer molecules cluster together, which means the water clusters are smaller – making them better able to move in and out among the fibers of your clothes so the water cleans better or in and out through the walls of the cells in your body so the water carries nutrients and waste in and out better.

Making water "wetter" can be done chemically (with surfactants in your laundry detergent or micelle in your drinking water), by apply magnetic fields to the water, electrical charges, sound waves, even heating and cooling the water in the right way. All can cause the water molecule groupings to become smaller, i.e. wetter. (For information on how to magnetize your own water check out http://www.jonbarron.org/documents/water.htm. Note: using all north as described in the article is probably a good choice for now, but Michael Pedersen has been running some fascinating experiments that may change that equation a bit.)

Despite claims from the scientific community that this is all quackery and that any perceived benefits are merely placebo results, real world results do no bear this out. In some ways, this is a little like the science that was used to prove that bumblebees cannot fly (but only a little like it). Some years ago, as a joke, scientists used scientific analysis to prove that the ratio of body weight to wingspan is disproportionate in bumblebees, which in theory makes it aerodynamically impossible for them to fly. But, of course, they can and do. This is now considered a scientific classic – using pure scientific analysis to “prove” the opposite of something that we actually know to be true. The only difference when it comes to the debunking of wetter water is that unfortunately, in the water example, it’s not being done as a joke.

Actually, there are thousands of examples of how water is affected by energy. A simple one you may have done when you were younger. Rub a plastic comb to charge it with static electricity and then turn on a tap so the water runs in a thin stream. Hold the charged comb close to the water and the water will bend towards the comb.

Amazingly, the scientific community dismisses the health benefits that hundreds of thousands of people experience as mere placebo effect.

Well, let's be good sports and run with that a bit. But very quickly we're faced with the issue of using wetter water in agriculture? And here I refer to the world’s agriculture industry, which has been exploring the benefits of magnetized water for some time now. Plants, of course, are not subject to the placebo effect. Differences in crops as the result of using magnetized water can only result from changes to the water, not psychological mind games with the plants. Bottom line is that there are numerous sites on the web clearly showing the difference in plant growth using magnets to create “wetter” water. Here’s one: http://www.magneticeast.com/agriculture/results.html.

Oh, and in answer to the question of how the scientific community deals with the non-placebo effect of magnetized water on plants? They don't; they ignore it.

Raising pH

I dealt with this in some detail in Chapter 14 of Lessons from the Miracle Doctors (which you can download for free at www.jonbarron.org) so I won’t spend much time on it here.

Suffice it to say, that drinking water with a pH higher than 7.0 is beneficial. In fact, water of pH 8.0 – 8.5 is probably ideal.

And there are a number of ways to do this:

Adding alkalinizing agents such as Alkazone drops to water
Magnetizing the water
Or using ionizing water filters that filter and split your tap water into two parts: a high alkaline water for drinking and a high acid water for cleaning and disinfecting.
And yes, it is possible to get too alkaline. For most people this is not a problem, but as always, some people go overboard in trying to alkalinize their bodies. Early signs of a problem are skin that goes suddenly dry and gets very itchy.

Higher Energy States
Some companies claim that they are able to apply energy fields to water to raise it to a higher energy state or alter the spin of the molecue or pass “information” to the water to alter its properties. For most of these, the marketing spiel is pseudo-science mumbo-jumbo. But, and this is a very important point (as with the energy patches we talked about last issue), just because the marketing spiel is nonsense doesn’t mean that something useful isn’t happening. Unfortunately, the only way to tell, since you can’t extract anything useful from the information presented, is on a case by case basis by experimenting with and using the “enhanced” water.

Carrying Frequencies
In a sense, water can function like a tape recorder, it can “remember” the frequencies of objects and substances it comes in contact with. Another way of looking at this is that water is nature’s great mimic. It can store the frequencies of things it comes in contact with and mimic the properties inherent in those frequencies/substances.

That water remembers is pretty self-evident. Anyone who has attached a magnetic device to their water pipes to clean scale knows that the water can remember the magnetic field at least long enough to clean scale from pipes throughout the entire house. In this case the memory lasts for several hours. When it comes to remembering frequencies (particularly if there are minerals present in the water), the memory can last for many months (or longer) unless the water is exposed to another, stronger frequency that replaces it. The question, as with all frequency issues, is what frequency are we talking about? Is it beneficial, harmful, or neutral?

Homeopathy
I’m not going to go into a discussion of what homeopathy is or how it works in this newsletter. What I do want to deal with is the main reason that the medical community considers it quackery. And for that I turn to Stephen Barrett’s Quackwatch website. To quote:

“Homeopathic products are made from minerals, botanical substances, and several other sources. If the original substance is soluble, one part is diluted with either nine or ninety-nine parts of distilled water and/or alcohol and shaken vigorously (succussed); if insoluble, it is finely ground and pulverized in similar proportions with powdered lactose (milk sugar). One part of the diluted medicine is then further diluted, and the process is repeated until the desired concentration is reached. Dilutions of 1 to 10 are designated by the Roman numeral X (1X = 1/10, 3X = 1/1,000, 6X = 1/1,000,000). Similarly, dilutions of 1 to 100 are designated by the Roman numeral C (1C = 1/100, 3C = 1/1,000,000, and so on). Most remedies today range from 6X to 30X, but products of 30C or more are marketed.

“A 30X dilution means that the original substance has been diluted 1,000,000,000,000,000,000,000,000,000,000 times. Assuming that a cubic centimeter of water contains 15 drops, this number is greater than the number of drops of water that would fill a container more than 50 times the size of the Earth. Imagine placing a drop of red dye into such a container so that it disperses evenly. Homeopathy's "law of infinitesimals" is the equivalent of saying that any drop of water subsequently removed from that container will possess an essence of redness. Robert L. Park, Ph.D., a prominent physicist who is executive director of The American Physical Society, has noted that since the least amount of a substance in a solution is one molecule, a 30C solution would have to have at least one molecule of the original substance dissolved in a minimum of 1,000,000,000,000,000,000,000,000,000,000,000,000,000,000,000,000,000,000,000,000 molecules of water. This would require a container more than 30,000,000,000 times the size of the Earth.”

In summary, the primary argument against homeopathic remedies is that they are so diluted that they really don’t contain even a single molecule of the original substance in them. And this argument is absolutely correct. The numbers that Doctor Barrett cites above are dead on. And if one remains rooted in the world of drugs and drug doses, then based on that argument, there can be only one conclusion: homeopathy is a fraud and homeopathic remedies are placebos.

However, if one steps back for a moment and considers everything we’ve talked about over the last two newsletters, then it’s easy to see that homeopathy is based on an entirely different premise. The idea behind making the dilutions is, in fact, NOT to maintain any of the original substance at all – but rather, to transfer the essential frequencies of the original substance to the water itself. In other words, the entire argument against homeopathy as presented by Dr. Barrett is meaningless. That’s not to say that homeopathy works or doesn’t work – just that the argument used against it is meaningless. It’s a bit like saying someone isn’t a good doctor because they can’t run the 4-minute mile. The statement about the doctor’s running ability may be true, but it has no relevance to his/her medical ability.

Anyway, the essence of homeopathy is in the transferring of various substances' frequencies into water – and then using that water to manifest the properties of the original substance. We already know that water can absolutely be changed when exposed to electro-magnetic forces and that it can remember those forces for a period of time. We know that energy altered water can significantly change the way irrigated plants grow. Based on those observations, you cannot dismiss homeopathy out of hand. If scientists want to evaluate homeopathy, they have to evaluate on those terms. You can't impose your own explanation for how something works and then dismiss it because of the holes found in that explanation. Given that modus operandi, you can eviscerate anything – even modern medicine.

The Laying on of Hands

A number of people wrote in after the last newsletter telling me how interested they were to know what I had to say about this controversial topic. So without further ado…

Let's start with four concepts that are easier to understand and accept before we make the big leap.

First, every substance or object (animate or inanimate) absorbs and radiates energy in its own unique way. That is to say, every substance has its own unique energy fingerprint. This is even easier to understand when it comes to living beings. As we discussed last issue, at every level we are fundamentally energy beings. Our entire body is built of a complex of electrical systems – even to the point that every single cell in our bodies functions as a mini battery.

Second, some frequencies are beneficial. Others are harmful. Some levels of intensity are beneficial. Others, harmful.

People who are healthy tend to exhibit more of the beneficial frequencies at higher levels of intensity; whereas people who are ill tend to exhibit fewer of those frequencies and at lower levels of intensity.

We can be affected by energy applied to the body. A TENS machine applied to the body relaxes muscles. A high voltage charge applied to the body kills.

So far, nothing very controversial or hard to accept here. But now let's move it up a level.

Since every human body can generate and accept energy, it is possible for bodies to pass energy from one to the other. Everyone can do it. But it's a little like hitting a baseball. Some people have no innate talent for it and never work at it. Some have no talent but work at it and develop some facility for it. Some have an innate talent but never develop it. And some have talent and work to develop it. These are the people we call "healers." And what is our proof of this? There isn't any real definitive proof. Some studies have indicated that it works, and other's have come to the opposite conclusion. Nevertheless, there are some strong suggestions as to its validity.

First, as mentioned above, anyone who makes the effort can learn to both feel and manipulate the energy. At that point it's no longer theoretical. And this brings up a great

question: if it's so easy to feel, how come we don't all feel it all of the time? How can something real be there but we can't see it or feel it one moment, but can the next? If it's real, wouldn't we experience it all the time?

And the answer is very simple: we tune it out. Actually, this happens far more frequently than you might think. Our brains are bombarded with hundreds of thousands of bits of information every day. If we didn't screen out "non essential" information, we would be overwhelmed by it. In fact, I'm going to train you right now to "reobserve" an aspect of light that you have tuned out.

Because color temperature is non-essential information for most of us, we tend not to see it. Our brains tend to filter out color temperature information and make all color temperatures look the same. But artists and color photographers don't have that luxury. They have to turn the filter off and have their brains "see" what their eyes see. Most people are not aware that their skin color changes wildly as color temperature changes. I'm now going to teach you to be aware.

The next time the sun is out. I want you to step out in the sunlight and look at the skin on your arm. Notice the blue tones. Then go inside and look at your arm under the light of an incandescent light bulb. Notice that the skin has now picked up a strong red/orange color. Nine times out of ten (and for some people ten out of ten times), you could walk indoors or out and never notice the change in color because your brain filters it out as non-essential. It was happening every time, but you never noticed it. The concept didn't even exist in your reality. But once you became aware of how to look, you can see, and what was once non-existent is now easy to see.

Another example is the color white. Next time you go to an art museum, look carefully at areas of white in an artist's canvas. You may be blown away if you look carefully and see how little white paint there is in that white area. Where you would only see "white," the artist sees all of the colors reflected in that white. Learn to see as the artist sees and you will then see what the artist sees – all the colors that in reality make up white. For example, here's a link to Fumée d'Ambre Gris, one of my favorite John Singer Sargent paintings – a study in white on white. And yet, note the browns, blues, grays, golds, and reds that make up the white robe and walls. Learn to see as the artist sees, and a world you were previously oblivious to suddenly opens up.

Feeling energy moving in and out of your body is no different. The experience is there all the time. It's just as real. We're just shut down to it. To those who are oblivious to it, it's easy to dismiss. Once you become sensitive to it, its reality is as unquestionable as seeing the world of color you were once oblivious to.

Second, anecdotally, stories about healers, healing hands, and healing energy go back centuries…to the beginning of recorded history. If it's a myth based on a placebo effect, it has remarkable staying power.

And finally, we now have some strong inferential support. I'm not going to go into the details of what Kirlian photographs are. Suffice it to say that although they depict much less than is claimed by their proponents, they absolutely do illuminate differences and changes in objects. What that means may be open to interpretation, but that it is present is not. Below is a kirlian photograph of two fingers – on the left, the finger of a healer and on the right, a person in need of healing. You can interpret the differences for yourself.

user posted image

In conclusion, there's nothing about healing hands that falls outside any of what we already know about energy and healing. Again, as with patches or pendants, there are many claims made by different people. Some may be completely valid, some marginally valid, and some are total nonsense (of which I have seen many). But I have seen enough to be convinced that some people definitely have "healing hands." In the end, I would recommend being open to the possibility, but skeptical of any claims you hear from particular healers until you find out if that particular healer works for you.

And just a note on the placebo effect. If it came down to it, which would you rather use?

A placebo that costs you $39.95 and that convinced your mind to heal your body of cancer
A well tested chemotherapy drug, based on volumes of clinical testing, that costs you tens of thousands of dollars and that in your case didn't work, destroyed your immune system, and caused your death.
In one, you'd be a sucker that was healed. In the other scenario, a dead rational being. I know most doctors and scientists would choose the rational death in a heartbeat. But that might not be your first choice.

A Final Thought
Sometimes you know the gods are smiling on you. Here we are running a series on healing energy and the body (a concept pretty much dismissed out of hand by the scientific/medical community) and what comes out of Harvard University? According to the Harvard Gazette, researchers at Harvard Medical School are experimenting with a technique that uses electromagnetic pulses to treat depression. Called transcranial magnetic stimulation, or TMS, it involves holding a figure-of-eight-shaped wand near a person's head. Two coils of wire on the wand generate a strong magnetic field that induces electric currents in brain cells.

"We believe that TMS works by normalizing disturbed levels of brain activity," says Alvaro Pascual-Leone, an associate professor of neurology at Harvard Medical School. In experiments at Beth Israel Deaconess Medical Center in Boston, he and his colleagues lifted the spirits of depressed patients who are resistant to anti-depressant

drugs.

Can't you just see the medical community's commentary on this device if it had been found in an alternative health clinic? You know perfectly well that if this research had been published by an alternative health publication, it would have been dismissed out of hand as big time quackery mumbo-jumbo. But that bitter question aside, the key point is that we have the ultimate statement from the medical community that subtle energy fields can directly affect our bodies and our biological functions. Thank you very much!

Title: SERGE LAKHOVSKY USING A MWO IN PARIS [IMG]
Description: *[THE SON OF THE GREAT GEORGE LAKHOVSKY]*

TheUnhivedMind - April 10, 2011 02:55 PM (GMT)

TheUnhivedMind - April 10, 2011 02:56 PM (GMT)

My meeting with Serge Lakhovsky - article in Borderlands
Paris, July 7, 1993
By Hessel Hoornveld

Serge Lakhovsky is the son of George Lakhovsky. Serge's father was a briljant scientist, a man of genius. George Lakhovsky was the developer of the "Radio Cellular Oscillator" and the "Multiple Wave Oscillator". Serge's father's discoveries are still the subject of great interest; in his time, the years between 1900 and 1940, he brought about a veritable revolution with his discoveries and theories. It is not easy to go through life as the son of a famous father, it has a great affect on you. In the room where we held the interview, his father's presence could be felt everywhere, in the form of paintings and the devices he developed.

The device that attracted my attention the most was the "Multiple Wave Oscillator". The MWO was specially developed to cure cancer. George Lakhovsky was not thanked for the fact that he was able to do this with his apparatus. George Lakovsky carried out a great deal of research at a university level, with truly astonishing results. In other words, both past and present scientific research has proved that his method works.

George Lakovsky died under extremely suspicious circumstances. He was hit by a car during a stay in America and, despite his protests, was taken to a hospital from which he never returned alive. The death of Serge's father and the Second World War meant that his discoveries and developments subsequently fell into neglect. What was a fact though, was that the discoveries of a genius, and an indispensable instrument in the fight against cancer and other degenerative diseases, had been temporarily eliminated from the scene. Fortunately, information is now coming to light that allows us to benefit from these techniques of yesteryear. Some time ago, a respected newspaper reported research findings to the effect that one in three Germans, Americans or Dutchmen suffered from, or was developing, a form of cancer. Nowadays, it is becoming virtually impossible to find sufficient funding to support the entire health-care system. And it is not inconceivable that the fossilized medical industry, along with its many branches, will go completely or partially bankrupt.

Serge Lakhovsky was born in Paris in 1913, and, after finishing his studies, went to America in 1940. He worked there together with Doctor Kovac at the University of Chicago, where they carried out additional research into the effects of the MWO, research which confirmed his father's discovery time and time again. Serge Lakhovsky has worked in the perfume industry for more than 30 years as a developer and producer of new scents. Serge also treated many of his scents with the Multiple Wave Oscillator, which resulted in exeptional energy-rich combinations and results. In a large room under his house in Paris, thousands op phials with the most unusual scents and compounds are kept.

THE ONE AND ONLY

Serge Lakhovsky does not have a very high opinion of so-called Multi Wave Oscillators. 'Everyone making a high-frequency device these days calls it a Lakhovsky Multi Wave Oscillator', he says, 'And what more, they don't work'. He thinks that it's fine for people to look for ways that do work, 'But you must take their effect on people into account.' By this he means that scientific research should be carried out, and that it should not just be allowed to run its course. Serge told of the extensive scientific research his father had carried out at universities in Paris, Vienna and elsewhere, but added that he always took al great deal of care with his research data and results.

Serge Lakhovsky thinks that there are a lot of unjustified claims being made these days, and that there is too much reference being made to the published research results of his father. 'The reason that I am sitting here talking to you is that before I leave this earthly plane, I want to set matters straight.' Serge is resolute. 'No-one makes the MWO as my father did, and none of them work as my father's did, so the claims that are being made in my father's name are unjust and far from true.'

During my visit with Serge Lakhovsky, I was able to see and feel the original MWO in action. We were able to carry out various water tests, using radiation from the MWO, and noticed a change in taste and an increased radiation of energy from the water (energetic or cosmic energy).

I have to agree with Serge that the original Lakhovsky MWO works as no other I know. Furthermore, its antenna is totally different tot that used on other devices. Most use a Bergstresser or Beck antenna, this MWO works with hollow antenna rings, which are tuned. I confirmed that they were really tuned when I checked them using my electronic tuning device. When I tapped the second ring, my tunig device clearly indicated a C Sharp. The outermost ring is a fixed ring directly attached to the coil and is a C. The next ring is a C Sharp, the next a D and so on until the inermost ring, which is a C. In other words, a full octave complete with semitones. If we examine the tuned rings (sound therapy), they also correspond to the chakras (energy points on the body). C is the base chakra, D the sex chakra, E the solar plexus chakra and so on.

Each antenna ring is made from a different metal. What the metals are was not revealed to me. When I asked why different metals were used, I was told by Serge that they were chosen in connection with the different planetary positions. Although I would not guarantee that I am right, I have taken a studied guess. The outermost ring, the C, is made of brass, the second ring, a C Sharp, of a light rustproof metal, the third of copper, the fourth of brass, the fifth of a light rustproof metal, the sixth of copper, the seventh of brass, the eighth of a light rustproof metal, the ninth of copper, tenth of rass, the eleventh of copper , the twelfth of a light rustproof metal, and the thirteenth of brass. There are bracing wires running from the innermost to the outermost ring, which keep the antenna rings the correct distance apart.

However, existing photographs of the MWO show antennas with different numbers of rings. I saw one with twelve rings, while Serge's MWO had thirteen with the innermost ring for the bracing wires. I do not know whether the thirteenth ring belongs to the antenna, but it seems very probable.

SECRECY

According to Serge, his father's MWO does not work when the moon is full, or when it is enclosed in a Faraday Cage. The rings of the antenna are held together by means of a string, and energy does not flow between them by conduction by but by radiation. The antenna is thus capable of radiating gigantic quantities of energetic energy. The higher and more powerful the energetic field, the faster illnesses and degenerative processes are positively affected. The outermost ring, the C ring, is directly connected to the coil on both sides.

The reply to my request for a peek into the sanctum of the MWO was a definite no. Nevertheless, I hope that Serge will eventually give his permission because the technology involved is naturally of great interest to us all, and because I feel that his father's work should be open to the view of everyone who is open to it. It seems to me that Serge's fear that his father's techniques would be misused can be ruled out, for there are few people around today who are capable of dealing with this type of energy.

When Serge demonstrated the MWO, two spark gaps could be seen. There is a large coil behind each of the two antennas, which are brought into resonance with each other. The whole technique is based on oscillation and resonance!! The sound of the two spark gaps is very stable and serene. No sparks jump from one antenna ring to another, as occurs with the Bergstresser and Beck antennas. It's quite safe to come vcery close to the antenna rings with a car key, although sparks begin to jump continuously from a distance of about six centimeters. This does not cause an unpleasant sensation though. This indicates an extremely high voltage, high frequency and extremely rapid pulse behavior through the spark gap, and I suspect that the MWO contains a rotating mechanical spark gap.

The electricity needed to operate the MWO is supplied from a wall socket, which causes a fair degree of interference in the public electricity supply. This is something which was permitted in the past, but which is actually no longer allowed. Due to such interference, alarm systems, computers, answering machines and telephone systems etc. could suffer damage, or start to lead a life of their own. It was only possible to operate the MWO for a short period of time, about five minutes, or else it would overheat.

The device is grounded through the mains. It may be that this was done in order to enable the feed cable connected to the wall socket to be used as a (capacitor). This

works even when an earth connection is not present.

Serge did not want to answer my question concerning the relationship between his father, George Lakhovsky, and Nikola Tesla; a brief silence followed. We know from available information that the two worked together, and that Tesla was also involved in the development of the MWO. Nikola Tesla had more than 1.000 patents to his name, and was the discoverer of alternating current, and induction motors.

A month after my visit to Serge, he sent me the Radio Cellular Oscillator, a device that George Lakhovsky developed before he started on the MWO. The RCO is a simple, subtle but effective instrument, which relaxes you rapidly and gives you a rosy feeling, especially in your head and body. The device is a boon for the relief of tension aches and it stimulates the circulation; for example, cold feet disappear like snow in the sun. Its effect is based on the same resonance principles as those of the MWO, only it is more subtle and the unit is driven by a vacuum tube.

CURRENT MWO RESULTS AND FINDINGS

The enormous interest that has arisen for MWO techniques and results is a clear indication that a new era has dawned . And I would like to share my knowledge of the current state of the MWO technique with you. A technique that is used both in alternative and regular health-care circles, and here and there in high-level scientific research. In the Netherlands, doctors, dentists, therapists, dermatologists, veterinaries, internists and private individuals etc. use the MWO. Outside of the Netherlands, I know of therapists, doctors and private individuals in Belgium, Germany, Switzerland, Italy and Africa who are familiar with the device. I have also learned that MWO's are built in Italy and Belgium, albeit on a smaller scale than in the Netherlands.

When I received the design for the MWO from Ralph Bergstresser, I decided to carry out a thorough study of whether with current technology, it was possible to achieve results similar to those achieved by George Lahovsky during the first four decades of this century. Of course, much has changed since then. There is more pollution than in Lakhovsky's time: electrostress, stress, different eating behavior, lower quality food, environmental pollution, lighting and double-glazing which distort the laws of nature, sufficient reason to leave well enough alone concerning Lakhovsky's research.

After a number of years of research and many technical improvements of the MWO, we are now able to state that we have achieved results comparable with those of Lakhovsky. I do suspect however, that it takes more time for the positive effects to be felt nowadays due to increased pollution and different living conditions.

Lakhovsky's device was exceptionally powerful; I do not think anyone builds them as powerful as that anymore. From various sources, I was able to learn that if you operate

a Lakhovsky MWO at full power, you could damage living tissue. And other experts have told me that a magnetic field stronger than 10 Gauss can also damage enzymes.

The old devices were rated at 220 V or 110 V and were capable of causing considerable interference on radios and television sets. The MWO's I am allowed to build use a small 12-volt battery, which provides sufficient power for approximately four hours of use. A second battery can be built in, which gives you eight hours of use. They are housed in a doubly insulated plastic suitcase and are portable. Another important feature is that they need far less power than older versions. The battery-powered version is to be greatly preferred to the 220-V and 110-V versions; there is so much electrical pollution in the public electricity supply that I consider it absolutely essential to use the cleaner energy that a battery supplies. Furthermore, many of our clients take the WMO with them when they travel or on vacation. New versions of the device have become more effective despite he fact that they use much less power. They do not cause interference and can be operated continuously without overheating.

I build two models, a Bergstresser/Beck system and a Lakhovsky system. The Bergstresser/Beck system has a single Tesla coil and an antenna, a mat to sit on, and a lamp. The Lakhovsky model has a double Tesla coil with a flat primary coil in the middle. This flat primary coil provides the MWO with enormous power and effectiveness, much more than the cylindrical coil. To the secondary coils, I have connected two antennas, which obtain their power on the outermost ring. The resulting power is radiated to the innermost rings, which in turn brings both antennas into resonance. The effectiveness of these resonant antennnas is many times greater than a single sparking antenna. With this model I deliver two mats to sit on, and a lamp. I have positioned the spark gap in front of the primary coil; see the diagrams of Peter Lindemann and Lakhovsky. This costs the least amount of energy and provides the widest frequency spectrum as they are not damped by the capacitors.

The MWO's I build are not grounded, and I have the feeling that they work better and generate more energy as a result. The person or animal being treated is already in contact with the earth, and, as far as I am concerned, provides the earth contact. Moreover, the middle of the coil, which is where the secondary coils begin, is not grounded either. The coils are connected to each other, which means that they have a floating neutral point where the flat primary coil is positioned. When someone takes up a position between both antennas, and does not sit exactly in the middle, or one side of the body requires more energy than the other, the energy supply stays in balance automatically and the resonance of the antennas is improved. With a ground in the middle, at the beginning of both coils, the system is less flexible and more forced.

Another important consideration is that the area in which the MWO operates should be energetically well furnished, with crystals for example, or a large plate or tray filled with sand (sand has a crystal structure containing silicic acid and silicon; the chips of a computer contain silicon) and is a perfect condutor. The area should not form a Faraday

Cage, and it should be possible to open a window. It is not inconceivable that the glass of the windowpanes filter certain energies. Ultraviolet light is filtered out by glass (exept quartz glass or plexiglass). It is very important to correct for the energy that ultraviolet light contains due to its frequency. In this regard, read 'Health and Light' by John N.Ott, and 'Into the Light by W.C. Douglas.

The MWO needs optimal surroundings because it takes (cosmic) energy from the earth's environment. If this process is hindered or prevented, the device will be less effective. In my opinion, the electrostatic and electromagnetic field developed by the MWO is a carrier of cosmic/ernergetic energy.

At Special Energy Products, so much data is coming in concerning the effects of the more than 120 devices we were able to build in 1992 and 1993, and concerning the many thousands of people who have been treated with them, that we cannot doubt the exceptional nature of this instrument. We are receiving similar feedback from America, and think that we will soon be able to build devices that are even more effective.

The essence of the technique is neither a strong electromagnetic or electrostatic field, but a wide frequency spectrum, with all its harmonics and extremely high voltages. When correctly applied, this allows you to generate enormous quantitites of energetic (cosmic) energy.

Energetic energy is the principal factor in restoring balance and harmony at a mental and physical level. This transmits the correct vibration and polarity to matter, which enables you to recover very quickly and even to regenerate damaged cells.

The ionization that takes place between the antennas, and the ozone (both very rich in oxygen) that is created by the antennas or antenna, and especially by the lamp, are absolutely indispensable positive energies.

The MWO enables you to create order out of chaos allowing energetic energy to flow again, and allowing you to function as an energetic antenna once more. For we are all energetic antennas; we only obtain a fraction of the energy we need from our food. The rest of the energy we need is obtained elsewhere. You can also store this form of energy in pure matter. I have carried out extensive research with these energy methods. By means of electro-acupuncture (dermatron) measurements, you can clearly demonstrate its effect on people, visually too. The MWO method can be used in a great many ways, for example, to enhance the effect of homeopathic medicines by providing more energetic energy in equivalent volumes. You can polarize water with it and thus detoxify dissolved contaminants (even though they can still be measured). If you add a drop of the energized water (preferably distilled water) to fluids with many additives for example, such as coloring agents and preservatives, you can taste the difference in taste within a few seconds. The taste of wine becomes fuller, that of coffee smoother. In general, you could say that it takes the rough edges off the taste. The addition of a few

drops of water makes plants grow faster, produce more beautiful flowers, and bear fruit more quickly. They also suffer less from insects pests. Treating a small quantity of sharp sand with the MWO also produces good results. Sprinkle this sand or mix it with the earth at the base of plants in the garden or flower pot. This form of energy can thus be used to completely or partially polarize (neutralize) poisonous substances.

What else do people use the MWO for? They treat plants with it, as well as animals, with astonishingly good results. They purify water with it, and clean the energy of rooms and objects. People treat vegetables and fluids in order to neutralize toxins. In addition, the taste of the products improves. A number of people treat their makeup or beauty products with the MWO in order to prevent allergic reactions, or to optimize their products.

People who have been treated with the MWO describe the experience as similar to that of being in an energy shower. They feel light and pleasant, as if a burden has dropped from their shoulders. The MWO has been used to treat a large number of ailments and illnesses. Here are just a few:
Arrythmia has often disappeared after a few treatments. The intended amputation of limbs usually be comes unnecessary.
Rapid relief is often experienced from pain caused by arthritis, arhrosis and rheumatism, and in many cases the sicknesses disappear after a number treatments.
Bone fractures heal in a fraction of the normal time, as do wounds. And scars fade, often vanishing completely.
Tension aches and facial neuralgia often disappear after a single treatment.
Various people have been cured of leukemia and cancer partly as a result of treatment with the MWO. This has also been confirmed in the regular health-care circuit. Many people who have undergone che- motherapy and have been treated with the MWO at the same time have stated that they did not experience any side-effects from the chemotherapy, such as hair loss or hemoglobin decomposition (iron level).
People who have been exposed to radiation and then treated with the MWO have suffered almost no tissue or cell-tissue damage, or other side-effects. Doctors call it a mystery.
Migraine and tension headaches usually disappear after a few treatments and some people have even regained their memory. The memory of one person, who had a 15-minute recall, showed increasing im- provement after a ccouple of treatments. One woman, who was treated for arthritis, also regained her me- mory.
A woman who was to undergo an operation for a cyst, was completely free of the cyst after ten days of treatment with the MWO.
Various people with tinnitus were relieved of their ailment after a single treatment.
One man whose left hand had been virtually paralysed after an operation, and which was swollen with fluid, was relieved of his paralysis after a single treatment, the arm returning to it normal size.
The condition of a 13-year-old boy, whose blood-cell count had been too low since he

was three, beca- me crititcal when it fell below 10,000 - a count of 125,000 is concidered normal. It was eventually deci- ded to treat him with the MWO and within a week his blood-cell count had climbed to 40,000. The youngster had an attack of influenza and it was not possible to measure the platelets because their shape was too irregular. Once the attack of influenza has passsed his blood-cell count was 125,000. From being a sickly boy, he grew to be a strong young man, without a problem in the world. He fell recently, seriously damaging his knee which bled profusely. His parents feared the worst. The bleeding stopped within a quarter of an hour.
A few people have partially or completely regained the head of hair they once had. Their hair had not fallen out due to illness or medicines.
A man with incurable prostate cancer, was treated with the MWO by a doctor for a number of months. His cancer began to disappear and he is now completely cured. The doctor is of the opinion that the cure can be completey attributed to the MWO, because every other treatment had failed.
In the Netherlands alone, there are currently thousands of people who have been successfully treated with the MWO, by doctors, therapists , homeopaths, private individuals etc. A high level of medical supervision is important of course, and minerals and vitamins in high doses are an absolute necessity. When undergoing treatment, the body's reserves are immediately mobilized by the MWO and sent to those locations where they are needed. If we all, including members of the regular medical and scientific establishment, want to get to grips with degenerative illnesses, cancer, leukemia, aids etc., we would to well to realize that this device is probably the answer we have been looking for.

In my opinion, treatment would be even more effective were it to be based on a combination of the MWO and Ultraviolet Blood Irradiation. In this regard, read 'Into the Light' by W.C. Douglas.

At the moment there are various highly qualified doctors, therapists and other scientists working with and researching energetic methods of treatment in order to perfect them and to make the resulting data available for statistical analysis. Practice has shown that not every practitioner succeeds with these methods. If a person does not experience any reactions when treating him- or herself (something that occurs sporadically), the treatment does not have an effect when used on his or her patients. However, when a person is sceptical, or is not open to the matter, but is treated by someone who is open to it, that person will definitely experience positive effects.

Dear friends, keep thinking positively, keep up the good work.

Hessel Hoornveld

View Full Version: Konrad's use of the MOLECULAR ENHANCER

Title: Konrad's use of the MOLECULAR ENHANCER

TheUnhivedMind - April 10, 2011 02:34 PM (GMT)

Hi everyone,

Yesterday I got a Molecular Enhancer from www.dansenhancer.com
I live in Sweden, and the shipping only took 2 weeks to get it from USA to Europe. I want to share my experiences with everyone as my search for better health continues. I want to be as informative as possible, so please beware my message will be long. I have an incurable disease. If I cure it, then my postings can be of great help.
So far I have been using 4 different frequency machines on a regular basis. They are listed below in chronological order:

1) Traditionel 30kHz Clark Zapper (www.frequencygeneration.com)
2) QXCI-SCIO (www.whitedovehealing.com)
3) Bemer 3000 (www.bioter.pl/english/bemer_english.htm)
4) Molecular Enhancer (www.dansenhancer.com)

Now my health has not been very good. I have Chronic Systemic Mastocytosis, which means that one of my internal organs is full of mastcells. In my case, my bonemarrow is full of mastcells. I also have plenty of Mast Cells on my skin, which are visible as small round hives called "Urticaria Pigmentosa".
This disease cannot be cured by conventional medicine. I have met Doctors and experts and all they can say to me is to wait and see and maybe my illness will get healed. However, to just wait and see is not very clever because the disease can become terminal. If the mastcells start to spread from my bone marrow out into the blood and other internal organs, that will indicate that the disease has become malignant, almost like cancer. During this malignant state, the conventional medicine can treat it using chemotherapy and other destructive methods, however it will only treat the disease, not cure it.
The disease also causes me to get attacks of extremely painful migraines, heart palpitation and vomiting. Weakness and chronic fatigue strike at me during some periods. Usually, just before a heart palpitation attack I feel weak and tired, and then the

heart starts beating like crazy. If I am unlucky, the blood pressure rises so high it causes me to get the migraine attack. The disease prevents me from doing any physical exercise, since I can get migraine.
In june 2004 (this year), my health got a bit worse. My body could not recover from a migraine. I was weak, my heart would beat faster every time I moved. I got tired of being a "victim", and changed my diet, stopped using commercial sopes and shampoos and went searching for frequency machines.

Mastcells are immune cells that release histamines which stimulate the sympathetic nerv system and increase pulse etc... Mastcells are also present in allergies, so my disease can also be viewed as a type of allergy. I believe Systemic Mastocytosis is developed when the body gets too much damage from poison and parasites, and when the immune system cannot cope with it anymore. The poison and parasites are everywhere.

So how have the machines worked for me?
1) At first the Zapper did not seem to make any difference for me. I used for 2 weeks without noticing any difference. However, a month earlies I had gone to a homeopath who told me a big part of my disease is in my intestines. I discovered that when I suddenly feel weak, the Zapper would make me feel better if I placed the copper handles down by my groin close to my intestines. However, now signs of changes on my skin occured.
2) QXCI-SCIO is an amazing piece of machinery. I did not buy the machine since it is too expensive. I regularly visit a health practitioner who uses the SCIO. The SCIO also told me I had problems with my intenstine, and that I should do a colon clense. I will do one starting tomorrow. I do SCIO therapy twice a month. It cannot be done to often, because the body can lose its own ability to regulate the balances. The SCIO can scan and Zap bugs, and also scan and "zap" poisons. All substanes also have their own characteristic frequencies. If you cancel out the frequency of a poison, then it will "behave" differently. The Zapping is only short term help, since the bugs and poisons which dwell deep in the body cannot be touched. Once the body gets stronger and starts detoxifying then new parasites and posons will be detected by SCIO. But SCIO is not primarily for zapping. It communicates with the body through the akupoints, balances the energies and detects various disorders and even genetic disorders and corrects them. The SCIO also incorporates chinese medicine, homeopathy, prayers and herbal medicine. It can provide the body with a herbal medicine electronically. It can also fix the balance of fatty acids, amino acids and other nutrients. So SCIO is a very advanced peace of medical science. Well, according to the SCIO my Zapper works fine, because I had extremely few bugs in my body the last time I was there. My parents are very sceptical of the Zapper and SCIO. They think that if it is so great, then why would it not be used in conventional medicine. However, after my last SCIO-therapy my mom looked at me and noticed I looked better and more energetic.
3) The Bemer 3000 (cost about $2940) is a matress that produces a magnetic field with

varying frequencies. You could call it a MWO, however the frequencies in Bemer are produced electronically, by applaying carefully computed mathematical formulas. So the waveforms are "artificial". I did not experience any drastic changes with Bemer. I noticed that after using it for a week I got less of those sudden energy drops with heart palpitation. My overall energy level got a bit higher, however the energy drops along with heart palpitation would still recur. The Bemer induces a slow healing process in the body. It definitely should not be used in case of emergency, however it does also raise the potential of the cells, and thus should also helpful in case of cancer.
4) The Molecular Enhancer is perhaps the weirdest looking health device I have come across, and the bulb shines with orange and blue colors as well as the aluminum foil which is very cool. I have only usd it for 2 days now. When I first started using it I was surpirsed by the strong smell of ozone. But it really charges my body up. Since my disease causes an energy drop in my body, I can feel a big difference after each session. But a really cool feature is that you can regulate the intensity of the machine by how mych skin contact your feet make with the aluminum base. The more contact, the more intensity and charging. I also checked the magnetic field it creates around the body. The magnetic field I could messure extended about 2 yards around the body. The best thing is, that it seems to stop my heart palpitation attacks along with energy drops. Today my heart started pounding, I felt weak and I even felt the pulse getting stronger in my head. I panicked since I thought I would get a painful migraine. I quickly got on the Enhancer and placed a whole foot on the aluminum base giving me an intense recharging. After 15 seconds my heart would start slowing down, and the pulse as well, and I felt stronger at once. I cannot draw any conclusion now, but it is possible that the Enhancer can actually stop a pending migraine attack.

SUMMARY AS OF SEPTEMBER 29 2004
So far, no hives have disappeared from my skin. Compared to my condition in June, I am much more energetic now. I can do things without feeling my heart racing. However, my improvements are probably not caused by the machines alone. I have started drinking magnetized water, eating organic foods only, no conservatives and also started on some supplements. I did Clarks Parasite Clense as well, but saw now parasites coming out in the feces. My increase in energy is probably a result of all my changes, not only the machines. Tomorrow I will do colon clense, and after that a liver clense.
To be absolutely shure my health has improved, I need to check the levels of histamine metabolites in my urine. So far it has been increasing. I will try to make a test, and report back to you.

Regards,
Konrad from Sweden

pivakl - December 1, 2010 12:51 AM (GMT)

Hello Craig. Which zapper would you recommend buying? Because there's probably a lot of bad ones out there (at least Bob Beck used to say so...)

TheUnhivedMind - December 4, 2010 03:34 AM (GMT)

The Ultimate Zapper by Ken Presner. The only issue I have with this particular Zapper is that it has mains support and I don't like 50/60hz cycle AC power but if he can somehow remove the negatives of that then it would be even better. You could of course hook it up to a car battery through an inverter and have zero problems whatsoever.

pivakl - December 1, 2010 01:13 AM (GMT)

Hello Craig. Do you know of any good, working blood electrification units, Bob Beck style? Thanks

God bless

TheUnhivedMind - December 1, 2010 05:13 PM (GMT)

Yes I would first recommend the SOTA ZBB5 and the other would be the once known Godzilla which V man (LED man) sells. You would need to just ask Sota Instruments if the Silver Pulser is still a multifunction blood electrification device as they seem these days to just push the Colloidal Silver angle since this is more popular these days. I have a ZBB5 myself. For the Godzilla get in touch with LED man.

TheUnhivedMind - November 26, 2010 11:24 PM (GMT)

Please listen from 6:50 to what Bob Beck informs you about how practitioners using MWO's had them confiscated and smashed and how these practitioners were jailed. You must know that these machines are the real deal if they went to these lengths. We know Antione Priore and his machine was healing and regressing all types of diseases including Cancer very easily. Priore's machine and the MWO both work with scalar energy.

View Full Version: Depression can be treated with electromagnets

Title: Depression can be treated with electromagnets

craig-oxley - September 26, 2010 05:24 PM (GMT)

Depression can be treated with electromagnets (better than drugs)

Saturday, September 25, 2010 by: David Gutierrez
http://www.naturalnews.com/029848_depressi...tromagnets.html

A therapy known as repetitive transcranial magnetic stimulation (rTMS), which involves inducing electromagnetic fields in the brain, may ease the symptoms of depression in hard-to-treat patients better than antidepressant drugs, researchers have found.

"This study should help settle the debate about whether rTMS works for depression," said lead researcher Mark George of the Medical University of South Carolina. "We can now follow up clues suggesting ways to improve its effectiveness, and hopefully further develop a potential new class of stimulation treatments for other brain disorders."

RTMS therapy uses highly focused magnetic pulses similar in strength to those produced by an MRI to induce an electric current in the Dorsilateral Prefrontal Cortex in the front left portion of the brain. Over the course of a single, 37-minute session, the brain is exposed to a total of 3,000 such pulses.

RTMS is the only FDA-approved biological depression treatment besides antidepressant drugs and electroconvulsive therapy (ECT, also known as electroshock therapy). It functions under basically the same mechanism as ECT, but without inducing seizures.

Prior studies have demonstrated the effectiveness of rTMS, leading the FDA to approve it as a treatment for depression in 2008. Since then, more than 20,000 procedures have been performed. Yet because scientists had never been able to develop a way to test the device against a placebo -- study participants were consistently able to tell whether they were receiving the real treatment or not -- critics have questioned the validity of the therapy.

For the new study, published in the Archives of General Psychiatry, researchers developed a device that causes the same eye-twitching and skull-tapping sensation induced by an rTMS machine, but without making use of electromagnetic fields. This sham treatment device and its physical effects appeared so similar to that of the real device that even the researchers could not tell them apart.

The researchers tested either true rTMS or the sham device on 190 patients who had suffered from serious depression for between three months and five years. All study participants had previously been treated with at least one antidepressant drug but had failed to respond.

After at least three weeks of treatment, 14 percent of the patients in the rTMS group experienced remission of symptoms, compared with only 5 percent in the sham treatment group.

"The effect sizes we report with rTMS are about on par with what you see with antidepressant medications," said researcher Sarah Lisanby of Columbia University and the New York State Psychiatric Institute. "The difference is that to get into our study, people had to have failed to have responded to a medication. And studies show that with previous failure to respond to an antidepressant, the rate of success for a second antidepressant is lower."

The researchers found that rTMS was more effective in patients who had previously taken only one antidepressant than in patients who had taken more than one.

"It is looking as if rTMS would be more effective earlier in the treatment course rather than later," said Matthew Rudorfer, of the National Institute of Mental Health, which funded the study.

Although the study was conducted without any industry support, all the researchers reported financial relationships with companies involved in rTMS. In addition, Columbia University holds an rTMS patent in Lisanby's name.

Participants in both the real- and sham-treatment groups suffered some side effects such as headaches and nausea. These effects were more common in participants that underwent true rTMS. Unlike antidepressants, however, rTMS does not circulate through the body and should have no systemic side effects such as dry mouth, sexual dysfunction, upset stomach or weight gain.

In contrast with ECT, no sedation is required for rTMS and patients can drive themselves to and from their appointments.

Description: *tumours*

craig-oxley - September 12, 2010 04:57 PM (GMT)

Revealed: The £120,000 'Lung Zapper' that fires equivalent power of 70 ovens to tumours the size of a postage stamp

By Cathy Wood
Last updated at 1:49 AM on 12th September 2010
http://www.dailymail.co.uk/health/article-...tage-stamp.html

It costs £120,000 and fires the equivalent power of 70 microwave ovens to tumours the size of a postage stamp. It's the UK's first...

An innocuous-looking new laser machine, which packs enough power to vaporise lung tumours, is now being used in Britain for the first time.

And it has already been a huge success, with operating times and hospital stays reduced and patients recovering sooner.

Life-saver: Thoracic surgeon George Ladas and the machine he believes 'makes things so much better for patients'

The 'lung laser' was unveiled earlier this year at the Royal Brompton Hospital in Chelsea, Central London, after more than two years of research, training and

preparation by George Ladas, the hospital's leading thoracic surgeon.

Mr Ladas, who trained in Greece before joining the Royal Brompton in 1994, performed hundreds of lung metastasectomy operations (the removal of multiple tumours in the lung which have spread from other parts of the body), between 1997, when he became a consultant, and February of this year, when the lung laser finally arrived.

The old operating method was long and slow, as Mr Ladas would painstakingly cut away the tumour while, at the same time, sealing the surrounding tissue to prevent bleeding and infection.

'It is a marathon,' says Mr Ladas, who often spent up to eight hours in theatre completing the process.

The deeper the tumour the more complicated, delicate and timeconsuming the operation would be, leading to one 12-hour procedure where 38 tumours were removed from a single lung.

Lung cancer remains the most common cancer in the world with around 1.3 million new people diagnosed with it annually.

In the UK, it is responsible for the most deaths due to cancer in both men and women. According to Cancer Research UK, in 2005 this totalled more than 33,000 people.

Around 85 to 90 per cent of lung cancers are smoking-related. Passive smoking has also been implicated-If you stop smoking, you will be less likely to develop lung cancer with each year that passes.

Many of Mr Ladas's patients developed secondary lung tumours after having primary cancer somewhere else in the body, such as the bowel or kidney, or in muscles or bones.

Although the laser can be used on selected primary tumours, it is more commonly used on secondaries as surgery on primary lung tumours often requires removing a larger part of the lung.

The idea of treating lung tumours with a laser is not new, having been developed and used in Germany in the early Nineties. Mr Ladas's interest grew as he realised the potential benefits, not just for himself, but also for his patients.

'The laser was of major interest to me in removing multiple tumours within the lung which had started in another part of the body,' he says.

'When you deal with secondary tumours it is usual for a patient to have ten or more in each lung. The task is to remove them while saving as much of the healthy lung as

possible.' The more research Mr Ladas did, the more convinced he became, because of the precision and concentration of power the laser offered.

The laser light beam is transmitted down a flexible glass cylinder covered in a plastic sheath.

At the tip of the cylinder, a pen-like device attaches which Mr Ladas holds in his hand enabling him to position the laser, with pinpoint accuracy, exactly where he wants it. 'Recovery is very fast. This machine makes things so much better for our patients.'

Once in position it delivers a staggering 70,000 watts of energy per sq cm, which generates heat of 700C at the wave of his wand. Imagine the combined power of 70 microwave ovens being delivered to an area about half the size of a postage stamp. No wonder the tumours vaporise.

'When the laser light beam is applied to tumour tissue this turns into smoke and gas and disappears completely,' says Mr Ladas.

'Everyone present in the laser theatre during the operation has to wear protective goggles to avoid eye injury and ensure safety for patients.'

But the disappearing tumour is not the only benefit. The laser also seals the surrounding lung tissue together which means there is no bleeding, or leaking air.

'It makes the operation much quicker,' says Mr Ladas, 'because I don't have to tie off each vessel or airway as I had to do before.'

And that means patients are under general anaesthetic for about half the time, on average two to three hours, and chest drains are removed much faster with patients discharged sooner.

'Recovery is very fast. This machine makes things so much better for our patients,' says Mr Ladas, who has already completed 45 procedures (three of which were on primary tumours) with excellent results.

Despite the advantages of the laser surgery, Mr Ladas needed to obtain the approval of the Royal Brompton's Clinical Practice Committee - the body that ensures patient safety - before the lung laser could be used for the first time.

Evidence had to be provided that the procedure was safe and then Mr Ladas had to complete his own training in Germany and Austria before training the staff at the Royal Brompton who would assist.

Once the £120,000 laser was installed in a special lung laser theatre, lectures on laser safety completed and the staff fully trained, Mr Ladas could not wait to get started.

One of the early beneficiaries of the new technology was retired ceramic tiler Clifton Goldson, 63, from Walthamstow in East London, who had his left leg amputated below the knee in 2008 as a result of bone cancer.

He subsequently developed secondary tumours in both lungs and was referred to Mr Ladas for treatment. 'He was very reassuring,' says Mr Goldson. 'I wasn't scared.

He explained all about the machine and I just had the feeling I was going to pull through.'

After he had recovered, Mr Goldson was invited back to view the machine that had made such a difference to his life. 'It was amazing,' he says.

'I was looking for something much bigger and it's just this compact little thing.'

View Full Version: WHY SHOULD WE GROUND THE BODY TO EARTH?

Title: WHY SHOULD WE GROUND THE BODY TO EARTH?

craig-oxley - June 6, 2010 09:47 AM (GMT)

Why Should We Ground the Body to Earth?

http://www.equilibra.uk.com/Barefoot_Conne...ng_Material.htm

The Importance of Our Environment and Our Essential Interaction and Interwoven Connection With It and Mother Earth

Why being directly connected to, and in symbiosis with Nature - especially the Earth - is inherently good for us, and why any form of disconnection, insulation from, or interference with this natural symbiosis may not be good for us.
Please note that this web page is currently under reconstruction!

["Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers." ARTICLE 19. The Universal Declaration of Human Rights, adopted by the United Nations General Assembly on December 10, 1948, in Paris.]

The following information is taken from an article based upon the published science (in English) of eminent Biophysicists in 1993 by Haug International s.p.r.l. First published in German in 1990 by Karl F. Haug Verlag GmbH & Co.

'A Human in many respects is literally an “open system and constantly receives from his environment information from biotic and abiotic environmental factors. Plants, animals and people and their vital expressions and mutual relationships are among the biotic environmental factors. Soil, air, water, sunlight, sound, crystals, trace elements, Schumann waves and other electromagnetic oscillations of the atmosphere are natural abiotic factors. All these natural items of information are largely disturbed

in our modern age by artificial environmental factors created by Man" - such as microwaves and radio waves, chemicals and so forth - which can "…lead to a modification of the natural environmental situation and environmental information and imperceptibly, but to an increasingly worsening extent, the human organism.'

'The science of biophysics has established that all life is firmly imprinted with the stamp of the environment: "The body is thus firmly integrated into our environment, is in constant exchange with it and is controlled by it, i.e. all our various biorhythms, our organ and metabolic functions (normally) run synchronously with the 'pulse rhythm' of the universe. If this coordination is disturbed, disease and possibly death occur." Control pulses come firstly from what are referred to as Schumann waves, arising in the ionosphere with a frequency of 7.83Hz that corresponds precisely with the frequency of the hippocampus in the brain of all mammals. The hippocampus in humans is responsible for our memory and survival among other factors.

'Our nervous system also responds to the electromagnetic pulses of the Schumann waves. These induce miniature potentials in the nerve loops, which on repetition add up to action potentials and can actively intervene in cybernetic control circuits of the body. The autonomic nervous system is autonomic but adapted to the environment and resonates with it. It becomes very clear that we are an electrical or energy system and depend on and interact with balanced and natural energies around us for our health, wellbeing and survival. The importance of this and the importance of the Earth's Schumann waves, as an example, are evidenced by the fact that NASA builds Schumann wave generators into its manned space flights to keep their astronauts physiologically and psychologically healthy.

"However, these Schumann waves can be interfered with or altered in towns and cities and even the countryside by technical interference frequencies from all forms of radio and other communication transmitters, railway networks and high-tension power lines et al. There is another signal spectrum that we humans integrate with and this is known as the electron plasma waves of trace elements and crystals in the lithosphere. Although these electromagnetic radiations are far weaker in intensity, they are in precise resonance with the organism, in which the same trace elements also occur, particularly in the blood. These too can be interfered with by communications transmitters.
"We have already shown how inextricably the human body is bound to Nature, both in relation to the Earth and the Cosmos. We are controlled by both and we can only live in common, rhythmical oscillations. Unfortunately the modern world is heavily polluted by microwaves, which have increased exponentially in recent years. The many new radio and TV broadcasting stations, the increase in CB radio, in radar for air traffic, satellites or military installations alone are flooding the aether, which has a knock-on effect on biological frequencies. If we consider that the body transfers biological

information ranging from 1 Hz right through to well above light frequencies, we can see how this type of pollution, which can be classed as more harmful than exposure to pollutant substances, is certainly a major reason why acute disorders are relatively rare nowadays… This is clearly supported by the increase in chronic disorders in recent years."' extracted from "Brief Synopsis of the Dangers of EMFs..."by Steve Gamble 1996

It is quite clear from the aforementioned information that our environment has played a large part in our evolution and survival, enabling us to become what we are today. That it continues to play a large part in the continuity of our species is also without question. (This of course applies to all living entities too). If our communication and interaction with nature and the environment is interfered with, then it is also clear that this interference will have a detrimental affect upon our biophysical functionality and corresponding physiology.

Does Our Modern Day Living Represent a Health Hazard?

Today the human body, more so than any other living entity, is gradually and increasingly being disconnected with, or insulated from, the Earth. This is a vital and important connection that we have had and have evolved with for many thousands of years. Today, due to our modern-day living, man-made fabrics and footwear, high rise offices and buildings, and a lot more, we seem to have lost this vitally important biological and biophysical connection essential for well-being. In view of the aforementioned information, and with the increasing plethora of human-created electrical, microwave and wireless radiation we are being subjected to today, is it prudent to ask if this disconnection from the Earth and a natural environment is actually doing us any good or not?

Is It Important To Have a Connection With Earth - To be Grounded?

Many people have noticed that they feel better when they spend time barefoot in the outdoors, walking barefoot on the seashore, feet in the edge

of the lapping waters, or just laid upon the Earth.

The known effect of grounding - or being grounded - is that it discharges and prevents the build up of electrical stress. This knowledge has been employed in the Electro-Static Discharge (ESD) business for many years in the UK as a form of safety and one of reducing (grounding) voltage (Static Electricity) levels in the human body to protect both humans and sensitive electronic equipment.

However, our modern lifestyle prohibits most people from spending time in direct contact with the earth. We have evolved in direct contact with the earth, walking barefoot, sleeping on the earth and using natural footwear that kept us 'earthed' and 'grounded'. Today we wear footwear with rubber-molded soles that insulate us from contact with the Earth. We sleep upstairs, away from connection with the earth. In the mid-1900s in the UK we switched our electricity supply from Direct Current (DC) to Alternating Current (AC), and with this change came the Electric and Electromagnetic fields that can affect us so much today. Additionally, with the plethora of mobile phone masts and all things wireless, we are being bombarded with electrical radiation from all quarters which can lead to a build up of electrical stress. Is it any wonder that more and more people are becoming electro-sensitive (ES) - a known and recognised medical condition in Sweden - and that chronic conditions are on the rise?

Therefore, it follows that in today's electrically-polluted world it is prudent to allow our body the opportunity to be able to discharge as much of this unnatural and excessive electrical stress as it can, as often as it can. For

our body to do this it needs to be connected with nature, with the earth.

Having a direct conductive connection with the Earth allows us to experience and enjoy that connection with Nature and the Earth's essential energy field that we once enjoyed as a matter of course, without interference, for thousands of years. When the body is grounded to earth it ceases to act just as an antennae, it then becomes a conductor as well. Thus it is able to discharge excessive and unrequired voltage (static & information) from the body. This is after all the premise upon which ESD to ground products work. In today's electrically-polluted world, re-connecting with the earth as often as possible - like in the old days - could well prove to be one of the most important decisions that we ever take!

Reconnecting to the Earth can be achieved in a number of ways. One, naturally by going barefoot as often as possible or swimming in the sea. Two, wear leather-soled footwear or ESD Grounding shoes. Three, use a Car Grounding Pad and/or a Vehicle Grounding Strip on your car that connects the 'Faraday Cage' of the metallic car with the surface/ground below to earth/discharge the electrostatic charge. Four, by using what is referred to as a 'Barefoot Substitute' - a conductive material that 'connects' the body to ground, to the earth. This particular way of re-connection with the earth and nature can be through connecting an external Ground Rod to any suitable conductive material, or through connecting conductive material to a dedicated Mains Earth Connection Kit, as outlined above.

Earthing Research

The pursuit of scientific validation for Earthing began with Clint Ober's initial question in 1998 of whether direct connection with the Earth could have an impact on health and whether separation from the Earth•such as by wearing insulative shoes•could contribute to unwellness.

The research that followed has produced fascinating evidence demonstrating that Earthing generates a powerful and positive shift in the electrical state of the body and restores natural self-healing and self-regulating mechanisms.

We know that Earthing allows a transfer of electrons (the Earth’s natural, subtle energy) into the body. We know that inflammation is caused by free radicals and that free radicals are neutralized with electrons from any source. Electrons are the source of the

neutralizing power of antioxidants.

In the Earthing studies, as well as the feedback from thousands of individuals who have grounded themselves, we have consistent evidence of people whose pain was reduced. Such reduction of pain is evidence (but not proof) that inflammation is reduced. However, the studies point clearly in that direction.

The institute hopes that evidence collected to date will inspire researchers with the financial resources to perform large studies to further clarify the benefits of Earthing.

Earthing: The Most Important Health Discovery Ever?

by Clinton Ober (Author), Stephen Sinatra (Author), Martin Zucker (Author)

Paperback: 272 pages
Publisher: Basic Health Publications; 1 edition (25 April 2010)
Language English
ISBN-10: 1591202833
ISBN-13: 978-1591202837
Product Dimensions: 24.1 x 15.2 x 1.8 cm

Product Description

EARTHING, the most eye-opening book to appear in decades, introduces the planet's powerful, amazing and overlooked natural healing energy and how people anywhere can readily connect to it. The never-before-told story

filled with fascinating research and real-life testimonials chronicles a discovery of the first magnitude with potential to create a global health revolution. Throughout most of evolution humans walked barefoot and slept on the ground, largely oblivious to the fact that the surface of the Earth contains limitless healing energy. Science has discovered this energy as free-flowing electrons constantly replenished by solar radiation and lightning strikes. Few people know it, but the ground provides a subtle electric signal that maintains health and governs the intricate mechanisms that make our bodies work just like plugging a lamp into a power socket makes it light up. Modern lifestyles, including the widespread use of insulative rubber or plastic soled shoes, has disconnected us from this energy and, of course, we no longer sleep on the ground as we did in times past. EARTHING describes how this physical disconnection from the Earth creates abnormal physiology and contributes to inflammation, pain, fatigue, stress and poor sleep, and how by reconnecting to the Earth symptoms are rapidly relieved and even eliminated.

Earthing

http://www.earthinginstitute.net/index.php/overview

The surface of the Earth resonates with natural, subtle energies. Ongoing scientific research is discovering the details as to why people feel significantly better when they connect with these omnipresent energy fields. Earthing refers to the process of connecting by walking barefoot outside, as humans have done throughout history, or sitting, working, or sleeping grounded indoors. For more than a decade, thousands of people around the world—men, women, children, and athletes—have incorporated Earthing into their daily routines and report that they sleep better, have less pain and stress, and faster recovery from trauma. Earthing immediately equalizes your body to the same energy level, or potential, as the Earth. This results in synchronizing your internal biological clocks, hormonal cycles, and physiological rhythms, and suffusing your body with healing, negatively charged free electrons abundantly present on the surface of the Earth.

Earthing is among the most natural and safest things you can do.

QUOTE

The Discovery of Earthing's Health Benefits

The remarkable story of the discovery of Earthing began in the late 1990s when a retired cable TV executive started to think about the human body in terms of electrical grounding.

For 25 years, Clint Ober had participated in the spectacular rise of the cable industry and his own business–the leading cable installation company in the U.S.–by giving customers images that were superior to broadcast television.

What does cable TV have to do with health? The answer may surprise you. The crisp image delivered by the cable is the result of shielding that prevents signals from leaking out and prevents outside disturbances from leaking in. The cable consists of an inner copper conductor surrounded by a mesh shield. The shield is electrically connected to the Earth (grounded), so that the Earth can either deliver or absorb electrons and prevent the build-up of electrical charges in the system. The potential of the shield equalizes with that of the Earth's surface, thus protecting and stabilizing the signals flowing through the conductor.

After his retirement, Mr. Ober began to consider how his experience with cable TV might apply to the human body. He realized that most people wear synthetic-soled shoes that insulate their bodies from the Earth's energy field that stabilizes not only cable TV but all electrical equipment– industrial or residential– throughout the world. This seemingly simple realization inspired a scientific adventure that has resulted in what is perhaps the greatest health discovery of our time.

craig-oxley - June 6, 2010 10:11 AM (GMT)

"In our high tech society, connecting with the Earth has never been more critical to our health and well-being. This inspired and well-researched book explains the perils we face by being disconnected from the power and energy of the Earth and its boundless storehouse of free electrons. Could much of the disease, chronic inflammation, poor sleep and more be the result of this? A brilliant hypothesis well-grounded in science. Highly recommended."
–Nicholas Perricone, M.D., author of Ageless Face, Ageless Mind

"Earthing ranks right up there with the discovery of penicillin. This book is probably the most important health read of the 21rst century."
–Ann Louise Gittleman, Ph.D.,C.N.S., author of The Fat Flush Plan

"People have lost touch with the Earth. From a biblical perspective, people who lose touch with the Earth lose touch with God. Earthing reconnects us to the planet, to others, and, in a sense, to God."

–Gabriel Cousens, M.D., author of Spiritual Nutrition

“Earthing may be as fundamental as sunlight, air, water, and nutrients. May the Ground be with you!"
–Amanda Ward, N.D., naturopathic doctor, San Diego

“Hormonal imbalances are so prevalent among women. Earthing has a profoundly beneficial effect in helping to balance the system and reduce symptoms."
–Gary E. Schwartz, Ph.D., Professor of Psychology and Medicine, University of Arizona, author of The Energy Healing Experiments.

“Earthing connects us to Nature and Nature is the ultimate source of health and healing. This book is a manual for one of Nature’s great healing secrets.”
–John Gray, Ph.D., author of Men Are From Mars, Women Are From Venus

“Most people want the most health benefits for the least amount of work. This is it! Earthing gives you more benefits for the least work. There is no work!”
–David Wolfe, M.S., author of Superfoods: The Food and Medicine of the Future

“The feedback from patients is now so strong that I know predictably, as a doctor, this will change a person’s life.”
–David Gersten, M.D., author of Are You Getting Enlightened or Losing Your Mind?

“Earthing is a revolutionary health breakthrough that will change your life. Read this book, get grounded, and start the process of breaking the stress and illness cycle.”
–Martin Gallagher, M.D., D.C., author of Dr. Gallagher's Guide to 21st Century Medicine

“This works! It has great promise. Something simple that should be used everywhere.”
–Richard Delany, M.D., Milton, MA

“Wonderful book! Earthing is a return to the healing power of Nature. Scientifically based and intuitively correct, here's a simple but powerful way to restore your health on all levels."
–Hyla Cass, M.D., author of 8 Weeks to Vibrant Health

“Sleeping grounded gives me sound uninterrupted sleep. I awake feeling refreshed even with all my traveling."
–Supermodel Miranda Kerr

“Earthing has been a huge boost for me and the recovery process from injuries and exhaustion. I’m able to come back a lot stronger and feel a lot better.”
–Chris Lieto, three-time Iron Man triathlete champion

craig-oxley - June 6, 2010 10:12 AM (GMT)

Welcome to the new frontier of Earthing.

Wednesday, March 10, 2010
By Gaetan Chevalier, Ph.D., Director, Earthing Institute

As director of the Earthing Institute I look forward to the many exciting discoveries ahead related to the simple proposition that good things happen inside our bodies when we connect to the Earth beneath our feet.

As a researcher involved primarily with the body's electrophysiology (how the body produces and utilizes electrical energy), I find it rather amazing that at this point in the human timeline we are just starting to scientifically explore the benefits to health that come from direct contact with the planet we live on. It is obvious that past cultures, and even indigenous people today, put great emphasis on connectedness to the Earth. Finally, we are investigating the precise dynamics and benefits of this connectedness.

The studies I have been involved with have yielded an intriguing glimpse at what appears to be a new, more vital and robust human physiology. The body's inner workings are different when we connect to the Earth either by being barefoot outside or sleeping on the Earth as was the case throughout most of evolution until only very recently, or through the utilization of practical Earthing products indoors that allow us to sleep, relax, and work grounded. The impact on our body, these initial studies strongly suggest, is a powerful and positive shift in the physiology that may one day give rise to a new definition of what is normal.

Earthing restores a lost electrical signal to the body that seems to stabilize the complicated circuitry of our essentially electrical body. My research shows that this has head to toe repercussions and many benefits for the hardware and software of our built-in self-regulating and self-healing mechanisms. For many people the shift is practically equivalent to charging a failing battery or restoring power after constant brownouts.

Those of us involved in Earthing research hypothesize that Earthing transfers negatively charged electrons into the body that are abundantly present on the surface of the Earth. Electrons are the "object of affection," so to speak, of positively charged free radicals, the biochemical agents causing oxidation in the body. Electrons are the source of the power of antioxidants. The influx of electrons from Earthing neutralizes or otherwise satisfies and quenches free radicals, stopping them from stealing electrons from healthy tissue that results in tissue damage and chronic inflammation at the heart of so many common and serious diseases. Here, seemingly, is a natural, profound, and simple remedy for chronic inflammation: connect to the Earth.

Modern living has increasingly separated humans from Mother Earth and its great natural commodity of unlimited, subtle health-nurturing energy. This energy has now been discovered scientifically and with that discovery the magnificent prospect of doing great good for the entire population of our planet.

We welcome your comments, questions, and feedback.

Earthing and Medication

Stephen T. Sinatra, M.D., F.A.C.C.
Co-author, Earthing
Friday, May 21, 2010

Can Earthing products be used if you are on medication? That's a question I hear fairly often. The answer is yes, but with a prudent qualifier. Keep in mind that Earthing reduces inflammation in the body and restores natural internal electrical stability and rhythms. Any doctor would applaud such benefits and improvements. But because of such changes, as good as they are, it is possible with continuing grounding, such as sleeping grounded at night, medication dosages may become excessive, and perhaps even unnecessary in some cases.

Years ago as a practicing cardiologist in Connecticut, I often found myself having to reduce the level of Warfarin (Coumadin) for patients coming back to their homes after snowbirding in Florida over the winter months. Their blood coagulability had changed. I thought it was simply a result of going from warm weather to cold weather. I was wrong. I didn't know anything about Earthing back then. I now know that the reason for the change was because they were going barefoot for many hours during the day and swimming in the ocean or in concrete pools. They were grounding themselves!

There is something very special and healing that occurs in your body as a result of being in direct contact with the Earth. I regard it as pretty much the equivalent of being on a treatment table. Your body is absorbing the natural, subtle electric energies omnipresent on the surface of the Earth. There is an instant shift in your physiology. We see that happening in laboratory studies that measure the electrical activity inside your body.

Logic tells us that the normal state of humans is to be grounded, that is, connected directly with the Earth. Most of us in the so-called developed societies function ungrounded, wearing plastic and rubber soled shoes, and no longer living on the Earth but above it and in structures that separate us from the Earth. For millions of years, our

ancestors evolved in intimate connection to the Earth. We think that the evolving body adapted itself to the energies and frequencies in the ground and that by being ungrounded the body malfunctions in one way or another, or in many ways. Think of a flickering light bulb that is not fully connected to its energy source.

Humans have increasingly adopted unnatural lifestyles, causing self-inflicted stress and illness. We regard the separation from Earth's natural energies as one example of an unnatural lifestyle, along with more familiar factors such as poor diet and lack of exercise.

Reconnecting to the Earth, such as being barefoot outdoors and sleeping or working indoors while using Earthing systems, is extremely beneficial. However, our research is in an early stage and we have not completed any direct studies related to medication, including Coumadin, a commonly used medical blood thinner and anti-clotting agent. In general, our experience suggests that some patients taking medication are able to reduce their dosage level. For that reason, we highly recommend that people on medication and considering Earthing should consult with their doctors first and then monitor their medication carefully.

Earthing helps balance the nervous system, lower stress, reduce inflammation and inflammation-related pain, and improve sleep and energy. The research also suggests that the electrodynamics of blood, a subject not very familiar to doctors, is also improved, and this effect may lead to a more desirable blood viscosity (thickness), reduced aggregation of red blood cells, and better overall circulation.

Your doctor is looking out for your well-being and will naturally be reluctant about something new that he or she has no knowledge about. If you are under a doctor's care, we strongly advise you to consult with your physician before grounding yourself. If interested, the doctor can read our book, Earthing:The Most Important Health Discovery Ever?, as well as check out the research we have posted elsewhere on this website. Keep in mind that Earthing is nothing more than the equivalent of standing or walking barefoot or sleeping on the ground. The same natural, subtle electric energy that your body would absorb from being in direct physical contact with the Earth outside is the same energy that you receive when sitting or sleeping indoors and using an Earthing product. It is something totally natural.

For those of you on Coumadin or any critical medication, you should decide with your health care giver about grounding yourself. If you decide to do it, it may be prudent to do so for shorter periods in the beginning, such as walking barefoot in the park or in your backyard, where it is, of course, safe and comfortable to do so, or ground yourself for a few hours while you watch television. As you slowly increase your Earthing time, monitor your situation carefully, including how you feel, so as to determine if your dosage of medication needs to be lowered. Ground with caution, and under the watchful eye of your physician.

craig-oxley - June 6, 2010 10:15 AM (GMT)

[dohtml]<h2>Earthing Basics</h2>
<p>
Q: In an age when there are so many discoveries and health-related technologies emerging every day, why do you think the concept of Earthing is so profound?

A: What is most profound about Earthing is that it is so natural and simple, and that it affects every aspect of human physiology. When you ground yourself, the entire body readjusts to a new level of functioning, the level, in fact, it seems to have been designed for throughout evolution. Many people who have lived Earthed for some years say that they do not want to go back to living ungrounded. They feel the difference. Living Earthed broadly elevates your quality of life to a level that seems not otherwise possible.

James Oschman, Ph.D., an internationally-renowned expert on energy medicine and a member of our board of advisors, describes the phenomenon thusly: “Recently I attended a meeting on the East coast. One of my colleagues came in from the West coast. She had a bad case of jet lag. I told her to take her shoes and socks off and step outside on the grass for 15 minutes. When she came back in, she was completely transformed. Her jet lag was gone. That is how fast Earthing works. Anyone can try this. If you don’t feel well, for whatever reason, just make barefoot contact with the Earth for a few minutes and see what happens. Of course, if you have a medical problem, you should see a doctor. There is nothing that comes close to Earthing for quick relief. You can literally feel pain draining from your body the instant you touch the Earth.”

Q: Can you wear any type of footwear and still be earthed?

A: No. Standard plastic/rubber or composite soles do not conduct the Earth’s electric energy. Most shoes today are made from those materials. You need leather or hide soles, which used to be the primary footwear materials in the past. The foot perspires and the moisture conducts the energy from the Earth through the leather and up into the body. Leather isn’t quite as good as bare feet on the ground but certainly much, much better than standard soles that are insulating. Hopefully soon shoe companies will begin making grounded shoes.

Q: Would it be considered Earthing to plug something into the ground port of a wall electrical outlet, for instance, a wire and wrap it around your ankle or wrist?

A: Don’t do it! Unless you are an electrician or an electrical engineer, it is highly recommended not to “experiment” with plugging “something” into a wall electrical outlet.

First and foremost, it is unsafe to plug a bare wire into an electrical ground in any case. An outlet should always be checked to see if it is properly grounded. All the authorized Earthing products are specifically designed for safe, biological grounding of people. They have built-in resistors that limit the flow of current in order to prevent the unlikely possibility that electricity would flow through the connecting wire and possibly hurt someone. They allow the Earth's natural energy to come through but not any potentially harmful electricity. In this respect, the resistor acts like a "kink" in a hose. Earthing products for personal grounding have built-in protection similar to the systems utilized in industry throughout the world to prevent electricity and static from damaging sensitive electronic parts.

Q: I live in Chicago and my cement basement floor is cold, so I am reluctant to ground myself bare foot on that surface. Could I get grounded there by using an un-insulated metal container, filled with warm water and still get the same results?

A: Yes. That should work.

Q: Does Earthing occur if you work, stand, or walk on a ceramic tile floor?

A: It depends on whether the tile floor sits on a concrete slab or on the ground. If so, the energy could come through. If the tile sits on plywood or some other kind of wood, plastic, or vinyl understructure, you are not likely to get any conductivity. Also depends on what kind of tile. Ceramic tile with a glazed finish on the surface will, like glass, probably prevent the Earth's energy from coming through.

Q: Why does the Earth's electric field transfer so easily to the body?

A: The body is mostly water and minerals. It is an excellent conductor of electricity (electrons). The free electrons on the surface of the Earth are easily transferred to the human body as long as there is direct contact. Unfortunately, synthetically-soled shoes act as insulators so that even when we are outside we do not connect with the Earth's electric field. When we are in homes and office buildings, we are also insulated and unable to receive the Earth's balancing energies.

Q: What is the difference between the Earth's electric field and the electric field used to conduct electricity in our homes?

A: The Earth's electric field is mainly a continuous direct current (DC) producing field. Throughout history, life on the planet has attuned our biology to this subtle field. By comparison, home wiring systems in the U.S. use 60-cycle per second alternating current (AC). Unless at very low frequency (less that 10 cycles per second) and/or low

power, alternating current is foreign to our biology. This, and other forms of man-made environmental electromagnetic fields (EMFs) are being researched as factors in a variety of stress-related responses. Many people are sensitive to EMFs. Studies show an “association,” but not cause and effect, between living near power lines (or exposure to EMFs on the job) and higher rates of health problems, such as childhood leukemia, brain tumors, certain cancers, birth defects and miscarriages.

Q: What is the difference between the Earthing technology and the use of magnets?

A: Although the use of magnets produce some therapeutic effects when properly applied, magnets cannot provide free electrons, nor can they connect the body with the naturally balancing electric frequencies of the Earth. The patented Earthing Connection technology is the only way, without standing directly on the Earth, to connect with the Earth’s electrons.

Q: Can Earthing protect me from cell phone frequencies?

A: The protective potential of Earthing has not been tested yet on cell phone exposure. There is no research indicating that Earthing will or will not protect a person from exposure to cell phones signals, microwave radiation, or radio frequencies. What we know is that Earthing reduces significantly the induced body voltages generated by simple exposure to common household 60 Hz EMFs continuously emitted by all plugged-in electrical cords (even if the appliance is off), internal wiring, and all ungrounded electrical devices in the home or office. Based in the cases we have seen of people extremely sensitive to such EMFs it is prudent to be grounded as much as possible in the home or office.

<hr />

<h2>Earthing and Health</h2>

Please note that none of the statements made here constitute medical advice in any way or any claim for cure or treatment of any medical condition. Always consult with your personal physician regarding any personal health care issues.

Q: How does Earthing affect the body’s ability to heal?

A: The simplest explanation is that aches and pains and other disturbances in our

bodies are often caused by inflammation. Electrons from the Earth have natural anti-inflammatory effects and are conducted relatively fast throughout the body, which is a good conductor. One of the most profound discoveries in modern biomedicine is that many of the chronic and debilitating diseases of our time have the same cause: chronic inflammation. Scientists now realize that many of our aches and pains arise from small regions in the body where an inflammatory response has taken place, but the inflammation has not completely stopped after the healing process. A low level of chronic inflammation can continue for years, damaging normal tissues and wasting energy. Many scientists believe that the human immune system evolved over a long span of time during which we were in virtually constant barefoot contact with the Earth. We believe that the immune system began functioning less efficiently as humans increasingly separated themselves from the Earth. One recent example is the advent of shoes with insulating soles about 50 years ago. Chronic disease, inflammation, and insomnia have skyrocketed ever since and the loss of connection with the Earth may be one totally overlooked cause.

Q: In your clinical studies, the physiological effects of Earthing have been almost immediate. Can you explain this?

A: The body is a good conductor of free electrons. It is a repeated observation that Earthing produces beneficial effects very rapidly. When people are grounded through the feet (either by standing barefoot on the Earth or via grounded EKG patches in experiments), they sometimes feel a tingling sensation moving up the legs. We associate this with the apparent movement of electrons up into the body. In our research, we have “clocked” the speed of this activity. We figure it takes about 20 to 30 minutes to reach sites of pain and inflammation and then begin neutralizing the inflammation. When a study participant says that pain has started to ease we regard this as a sign that the electrons have arrived at the pain site and have started to “go to work.”

Electrons may even be attracted to those sites because of they have a negative charge and free radicals, involved in the inflammatory process, have a positive charge. Once the free radicals are neutralized, we hypothesize that they stop their destructive actions on healthy tissues, leading to an abatement of pain, sometimes quite fast.

We also think that as soon as a person comes in direct contact with the Earth the electrons inside the body “feel” the effect of the ground potential through the Earth’s electric field. We discuss this—the so-called “straw-bead” effect—in Appendix B of our “Earthing” book. The body settles and equalizes electrically to the ground potential almost instantaneously. The information that a new potential has been established in the body is transmitted, also almost instantaneously, to the autonomic nervous system which then responds by “adjusting” electrical activities throughout the body. Muscle tension and skin conductance, and maybe also brain waves, are adjusted in a few

seconds at the most.

Q: Earthing can improve quality of life, but what about aging? If stress causes premature aging, do you think we can add years to our lives by reconnecting with the Earth?

A: We don't know the answer to that question, however Earthing looks promising as a powerful anti-aging strategy. Many researchers have documented the deterioration of the immune system as we age. The name for this is immunosenescence. A prominent medical theory states that one of the causes of general deterioration during aging is free radical damage, technically known as oxidative stress, and resulting in injury to cells. Since Earthing greatly reduces oxidative stress it is expected to increase life expectancy and improve health. There is no question that maintaining a functionally “young” immune system is an excellent strategy for preserving the quality of life and slowing senescence.

Q: How many minutes or hours a day do I need to be grounded in order to feel results?

A: When you come in direct contact with the Earth there is an immediate and natural shift in your body. We have measured these in the laboratory and the changes point to the body functioning better. People with pain often feel relief in varying degrees—from a little to a lot, and to even disappearance of the pain—just by planting their bare feet on the ground outside for a half hour or so twice a day. Sleeping grounded through the night produces many beneficial results, such as better and deeper sleep, more energy during the day, and less pain. Again, the degree of benefits run from slight to dramatic, from immediate to gradual. Some chronically ill people benefit from additional grounding hours during the day, such as by being barefoot or using an Earthing mat or body band. From the thousands of cases that Clint Ober and others have observed over the past decade, the more severe the health problem the more dramatic the improvement seen with grounding in general, unless someone is dying. Even in end-of-life cases associated with pain, it has been reported that the dying person is generally in less pain.

Q: How long does it take to relieve my symptoms?

A: Everybody is different and symptoms are different with different causes. Earthing does not cure anything. Contact with the Earth helps restores the body’s natural electrical balance and reduce stress and inflammation. By doing these things, Earthing can have both short-term and long-term effects, and sometimes quite dramatic and quick. We have had many reports of improved sleep and decreased stress after only one or two nights of sleeping grounded. If the cause of sleep difficulties is long-term insomnia with underlying health issues, improvement often takes more time.

Medical thermal imaging has shown decreased inflammation in minutes. In a study conducted by the California Institute for Human Science instantaneous changes in brain waves and muscle tension were documented when the Earth connection was introduced.

Clearly, lasting changes in stress, sleep, pain and body rhythms occur when we are connected to the Earth for longer segments of time on a repeated basis. Nighttime sleep, when the body is most receptive to healing, is the most beneficial time.

In a general sense, just as you can't direct healthy food, air, or water to create specific desired results in one function or part of your body, the body takes in the natural energy of the Earth and uses it as needed. You may experience benefits for certain issues you were not even expecting improvements in and there may be no change in other areas. Generally, the longer you use Earthing, the more benefits and vitality that become apparent.

Q: I feel better when I sleep grounded. What happens if I stop sleeping grounded?

A: We have heard from many people over the years who experienced relief and improvements and then stopped Earthing. Their gains began eroding. We advise people to make Earthing part of a healthy lifestyle routine and keep grounding themselves. Don't stop. We all evolved connected to the Earth. Staying connected may be the difference between feeling good and feeling bad. Earthing is not just for regaining well-being, but also for maintaining it.

Q: I just started sleeping grounded and feel a bit strange. What could that be from?

A: Initially, some people may feel some temporary discomfort or even flu-like signs, pain or achiness. In practically all cases, this experience is fleeting. This effect stems from a normalization of the body's "electrical system." As that process gets underway, the body's ability to release accumulated toxicity may improve and you could feel that as transient discomfort. Typically, after some initial adjustment, those individuals start feeling better and more energized. The feeling might last a few days at the most but it will go away. If you are uncomfortable, stop using the device for several days and then begin again. In the majority of cases, no discomfort is felt at the beginning.

Q: Are there people who sleep grounded and don't feel anything, or for whom grounding doesn't work?

A: Everybody benefits in some way, but we are all different. The benefits can come quickly and dramatically, such as less pain and better sleep, or subtly and gradually

over time. Often people who are very ill feel the difference more dramatically. Someone with radiant health and who sleeps well may not feel any difference, however, connecting to the Earth is helping to preserve and perpetuate the precious commodity of good health. We regard Earthing as a natural form of anti-aging medicine, whether you feel it or not.

Q: I purchased a bed sheet and noticed tingling in my feet for the first few nights. Should I be concerned?

A: Many people feel tingling in the beginning. It's a sign that the circulation is improving.

Q: I've got pain. How can this help me?

A: Go outside and stand, sit, or walk on the ground barefoot for at least a half hour or so. In that time you may notice that your pain is less. We believe this effect comes from the electrons that flow into your body from the Earth. Inside the body they act to reduce inflammation. There are also "barefoot substitutes," Earthing products you can sleep on, work on, and sit on inside your home or place of work. Think of them as extension cords connecting you in your house or office to the Earth outside.

Q: Do the products need to go where my pain is?

A: Because our bodies are highly conductive, if any part of your body is in contact with the earth, or an Earthing device, all of your body is grounded. However, we have noticed that having the Earth connection near the location of an injury or pain may speed the decrease in inflammation that causes pain.

Q: I have two stents. Could sleeping grounded do any damage to the stents?

A: Not any more than sleeping or walking barefoot on the Earth would cause damage. Earthing devices simply deliver the subtle energy of the Earth inside to where you live and work. The energy helps restore the natural electrical balance in your body.

Q: Can Earthing products be used by somebody who has a pacemaker?

A: There is no evidence that Earthing interferes with the function of a pacemaker. Earthing is the same as walking barefoot on the Earth. Many people with pacemakers sleep grounded and experience the benefits of their medical device and Earthing. To our knowledge, no one with a pacemaker was advised not to walk barefoot outdoors. Just check with your doctor initially and monitor yourself for any symptoms.

Q: Can you use the Earthing products if you have knee and hip replacements?

A: No problem.

Q: I live in a warm climate where we are reluctant to go out barefoot due to parasites in the soil like hookworm and roundworm). The soil never gets cold enough for the parasites to die off.

A: If being barefoot outside is risky, use the Earthing products inside. The best opportunity to gain the many benefits of Earthing is to sleep grounded.

Q: Can I get too much of the Earth's energy by sleeping grounded every night?

A: Throughout most of history we walked barefoot and slept on the ground. We were directly connected to the Earth almost 24/7. That's what our bodies are used to. The combination of insulative shoes and elevated beds has separated us from the natural electric frequencies of the Earth. We believe this separation has contributed to the great increase in chronic diseases and inflammation.

Our body knows exactly what to do with what the Earth provides for us. When we connect to the Earth the amount of the electrons we absorb is driven by the amount our body needs to balance the electrical charge of our body. It is always the perfect amount.

<hr />

<h2>Earthing Products</h2>

Q: How do I know if I need a ground rod or a plug in connection for my Earthing device?

A: Most modern homes have a functional electrical ground system that interfaces with the Earthing plug in device. If your home was built before the 1960s and has not been electrically re-wired, you may require a ground rod or professional installation of a dedicated grounding connection to the Earth. If you are unsure, have an electrician check your home for the presence of a functional ground system or use a commercially available outlet checker.

Q: If I place a ground rod in the earth outdoors is it OK if it gets rained on?

A: Totally OK. The presence of moisture increases the flow of electrons from the Earth. That's why it's great to stand or walk barefoot in damp grass or in the surf or wet sand at the beach. If you live in a very dry climate and are using a ground rod, you will want to place it in the earth where there is some moisture. You can even water the ground rod every week or so.

Q: I live in an old apartment building that does not have grounded electrical outlets and I can not put a wire outside to the Earth. What can I do?

A: As the benefits of Earthing become more widely recognized, solutions such as retrofitting older buildings with dedicated grounding systems, and adding them to plans for new buildings will come about. Meanwhile, try to spend some barefoot time in nature if possible, and consider using an Earthing device at the office and when you travel.

Q: Is it OK to use the United States style Earthing plug in countries with 220 volt electrical systems if I use an adaptor, converter or transformer?

A: No! Ground rods and dedicated grounding systems can be used safely internationally. Electrical systems vary greatly worldwide. Earthing plugs designed especially for specific countries outside the US and Canada are gradually being developed.

Q: Do Earthing products run on electricity?

A: No. They simply pick up the Earth's energy through the ground port of a properly grounded outlet or from a ground rod placed directly in the Earth and deliver it via a cord to the conductive Earthing pad, mat, sheet, or band specially designed for human grounding. When your body comes in contact with the Earthing product you absorb the Earth's energy. Earthing products are like "barefoot substitutes," enabling you to receive inside your home or office the outside energy of the Earth.

Q: Can I become electrocuted by an Earthing product?

A: No. Earthing yourself by sleeping, working, or sitting grounded indoors has no relationship with electrocution. When you plug in the cord of an Earthing sheet or mat into an electrical outlet, the plug, cord, and product are designed to only conduct the ground energy, from the ground port in the outlet, to your device. It does not conduct the electrical power that operates your lights and appliances in the house.

Q: Do I have to be concerned about being hit by lightning during a thunderstorm if I am grounded in my home?

A: Lightning is a massive natural phenomenon that is unpredictable and challenging to totally protect against. It is poorly understood. Homes are rarely hit by lightning. When this does occur, the lightning usually takes the path of least resistance to the ground, such as large conductive systems like the plumbing pipes, electrical wiring network, or telephone and cable TV lines, all of which are directly grounded to the Earth.

The National Safety Council reports that the odds of dying from a lightning strike in one year are 1 in 6 million (www.nsc.org/research/odds.aspx). To put this in perspective, the chance of being hit and killed by an automobile as a pedestrian in the same period is 1 in fifty thousand—a risk 120 times greater. What these statistics suggest is that being hit by lightning is rather unlikely. However, follow standard lightning safety guidelines as directed by National Weather Service (www.lightningsafety.noaa.gov) if you live in a lightning-prone area. Disconnect your Earthing device and don't use it during lightning and thunderstorms.

Q: I started sleeping on an Earthing sheet and noticed that I feel warmer. What's going on?

A: In our research, contact with the Earth contributes to good circulation and relaxation of the body, including blood vessels. One byproduct is more heat in the extremities and throughout the body. We have seen people quickly develop a rosier color in their skin. Many people have also reported feeling some initial tingling in the extremities.

Q: My Earthing device has a white plug that fits in a three prong outlet. How do I know if the outlet is grounded?

A: The two lights on the white plug must be green to indicate a grounded outlet. Some Earthing products do not have the white plug. They have a prong that simply inserts into the ground port of the outlet. These products come with a commercial outlet checker that you can use first to determine if the outlet is grounded. Two orange lights on the commercial outlet checker indicate a correct ground is present.

Q: Once the Earthing product is plugged into a grounded outlet should I always leave it plugged in?

A: Yes. For cleaning and washing purposes, you simply unsnap the cord from the product. There is no need to remove the plug-in end of the cord from the outlet unless you want to use the product elsewhere.

Q: There are three pins on the white plug that came with my Earthing product.

What are they for?

A: The two standard pins plug into the regular electrical slots only to light the LED to show that the outlet is grounded. The round pin (prong) fits into the ground port to conduct the Earth's energy.

Q: What if the lights burn out on my white plug? Do I need a new plug?

A: When the two green lights are lit that means you have a proper ground. If the plug lights were to burn out, the ground component of the plug would still continue to function, however it is best to replace devices with burnt out lights so that you know for sure that your outlet is indeed grounded. You can either purchase a new plug or a simple commercial outlet checker. You can buy a checker at any store that sells electrical products such as a hardware store, Home Depot, RadioShack, or Fry's.

Q: The lights on the plug are too bright when I am going to sleep. What can I do?

A: Place a piece of non-transparent tape over the lights.

Q: Are all the outlets in my home grounded if one of them is grounded?

A: No. All kitchens and bathrooms must have grounded outlets but the bedrooms and other rooms in the house do not necessarily have a grounded outlet even if they have a three prong outlet. You must test any individual outlet for a proper ground if you plan to use it for an Earthing device.

Q: Can I wear clothing or put a bed sheet over the Earthing device?

A: If your body is not in direct contact with the device, it will require some moisture for the direct current of the earth to flow through the fabric into your body. For some people this occurs naturally during the night when moisture from the body creates the necessary conductivity. It is best, however, to have some bare skin in contact with the device if possible.

Q: Can I wear socks when using an Earthing mat on the floor?

A: Yes, but direct skin contact is best. Feet naturally sweat and will hydrate socks, making the socks somewhat conductive.

Q: I like to wear socks to bed. Do my bare feet have to touch the Earthing bed

sheet?

A: Since our feet are the most electrically conductive part of our body it is best to have your bare feet in contact with the grounded sheet. However, if you must wear socks, try to have some skin—bare legs or any other body part—touch the Earthing mat or sheet. You can place the Earthing product in your bed wherever it is most comfortable and effective for you. If you wear socks to bed because of cold feet, you will often find that your feet warm up naturally from improved circulation when you sleep grounded.

Q: Is it okay to use an Earthing sleeping product along with an electric blanket or on an electrically heated mattress pad or waterbed?

A: There is nothing wrong with using an Earthing sleep product with any electrical devices as long as those devices are in good working order.

Q: How are the Earthing sheets different from an electric blanket?

A: Earthing sheets do not heat up as does an electric blanket. They only conduct the subtle energy from the ground. They do not conduct the electrical energy that flows in the electrical system of your house and powers your lights and appliances. If you want to know about safety issues related to the use of electric blankets, visit the following website: http://www.electricblanketinstitute.com/safety.html There are no additional safety issues regarding the use of an electric blanket when sleeping grounded. The Earthing device cords contain a current limiting resistor that prevent any harmful effect should an electrical event such as a short develop in an electric blanket.

Q: Can I plug the Earthing product into a surge protector or extension cord?

A: Yes, as long as they have an existing ground port (for the third prong) which will connect with the grounding system in the home or office.

Q: How long will an Earthing sheet last before it wears out?

A: Sheets made with cotton, polyester, and conductive silver fiber have withstood rigorous testing conducted by an independent testing lab. After 100 wash/dry cycles, the conductive silver fibers show virtually no breakage or wear. When cared for properly, your sheet should last as long as any good quality bed sheet.

Q: Are the sheet threads really silver? Why?

A: Any metallic material will conduct the flow of electrons. Earthing devices typically use

carbon or silver as the conductive agent. Silver is highly conductive and very strong, allowing it to hold up well with frequent use and washings. Moreover, it is inherently anti-microbial.

Q: Is the Earthing sheet washable? What about care and cleaning?

A: Your sheet may be laundered just as you would wash other bedding, using a gentle wash cycle and a mild detergent. Low heat drying is recommended. However, NO chlorine bleach or fabric softener should be used. When necessary, use a hydrogen peroxide-based non-bleach to remove stains and/or to whiten your sheet.

Q: How do you clean an Earthing mat?

A: Mats can be cleaned with ordinary dish soap and water.

Q: I have used various devices that simulate the frequencies of the Earth. How is this different?

A: There are many effective therapeutic devices available that use a variety of frequencies. Earthing products simply conduct the actual frequencies of the Earth to your body without any simulation and serve as extension cords from the Earth to you. The signal they carry includes all of the subtleties inherent in nature that our bodies have attuned to over millions of years. Earthing is totally natural.

Q: Can you use an Earthing sleep system over a mattress pad that has magnets embedded in it?

A: There is no problem with using an Earthing sheet over a magnetic mattress pad. The magnets in the magnetic mattress pad produce a static magnetic field that would naturally go through and extend beyond the surface of the Earthing sheet similar to the way it passes through a regular sheet.

Q: My dog sleeps in my bed with me and sits at my feet when I am at my desk. Is it safe for him to touch the Earthing product?

A: Yes. Animals naturally want to spend time in contact with the Earth. Most indoor pets share our lifestyle causing them to be separated from direct contact with the Earth. People report that pets indoors are attracted to grounding sheets and mats.

Q: Can I ground myself while driving the car?

A: Yes. The car is two tons of metal. It is a ground plane by itself. Sitting on a conductive auto pad connected by a wire to the metal frame of the car helps eliminate

static electricity that builds up on the body. Such static electricity can contribute to fatigue and tension.

Title: Heat wrap pad
Description: *Heat wrap, Heating pad, Heat wraps*

billfryer - May 26, 2010 07:20 AM (GMT)

Heat wrap pad is a revolutionary product that uses infrared radiation to heal up the body pain and muscle stress. Infrared is the safest mode to heal up the body pain. It penetrates up to 2 inches into tissue muscles. It means that this is the best heat therapy as it treats deeper than any other heat therapy. The best thing about the product is that it does not emits electro-magnetic radiation like other heat therapies.

Allergy Free Living - Spring Pollens

How do you live allergy free if you are allergic to pollens? Well you just need to know which pollens are active and what their frequencies are. Good weather has returned and a swine flu or other viral infection in combination with allergies can really be nasty!

Go to pollen.com and insert your zip code and you will see todays predominate pollens. For 02144 the pollen count is medium today and going to high on the weekend. Allergy sufferers better be ready or you will be miserable.

Todays pollens are primarily Juniper and Poplar. We can create a frequency program that runs the pollen frequency for 12 seconds out of every minute. This is enough to give your immune system assistance and eliminate allergy symptoms. Your allergies are an inadequate immune response to the pollens entering your body. They are living things and cause an immune response. If your immune response is not adequate to eliminate them you have allergy symptoms.

Here is the program today for Juniper and Poplar. With an F165 frequency generator connected to an SC1 you can broadcast these frequencies to yourself wherever you are. Call Dale Fawcett for details on how to do this: 360 598-6585 dale.fawcett@gmail.com

Frequency Foundation Workshop - Las Vegas 10-11 July 2010

You voted for Las Vegas over San Diego for a workshop on 10-11 Jul 2010 and this Workshop is for you!

Now tell us what YOU want to learn using my updated and far more efficient and inexpensive Remote Lab. We'll also be working with the F-165, custom designed SC-1A, F-Scan, ABPA and other very special research devices with many new surprises, like easy F-165 program selection.

We have about 15 research partners ready to attend the July 10-11 workshop. Seating will be limited so now is your time to ask questions, e-mail me or Dale at dale.fawcett@gmail.com (or call Dale at 360 598-6585) soon with your phone # for many more details that we cannot post at this time. We should have the hotel next week ready for reservations. It's looking now like the lovely Monte Carlo on the strip with possible $49/night rooms (we're working on it! And excellent airline fares from all over the world.

This is YOUR workshop and we appreciate your input. We only do them on demand and since there is NO Rife Conference this year we've had a large request for this cutting-edge frequency work.

Seating is limited even if you're thinking about it drop us an e-mail with question so we may continue to custom design this event for your needs. We had a fantastic time in Kauai a few months back let's see if we can top Kauai. As usual all we do is research and education for your entertainment and no medical claims whatever are made.

Regards,
Jeff

craig-oxley - March 27, 2010 04:23 PM (GMT)

Cranial Electrotherapy Stimulation (CES) Provides an Alternative Non-Drug Treatment

Tuesday, March 23, 2010 by: Katherine East
http://www.naturalnews.com/028418_electrom...ine_health.html

Cranial Electrotherapy Stimulation (CES) is non-invasive alternative therapy that involves passing very small electrical impulses (micro-currents) across the base of the skull. This is done by placing electrodes or clips on or near both ears. Cranial Electrotherapy Stimulation alters the electrical activity of the brain and is being considered a safer alternative to drug treatments for conditions such as insomnia, depression, drug addiction, headaches and even ADHD.

Electrotherapy is not new to the world of healing. Ancient civilisations have recorded the therapeutic use of electrostimulation. Artwork in Egyptian tombs demonstrate the healing use of the Nile catfish, which emits an electric shock when touched. The Black torpedo (an electric ray fish) was prescribed by the Roman physician Scribonius Largus for relieving headaches and gout in 46 AD (his patients had to stand on a live fish).

A number of scientific studies have indicated that CES has many positive effects. The Harvard School of Public Health conducted randomised, controlled trials comparing placebo treatments with CES. The CES proved to be substantially more effective than placebo in alleviating anxiety, headache and pain. Further studies confirmed that CES increased the attention and concentration in patients while they completed a psycho-motor task. These findings could be valuable in providing non-drug assistance to learning-disabled children, such as those with attention deficit/hyperactivity disorder (AD/HD).

How Does CES Work?

The pulsed electrical currents are believed to affect the limbic system, the reticular activating system, and/or the hypothalamus and to stimulate regions that control pain messages, neurotransmitter creation, and hormone production via the hypothalamic-pituitary axis.

The electrical current is believed to increase the brain's levels of serotonin, beta-endorphin, GABA and DHEA and to lower levels of cortisol and tryptophan. These substances influence the chemical activity of nerve cells in the nervous system.

CES stimulates activity in some neurological systems and decreases activity in other areas by changing the electrical and chemical activity of nerve cells in the brain stem. This produces increased alpha rhythms (electrical activity patterns in the brain) that are accompanied by feelings of serenity, relaxation and increased mental focus. This reduces agitation and the effects of stress, helps balance mood and controls sensation and perception of certain types of pain. Decreased delta rhythms suggest reduced drowsiness and decreased beta rhythms are associated with reductions in anxiety, ruminative thought, and obsessive/compulsive-like behaviours.

CES should not be mistaken for (ECT)electro-convulsive therapy also known as electroshock therapy used by psychiatrists to treat patients with severe depression. Shock therapy uses a current that is 1000 times greater than Cranial Electrotherapy Stimulation (CES).

The most common and recognised treatments with CES are for anxiety, depression and insomnia. It is also used to treat other conditions such as stress, headaches, cognitive dysfunction in head-injured patients, fibromyalgia and pain and has been shown to be effective with virtually no adverse effects.

The outcomes of the studies done indicate that Cranial Electrotherapy Stimulation is a good potential substitute for drug therapy in the conditions noted above, especially where mainstream drugs may have undesirable side-effects including dependency (addiction). It has also shown positive results in the treatment of a variety of chronic conditions, including reflex sympathetic dystrophy and multiple sclerosis, and as part of the supportive treatment of alcoholism and drug addiction.

Medical Mafia Hits Another Health Freedom Provider

Wednesday, March 10, 2010 by: Paul Fassa
http://www.naturalnews.com/028336_medical_...th_freedom.html

Very recently this year, the FDA had another victory in their unjust war on alternative health when they succeeded in railroading Jim Folson into a 51 month prison sentence. He is 68 years old. Jim Folson was a distributor of Rife machines and part of the international movement attempting to keep Royal Raymond Rife's incredible technology. Rife's technology involved machines that create radio frequencies to resonate with disease causing microbes' energy vibrations, causing their destruction.

Rife's Technology After His Persecution

The normally reclusive low key scientist Royal (Roy) Rife was a broken man after the death of his wife and the oppression from the Medical Mafia that destroyed his scientific achievements, which were recognized as valid and used by many in the mainstream medical community at the time. He ran off to Mexico around 1950 and succumbed to booze and tranquilizers, passing away in 1971. The Rife saga and technical details are in the Natural News article sourced below.

Several of Rife's colleagues and medical practitioners attempted to continue using his machines and advance the technology. But the FDA was on the warpath, threatening to revoke their medical licenses, confiscating their equipment, destroying their records, and jailing those who tried to continue producing the machines.

What's left today is an international loosely knit network of technical types who have modified Rife's original machine with current electronic technology, making machines more user-friendly and compact. Along with the hardware, a complete encyclopedia of Rife's research that identifies the resonant frequencies of various pathogenic microbes,

whether viral or bacterial, is available from sources other than the Rife machine distributors to disassociate claims of curing that attract the FDA gestapo.

But the recently persecuted and prosecuted Jim Folson, in his innocent naivety, did package some of his machines with that encyclopedia. This and the phrase "for experimental use" on the machines was considered cause for the FDA to raid Jim's home. They did so in 2003 without warning, using local (San Diego) and federal authorities with guns drawn and excessive force to confiscate his machines and records. But he was charged only recently, just before the statute of limitations expired.

Jim Folson, a gentle, compassionate family man and devout Christian, seems to be one of those who thinks that others see the world the way he does, humanely and rationally. Everyone who knew him or did business with him recognized his noble nature. Oblivious even to the obvious tragedy of Rife and others, Jim refused a plea bargain slap on the wrist that required he would no longer produce and distribute the machines.

He considered his situation as an opportunity to take Rife's technology to a public trail, clear Rife's name, and put the underground Rife technology community on the ground's surface in a positive public light, where it should be! However, Jim didn't realize the injustice of the justice system when Big Brother prosecutes!

The Trial

Jim went into debt for over $250,000, for what he thought was the best defense counsel money could buy in San Diego. Jim's friends and colleagues who attended the proceedings were wondering if his defense team was worth $250! Most of the documentation on Jim's behalf was denied. Only two defense witnesses were offered by the attorneys, and their testimonies were twisted by the prosecution to an unenlightened jury with virtually no protest or rebuttal from Jim's attorneys.

The government reportedly spent a million dollars on Jim Folson's case to ensure unfair trial. They weren't just after him; they were protecting the Medical Mafia and Big Pharma by intimidating the application of Rife's superb and safe technology.

Frequencies Disrupt Cancer Cells

mydigitalfc.com
By Purnendu Ghosh Dec 21 2009

The research conducted at the Israel (Novocure, Israel Institute of Technology, Weizmann Institute of Science and Elisha Medical Centre) indicate disruption of cancer cell replication by alternating electric fields. The effect is found to be selective, affecting only dividing cell lines and sparing the quiescent ones. The electric field arrests cell proliferation as well as destruction of cells while undergoing division. Just before a dividing cell splits in two, it briefly forms an hourglass shape before the two daughter cells pinch off, and this shape is particularly vulnerable to electricity. The current gets concentrated at the cell's narrow waist, and at the very moment of division, the cell membrane is destroyed, and the cells disintegrate. The mechanism of action of the fields, researchers say, depends on disruption of the microtubules of the mitotic spindle and the electric forces resulting from focusing of the field in the dividing cells. The spindle is composed of cell components known as microtubules. The microtubules contain components that have high electric dipole moment, in which there is a large separation of opposite electric charges. Therefore, parts of the mitotic spindle are greatly influenced and apparently get disrupted by an electric field.

The cancer fighting abilities of this technique are being evaluated on human patients with recurrent glioblastoma multiforme (GBM); a fast growing, and difficult to treat form of brain cancer. This new technique exploits the difference between normal cells and cancer cells; it acts only on physically splitting cancer cells. The researchers are optimistic as they observed slower than usual progress in the development of brain tumour; in some cases even cell regression was observed. It is believed that this technique will work on all type of cancers and can possibly be applied to many different disease types. When the technique is applied in association with chemotherapy, its

effect has been found more promising; the electric fields appear to make the cancer cells far more susceptible to chemotherapy without any additional increase in side effects and toxicity.

Brain Cancer Zapper

Watch this video about a brain cancer "zapper" on HowStuffWorks. Using electrical energy to zap cancer cells may sound like a strange idea, but clinical trials at 12 major hospitals around the country are now testing it against the deadliest form of brain cancer. Hear from one study participant who a year ago was given only six months to live. See how the brain cancer zapper works in this video from ScienCentral.

The researchers are optimistic as they observed slower than usual progress in the development of brain tumour; in some cases even cell regression was observed. It is believed that this technique will work on all type of cancers and can possibly be applied to many different disease types. When the technique is applied in association with chemotherapy, its effect has been found more promising; the electric fields appear to make the cancer cells far more susceptible to chemotherapy without any additional increase in side effects and toxicity.

craig-oxley - December 21, 2009 05:57 PM (GMT)

Carcinogenesis: Stopping it with electronic medicine

Thursday, December 10
http://www.frequencyfoundation.com/

People ask me regularly about electronic medicine and cancer cells. I discovered this draft of a post from 2002 that was never published that provides some initial insights. Further work can be seen at other parts of this site noted at the end of this blog item.

There are several steps to current thinking on dealing with cancer cells:
1 Nutritional and lifestyle factors described elsewhere are critical
2. Eliminate the Rife BX BY complex
3. Eliminate the Gregory cancer virus
4. Eliminate parasites that promote tumor growth
5. Eliminate viruses that cause malignant cells
6. Target specific malignant cells for elimination

There is abundant epidemiological data from all over the world on cancer incidence for a wide variety of tumors in animal and human populations. My thesis advisor was Editor of the Journal of the National Cancer Institute in the late 1970s and early 1980s. He gave me a stack of over 300 papers from the medical journals with carcinogenesis dose reponse curves for many different species. All the curves looked different. He told me to explain why they were all different and he would give me a Ph.D. I then spent about 8 years doing supercomputer mathematical analysis of data on various types of cancer. The final data set I focused in on for publication was data from the Third National Cancer Survery which had complete coverage from many states in the U.S. and was the best available data at the time.

For most human cancers, the data clearly shows a four hit process. This can be visualized most clearly in skin tumors. An abnormal cell appears and begins dividing

and creates a small patch on the skin. Within this lesion, a cell mutates, and you have a small patch growing within a patch. This happens a third time, then a fourth time. On the fourth genetic change, the cell breaks through the mechanisms that control proliferation and is malignant. It grows uncontrollably in a fifth phase, with the right promoting environment available, and can get into the bloodstream and migrate to other parts of the body causing metastases.

I have repeatedly seen the frequencies 2008 and 2127 appear in myself and others after eating certain food. I have been able to confirm that this has happened in most people who have eaten a specific meal. This is the BX and BY “virus” form of Rife’s organism. Today, this is not believed to be a virus and some think it is a mycoplasma.

These organisms are clearly not a typical virus. They immediately go systemic throughout the entire body. And it takes days of repeated treatment for long periods with the FSCAN and/or EM6+ to clear the body of them. Meanwhile, I have repeatedly seen non-malignant skin tumors grow quickly and in one case apparently become malignant in the presence of BX and BY. In the presence of this organism it is common to have tumors erupt in less than a day. This helps to explain an interesting aspect of my previous research in carcinogenesis. In some tumors, prostate for example, the data show that the first malignant cell appears 35 years before clinical diagnosis on the average. In a fast growing tumor like lung cancer, the first malignant cell appears about a year before clinical diagnosis. However, it is very common to see people go downhill extremely quickly after initial diagnosis. While some of this is undoubtedly due to the shock of the diagnosis and resultant depression of the immune system, I believe it may be aggrevated by the BX and BY virus.

So the BX and BY organisms are strong promoters of at least stage 3 (premalignant) and stage 4 (malignant) tumors and may even promote earlier stages. As indicated in the paper by Owens DM, Wei S, Smart RC. A multihit, multistage model of chemical carcinogenesis. Carcinogenesis, Vol. 20, No. 9, 1837-1844, September 1999, promotion of early phases of tumor initiation increases the cellular population at risk of mutating into a subsequent phase. This process happens so fast in the presence of BX and BY that I believe the Rife organisms are both promoters and mutagens.

The first approach to stopping proliferation of tumors must be to eradicate the BX and BY virus. Parasites also release substances that promote tumor growth so they must be eliminated as well. However, they are not as dangerous as BX and BY. I believe if everyone was monitored for BX and BY and the infection was eliminated immediately, we could significantly cut cancer incidence in the U.S.

The tumors I have worked with (lung, cervix, skin, colon) have all had the presence of BX and BY which I have eliminated straight away. It is important to realize when targeting the BX and BY organisms with an electronic device that when you kill one strain, another strain proliferates and the frequency changes. These organisms have

very stable frequencies around 2008 and 2127, however, and I have seen them deviate only by 3HZ at the most. It is important to eliminate all of them and you must have the exact frequency to 1HZ and this frequency may vary between 2003-2010 and 2125-2130.

Eliminating the BX and BY organism does not stop cells which have already reached stage 4 and are malignant. In fact, all malignant tumors will not show BX and BY present. They can continue to proliferate and metastasize without BX and BY. The best way to eliminate the malignant cells is to stop the ATP metabolism in these cells while leaving normal cells unaffected. This will prevent mitosis and the cancer cells will die a normal death without proliferating. This appears to be possible with frequencies in the 11,700,000 range. These frequencies also seem to stop mitosis of stage 3 cells as well. The data in the Gorgun paper suggests that this is possible.

Gorgun SS. Studies on the Interaction Between Electromagnetic
Fields and Living Matter Neoplastic Cellular Culture. Frontier Perspectives 7:2:44-59, Fall 1998.

Stopping cellular mitosis requires the exact frequency. I have seen frequencies in the range 11,600,000 – 11,900,000HZ affect tumors. Different tumors of the same type (or perhaps cells in different stages) will have slightly different frequencies. Metastatic tumors will have different frequencies. They must all be eliminated systematically, one by one.

I believe that Rife was able to affect a “cure” in almost every case because his device running at 11,700,000 had enough variability and harmonics to stop mitosis in all relevant cells, even though their frequencies may have been slightly different. The curse of modern technology is that it is so precise, most people are unable to reproduce Rife’s work.

Richard Loyd has a machine that can treat directly at 11,700,000HZ. Most of us are not so lucky. I have found some success, however, in using the FSCAN to treat all the octaves of the exact frequencies in the FSCAN range from 10-3,000,000HZ. It will be difficult but not impossible, in my view, to stop all cellular mitosis using a Rife device that can only treat at less than 10,000HZ.

This is a working hypothesis that has been successful in a some cases and not as successful in rapidly growing tumors. It needs further research and new data may alter the working hypothesis. I present it so that others can take a look and see if they can produce the same results consistently.

Further study on Rife BX BY organims:
What is the Rife BX BY virus?

craig-oxley - November 28, 2009 04:35 PM (GMT)

The singing fatbuster: New machine uses soundwaves to shatter cells like a diva cracking glass

By Jenny Hope
Last updated at 2:00 AM on 28th November 2009

http://www.dailymail.co.uk/news/article-12...king-glass.html

Sometimes no amount of dieting or exercise can shift the unwanted pounds that gather on thighs and stomachs.

Now, it seems, science has found a way to 'sing' them away.

The new Ultra system painlessly 'shatters' fat cells using ultrasound, leaving the deposits to be harmlessly disposed of by the body.

How the fatbuster works

Nicknamed the Opera Singer, it uses vibrating ultrasound notes at different pitches to 'pop' the fat cells, like a singer shattering a glass by hitting the right note.

This month, the machine began treating British patients for the first time. There are no risks from infection, scarring or anaesthetic, unlike liposuction, which uses surgery to suck out excess fat.

The targeted cells are just below the skin and the fat passes into the lymph channels and then the veins before being processed by the liver. It is then burned off as calories or stored more evenly in the body.

Pioneer: Tiggy Walker has tried the lipo-sculpure treatment on her thighs

Clinical trials show an average shrinkage around the waist of almost 2.5in with four treatments. No damage was caused to nerves, blood vessels and other tissue.

The first UK treatments were at LipoSculpt clinics in London and Manchester, with the cost of a one-hour session starting at £300.

A course of four is recommended. Dr David Allamby, medical director and clinic founder, said: 'The device works by vibrating fat cells at their resonant frequency until the walls break open.'

He said many people wanted to 'spot reduce' their thighs or stomach, but found diet and exercise did not necessarily work.

Tiggy Walker, 48, wife of veteran BBC radio DJ Johnnie Walker, was the first person to try out the Opera Singer, made by Israel-based Alma Lasers.

She had treatment on her thighs, which have always been a problem for her.

'Weight loss doesn't just affect my legs,' said Mrs Walker. 'I'm full-breasted and I don't want them reduced, they don't look as perky when you diet!'

Mrs Walker, who will co-host a special Johnnie and Tiggy show on Radio 2 on December 28, said she would never have cosmetic surgery. She can see a distinctly smoother part of the thigh, although it will take three more sessions to complete her treatment.

Device spells doom for superbugs

The prototype device can kill off bacteria, viruses, and fungi in just seconds

By Jason Palmer
Science and technology reporter, BBC News
Thursday, 26 November 2009E-mail this to a friend Printable version
http://news.bbc.co.uk/1/hi/technology/8379604.stm

Researchers have demonstrated a prototype device that can rid hands, feet, or even

underarms of bacteria, including the hospital superbug MRSA.

The device works by creating something called a plasma, which produces a cocktail of chemicals in air that kill bacteria but are harmless to skin.

A related approach could see the use of plasmas to speed the healing of wounds.

Writing in the New Journal of Physics, the authors say plasmas could help solve gum disease or even body odour.

Plasmas are known as the fourth state of matter, after solid, liquid, and gas. They are a soup of atoms that have had their electrons stripped off by, for example, a high voltage.

Plasmas are common elsewhere in the cosmos, where high-energy processes produce them, and they are even posited as a potential source of fusion energy. Their properties have recently been harvested for use in plasma televisions.

Deadly cocktail

But the new research focuses on so-called cold atmospheric plasmas.

Rather than turning a whole group of atoms into plasma, a more delicate approach strips the electrons off just a few, sending them flying.

You can even make it battery operated so you can use small devices - I have one in my hand right now
Gregor Morfill -Max Planck Institute for Extraterrestrial Physics

Collisions with nearby, unchanged atoms slows down the electrons and charged atoms or ions they leave behind.

It has been known for some time that the resulting plasma is harmful to bacteria, viruses, and fungi - the approach is already used to disinfect surgical tools.

"It's actually similar to what our own immune system does," said Gregor Morfill, of the Max Planck Institute for Extraterrestrial Physics, who led the research.

"The plasma produces a series of over 200 chemical reactions that involve the oxygen and nitrogen in air plus water vapour - there is a whole concotion of chemical species that can be lethal to bacteria," he told BBC News.

Professor Morfill and his colleagues have worked out the precise details of the plasma production that effectively kills off such bugs without doing harm to skin, and demonstrated a number of prototype devices that do the job efficiently.

"To produce plasmas efficiently at low cost so you can really mass produce these things for hospitals, that's the big breakthrough of the last year," Professor Morfill said.

The team says that an exposure to the plasma of only about 12 seconds reduces the incidence of bacteria, viruses, and fungi on hands by a factor of a million - a number that stands in sharp contrast to the several minutes hospital staff can take to wash using traditional soap and water.

More applications

Professor Morfill said that the approach can be used to kill the bacteria that lead to everything from gum disease to body odour.

"The idea is scalable to any size, it can be produced in any shape; it's very flexible," he said.

"You can even make it battery-operated so you can use small devices - I have one in my hand right now."

A similar approach, using the element argon instead of plain air, has been demonstrated for application directly to wounds, and initial indications are that speeds healing.

Michael Kong, a bioelectrics engineering researcher at Loughborough University, said it remains unclear whether those effects are through the chemical cocktail that the plasma produces, or simply from the effect of reducing the number of bacteria crowding a wound.

"Either way, it is still a very important breakthrough," Professor Kong told BBC News.

"The ideas are not new - but only recently, collectively, has this community of researchers come up with plasma sources that achieve disinfection but also have minimal impact on skin cells."

Professor Morfill said that more testing of the devices is necessary before they end up in widespread use, but he said that there is already significant interest from industry.

Title: Rectal cancer tumour destroyed by ultrasound

craig-oxley - November 26, 2009 04:06 PM (GMT)

Rectal cancer tumour destroyed by ultrasound in a first

Thursday, 26 November 2009E-mail this to a friend Printable version
http://news.bbc.co.uk/1/hi/health/8380812.stm

A patient with rectal cancer has become the first to have part of their tumour destroyed by ultrasound, say UK doctors.

A team of radiologists, surgeons and oncologists at Hammersmith Hospital in London used high intensity ultrasound to heat up and kill the cancer.

They say the technique will allow faster and more accurate targeting of tumours than conventional treatments.

Hammersmith Hospital will offer the treatment to advanced stage patients.

High intensity focused ultrasound (HIFU) is carried out under general anaesthetic.

The device can treat tumours up to about 40cc volume and can heat the tissue up to 90 degrees centigrade

First patient

The first patient to have the procedure has requested anonymity.

RECTAL CANCER
Almost 38,000 patients suffer from rectal cancer per year in the UK
Approximately a third of these cancers are within the rectum
Patients often suffer from tenesmus - a painful condition where they find it difficult to empty their bowels and need frequent trips to the toilet

They were given a low dose of heat at 70 degrees.

Doctors say they are planning to treat 50 more patients and they will closely monitor them to discover the most effective temperature at which to perform the procedure.

Unlike radiotherapy, HIFU, can be given to a patient a number of times with minimal risk of toxicity.

The study leader, Professor Paul Abel, from Imperial College Healthcare NHS Trust, said: "There is no incision made during the procedure, it's completely non-invasive, so recovery time will be quicker too.

"As this is the first time this procedure has ever been performed for rectal cancer, we need to study a wider group of patients to assess how effective the treatment is and whether it has the potential to be curative or to lengthen a patient's life."

A spokesman for the charity Beating Bowel Cancer said it welcomes "advances to improve the quality of patients' lives and relieve symptoms".

"As this is a world first, we look forward to further studies and results with more patients over a longer period."

Hulda Clark will be remembered as one of the great pioneers in electronic medicine. Her probing of the human body with low voltage frequencies has led to findings that are incredibly valuable to many of us.

Her book, The Cure for All Cancers, was ridiculed by the medical profession when it was first published. However, she has gone on to cure more cancers than any physician I know, and I know a lot of them after being funded by the National Cancer Institute for a decade of cancer research.

There is no better testimonial than from a physician who was told to go home and die by his doctors and instead went home and cured himself with the help of Hulda. People do not have to die of cancer and should do everything in their power when threatened by imminent death to seek out alternative approaches to cancer treatment. If it does not save them, it will at least help save others.

To whom it may Concern:
My name is Scott R. Werner, M.D., I developed Invasive Malignant Melanoma in 1987 with metastasis (Stage 4). The Doctors at my hospital told me to just go home and enjoy the last part of my life and get my home in order. I wasn't ready to die, so I prayed, and the name Hulda Clark came to my mind. An Article written by Hulda was on my desk the next morning (everyone I asked didn't know where it had come from) I gave Hulda a call and she told me how to cure my Cancer. As you can see, that was 22 years ago. I became an advocate Herbalist using the parasite cleanse, Esiac Tea, Cat's Claw, getting people to eat a more wholesome diet, and have seen miracle after miracle because of my one phone call many years ago. When I read your e-mail of Hulda's passing, I couldn't hold back the tears of Gratitude for her. She will be missed!
I honor all of you in continuing Hulda's life work and mission.
Sincerely
Scott Werner, M.D.

Title: Electronic Medicine Workshop - Kauai 4-6 Jan 2010

craig-oxley - October 17, 2009 02:05 PM (GMT)

Electronic Medicine Workshop - Kauai 4-6 Jan 2010

Tuesday, October 6
http://www.frequencyfoundation.com/

Dear Friends of Dale Fawcett and Dr. Jeff Sutherland and Health & Longevity Enthusiasts,

So many of you have requested a workshop with Jeff in the last few years that he has decided to present another one Monday, January 4th, to Wednesday, January 6th, 2010. Come join us on the lovely, tropical Hawaiian Island of Kauai.

To meet your educational needs for the latest in advanced future technology, today, Jeff will focus on his new lab, fantastic Star Trek-like equipment, and exciting new developments since you last saw him. However, we'd also like to hear from you! Send us your requests for whatever special aspects of Jeff's work you'd like to learn about.

Jeff's Private Sessions have always been a big hit. In these, you can discuss anything you wish as he'll have his entire lab set up. As Jeff's time is limited, please indicate your interest ASAP if you wish to sign up for a private, custom-designed session.

The meeting will be held at the lovely and inexpensive Aloha Beach Resort: www.alohabeachresortkauai.com Rooms begin at $96. When you call the hotel ask for their FREE upgrade to an Ocean View room. The finest protected swimming and snorkeling area in Kauai is right in front of this hotel and all the rooms have just been redecorated. Stay a few days before or after the conference for a dream vacation on the most beautiful of the Hawaiian islands. Kauai is a lush tropical paradise with the most sandy beaches of all the islands, where many famous movies have been filmed--Jurassic Park, Raiders of the Lost Ark, South Pacific, and Blue Hawaii. To book your room now, go to www.alohabeachresortkauai.com

Come to this unique, futuristic workshop, and see for yourself why Dr. Nenah Sylver -- author of The Rife Handbook of Frequency Therapy, with a Holistic Health Primer (2009) -- says: “I have used Jeff Sutherland’s services for many years, sometimes for myself but mostly for my beloved dog. Jeff’s scientific knowledge and finely honed intuition helped me nurse her through cancer and Lyme-related infections, extending her life I would estimate by about six years.”

Don’t miss out on cutting-edge technology at this once-in-a-lifetime workshop in Hawaii! For more information, email Dale Fawcett at dale.fawcett@gmail.com or call 360 598-6585. If enough people are interested in this workshop, we will consider doing future workshops in our usual places, i.e. Las Vegas, Seattle, and perhaps the East Coast as well. In the meantime, plan on joining us in Hawaii and post or forward this announcement to your friends and favorite e-groups. See you soon!

Regards,
Dr. Jeff Sutherland and Dale Fawcett
(360) 598-6585

Royal Rife: Cancer Cure Genius Silenced by Medical Mafia

Saturday, September 26, 2009 by: Paul Fassa
http://www.naturalnews.com/027104_cancer_C...ancer_cure.html

What if someone invented an electronic device that would destroy pathogens, bacteria, and even viruses with no toxic side effects? What if that same device could wipe out cancer by altering the cancer's cellular environment or by killing cancer viruses with an electronic or ultra sonic beam? That was accomplished years ago. The researcher who invented and perfected this device had an odd name, Royal Raymond Rife. But his associates and colleagues knew him as Roy Rife.

The original Rife machine, based on a naval radio frequency oscillator, evolved to the Rife Ray Tube. It is the basis of Rife technology that underwent successful trials and experiments as it was developed in the 1930's. You'd think that further research into Rife's findings would have been supported and propagated further for the welfare of all. And at first it was. But guess what, Rife's technology was suppressed by the medical mafia, and very little has come of it. Nothing new here.

How It Works (Basically)

Have you ever seen or heard of singers who could shatter wine glasses by hitting and sustaining the right note? How about striking a tuning fork held next to another of the same pitch that is not struck, but vibrates and makes a tone anyway? These are visible examples of vibrational reciprocity in the sonic range. From this basic understanding, Rife developed what he called resonance therapy.

Imagine if minuscule pathogens had energy frequencies beyond the sonic range that, if induced, would cause the pathogen to implode or explode. This Rife called the Mortal

Oscillatory Resonance or MOR. It is technology within the arena of energetic healing, but more in the western mode of challenging pathogens with technological machinery from outside. With a special microscope of his own making, Rife was able to observe and record the MOR of many pathogens.

Instead of dealing with the vibrational field of the patient, or the patient's chi energy, Rife used high frequency energies created by electronic machinery to alter both pathogens and their environments. The difference between Rife's Ray Beam and common radiation therapy was that only those specific MOR frequencies of targeted microorganisms had negative responses. All other cells were left unharmed. This is the essence of Rife's technology.

Also included in his research was observing morphing pathogenic bacteria and viruses into different less destructive forms. He was among a growing number of microbiologists and researchers who had adopted Pleomorphism as an explanation of microorganism life. Pleomorphism posits that the life form of a pathogenic microbe alters, possibly many times.

Rife also noticed corresponding changes in the tissue or blood environment of these morphing microorganisms. This led to the theory that the condition of the germs' medium, i.e. the blood or tissue, was the cause of disease and not the germ. Rife did observe the pH changes in what is now called the field or terrain in the microorganism's host environment as well as its association with bacterial/viral morphing.

He considered that the field pH changes influenced the microorganisms morphing, causing them to become more pathogenic or more benign depending on the pH factor. This was the precursor to the field or terrain theory as a source of disease that many holistic healers now embrace over the germ theory. Rife was beginning to realize this in spite of being able to kill the germs of many diseases with his ray tube.

Monomorphismwas the accepted theory at that time since microscopy was not able to observe the mutable morphing of microorganisms. This re-enforced the old germ theory and made a lot of people in western medicine happy to be in their profession. What was usually observed with the microscopes of that time were simply shells of dead viruses and bacteria.

Because the electronics of electronic microscopes killed the tiny microbes, electronic microscopes were unable to observe pleomorphic alterations or the result of the correct resonance (MOR) applied for its destruction while alive. As is the nature for accepted doctrine, especially when there are significant monetary interests, monomorphism was in and pleomorphism was out!

This despite the fact that to pleomorphism advocates' glee, Rife's Universal Microscope made observing microbes changing form a reality. Photos and films were provided to

scientists who were open to this, and eventually a couple of prominent scientists gained access to Rife's Universal Microscope to observe the previously unseen phenomena first hand.

Rife's Early Achievements

Royal Raymond Rife left the United States after his medical education and trained for six years at the Carl Zeis Optical Company in Germany. The unique and complex microscope he created used different mediums for bending light than normal optics used prior to his ultimate invention, which he called the Universal Microscope. That achievement alone brought him fame in the inner circles of the scientific community.

However, the mother for this invention was his desire to see the tiniest microorganisms alive for as long as desired, enabling him to notice when they disintegrated or changed form from a focused ultra sonic frequency. The Universal Microscope enabled Rife to painstakingly record the exact frequencies, or MOR (mortal oscillatory resonance) to destroy different pathogens, even viruses, that were commonly found in the blood and tissues from many of the diseases.

During Rife's time, a virus was defined simply as a living microorganism too small to be seen with a microscope. Of course, his unique microscope changed that. With its astounding 31,000X magnifying power, which some say could be boosted to twice that power with special UV lighting, Rife was able to observe microorganisms morph into different forms, sometimes as many as 16, and disintegrate with the corresponding mortal oscillatory resonance (MOR) frequencies.

For his scientific genius, Rife was nominated for the Alternative Nobel Prize, Europe's arrangement to award more risk taking ventures passed over by the Swedish Noble Prize. Rife's genius was boundless, he excelled in microbiology, optics, and other mechanical and electronic applications.

Henry Timken, Jr., the wealthy owner of Timken Roller Bearing Company became Rife's patron, enabling Roy Rife to maintain independent research without interruption. Out of gratitude for a Rife invention that had reduced his production costs, Timken established a laboratory on his estate in San Diego, CA for Rife to research as he desired with the best equipment available. It was a state of the art lab.

Rife was also introduced to Dr. Milbank Johnson, who was the head of a regional medical board and affiliated with the University of Southern California (USC) medical department. Dr. Johnson admired and respected Rife's ideas and ingenuity. As the head of a regional medical institution, he had political clout in the medical community throughout the nation. Dr. Johnson's support of Rife's work enabled Rife to continue his research unabated by medical authority throughout the 1930's.

Dr. Johnson helped Rife network with a couple of eminent bacteriologists who were interested in pleomorphism research, Dr. Arthur Kendall of Northwestern University in Chicago and Dr. E. C. Rosenow of the Rochester, Minnesota Mayo Clinic. Those two participated with Rife by using his Universal Microscope to see what Roy Rife was seeing to confirm their theories.

After experimenting by infecting lab animals and curing them, Rife was confident that his research could now extend to real life human cancer victims. Dr. Johnson set up clinical trials out of USC's medical school. The clinical trail results were monitored by a team of physicians headed by pathologist Alvin Ford, MD.

Rife was presented with 16 terminal cancer victims afflicted by a variety of malignancies. The USC team of physicians declared 14 of those 16 were clinically cured within 70 days. The other 2 took 20 days longer. The treatments included short breaks with nutrients to promote lymphatic elimination of the destroyed microbes.

In 1940, Dr. Arthur W. Yale announced that Rife had discovered a technique for curing cancer so unique and amazing that medicine was on the verge of completely eliminating the second highest cause of disease death in America. Unfortunately, Dr. Yale did not have the last word.

The Beginning of Betrayal and Suppression

Any threat to the medical mafia with a cancer cure that was not dependent on AMA surgery or Big Pharma drugs needed to be openly challenged by the monomorphic crowd, whose theory supported curing by surgical removal, dangerous radiation, or poisonous drugs. And Rife's Ray Beam therapy was not just for curing cancer, but for curing any and all diseases without the use of surgery or drugs!

For every Rifean there were many others whose careers were threatened by anything outside of their cash flow boxes. Dr. Thomas Rivers was among the first to attack, and he was right out of the Rockefeller Institute. He was joined by Dr. Hans Zinser, a Harvard Medical School microbiologist. They declared Rife's theories and techniques as worthless. Naturally, many others in the habit of obedience to authority joined in.

But this was just the beginning of Rife's descent into doom. Around 1936, Rife realized he needed to form an independent company producing more manageable machines than the monstrosity in his lab. Rife contracted an individual who understood his invention, and who demonstrated the ability to package Rife's devices more compactly while maintaining their efficiency. That man was Philip Hoyland, an electronic/electrical engineer.

Rife, Hoyland, and two other associates formed the Beam Ray Corporation with the idea of making and distributing the machines to clinicians and physicians. Soon, along

came the doctor who had never practiced medicine, Morris Fishbein, the notorious alternative cancer cure hit man and head of the AMA. Just as he has done with others who had come up with cancer cures outside the cut, burn, and poison mode, Fishbein made a move to possess and control Rife's technology at first.

He bribed Hoyland with $10,000 to file a suit against Rife in order to obtain the company and include a Fishbein agent on the board of directors while excluding Rife. Ten grand was quite a lot in those days. Rife counter sued and won in 1939. The litigation and betrayal took an emotional and financial toll on the normally reclusive scientist, and he began drinking.

Then the big bad Fishbein decided if he couldn't have the Rife operation, he'd destroy it. This was Morris Fishbein's MO with others who had come up with alternative cancer cures, but would not allow him to virtually steal them away and possibly hide them. He used his Machiavellian clout to ban doctors from using Rife technology and even confiscated equipment.

A small circle of doctors in California continued despite the national pressure, thanks to the protection of a politically powerful medical person, the same Dr. Milbank Johnson who was always in Rife's corner. However, Dr. Johnson passed away in 1944, and the AMA had its way as medical mafia terrorists!

Suspiciously, upon Dr. Johnson's death, many of the documents from the USC clinical trails he had held completely disappeared. Not long after, investigators suspected that he was poisoned just prior to announcing Rife's successes publicly.

Equipment was confiscated, laboratories were destroyed, one doctor was harassed to the point of quitting the profession, and another was reported as having committed suicide! The wife of another doctor had a nervous breakdown, forcing her to receive shock therapy during her two months in a mental hospital. Medical mafia is an appropriate term after all!

Rife MOR Therapy on Life Support

Again, Roy Rife made another attempt at manufacturing and distributing his Rife Ray Beam devices with the technology for using them correctly. He partnered with an engineer named John Crane, who had encouraged Rife to continue. They made a bit of a stir with even better designs that were easier to use around 1960.

But even without Fishbein, who was forced to retire in 1954 because of the AMA scandals discovered by the 1953 Fitzgerald congressional committee, the FDA took over harassment activities and seized Rife and Crane's latest equipment.

All this plus the death of his beloved wife of over 30 years left Rife a broken man. In 1961, at the age of 73, Roy Rife fled the country to nearby Mexico. Rife had added

Valium to his drinking habit, yet he managed to live until 1971, when he died in Mexico at the age of 83. John Crane later explained that Rife was a great researcher, but was not cut out to be a fighter. However, John Crane was a knowledgeable and outspoken fighter.

After Rife's exodus to Mexico, John Crane still attempted to bring Rife's technology to public awareness while railing against the medical establishment's suppression of his constitutional rights. He was criminally indicted and tried on charges involving practicing medicine without a license. The trail jury was screened to eliminate all those with any medical knowledge, especially alternative healing, while retaining an AMA doctor as the jury foreman!

Rife submitted a deposition from Mexico to support Crane's defense, but it was not even admitted. Talk about getting railroaded! Crane was convicted and sentenced to 10 years imprisonment. Two of the three counts against Crane were overturned later, and he was released from prison after serving 3 years and 1 month.

Yet even after his release from prison, Crane continued his work underground and compiled and produced a 1000 page manual on the Rife machine's design and use, which has survived after his death in 1995. Thanks to John Crane's persistent work, Rife's ray beam technology managed to stay alive, but only on life support.

In 1986, Barry Lynes, author of The Cancer Cure That Worked: 50 Years of Suppression, a book that chronicles Royal Raymond Rife's life and work, submitted an article to every member of the U.S. Congress and the staff and students of George Washington University's medical school as a last gasp effort to openly investigate Rife's work without bias. Nothing, not even one response, came of it.

Currently, the life support system for Rife's work is a scattered group of technically oriented individuals and holistic and allopathic doctors, connecting by Internet throughout the world, especially from Europe. They are holding Rife's technology together, some even using it, in the hopes that someday it will see the light of day for all of humanity.

Title: Malaria Machine

craig-oxley - September 22, 2009 05:09 PM (GMT)

Malaria Machine

Friday, August 28
http://www.frequencyfoundation.com/

user posted image

Those who understand frequency medicine know that malaria is completely unnecessary and can be eliminated in a few hours. Here is a machine that can do it in 60 minutes for a light infection. Of course this a big hammer to crack the walnut. Much smaller devices can do the job. The good news is that someone is actually doing some testing.

A physician from one of the leading multi-million dollar malaria projects in the world told me at an MIT conference that if they even tested an electromagnetic device on a malaria patient their funding would be totally eliminated.

Dr. Clark Research Association - 28 Aug 2009
David Amrein, Naturopath

Malaria is a condition of which 500 million people are affected every year, with as many as 2.7 million dying, mostly children. Malaria is caused by a parasite transmitted by mosquitoes in warm and damp areas, especially in Africa. The parasites are becoming increasingly resistant against the available drugs.

Prof Henry Lai at the University of Washington in Seattle studied the mechanism by which artemisinin, a natural compound used against the malaria parasite, works to kill the parasite. It has to do with the interaction of artemisinin with iron that is stacked within the parasite. Looking at the iron stacks, Prof. Lai wondered whether treatment with an oscillating magnetic field could maybe kill the parasite.

Lab tests were successful and Prof. Lai published his work in 2000, hoping that others would take up the idea and develop units that could be used to treat malaria with magnetic fields. Unfortunately, this did not happen.

I saw Prof. Lai's study some three years ago and was amazed that 6 years after publication, no one had developed any application of it! So I set out to do just that. It took 12 months to develop three prototypes of the device. They are man-sized devices, the larges one almost 2 meters (7 feet) tall. While developing the units, we started to network with African Governments in endemic areas to see whether we could run a test wit the devices. Finally we had the blessing of the Ghana Health Ministry. My right hand Konrad and myself traveled to Ghana in February of 2008 to start the tests.

How to get three large units into an African country is a science in itself, but we finally sailed around all cliffs and were ready to go. Our first aim was to try the treatment with patients that had los levels of parasites, just to see whether there would be any adverse effects. We worked with 4 patients. There were no adverse effects, but also the before and after tests showed that malaria was cleared in a very short treatment time with our units!

We then went on to work with a hospital to treat a larger number of patients -- the goal was to treat some 30 patients. After a few days we realized that we could not use those tests because the lab at the hospital bungled al lour blood test slides. At the end of our time in Ghana, we had only our first 4 (but very good) results and the useless hospital experience. We did not have the time to continue at that time but instructed a local professional on how to use the machines.

Now our first study is finished and 26 patients were treated. Out of the 26 patients, all except one became negative with the magnetic treatment! One felt worse the day after treatment started and decided to go for medication instead, so he dropped out of the study. The other 25 patients all became negative. And the ones who did not have high levels of parasites, were negative right after the first 60 minutes of treatment! This is so fast that we do not really have an explanation of how it could work so quickly. But the results are nothing short of sensational.

Now our goal is to do a second study and to get others on board to turn this into a household unit for treatment of malaria.

Parasites: New Findings

Wednesday, September 2
http://www.frequencyfoundation.com/

Parasites are easily eliminated from the body within a few hours with the correct frequencies. Each parasite strain requires at least eight frequencies to knock out each stage of the life cycle plus a frequency to knock out a critical protein. For some parasites there will be several strains in the body.

The complexity of multiple frequencies and multiple strains makes it difficult for most researchers to systematically eliminate parasites. Frequency Foundation has spent more than a decade of research to be able to do this consistently and effectively with frequencies only.

Ongoing research on the ability of parasites to evade the immune system is of interest for pursuing frequency strategies that can shorten frequency application time.
Parasite immunomodulation and polymorphisms of the immune system

Abstract
Parasites are accomplished evaders of host immunity. Their evasion strategies have

shaped every facet of the immune system, driving diversity within gene families and immune gene polymorphisms within populations. New studies published recently in BMC Biology and Journal of Experimental Medicine document parasite-associated immunosuppression in natural populations and suggest that host genetic variants favoring resistance to parasites may be detrimental in the absence of infection.

Parasites

Parasites are eukaryotic pathogens, and broadly comprise protozoa, fungi, helminths and arthropods (Figure 1) that complete part or all of their life cycle within a host organism. Like other pathogens, parasites must survive in the face of a highly potent immune system. They succeed in this through a great diversity of strategies for avoiding immune detection, suppressing cellular immunity and deflecting immune attack mechanisms. It has been suggested that the need to overcome suppressive mechanisms of parasites may have led to compensatory adjustments in immune genes that, in an environment where parasitic infection is not endemic, may increase the likelihood of inappropriate responsiveness to self-antigens (autoimmunity) and environmental allergens (allergy). This notion has become known as the hygiene hypothesis [1]. Two recent papers, from Jackson et al. [2] and Fumagalli et al. [3] lend support to this hypothesis.

Cancer Frequencies: Finally a Clinical Trial

Thursday, September 10
http://www.frequencyfoundation.com/

We've known for decades that frequencies are an excellent approach to treating cancer with dramatically less side effects than chemotherapy and radiation. It is nice to finally see a group do a successful clinical trial on this.

This team did not even use frequencies in the range known to kill cancer cells and were successful. Image what they could if they utilized the expertise in the worldwide community working with this technology!

An important finding (pointed out for many years on this site) is that frequencies are specific to specific cells and cell types. This makes it challenging for the average university research groups. As Rife has shown us, getting the exact frequencies requires painstaking work for many years with highly refined tools not generally available.

Also well known, and can be inferred by the data in this study, is that it is difficult to eliminate cancer completely for terminal cases, but possible to signficantly increase the life span and quality of life compared to conventional treatment.

Abstract

Purpose
Because in vitro studies suggest that low levels of electromagnetic fields may modify cancer cell growth, we hypothesized that systemic delivery of a combination of tumor-specific frequencies may have a therapeutic effect. We undertook this study to identify tumor-specific frequencies and test the feasibility of administering such frequencies to patients with advanced cancer.

Patients and methods
We examined patients with various types of cancer using a noninvasive biofeedback method to identify tumor-specific frequencies. We offered compassionate treatment to some patients with advanced cancer and limited therapeutic options.

Results
We examined a total of 163 patients with a diagnosis of cancer and identified a total of 1524 frequencies ranging from 0.1 Hz to 114 kHz. Most frequencies (57–92%) were specific for a single tumor type. Compassionate treatment with tumor-specific

frequencies was offered to 28 patients. Three patients experienced grade 1 fatigue during or immediately after treatment. There were no NCI grade 2, 3 or 4 toxicities. Thirteen patients were evaluable for response. One patient with hormone-refractory breast cancer metastatic to the adrenal gland and bones had a complete response lasting 11 months. One patient with hormone-refractory breast cancer metastatic to liver and bones had a partial response lasting 13.5 months. Four patients had stable disease lasting for +34.1 months (thyroid cancer metastatic to lung), 5.1 months (non-small cell lung cancer), 4.1 months (pancreatic cancer metastatic to liver) and 4.0 months (leiomyosarcoma metastatic to liver).

Conclusion
Cancer-related frequencies appear to be tumor-specific and treatment with tumor-specific frequencies is feasible, well tolerated and may have biological efficacy in patients with advanced cancer.

View Full Version: Dr. Hulda Clark Passed Away on Sep. 3, 2009

Title: Dr. Hulda Clark Passed Away on Sep. 3, 2009

craig-oxley - September 13, 2009 06:07 PM (GMT)

Dr. Hulda Clark Passed Away on Sep. 3, 2009

From Ken Adachi, Editor
http://educate-yourself.org/cn/huldaclarkp...ng07sep09.shtml
September 7, 2009

Dr. Hulda Clark Passed Away on Sep. 3, 2009 (Sep. 7, 2009)

I just read an e-mail from Koen van Klei in The Netherlands informing me the Dr. Hulda Regehr Clark had passed away peacefully in her sleep on September 3, 2009. Tim Bolen reports that Dr Clark had died as a result of complications form a spinal cord injury that had plagued her for over five years. She was 82 years old.

Dr Clark was one of the most important health researcher and scientists of the past 50 years. In my opinion, she stands head and shoulders with the likes of Dr William Koch , Dr Joanna Budwig, or Dr Royal Raymond Rife. And not unlike Drs Koch, Rife, and Budwig, she was hounded, harassed, ridiculed, and tormented by the vested interests of orthodox medicine and Big Pharma who hated her for enlightening the public about the true genesis of disease conditions and making available to anyone who read her books, ridiculously inexpensive and easy-to-obtain Nature-based therapeutic recommendations-which more often than not - worked like gang busters to solve the problem.

She understood that the human body is a child of Nature and functions according to rules of Nature, and not those of mechanistic science. She played a leading role in waking up the world to understand the pivotal role that micro-parasites, toxic metals, and solvents played in the development of chronic disease conditions. Unlike the orthodoxy, who wishes to manage and "control" chronic conditions, Dr Clark was interested in CURING the disease-and that's why they went after her with a vengeance. I took a brief look at her Wikipedia entry before penning this note and I see that the jackals of slander and misinformation gave no quarter or respite, even in the wake of

her passing. I'll expound at greater length in another article about the importance of Dr. Clark's brilliant discoveries and address the upside down, groundless denunciations that incompetent, feckless shills for the Big Medicine continue to heap upon this saintly woman whose only desire in life was to aid and cure humanity of its diseases and infirmities

You can read the memorium notice posted from her publisher at this link:
http://inmemoryofdrhuldaclark.com/dr-hulda...dr-hulda-clark/

and a video about her work at this link

So Sad: Dr. Hulda Clark Died of Spinal Cord Injuries last September 3, 2009

Mon, Sep 7, 2009 at 6:12 am Posted in General Health 16 Comments
http://www.myhealthblog.org/2009/09/07/so-...ptember-3-2009/

Oh my, it seems Dr. Hulda Clark passed away recently. She was one of my most

respected researchers and authors. She is a tireless true scientist who always sought to do honest research that benefited everyone. She kept no secrets and published everything, open sourced technology for all to benefit and improve upon. She will be missed.

The big impact of Dr. Clark to my health education came from her books, Cure for All Cancers, Cure for All Diseases and Cure for AIDS, Cure for All Advanced Cancers. Although with my further education into health literacy I would later disagree with the complete de-parasitization of food and the use of artificial vitamins and supplements, I now understand that these were recommendations of Dr. Clark not for longevity health seekers but for her emergency cases in her clinic.

Dr. Clark's gift to the world is open sourcing her and her son's zapper technology which allowed many people to make their own and improve on it. I own 3 zappers and use them when needed. They absolutely work. You just need to know when to use them. The most significant life saver incident of our tiny hand held zapper was when my then 3 year old girl had neck pain which had gone on for 3 days with no relief from the hilot or the chiropractor. A friend wrote me to check for germs like meningitis in a lab test and administer the correct drug… this gave me an idea, let's skip the lab test and the drug by administering a broad spectrum electronic device – our hand held hulda clark inpired Don Croft Zapper. I zapped my daughter and after an hour she stopped crying, her pain went away… all gone! Thank you Dr. Clark… and Don Croft you made this healing possible!

Dr. Clark's books also helped our family establish a basic understanding about facets of health we only realized through her books: How bad and prevalent parasites were especially combined with how bad unknown pollution was. Before Hulda Clark I had no idea about both topics. Dr. Clark gave us a glimpse of the detoxes and body cleanses with her kidney cleanse herbs, herbal dewormers, electronic dewormers and her version of the Liver Flush. I had done several versions of liver flushes before I read Dr. Clark on the matter.

Dr. Clark was a true scientist and was open to criticism and improvement. She made correspondence with Master Herbalist Joel Berry who made a better more convenient herbal dewormer and being a master herbalist taught Hulda Clark that the GREEN WALNUT was much better than the black walnut she previously wrote about to fight parasites. Hulda Clark made that correction in the new editions of her books and in her videotaped interviews.

I took on a different direction with my health research going towards raw food and raw meat but never forgetting Hulda Clark's teachings. I have come to peace with the parasite and germs debate that many sides hold some truth and as the family healer you must be open as to when the parasites and the germs are beneficial and when they need to be kicked out.

Dr. Clark's imprint on my personal education was her scientific approach, curiosity and non-stop experimentation and non-stop adjustment… always open to improvement. And I am very grateful to have read her and viewed her videos. Let us remember to respect her for her selfless contributions to all of humanity.

[dohtml]<object id="VideoPlayback" style="width: 400px; height: 326px;" classid="clsid: d27cdb6e-ae6d-11cf-96b8-444553540000" width="100" height="100" codebase="http://download.macromedia.com/pub/shockwave/cabs/flash/swflash.cab#version=6,0,40,0"><param name="src" value="http://video.google.com/googleplayer.swf?docid=-1351254061061988 14&hl=en&fs=true" /><param name="allowfullscreen" value="true" /><embed id="VideoPlayback" style="width: 400px; height: 326px;" type="application/x-shockwave-flash" width="100" height="100" src="http://video.google.com/googleplayer.swf?docid=-1351254061061988 14&hl=en&fs=true" allowfullscreen="true"></embed></object>[/dohtml]

From a thread on Curezone.com:

We just received word that Dr. Hulda Clark passed away peacefully in her sleep September 3, 2009.

Since she had retired and closed her clinic last fall she has spent much time with her family.

We will certainly miss Dr. Clark both as a friend and researcher who gave so much of her self to so many.

A website is being setup in memory of Dr. Clark where people may leave their thoughts and experiences to share with all.

Further information will be posted at that website next week:

http://www.InMemoryOfDrHuldaClark.com

For her family and many close friends our condolences and thoughts are with you.

And from Tim Bolen:

Posted September 5, 2009 at 8:48 am | Permalink
My friend Hulda Clark died from the complications of a spinal cord injury that plagued her for the final years of her life.

As many know I accompanied her on her lecture forays around the US and I never told anyone how much pain she was in these last few years. She simply wanted to keep going. I arranged wheelchairs for all of the travel arrangements. A year ago, last

October, she was planning on speaking at the Rife conference in Seattle, and although she was able to get her lecture together she could not get her body to cooperate. The pain was too much.

I visited Hulda last Saturday, and she had lost even more functions – so I was unable to take her out to lunch at her favorite restaurant. Although I have always kept this a secret, I want you to know that Dr. Clark's favorite restaurant in the US was the Home Town Buffett in Chula Vista, California. Going to lunch with her was a time consuming experience, and well worth it, for she bombarded me with the latest findings of her research – treating me as though I were a fellow scientist, and a good friend.

I had the joyous experience of being this wonderful person's friend. She had an amazing twinkle in her eye, and I will miss hugging her.

Hulda Clark was not just a scientist and author. She was one of the most amazing people I ever met. She was, in person, absolutely delightful. Everything she did was for others. The world has lost a lot with her passing.

I'm going to write a lot more about my friend, but right now I need to grieve.

Tim Bolen

Title: Coping: With Scenars and Beyond

craig-oxley - July 30, 2009 02:49 PM (GMT)

Coping: With Scenars and Beyond

30 Jul 2009
http://urbansurvival.com/week.htm

I noticed that Wikipedia has deleted it page on a new medical device called a Scenar.

OK, you're wondering, what is a scenar?

The answer is a bit long, but I've been doing a bit of research, and since it has popped out of some of the discussion groups and fora which are scanned by the web bot project spiders, a little discussion is warranted so we can stay up near the bleeding edge of science.

We begin with a light discussion of quantum physics and how what ancient people (back in days of Sanskrit) described how the Universe worked at the physical layer. According to this view of things (which 'modern' quantum physics seems to be drifting toward) is that down as the smallest possible level, what we perceive of 'reality' is little more than bit of matter that come into existence some 7-trillion times per second as three (or more, it gets a little foggy here) waves of energy collide. Just as interfering wave patterns from cohesive beams of light (lasers) make modern holography possible (3-dimension pictures).

Out of this bit of ancient knowledge (or call it speculation if you want) comes the possibility for a comprehensive view of physics and reality since the popping in and out of existence of these 'smallest possible bit of matter' (the kalapas) behave in certain ways which are predictable. Some discussion also shows up in Buddhism and if you read the discussion in Wikipedia, you'll catch the reference to "their characterization as earth, water, fire, and air, respectively, is declared an abstraction."

Depending on how far you've gone in your study of magic and directly operating on the fabric of reality, whether you've entered 'the stream', or have momentarily been able to 'dance with Universe" you'll recognize the importance of this kalapas coming and going stuff and the high correlation to studies of ritual magic among ancient peoples, who you may appreciate also looked at the earth, air, fire, and water (plus their associated colors) as being how one gets down to the control of how the kalapas come and go - which in turn defines reality.

This ancient concept was rediscovered, in a sense, in 1930 with Paul Dirac's claim that we live in a 'Dirac Sea' of positive and negative energy. It's from his work that the we find the whole basis for the 'zero-point energy' developments which by some classical physicists can't possibly work but in many machines and repeatable experiments actual do work much to the disdain of peer reviewers of academia who are quick to dispense with any concepts broader than their own.

A very good description of the Dirac Sea and how it can be 'tickled' (changing the template of reality is another way to think of it) can be found on Tom Bearden's most excellent web site.

(Heavy stuff for this hour, huh?)

What's been going on in other parts of the world, while we have been massively entertained with figuring out new and faster ways to print money and invent financial products, research in the rest of the world (ROW) has been tinkering with electrical devices which use multiple frequencies in order to locally displace the way the kalapas pop into - and out of - our 'reality'.

Seem to be a couple of ways this is done. One being with ultra-high powered magnetic fields of various frequencies that interact with one another, as was reportedly tried in the Philadelphia Experiment and later rumored later at the Montauk Project.

Understanding that reality may just be a hologram of colliding energies opens up a strange rabbit hole to go down. For one, it means that when people die, they may just shift into another reality at a different collision point of the kalapas. It would also open the door to direct manipulation of matter, and this is where it gets particularly interesting.

Seems there are some discussions in other languages which go to the idea of large-scale 'kalapas template' electronics when allow (just for example) the 'disconnecting' of the bonds that holda piece of steel in shape and which, when broken, can allow steel, titanium, or any other material, to be 'poured' or 'molded' at room temperature only to solidify once the energy manipulation devices are turned off. Pretty cool stuff, but whether it's real in which case it may have been back-engineered from crashed UFO materials, or whether it's nothing more than a new kind of Cold War psyops between East and West could be the subject of much study.

That said, however, there's some anecdotal evidence that electrical devices can have a dramatic impact on healing by rearranging the kalapas templates to allow them to get back to their normal/healthy order of things.

A predecessor technology is already well described in the area of sports medicine in the "Transcutaneous electrical nerve stimulation" (TENS) machines. Definitely something going on here, blessed by 'officialdom' or otherwise.

While the Wiki entry on Scenars has been removed, there's the old saying that sometimes where there's smoke, there is fire.

If you do a search on an precursor technology "rife machine" you will find a ton of reading to delve into, and when you're done with that, the book "The Cure for All Diseases" by Hulda Regehr Clark, Ph.D.,N.D. - all 631 pages of it, complete with lists of frequencies - can be found here.

One of the reasons I have a couple of function generators on my electronics bench (along with my trusty dual channel oscilloscope) is so I can set out voltages from the function generators precisely where I want them. In Clark's book, frequencies to which influenza is reported sensitive are given and while it have not been blessed by any government outfit, I'm not above a little self experimentation using low voltages of specific frequencies. As I explained previously, the fellow who may have inspired Mary Shelley's character Frankenstein was a great, great, great grandparent. It's genetic, what can I say.

Obviously, this is not medical advice and the FDA periodically cracks down on different kinds of machines which make medical claims. So I make none and specifically disavow such. History teaches us that people who do make claims which aren't sanctioned by the government end up, as was the case with Tesla, Wilhelm Reich, and many others, find themselves prosecuted by rulers of the prevailing paradigm.

Yet to deny that there's something to all this electrical stuff, ranging from the newest of Scenar machines with 'cosmodic' technology at one extreme, and something as simply testable as Clark's work at the other, is something I find curious indeed. The original 'Ure branch' of electrical stimulation from the mid 1800's got us to the ECG and electric defibrillator stage. To say science and applications of electrify stop there would be 24 karat stupid.

But then again, perhaps not. Big pharma is big business. If people could effectively treat many ailments, as supporters of MMS, colloidal silver, various frequency generators, and now scenars with cosmodic technology claim, they might actual find themselves cured of disease.

And hey! Where's the recurring revenue and perpetual profit in that?

Still, in keeping with the predictive linguistics, the recent rise in chatter on the net about scenar/cosmodic machines certainly is a fit with those 'new electrics' that are supposed to be along about now, isn't it. Show me how to pour stainless steel at room temperature, roo, if you wouldn't mind. Want to cast some coffee mugs...

Out of time this morning - drop by tomorrow. Several attorneys have sent in the answers to why they don't tell juries in criminal cases that they have the rioght of nullification of law when they sit...you'll find it interesting as heck. See you then...

craig-oxley - July 31, 2009 03:04 PM (GMT)

"I crashed off a horse a couple of times and broke a disc on a scoliosis curvature. There was no rational surgical option and the thing was in a loop of muscle spasm/leak fluid from the disc causing/ muscle spasm... They tried a TENS, but decided against it since it would prolong the problem by enabling continuous activity. Sometimes you just need to stop. As far as I could tell, the unit simply puts its own frequency in loud enough that it cuts off the message to the brain that you are in pain. A short circuit. Then, you are up and around doing more damage. Since there is so much short term money in sports, long term damage is less of a consideration. In reality, after 6 or 9 months of childbirth level pain, your pain receptors burn out and the pain register mutes if you are not allowed any meds or mechanical intervention. It's a bummer, but better than ending up like Michael Jackson. If you are externally targeting the measurable frequency of a lifeform like a virus or bacteria, you would have to be pretty careful that you don't inadvertently also target a body part. That is the problem with celiac disease. You leak gluten into the blood. Your body makes an antibody. Gluten is close enough to the makeup of parts of your body that the gluten antibody starts attacking your joints, your thyroid... If you frequency zap a bug in your body, you better make sure you aren't zapping an essential body part, as well. It would be different to raise the frequency of your body to the point where an invader wouldn't be compatible. Nutritionally, spiritually... I think that reality frequencies are more in line with the extra dimensions of string theory, not simple electronics. Such frequencies can be entrained, much like violin strings. Since you exist interdimensionally, your mind is more of a key to accessing those elusive dimensions by focused entrainment than electronics. Intention. A mechanical device would be affected by the transformative frequency it produced. The other dimension I had touch with was in a different time frame. Electronics have a source and are tied to time. Even though the world is sound, such electronic generation of sound would be limited to this world. "

craig-oxley - July 31, 2009 03:10 PM (GMT)

The Hutchinson Effect

But speaking of TENS machines and the later Scenar/COSMODIC follow-ons, and staying on the thread of at least part of the week's snip & save section, however, I expect that most people have either never heard of, or have forgotten, something called the Hutchinson Effect. An email from a reader reminded me...

"George there was a guy, technically is a guy, named John Hutchinson that lives in Canada. He bought a lot of old microwave radar electronics, oscillators, etc. from military auctions and what not. He started experimenting and created a lot of very strange effects. Besides the melting and actual new alloy creations, he reported things like objects disappearing, and flying. Funny part is he reported that due to Canadian officials confiscating his equipment he went to work in Germany for awhile. He had a web page that has since disappeared. He was on on of the History channel specials, and was commissioned to build an ark of the covenant to specifications with gold. He reported strange happenings, but did not specify. I have included two pictures one of the man himself, and one of his experiments.

If you do a check of live.com and go looking for images of this Hutchinson fellow and his devices, you can get to this place. Because Hutchinson doesn't sound like an especially Hispanic name, and many of the drawings seem to have Spanish (Italian?) captions, I'm not sure how accurately the call-outs are dimensioned or even described. If you can't make a UFO off this stuff, don't come whining to us...

It helps to know a little bit about electronics at this point. For example, just to make things easy, most home microwave ovens operate around 2.45 Gigahertz (GHz). Which is why, if you happen to use a wireless network in your home (we have two at the ranch for redundancy) you'll notice that the 2.4 GHz wireless network can be disrupted by the operation of a microwave. 2.45 GHz is right around one of the resonant frequencies of water, and so when you're microwaving food, what you're doing is shaking the H20 around fast enough to heat it up. But, it's close enough to the wireless router frequency that it can overload the front-end of the wireless router's receiver, especially if the routers are at some distance away so that you don't cook yourself with RF off them, LOL.

What this means is that if you're planning to do any imitations of the Philadelphia Experiment with home/consumer-grade microwave ovens driving your 3 or 4-axis collapsing wavefront device, remember that the effect is likely not to conveniently happen at a single frequency. What's more, there may be effects, such as alignment to the Dirac Sea (land of the kalapas) in just such a way as to make it work, so you'd be well-advised to document everything you can think of along the way lest you end up with a skeptical Wikipedia entry like Hutchinson's, since he hasn't been able to repeat certain effects on demand.

What seems to be key in all of this work (levitation, etc) is that a wave interference effect is what seems to 'get the work done'. I think I've mentioned to you previously

about how Tibetan monks are alleged to have placed horn blowers at particular frequencies in a semi-circle in order for them to levitate stones/boulders of incredible size for temple building.

Do the same kind of thing, oriented just so (either to local magnetics, proximity to Ley Lines, hyper spatial hot points around the planet, the galactic center, or maybe to the deep fryer at the local McDonalds - I mean who knows what, right?) and presto, you're in league with Tesla, Hutchinson and those purported manipulators of Philadelphia Exp. and Montauk Proj. fame.

If you happen to have a method of calculating frequencies for collapsing wavefront devices, please send them along. In a pinch, I guess I could work out the math and retune the resonance cavity of a microwave, although I might have to look around for books like Magnetrons 101 or Advanced Klystrons for Overweight 60+ Bozos.

Oh...even though there are 'safety standards' for microwave ovens, we make it a practice to go across the room when ours in in use and check the seal every so often. It doesn't take much to disrupt our wireless routers at very low signal levels, but I am paranoid enough to check tor leakage. Most people never think to do so.

In fact, now that I think of it, I haven't tested mine for a while, because I haven't been able to find my old detector, so I've ordered a new one - here's one for $50 with shipping from Amazon. Microwave Leakage Detector I'll probably lend it to the neighbors and such.

I'm in no more hurry than anyone else to pop $50 on something, but you know what? It's a lot cheaper than the low-level health issues that can arise from periodically partially cooking yourself from a microwave leak. I've seen cases where people have a meticulously clean inside of their 'waves, and yet the seal can be dirty as hell, letting cooking power leak into the room. When that happens, you're just asking for trouble. Since Elaine's computers operate the wireless right down at the noise level, I can justify the as a tool to decide whether I might want to consider a wireless extender or spring for a new microwave.

Now that I think of it, a new 'wave would give me a working but out of service unit from which I could source my first magnetron and power supply....hmmmm. Turn on the function generators!

craig-oxley - July 31, 2009 03:12 PM (GMT)

Function Zapping Department

That brings me to this letter from a reader...

"The Hulda Clark Zapper Coincidence

I'm totally amazed that you discussed Hulda Clark's work this morning. On Tuesday evening I began an overnight Zapper session to eliminate a muscle fatigue illness that somehow developed.

Four weeks ago I had an unexplained vertigo for one day. It passed. A week later I developed fatigue in the muscles from my waist down. Overnight I went from running 1½ miles daily to barely able to walk ¼ mile. I didn't catch on at first, thought it was an injury, went to my Chiropractor which helped and got very good relief with Traumeel tablets, a very safe homeopathic under-the-tongue pain reliever. Tuesday afternoon I developed a fever. That was my "Aha!" moment.

I got my Hulda Clark 2006 Zapper out and selected a battery of nine neurological program chips. I had positive results with the Epilepsy Chip and the Herpes Chip.

The Zapper is a very interesting gadget. Using two double-A batteries, it delivers electricity into the body via a pair of electrodes. The frequencies change to match the frequencies of known pathogenic organisms. Think about the opera singer. When she sings the right note and holds it, the wine glass shatters. When the Zapper sends the resonant frequency of an organism's cell wall, the organism shatters. (BTW: I enhance my Zapper by running the wires through an FM transmitter, a little "play your iPod on the car radio device" so that the Zapper frequency will be carried into the cells. But I digress.)

If the Zapper finds nothing, nothing happens. You feel nothing and just go about your business. When it finds something, it's way cool. The 7th seven minute zap using my Epilepsy chip found something. Almost as soon as the session began I began feeling little pops in my brain and spinal column. Soon, it was like a Geiger counter set next to a plutonium rod. Pops were flying. Each "pop" is a virus winking out. There's no pain involved, just a feeling. When the session was over, I re-ran the chip and there was no response, meaning that the first pass did the job. The Herpes chip cleaned something out of my left kidney in about 30 seconds.

The epilepsy chip has eight 7 minute sessions. Number 7 is Coxsackie Virus #3, frequency 363.9 to 364.9 hz. I searched Wikipedia and the net and I found something interesting. The coxsackie virus family includes polio. Makes me wonder. Here's why:

Last year I read Edward T. Haslam's book, "Dr. Mary's Monkey," a very meticulous and well researched book describing what the health authorities did after they knowingly released monkey-virus contaminated polio vaccines to the country in 1957. What they did was beyond criminal... and their offspring are running today's vaccine programs.

[Hint: HIV. Monkey virus. Coincidence? The book explains the whole sordid affair.]

So where did this Coxsackie virus come from? Did I pick it up off the street somewhere? Or... and here's the BIG OR... Is this the live attenuated polio virus from the 50's and 60's springing to life? A few years ago oral polio vaccine was pulled and replaced with IPV which stands for "Inactivated" Polio Vaccine. Hmmm. What do they know?

One more clue. I had no reason to even suspect a kidney problem. Yet the Herpes chip found and quickly eliminated a kidney infection. The contaminated polio vaccines were developed using monkey kidneys, full of monkey kidney viruses. More coincidence.

There is no mainstream cure for Coxsackie virus, yet the Zapper quickly diagnosed the problem at the same time it delivered the cure. It's not sanctioned by mainstream medicine, so my anecdotal tale is purely for entertainment purposes. My muscle fatigue is gone, I'm building up my running, the brain fog is gone... OMG George Ure is making sense... and I'm no longer craving bananas<LOL>. "

No endorsement here, in fact, time to throw in a boatload of disclaimers:

Don't play with electronics in general and microwaves in particular unless you know exactly what you are doing. I've got a commercial radio ticket (old First Class now GROL) and an extra class ham ticket and just know enough to ask good questions and to keep one hand in my pocket when working on gear. And a rubber glove on that one...

None of this is medical advice - it's only a discussion of purported scientific developments and includes the specific recommendation that you don't do anything discussed here.

The FDA doesn't like anything that's not been blessed by them when it comes to medicine, and such zappers are not. On the other hand, if you're an investigative reporter, you might do some research into how many one-time 'regulators" end up getting phat jobs in the companies they once supervised, This is going on in everything from finance to medical to railroads, BTW. Fine material to write some exposés on the "Captive Regulator" phenomena which is right up there with deep-pocketed lobbyists and political action committees when it comes to 'greasing' the wheels of government, if you follow.

Medical spy ware: How Russian KGB technology is being used to spot impending disease

Published on 07-19-2009 Email To Friend Print Version
http://www.dailymail.co.uk/sciencetech/art...ng-disease.html

Technology developed by the Russian KGB is being used to help diagnose and predict impending illnesses, a scientist said today.

Russian-born consultant Alla Cranham has used the technique to develop the Health Detector, which measures impulses from the brain to pinpoint hidden weaknesses in other parts of the body.

It can then identify potential problems in internal organs, bones and muscles, she said.

Mrs Cranham's Nottingham-based company In Vivo Health uses the technology to help patients across the country, and today she said she has successfully predicted ailments including skin cancer, sexually transmitted infections and cataracts.

Inspired: The Health Detector is built on Russian technology, originally funded by the KGB

She said the Health Detector can find potential problems when the symptoms may not be picked up by conventional medicine.

'It is a successful early warning system for impending disease, which allows us to identify and treat ailments before symptoms become apparent,' she said.

'The Health Detector operates using the principles of Cybernetics, a scientific theory, which studies and maps control systems.

'It focuses on the way a system functions and how it self-controls and regulates.

'Cybernetic medicine assesses the function of body organs and can predict where problems are likely to occur.

Σ (N>S) = +1.81
Σ N = 42.87
Σ (S>N) = 0.00
Σ S = 41.07
5.55
0.25
5.30

Early warning system: The technology pinpoints weaknesses in the body by measuring impulses from the brain

'The brain is the centre of the human control system and it knows where weaknesses lie.

'The Health Detector picks up the signals from the brain and analyses them to produce a virtual scan of the whole body.

'Patients can then take action with a course of medication - usually natural - which will boost the affected area and correct the imbalance.'

She said the Health Detector is portable and used in conjunction with a laptop.

Patients see a display of the areas being examined on the screen, with a report on the condition of organs and systems.

Mrs Cranham compared it to a 'Virtual Bodytalk' system - the 'bodytalk' technique, widely used in Russia, sees a practitioner place his hand on a patient's body to 'diagnose' ailments.

Up and running: The portable Health Detector is used in conjunction with a laptop to treat patients nationwide

Mrs Cranham studied pharmaceutical chemistry in her native Russia and has since completed a Master's Degree in biomolecular sciences at Nottingham University.

She also studied at the Academy of Homotoxicology and Bioregulatory Medicine, and is a fellow of the Royal Society for Public Health, a member of the Biochemical Society and a lecturer at the Biomedic Foundation in London.

She uses the Health Detector to treat patients across the country, including a clinic in London's Wimpole Street.

Today she added: 'Russians believe in treating the whole person - not just the areas which show symptoms and they are much more open to alternative therapies.

'The Health Detector is built on Russian technology, originally funded by the KGB and which is now being refined for use by the medical profession.'

Killer parasites' genes decoded

The smaller female parasite lives inside the thicker male

Thursday, 16 July 2009 04:19 UKE-mail this to a friend Printable version
http://news.bbc.co.uk/1/hi/health/8151199.stm

Scientists have decoded the genetic blueprint of two parasitic flatworms responsible for thousands of deaths worldwide every year.

Schistosoma mansoni and Schistosoma japonicum both cause the debilitating disease schistosomiasis, otherwise known as Bilharzia.

The work has already uncovered targets for new treatments for the disease, which causes fever and fatigue.

The international study features in the journal Nature.

Schistosomiasis cases top 200 million every year, with 20 million people are seriously disabled by severe anaemia, chronic diarrhoea, internal bleeding and organ damage caused by the worms and their eggs, or the immune system reactions they provoke.

In sub-Saharan Africa alone it kills 280,000 people each year.
SCHISTOSOMIASIS
People become infected with Schistosoma when they wade or bathe in water inhabited by tiny snails that host the parasites
The parasites are released into the water, and use fork tails to burrow into the skin
They travel to blood vessels that supply urinary and intestinal organs, including the liver, where they mature
Female worms, which live inside the thicker males, release many thousands of eggs

each day
Eggs shed in urine and faeces may make their way into snail-inhabited water, where they hatch to release parasites that seek out snails to begin the cycle again

Dr Anthony Fauci, director of the US National Institute of Allergy and Infectious Diseases, said: "Chronic infection with Schistosoma parasites makes life miserable for millions of people in tropical countries around the globe, and can lead to death.

"New drugs and other interventions are badly needed to reduce the impact of a disease that lowers quality of life and slows economic development."

Since the 1980s, a cheap drug, praziquantel has been widely distributed to areas where the disease is common.

However, although the drug is effective, it does not prevent a person becoming re-infected. There is also a risk that the parasites will become resistant to it.

Therefore, developing new drug targets is important.

Enzyme targets

Researchers working on the genetic blueprint of S. masoni, the most widespread of the schistosomiasis parasites, found that it was made up of 11,809 genes - about 10 times the size of the malaria parasite genome.

In particular, they identified a large number of genes which produce enzymes that break down proteins, giving the parasite its ability bore through tissue.

Subsequent analysis revealed 120 enzymes that could potentially be targeted with drugs to disrupt the worm's metabolism.

The researchers also identified 66 drugs already on the market which might also be effective against schistosomiasis.

The analysis also found that S. mansoni lacks a key enzyme needed to make essential fats, and must rely on its host to provide these - revealing a potential Achilles' heel that could be exploited for drug development.

Researcher Dr Matthew Berriman, of the Wellcome Trust Sanger Institute, said: "This genome sequence catapults schistosomiasis research into a new era.

"It provides a foundation for understanding aspects of the parasite's complex biology as well as a vehicle to immediately identify new targets for drug treatment."

Fellow researcher Dr Najib El-Sayed, of the University of Maryland, said: "The genome

sequence has given us, for the first time, a comprehensive view of the engines that drive the parasite, the strategies that allow it to survive in us, its human host.

"It is a catalogue of opportunities."

In a separate study, scientists discovered that S. japonicum, which is largely confined to Asia, had even more genes.

View Full Version: New Medical Research Show Rife Frequencies Kill

Title: New Medical Research Show Rife Frequencies Kill
Description: *Cancer*

craig-oxley - July 12, 2009 05:33 PM (GMT)

Its okay saying rife technology kills Cancer but theres far more too it. You need a quality high power plasma or RF system for starters and no more than 300watts of the later. Then you need a device to scan your body for the frequencies needed such as an F-Scan2. Then you must also use that same detection device as a frequency generator into the Rife machine. If you do not then you will never get the correct resonant frequencies resulting in a random duck shoot. A use of a + or - either side of the frequency is also of use. I forget what you call this but basically if you put in a frequency of 16 then you'd have say the machine floating between 15.5 and 16.9 or something to make sure you have a hit. -Craig

New Medical Research Show Rife Frequencies Kill Cancer

By Ralph W. Moss, Ph.D.
7-7-9

Will scientists someday be able to 'dial up' an electromagnetic treatment for some people's cancer? Possibly, according to scientists at eight laboratories in five countries, who published an interesting article recently in the Journal of Experimental Clinical Cancer Research (2009;28:51). An international team, headed by Dr. Alexandre Barbault of Lausanne, Switzerland, found that most frequencies were lethal to a particular cancer type. They call their device a "noninvasive biofeedback method."

In this trial, 13 patients were considered evaluable for response. Of these, one with a hormone-refractory breast cancer metastatic to the adrenal gland and bone had a complete response lasting 11 months. A similar patient had a partial response lasting 13.5 months. Four had stable disease: of these, one with thyroid cancer metastatic to the lung had 34.1 months stability, a non-small cell lung cancer patient was stable for 5.1 months, a patient with pancreatic cancer metastatic to liver was stabilized for 41 months and a patient with leiomyosarcoma remained stable for 4.0 months.

The authors concluded that "cancer-related frequencies appear to be tumor-specific and treatment with tumor-specific frequencies is feasible, well tolerated and may have biological efficacy in patients with advanced cancer."

The same authors had previously shown that administration of a low level electromagnetic field (at a frequency of 42.7 Hz) by means of a battery-powered portable device could change the brain waves of healthy volunteers and is associated with the relaxation effect. The device has been used to induce sleep in insomniacs. Such an approach has been called Low Energy Emission Therapy (LEET). For those who think such an approach is dangerous, they point out that the amount of energy delivered to the brain in this way "is 100 to 1000 times lower than the amount of electromagnetic fields delivered by handheld cellular phones and does not result in any heating effect within the brain."

The authors explained that in their study of cancer patients they had observed "strikingly similar frequencies among patients with the same type of cancer."

A Rife Connection?

Royal Raymond Rife
(Source: Wikimedia Commons)

This technology bears some resemblance to the ideas of a notorious American inventor, Royal Raymond Rife (1888-1971). In the 1930s, Rife claimed to have invented a "beam ray" device that could destroy cancers (and other supposedly virally-induced diseases) by vibrating at the "Mortal Oscillatory Rate" (MOR) of their constituent chemicals.

After publication of a sensationalist book in 1987 ("The Cancer Cure That Worked"), the sale of various "Rife machines" multiplied. I cannot vouch for the effectiveness (or lack thereof) of any or all of these electromagnetic devices. But in the light of the above paper, perhaps Rife's controversial work bears re-examination from the research community.

Jim Folsom (Freq. Device Dist.) Sentencing July 13, 2009 in San Diego (July 8, 2009)

From: Vic & Cindy <V.Connor@comcast.net>
To: Editor
Subject: Jim Folsom (frequency device distributor) sentencing July 13 @ 10:30AM, San Diego
Date: Jul 8, 2009 1:19 AM

Prior details here:
http://educate-yourself.org/cn/jimfolsomjailed20mar09.shtml

SUPPORT JIM! FILL THE COURTROOM!

http://www.rifewiki.org/wiki/Jim_Folsom_Tr...l_the_courtroom

Jim, manufacturer and distributor of electronic frequency-type devices, including Global Wellness, BioSolutions, Astropulse, and Naturtronics, is in
jail awaiting sentencing.

If you've tried these types of devices, or Jim's devices, and know (like me) that they work, Jim needs help now.

Please, if you live anywhere near San Diego California, please do go to the sentencing and support Jim.

THANK YOU!

Cindy Charlebois
Normal, Illinois

P.S. It was mistakenly posted a while ago that the sentencing date was 7/10. That is

wrong. It is 7/13 @ 10:30AM.

craig-oxley - July 11, 2009 11:32 PM (GMT)

Jim Folsom (Freq. Device Dist.) July 13 San Diego Sentencing Postponed (July 10, 2009)

Subject: URGENT! Jim Folsom July 13th sentencing hearing is OFF for now.
From: CindyCharlebois@hotmail.com
Date: Thu, July 9, 2009

URGENT! Jim Folsom July 13th sentencing hearing is OFF for now. Motions filed resulted in new date; POSSIBLY July 17th. I'll write more as soon as I know anything.

There were motions filed for several things pertaining to the Jim Folsom case, and today I received word that one of them has caused the Judge to (at least) postpone sentencing. There is something scheduled for July 17th, but we don't know if this is something the public can attend or not. As soon as I find out more I'll write again.

Also, refer to this site for the latest information (as of 7/9/09 this hasn't been updated, but will be soon).

View Full Version: Can a blast of light really kill breast cancer?

Title: Can a blast of light really kill breast cancer?

craig-oxley - June 30, 2009 02:30 PM (GMT)

Can a blast of light really kill breast cancer?

By David Derbyshire
Last updated at 1:46 AM on 30th June 2009
http://www.dailymail.co.uk/health/article-...ast-cancer.html

A revolutionary treatment for breast cancer which destroys tumours with a blast of laser light was unveiled by doctors today.

The technique involves no surgery, can be carried out in only a few minutes and does not harm healthy cells.

A team of British surgeons plans to start clinical trials of 'photodynamic therapy' on 20 patients this year.

It is the first time worldwide that doctors will test the technique on primary breast cancer. Previously, it has been used on cancers of the skin and mouth.

The procedure is being pioneered by Mo Keshtgar, a world-renowned breast cancer surgeon, at the Royal Free Hospital in North London.

During photodynamic therapy, or PDT, a drug is injected into the patient's bloodstream which makes the cancer cells extremely sensitive to light.

Photodynamic therapy uses tumour-killing drugs that are activated by light

When a low-level laser beam is shone at the cancer through the skin, the cells self-destruct. Researchers, who announced their plans to start trials at the Royal Society's Summer Science Exhibition, said it could even offer an alternative to radiotherapy for some women.

'The key appeal is that it attacks and destroys cancer cells while retaining the viability of the surrounding normal cells,' said Mr Keshtgar.

'Breast cancer can be particularly traumatic, with more invasive treatments leaving physical and emotional scars.

'Our treatment will keep the structure of the connective tissue intact, meaning the breast does not become deformed or lose shape.'

The drug - called a photosensitising agent - is injected directly into patients and finds its way into the breast's epithelial cells, lining cells which can become cancerous. The drug makes these cells highly sensitive to light.

Because tumours have high metabolic activity and are surrounded by a proliferation of new blood vessels, the drug accumulates in cancer cells in preference to healthy cells.

Once the drug has been taken up by the cancer cells, surgeons point a low-powered red laser at the tumour.

The light triggers a chemical reaction which kills the harmful cells. The drug loses its potency after a few hours.

However, patients are kept in a subdued
light for 24 hours after their treatment and then told to avoid bright sunlight for another 24 hours.

Mr Keshtgar said the technique could be available within six years, once it has been properly tested on volunteers.

The initial small-scale trial will be on breast cancer patients due to have mastectomies. They will have PDT just before their surgery, after which the tissue will be examined to determine the effects.

If the trials are promising, the team will recruit women to take part in a larger trial. They will be monitored for five years after their treatment.

Mr Keshtgar said the technique could help patients anxious about surgery or who are not well enough for invasive operations.

Dr Alexis Willett, head of policy at Breakthrough Breast Cancer, said: 'We welcome research into new therapies that may reduce the need for invasive treatment.

'It will be interesting to see how trials progress.'

PDT trials are already underway for cancers of the prostate, bile duct and pancreas.

Around 46,000 women are diagnosed with breast cancer each year in the UK. It is the most commonly diagnosed cancer and accounts for nearly a third of cancers in women.

One in nine women will develop the disease at some point in their lives, while more than 1,000 die of it each month.

Title: Could a zapper in your undies banish period pain?

craig-oxley - June 30, 2009 02:27 PM (GMT)

This is not the answer, the answer is to cleanse the system and nourish it. Also making sure the hormonal balance is corrected via Christopher's formulas. -Craig

Could a zapper in your undies banish period pain?

By Pat Hagan
Last updated at 10:48 PM on 29th June 2009
http://www.dailymail.co.uk/health/article-...eriod-pain.html

A device that fires a mild electric current through the abdomen could be a radical new treatment for period pain.

The treatment is based on a technology called pulsed electromagnetic field therapy (PEMF), which has been used for many years to treat sports injuries.

An estimated 75 per cent of women suffer from period pain - one in five so severely that it affects everyday activities.

Symptoms range from abdominal pain and nausea to dizziness and diarrhoea.

There are two types of period pain (or dysmenorrhoea). The more common is primary dysmenorrhoea; here, there is no underlying medical reason for the pain. In other words, a woman's womb is healthy and the pain is the result of the body's natural process of shedding the womb lining.

In secondary dysmenorrhoea, the symptoms are caaused by something more serious, such as pelvic inflammatory disease, where bacteria infect the reproductive organs and trigger painful swelling.

While many rely on over the - counter painkillers to cope with period pain, GPs may

also prescribe the contraceptive pill - this thins the lining of the womb so that muscles do not have to contract so much during a period, reducing pain.

The new device, known as Allay, offers a drug-free alternative. It is roughly the size of a saucer and consists of a metal loop covered in cloth.

The loop is attached by wires to a small batteryoperated control unit which contains a computerised microchip. Both the loop and the device are held in place by the elastic of the woman's underwear.

When is switched on, the device sends a series of small currents through the loop inside the cloth; this generates a 'pulsed' electromagnetic field - one that repeatedly switches on and off.

The level of current it produces is low, around a tenth of the electromagnetic force produced by a mobile phone. But this is said to be enough to provide pain relief.

The theory is that when cells are traumatised, such as during menstruation, their natural electrical charge is reduced.

This triggers chemical signals that cause inflammation, resulting in pain and also inhibiting the communication between cells necessary for pain relief to begin. It's said that the new device restores the natural electrical balance in the cells, triggering healing.

PEMF technology has been used for many years in the treatment of pain and sports injuries.

The most well-known form is a Transcutaneous Electrical Nerve Stimulatoror TENS machine. These deliver small electrical pulses to the body via electrodes placed on the skin and it's thought they affect the way pain signals are sent to the brain.

Pain signals reach the brain via nerves and the spinal cord; blocking them means the brain will receive fewer signals. While the evidence to back up their use is mixed, many people report the machines help to ease their pain.

PEMF has even been used to help injured racehorses recover. But the equipment has traditionally been bulky and immobile. The new patch shrinks the technology into a handy size that allows the patient to go about their normal activities.

However, serious doubts remain in some circles about whether PEMF has any real effect, or is all in the mind.

Some studies suggest that similar treatments in osteoarthritis, for example, fare no better than a dummy therapy.

Royal College of Obstetricians and Gynaecologists spokesman Dr Peter Bowen-Simpkins says if it does work, the Allay patch could help some women.

'Some are so disabled by period pain they cannot go to work, school or university. If this patch really is able to make a difference, then I would welcome it.'

The Allay, which costs around £30, will be available from High Street chemists within the next six months. Each one has a battery life of around 360 hours - enough for three five-day periods.

Urine Therapy

22 Apr, 2009 health
http://natnitnut.net/urine-therapy/

Urine therapy involves urine through its own internally and externally as a way to promote or maintain good health. Sometimes, when all else fails, turn on the urine therapy for a patient at all. The first question that probably comes to mind is whether urine is a toxic substance and how a waste product excreted from the body and can be of any benefit to your health. Urine is not a product of toxic waste, say the practitioners of urine therapy. Mentioning that 95 percent of urine is water, 2.5 percent is composed of urea and the remaining 2.5 percent is a mixture of minerals, salts, hormones and enzymes.

Toxic substances are eliminated from the body through the liver, intestines, skin and by exhalation. The main function of the kidneys is to maintain the composition of the blood in optimal balance. Therefore, the main component of urine is not toxic at all. Only the urea can be poisonous when present in large amounts in the blood. However, this is irrelevant in the practice of drinking urine, as urine is not immediately in the bloodstream. Once again the urea in the body in small amounts, it purifies, removes excess mucus and has a number of other useful purposes.

It also has a great toning effect and healing when applied to the skin. Urine is sterile after secretion and has an antiseptic effect. This is true for people who follow a reasonably healthy diet, do not use chemicals or drugs allopathic medicines. “In my search for alternative therapies, I found urine therapy and found it to be very attractive. Something inside me says this was the right one for me,” said Salome Roy Kapoor, choreographer, dance teacher and grooming in Mumbai, which is now a true defender of the therapy. While many are reluctant to practice urine therapy initially, Salome is optimistic. “There was no resistance for me-I had a firm belief that this would make a

difference," he says.

Dr. C.P. Mittal in his book, Miracles of Urine therapy, talks about some doctors in India who believe in urine therapy, but are aware that their patients not to drink it. So when the patient comes for a visit, the doctor may request a urine sample. Will sit in the back, which repackaged as medicine, with taste and smell disguised.
Is it science?
Dr. BV Khare, an allopathic doctor and Mumbai-based tracker of urine therapy, said: "The Italian surgeon Stanislau R. Burzynski, now settled in America, separated neoplastin anti-human urine and showed remarkable results in cancer treatment. Another substance found in large quantities in the urine is called dehydroepiandrosterone (DHEA). It is a hormone related to testosterone. This, as research showed, has anti-cancer, anti - obesity and anti-aging properties. It has also been found that when urea ingestion by recycling, it becomes essential amino acids. "

Medical researchers have discovered that many elements of the blood found in urine have enormous medicinal value, and when back into the body, stimulating the body's immune system and stimulate healing in a unique way. The therapy can be applied in many ways. The most common is to consume your urine in the morning (not the first drops) completely and without dilution. Gargling, massage and inhalation have also been found to be useful.

When asked if it should be practiced only during illness, Dr. Khare said: "Why do you want to stop at all? I am not suffering from any illness, however, take three glasses of my urine every day and massage my body with urine every morning and take bath after one hour. Like brushing your teeth or go to the bathroom every morning, this must be incorporated into our daily routine. I know that a family of four that have not been to a doctor for any illness more than a year after it was launched in urine therapy. "

Benefits and Experiences
Many people have benefited from therapy, urine and still want more. "Urine therapy makes you feel vital and energy. It has helped me to increase my immunity levels. It also helps me stay thin," said Salome. "I had developed chronic, degenerative disorder that could not be helped by conventional medicine and which threatened to permanently destroy my ability to work, the role and just enjoy life," said Martha Christy. "Urine therapy has helped me in several complications, including menstrual problems, pelvic inflammation, ulcerative colitis, Chron's disease (inflammation of the colon), Chronic Fatigue Syndrome (CFS), thyroid disorders, and mononucleosis."

Commenting on the original of an allopathic medical promote this therapy, Dr. Khare said: "You will be surprised to know that I have dealt with many doctors and urine therapy are cured of their disease. However, not recognizing the fact for obvious reasons. " Another condition in which urine therapy provides relief chronic amoebic dysentery, which is common in India. Chronic constipation, a problem of aging, is also

treated by this method. Urine World Conferences have been held the first in India in February 1996 and the last in Germany in May 1999. For a generation obsessed with the soda, that could definitely benefit much more from the 'Morarji cola.
Ways of using urine therapy
Drinking:
Urine in the morning is best. Take the middle stream. You can start with a few drops to the construction of a glass per day. Good as a tonic, as a preventive and minor illnesses.
Fasting:
Drinking the urine of all passes, except at night-otherwise do not get to sleep. You can also take a little water. The urine is quickly changing the taste almost neutral. Fasting on urine and water cleanses the blood. Toxins are eliminated through the liver, skin and exhalation.
Gargle:
Gargling with urine works wonders when having a sore throat. Also good for toothache and generally when you have a cold.
Enema:
Urine enemas work very well in cleaning the colon and in providing direct immune stimulant.
Douches:
Useful in cases such as yeast problems, white, etc.
Ear and eye drops:
For ear infections, conjunctivitis, glaucoma. For the eyes, dilute the urine with a little water.
Sniffing urine / Neti:
Sinusitis and other nose problems. Very good preventative for colds and to clean the subtlechannels in the head.
External application
Massage / scrub: You can use either fresh or old urine. Old urine (4 to 8 days) is generally more effective, but has a pungent odor. Full body massage is an important treatment fasting. That nourishes the body through the skin and helps against increased heartbeat.

You can leave in the urine or wash it after an hour or so, only with water or a mild, natural soap. Urine as a fresh after-shave gives you a beautiful smooth skin. It is also useful in all types of skin problems such as itching, burns, eczema, psoriasis and acne.

Gentle touch of acupressure points in the urine (eg, in the ears) is useful when reactions are too strong, accompanied by severe allergic reaction.

Foot: A skin and nail problems of the feet (athlete's foot and ringworm)

Compress: When rubbing is not appropriate, this is another way of applying urine on the skin.

Hair and scalp massage: Represents the hair soft and clean. Sometimes, it stimulates the growth of new hair.

Title: URINE & UREA Therapy

craig-oxley - June 28, 2009 03:24 PM (GMT)

URINE & UREA Therapy

By Walter Last
http://cancerresourcecenter.com/articles/alt114.html

I have been fond of urine therapy for many years but, except as a homoeopathic remedy, I have rarely mentioned it to patients as our social conditioning invariably prompted a strong negative reaction.

The many and varied case histories described by John Armstrong in his 'The Water of Life' are certainly impressive. However, this book was first published fifty years ago, Armstrong did not have any academic qualifications and without the strong support of other therapists, there were not many convincing reasons for patients to try this method.

This has changed dramatically in recent years with the publication of the books 'The Miracle of Urine Therapy' by Dr Beatrice Bartnett and especially 'Your Own Perfect Medicine' by Martha Christy.

Martha Christy's Experience

Martha Christy cured herself of a host of incapacitating illnesses, including intestinal inflammation or Crohn's disease, chronic fatigue syndrome, thyroid disorder, severe chronic kidney infections, food and chemical allergies and severe endometriosis.

The conventional approach with drugs and six operations did not help and probably intensified her problems. Natural therapies worked for a while, but a difficult pregnancy disabled her again and this time even the natural therapy she tried was not good enough, including $US 15,000 spent in an alternative cancer clinic in Mexico for bleeding pelvic tumours.

Most of the time she had to stay in bed until one day she was introduced to urine therapy and before long, all her health troubles were over.

Instead of just writing another 'How I Did It' book, she went to university libraries and hired a research firm to search the scientific and medical literature for publications on the use of urine and products derived from it.

She was amazed by what she found. There were not just hundreds but rather thousands of published articles. There are probably more articles published about urea, the main ingredient of urine, than about any other organic substance. Mrs Christy devoted a large part of her book to explaining and summarising this scientific and medical evidence and also provided detailed references of published papers.

In addition, she lists many testimonials of individuals as to the effectiveness of urine therapy in overcoming AIDS, Candida, Cancer, Colitis, Depression, Diabetes, Immune deficiency, Multiple Sclerosis and other diseases.

Scientific Evidence

The most amazing aspect of urine therapy is its effectiveness in such a wide range of different diseases.

There are several reasons for this. For one, urine contains antibodies and immune stimulating factors against all viruses, harmful bacteria or fungi that we may harbour in our body. The researchers stated that even minute amounts of antibodies, sometimes so low that they cannot be detected with conventional methods, are effective in preventing and treating diseases.

There are reports investigating and describing the curative effects of urine therapy on a wide range of infectious, fungal and viral infections, such as hepatitis, poliomyelitis and AIDS. Urine is especially effective against allergies, auto-immune diseases and other disorders of the immune system.

To switch off an allergic reaction one must put a few drops of urine under the tongue, collected during the reaction, or the urine may be homoeopathically diluted and some of it kept in the mouth for a few minutes.

When drinking urine routinely, allergic reactions may not occur at all, thus doing away with the need to identify which substance one has been reacting to.

Curing Cancer 'Child's Play'!

Cancer, too, responds very well to urine therapy. Most effective appears to be the urine fast employed by Armstrong.

His first cancer patient was a nurse who had herself cared for over fifty cancer patients. She knew that any cancer pain is mild as compared to that experienced from the regrowth commonly occurring after medical intervention.

Usually visible tumours such as with breast cancer disappeared within three weeks, but sometimes even in one week. Armstrong called curing cancer 'child's play' except if patients had already received chemotherapy or radiotherapy.

I also know personally of several cases of cancer cures exclusively or mainly due to urine therapy; sometimes the addition of urine therapy to a natural cancer program appeared to be responsible for the successful outcome.

Most of the scientific cancer reports concentrate on urine extracts of anti-cancer agents. One such extract is called H-11, another HUD, others Retine, DHEA hormone or Anti-neoplaston.

While good results were reported with all of these, it is very expensive to treat patients in this way and the treatment would be even more effective and much cheaper if all of these cancer-fighting ingredients of urine were used together by ingesting whole urine.

Surprisingly, uric acid is not just the villain causing gout, it is also a proven anti-cancer agent and rejuvenating factor. However, the crown of the cancer-fighting urine ingredients may actually belong to urea, the most common chemical in urine.

Benefits of Urea

Only recently has it been discovered that the concentration of urea in the blood has a key role in regulating at least 7 major pathways. Urea levels are low with cancer and many other diseases. The frequency of cancer and especially of multiple tumours and metastases increases greatly if urea levels are low.

Urea is not just a waste product or the end state of the protein metabolism as commonly assumed. Biochemical research has shown that urea, both from internal sources or externally supplied, is used by the body as a raw material to synthesise amino acids and proteins.

This is especially important for patients with kidney failure. These deteriorate quickly on a diet containing normal amounts of protein, but do much better if the diet is extremely low in protein, below 20g per day.

Another research report states that patients with kidney failure on very low protein intake show progressive clinical improvement when receiving added urea which then becomes the main source of nitrogen for protein synthesis. Urea may thus be the main reason why urine therapy and especially urine fasts are so successful with kidney failure.

I believe that it is the best and sometimes the only successful therapy. One of my patients with kidney failure continued to deteriorate on a fast of fresh vegetable juices, but was cured when fasting on urine for 2 weeks.

Another helpful factor is the role of urea as the best natural diuretic and far better than synthetic ones. This is not only important for those with deem or fluid retention because of kidney or heart weakness but especially with fluid pressure on the brain or spinal cord or in the eye with glaucoma.

With this, additional urea is important with brain tumours, stroke, meningitis and other inflammations of the brain and spinal cord. One report cites the case of a massive brain tumour reappearing 3 months after surgical removal of another brain tumour. The patient received 256ml of 30% urea. After 2 hours the tumour had completely disappeared.

When applied externally, urea has a very beneficial effect on wound healing, including infected wounds, burns and ulcerating tumours. The urea crystals may be directly packed into the wound or a strong or saturated solution may be applied. In this way, urea removes the foul odour often associated with an ulcerating tumour or other dead or putrefying tissue.

Urea Pioneer

The use of urea in cancer treatment was pioneered by E V Danopoulos, a Professor of Internal Medicine in Athens. Urea was notably effective with liver cancer and in preventing the development of metastases or secondary tumours. He used 45g of urea daily in 6 divided doses for 40 days and then 20g in 3 doses for 2 years. 45g corresponds to 6 rounded teaspoons, while 20g is about 3 teaspoonfuls. The results were published in The Lancet in 1974.

But as it happens so often with discoverers of cheap cancer cures, Danopoulos lost his position after this publication and was forced to retire. Other research has shown that the effectiveness of urine in killing microbes depends largely on its concentration of urea and is better, the higher it is in urea.

Other Beneficial Ingredients

Another important reason for the effectiveness of urine is its content of countless hormones, enzymes, vitamins, trace minerals and other valuable biochemical. Some companies make a fortune by extracting some of these substances from collected urine on a large scale. The fact is that urine is not a waste product full of harmful substances as is commonly believed, but instead a treasure-trove of just the right bio-chemicals that we need for our condition.

The main function of the kidneys is to regulate the concentration of all these countless bio-chemicals in our blood. Any unwanted surplus is as harmful as any deficiency. However, any hormone or enzyme removed as surplus at one time may be in short supply a few hours later.

Furthermore, with advancing age, our hormone and enzyme production declines to sub-optimal levels while the kidneys become less and less efficient in retaining needed ingredients.

Therefore, it greatly helps, especially with chronic degenerative diseases and advancing age to recycle these valuable hormones and enzymes.

Urine Rejuvenates

Urine ingestion is frequently praised as possibly the best rejuvenation therapy known to us. It certainly rejuvenates the hair and the skin. The youthful appearance of many Buddhist monks is ascribed to their routine urine ingestion.

It seems that historically all cultures have used urine for medicinal purposes. It is praised in ancient Egyptian papyri, was used in ancient Rome, in China, India, America as well as European countries. The Journal of the American Medical Association states that in 'primitive medicine' there is scarcely a disease that has not been treated with the external or internal use of urine.

A 5000 year old Sanskrit text describes in a religious context in 107 verses the virtues of urine. In one verse Lord Shiva, the great destroyer and re-generator, says that he who drinks urine sweetened with honey is cleared of any ailment within 6 months. He attains brilliant brain power and his voice becomes melodious.

One well-known urine ingredient is melatonin, the hormone of the pineal gland. It regulates our body rhythms linked to the dark-light cycle. It is produced in the night and mostly expelled with the morning urine. However it is now highly valued as protecting us from cancer and ageing. Melatonin sales in California are said to top aspirin sales. But why pay much money for just one beneficial ingredient when there are thousands for free?

Problems may arise from ingesting large amounts of urine if one takes medicinal or recreational drugs as these drugs may be recycled and cause an overdose. The same may happen if one ingests other toxic substances. However, harmful substances are not necessarily reabsorbed and may just cause diarrhoea instead.

How to Use Urine

There are various ways to use urine but generally it is advisable to start with small amounts. This is not only to get accustomed to the taste of it, but also to slow down any

healing reactions. These occur commonly with methods that genuinely improve our health.

Reactions may manifest as diarrhoea, vomiting, nausea or a temporary flare-up of old health problems prior to their final elimination.

Start with a few drops or a teaspoonful. These may be swallowed immediately and you may wash it down with some water or juice or eat a piece of fruit. However, with allergies and immune disorders it is more effective to leave the diluted urine under the tongue for a few minutes.

An allergic reaction can best be stopped or neutralised by collecting the urine when the symptoms are worst, however in practice you try to use it as soon as you notice the first symptoms.

Some researchers suggest that the proper dose can be found by slowly putting single drops under the tongue until the taste and temperature of a drop can no longer be distinguished. This is then the neutralising dose. Each subsequent day you may double the previous dose or the number of times you take them per day until you reach your target amount or the dose that you are comfortable with.

A suggested amount for general health improvement and rejuvenation are 2 or 3 cupfuls daily. More is advisable temporarily to overcome serious diseases, especially AIDS and other viral, bacterial or fungal infections, cancer and kidney diseases.

In these cases ingest about one litre, the more the better, while for a limited period, say several weeks, try to drink all or most of your urine, except in the evening so that you do not have to get up at night. However, that may only be suitable during a cleansing period, as drinking a large amount or strong urine after a meal may cause digestive upset.

My favourite way to flush the kidneys is to drink 1 to 2 litres of urine before breakfast. Start drinking all the urine when you first wake up, lets say around 5 o'clock. Then you may urinate again and drink another lot about 6.30 and then again at 8 o'clock. Either drink sufficient in the evening so that the first morning urine is not too concentrated or otherwise dilute strong urine with sufficient water. I do not use urine that is cloudy as it easily happens during a healing reaction. If the body is reasonably clean, then the urine does not taste offensive and reflects the aromas of the previous meal. The second morning urine, especially after drinking a fair amount of liquids after rising, is usually very mild and better to get accustomed to then the first morning urine.

The Urine Fast

The most powerful form of urine therapy is a urine fast which combines two of the most effective natural healing methods, urine therapy and fasting. This is the method

routinely used by John Armstrong and described in his book The Water of Life. Armstrong had amazing results with this method and I also found it very effective. A main advantage of a urine fast over a water fast is a greatly increased amount of energy so that the fast can be continued for a much longer period. I believe that it is also more effective than a fast or cleanse on vegetable juices.

During the urine fast you drink all of your freshly voided urine and initially some added water to bring the daily volume to about 5 litres. However, I suggest to gradually increase the ingested amount to full intake already before starting the fast while gradually reducing the food intake to just a few pieces of fruit or vegetable salad and fresh vegetable juices.

It is possible that this combination, a small amount of fresh fruit or vegetables and juices together with ingesting almost all of your urine is already sufficient to cure your problem. If after a week or two you feel that you do not make enough progress, you may then proceed with a strict urine fast for 1-4 weeks.

You end the fast by using again only a small amount of fresh raw fruit or vegetables for another week or two, gradually increasing the amount and variety of fresh food.

As with all fasts or cleanses, it is important to keep the bowels moving daily. Initially I suggest using a tablespoon of Epsom salts together with a crushed clove of garlic for several mornings or evenings when starting with a greatly restricted food intake.

This will help to avoid or minimise unpleasant cleansing symptoms, such as weakness, pain or nausea. However, in many cases the ingested urine will already over-stimulate the bowels with liquid discharges and then no further action is needed.

Ingest only your own freshly voided urine. Normally urine is light yellow, clear and sterile, especially if collected mid-stream, but during reactions it may become offensive and cloudy. When ingesting a large part of your urine you should check to make sure that it is not too acid. The morning urine normally is slightly acid, but during the day it should be slightly alkaline.

You can buy litmus or pH paper from a chemist. Litmus paper is red when dipped into an acid solution and blue when alkaline, neutral or pH 7 is in between both colours. With pH paper you get a colour chart to compare. If the urine remains acid during the day, which usually happens with allergies and a weak sugar metabolism or if eating much fruit, then take 1/2 teaspoon of sodium bicarbonate once or several times daily in water, but not within 3 hours after meals, until the urine remains alkaline during the day.

However, those with cancer should use potassium bicarbonate (from a chemist) instead of sodium bicarbonate. If the body is too acid, sometimes the emotions become overly sensitive with a tendency to inflammations, mouth ulcers and strong skin reactions.

With cancer, oedema and infectious diseases the effectiveness of urine therapy can be increased by taking daily 1-6 teaspoons of urea (e.g. in water or juices) in divided doses; you may take 3-6 teaspoons when only a small amount of urine is ingested and progressively less with larger urine intakes, leaving it off completely when nearly half or more of the daily urine is ingested.

Homoeopathic Urine

A final possibility is to use urine in homoeopathic form.

The simplest way to prepare it is as follows:

To one teaspoon of unchlorinated water add one drop of fresh urine. Shake it vigorously in a small bottle about 50 times with a sharp downward stroke. One drop of this mixture is then added to another teaspoon of water, shaken again and then the whole procedure repeated a third time. Place 3 drops under the tongue several times daily. When it is used up, wait a few days and then prepare a new homoeopathic remedy. In order to find the most effective potency add one more step to each subsequent preparation of the remedy, that is dilute it a fourth, a fifth and a sixth time and so forth. Start with such higher dilutions, say sixth potency, especially if a remedy is made from fluid such as pus derived from a diseased part of the body.

An alternative method is even simpler and recommended as an introduction to urine therapy and at times when cupfuls of urine are not tolerated.

To 1 tablespoon of morning urine add 4 or 9 tablespoons of unchlorinated water. Shake 50 times with a sharp downward stroke, and take a spoonful several times during the day; keep in the mouth for a minute before swallowing.

Homoeopathically energised remedies should not be exposed to strong magnetic or electromagnetic fields. Keep this urine remedy only lightly covered in a cool place but not in an electric refrigerator, and make up fresh daily.

Social Considerations

The main problem when starting urine therapy is our social conditioning. You may overcome that by reading and contemplating about the expected health benefits.

The taste of urine is not normally offensive, except if the body is rather polluted or when fasting or with strongly concentrated urine. Therefore, dilute strong urine, start with a small and gradually increasing amounts or have a day on fruit before starting to ingest urine. Minimise salt and strong spices in the diet when on urine therapy.

An easy way to drink urine or any other unpleasant fluid for beginners is by breathing

only through the mouth and possibly pinching the nose until the mouth has been rinsed with water or juice or a piece of fruit may be eaten.

External Use

For skin problems such as burns, wounds, gangrene, psoriasis, eczema, dermatitis, fungus problems ageing skin as well as over inner tumours, inflammations and diseased organs a urine or urea pack or a combination of both is very effective: keep the affected area covered with a folded cloth well moistened with urine or concentrated urea solution, put another cloth or plastic sheet on top, renew several times daily.

Urine becomes more alkaline when standing for a few hours and is then more effective than fresh urine for external applications. However it also smells much more and fresh urine seems to be adequate in my experience. With gangrene, dead flesh, skin infections and open cancer and ulcer sores it is even more effective to saturate the applied urine with urea, that also removes offensive odours. With weeping or suppurating wounds, especially if associated with foul odour, it is also very beneficial to cover the area with dry urea crystals.

Urine can be concentrated by leaving it for several hours in a flat dish in the sun or a warm place. This has been recommended by Armstrong for friction rubs to rejuvenate ageing skin. Armstrong also recommended urine packs over tumour sites or diseased organs in addition to rubbing the body daily for two hours with small amounts of urine.

The main problem with urine packs is the offensive odour. You may try to prevent it by sealing the pack with a good tape, such as duct tape. You may completely seal it and keep the pack moist by injecting fresh urine several times a day with a syringe.

Title: Shivambu Gita

craig-oxley - June 27, 2009 05:46 PM (GMT)

Shivambu Gita

by Dr.G.K.Thakkar
http://materiaetherica.com/urine/thakkar2.html

1: BRIEF INTRODUCTION OF THE AUTHOR:

Dr. G. K. Thakkar, a law graduate by education and an advocate who worked as a Tax Consultant by profession has earned International name and fame as a Urine Therapist and the propagator of SHIVAMBU.
Dr. Thakkar's endeavour(SADHANA) for the advancement of transcedental spiritual life is persistently going on, but now he has found a purpose of his life in SHIVAMBU SADHANA for which he has dedicated the rest of his life. As such SHIVAMBU propagation has occupied the ulmost priority in his purposeful life which is full of faith, selflessness, soft-spokenness, simplicity, punctuality, transparent honesty, versatility are some of his special qualities.
Although Shivambu Therapy is very ancient and on the basis of experimentation and propagation by great personalities, it is prevalent in India and several countries, but Shivambu Crusade carried on by Dr. Thakkar with dedication, enthusism and selflessness has unique attraction for the people, perceiving which it can be guessed that in the near future people of our country in particular and of the whole world at large will get rid of the vicious circle of inhumanly commercialised medical profession and blessed by Urine Therapy, they will be able to enjoy healthy and happy life.

2: SELF CONFIDENCE BY "SHIVAMBU SADHANA"

Friends, as a result of practicing U. T. when you will realize that you are not going to fall prey to any dreadful disease, and if at all you get some minor ailment while at home or out-side, while in city or village, white in train or plane whether at hill station or in Himalayas or in the event of scorpion or snake bite you must have developed the self-

confidence that all the time you are in possession of your own medicine (Panacea) then and there, and thus you have not to go in search of any doctor, nor struggle here and there for any medicine, the very feeling that Divine Panacea is with you shall fill your life with immense happiness and/or overflowing 'joy and your self confidence will soar tremendously. This is not the domain of imagination but of self-realization. Therefore my good wishes to all of you that you may soon experience the same realization which I have already acquired by SHIVAMBU Sadhana.

I came to realize the fact recently that the popularity of Shivambu Therapy is increasing day by day and how peo ple are eager to know more detailed information about it. Our Foundation had organized a half day seminar on Shivambu a Birla Krida Kendra, Chowpaty on 25th Sep tember' 94. Readers will be surprised to learn that 625 29 seating capacity half was fully packed. In this seminar we could also learn about the generosity of Shivambu devotees as we received voluntary donations to the ex tent of Rs. 10,000/- on that day and flow of donations is still on. Really speaking we are doing God's work by car rying out the propagation of Shivambu as the same is meant for the benefit of suffering mankind. Service to downtrodden is service to God. Therefore we firmly be lieve that our divine campaign despite financial con straints shall continue uninterruptedly without any hin drance whatsoever.

During my recent Shivambu propagation tour of Rajasthan and Agra I had some unforgettable thrilling experiences which I would like to share with my read ers. During Aug. 96 I visited Jaipur, Jodhpur, Pali, Sojat Road, Sojat City, Chandawal, Beawar, Ajmer and Pushkar etc. where my several lectures were arranged in schools, colleges and hospitals before huge gather ing of students, nurses and doctors. I addressed press Conferences in Jodhpur, Agra and Ajmer and numerous newspapers gave a very good coverage to the fabulous efficacy of U. T. on deadly and incurable diseases.

In Ajmer I had a very encouraging and thrilling experi ence. Sister Ignesia, The Secretary General of the Missionery Sisters House, who is in-charge of Sophia Schools, Sophia Colleges all over India and St. Francis Hospital at Ajmer, which was a historical event, as hun dreds of students, teachers, nurses and doctors came to know about the fabulous efficacy of U. T. for the first time because of the bold and daring decision of Sister Ignesia to arrange my lectures. She was attracted to U.

T. few months before on hearing a talk of Prof. S. B. Sharma and alter reading my book and was immensely benefited by its practice and within a span of few months she has become a powerful propagator of U. T. ! I was greatly thrilled to hear her experiments and experiences of U. T. which she narrated during my lectures referred above.

By the above episode I am extremely overjoyed as I have become confident that looking to Sister Ignesia dedi cation and enthusiasm the most precious knowledge of

U. T. would certainly reach, other missionaries not only of India but of several other

countries; and thereby mil lions of suffering people around the World will be benefitted by it.

In the public meeting of Agra during my lecture held on 4-8-96 Swami Krishnanand of Haridwar (Aged 85) sur prised the audience by telling them that he himself is drinking SHIVAMBU for the last 60 years ! For the first time he disclosed the secret of his excellent health before the audience and inspired them to follow U. T. for keeping good health.

Another revolutionary incident happened in Agra. My lecture was arranged during Nirankari Satsang Sabha on Sunday Dt. 4-8-96 at Agra before a gathering of 2000 devotees! The devotees got so much interested in Shivambu talk that half an hour talk went on far 3 hours !!

Swami Krishnandji had come to know about the fabu lous efficacy of SHIVAMBU from a YOGI residing in the Himalayan Cave, sixty years ago.

3: MISCONCEPTION OF MASSES

Scientists declare that God has created seven lac types of living beings including creatures and insects. All of them are self-reliant. (In our scriptures it is referred as 84 lac YONIES) But has God created the highest and best creation man (human being) as dependant and help less ? No, never. Man has only become miserable, de pendant and helpless by reason of his perverted intellect and there won't be least exaggeration in saying so.

Man of today is living in a delusion that his health and treatment of various diseases can be bought through money only. Had this been true then all the wealthy human beings would have remained healthy and free from disease, but as we can see the reality is something different. Never in the past science had progressed so much as these days. Take the case of pharmaceutical research based on science. How many new products are coming out every day ? New hospitals equipped with ultra-modern, latest, and exorbitantly costly equipments are opening in different cities as if competing with each other ! But even then number of diseases as well as patients are ever increasing ! We have not seriously given our thought to this stark reality. Today mankind has been surrounded by innumerable incurable disease and man is feeling utterly helpless and dejected. Even scientists despite their endeavour and continued research have not been able to discover a permanent cure for several diseases. Leave apart the case of killer and dreadful diseases like Cancer, Arthritis, AIDS no successful treatment has yet been found out for ordinary common cold ! However medicines worth scores of Dollars are being sold throughout the world for common-cold. Is it not true? While SHIVAMBU can cure it in a day or two if not in few hours ! Not the slightest exaggeration. Let me tell you that there is not a single medicine of modern science without any reaction or side effect. Some scientists in advanced countries are now

openly discuss ing that AIDS is the creation of the modern science. It is, they say is the by-product of the use of the heavy and indiscriminate doses of antibiotics, chemotherapy and other harmful drugs-used for combating Cancer and other related diseases.

Friends, do not read this book only once, but read it again and again and do ponder over what I have said and you would certainly realize and feel that the naked truths revealed by me in this book are the best amongst other health techniques already known to you. I can declare without least doubt that information based on great truth (Shivambu) would not be. found elsewhere except this book. As you will go on reading it again and again you will be receiving more and more inspiration and self con fidence each time.

Though I had a strong desire to translate Hindi Shivambu Gita into English and Gujrati languages, I was not very keen about it, but Mr. K. R. Raghwani of Nairobi who has become my esteemed friend on meeting me on 2nd May 96 after reading my book has become instrumental in inspiring me to take up its publication in the right ear nest. Because on meeting me Mr. Raghwani was so much impressed by my missionary zeal and dedication to serve the ailing humanity, that he took the spot decision to sponsor my visit to his country to help his country men by making them aware about the tremendous potentiality of U. T. who have been plagued by horrible diseases like AIDS and Ebola etc. for which no cure is in sight. Due to his loving insistence I had to give my consent to visit Kenya by the end of 96. Where I wish to distribute thousands of books in English and Gujrathi during my visit. You will be amazed to know that amongst all African Countries maximum number of followers of U. T. are in Tanzania.

Here I would like to appeal to my beloved readers by way of request that during this year you may send a copy of SHIVAMBU GITA to your friends and relatives instead of sending costly new year greeting cards. Thus you will be instrumental in bringing about a great health revolu tion, and thereby get the blessings of those who would be benefited from the information given in this book.

Time has now come to rectify our usual belief that health resides in prosperity. America being the most prosper ous and richest country in the world has the maximum number of patients. These people consume sleeping pills, weighing more than 500 tons every year, besides con suming digestives and laxatives weighing almost 2000 tons ! I have shown you the path of Shivambu now it is up to you to tread upon it. I have run around the world to show the right path to the disillusioned. I would like to quote an appropriate couplet (Sher) in this respect. Come! Let us all join in this service oriented crusade by contributing physically, mentally and financially. Jai Shivambu.

On the occasion of the publication of SHIVAMBU GITA I deem it necessary to express my heartiest gratitude towards two persons. Firstly my bosom friend Mr. R • -K Sharma who has been forced by me to become a trustee of our Foundation. 1 offer my sincere

thanks to him, although he doesn't like such formality. Mr. Sharma has taken so much pains and hard-work for the compilation of Hindi Shivambu Gita, and its translation in English as well as for its proof-reading and thereby saved my time and botheration, which cannot be evaluated in terms of words or money. Another person worthy of all praise is Shri Nitin Prabhu who has been blessed by God, Lord Krishna (He is active member of ISKCON) with a spirit of dedication even at this young age. He owns a press where he has willingly published almost all my books, including this "SHIVAMBU GITA" with the minimum profit motive within a short time which is equivalent to MAGNA work for which he deserves lots of thanks. More over he has become a SHIVAMBU Sadhak & propogator too. He is so much fascinated towards Shivambu that, from his busy schedule he spared a week's time to attend the First World Conference of U. T. organized by us at Goa! However looking to his young age he is as good as my son and as such I feel instead of thanking him, it will be most appropriate if I offer my innermost blessings to him.

4: MY PERSONAL EXPERIMENTS, EXPERIENCES & RESEARCH

Before giving you the significant information about U. T. I consider it necessary to tell you how I became the devo tee and crusader of Shivambu Sadhana which I had not imagined of. Without this relevant information Shivambu Gita would be incomplete in all respects.

About eleven years ago, to be more precise on 15th Aug. 1985 I was introduced to U. T., and thrilled by its mira cles I was attracted irresistibly towards it.

I had been suffering from amoebic dysentery for the last twenty years and doctors, Vaidya, and Hakims having declared this incurable, advised me to live with it; sub ject to receiving treatment continuously along with regi mentation of diet etc. There was no permanent cure for this disease. In addition 1 was having eczema on my hand and foot far the last forty years for that I had consulted all the leading skin specialists of Bombay, but of no pur pose.

My above mentioned both the diseases were totally rooted out just in few months of Shivambu treatment. Different medical systems have certain dangerous side effects while those arising out of Shivambu treatment are not harmful but beneficial. As a result of beneficial side-effects, unknowingly I got rid of several minor afflictions like stomatitis (Month ulcers) cracked feet and lips, falling hair, dandruff etc. Today I am having vigor, stamina and energy which I didn't have quarter century before. My wife says "I was never so young, full of vigor, active, energetic and sexy even in my real young days !"

The biggest miracle or beneficial side effect that has occurred in my case is that Urine Therapy has made me an effective, bold and hypnotic orator overnight. Yes, I had never spoken from any platform before even a small audience, prior to doing Urine Therapy. Now I can speak in four languages for hours at a stretch on this subject so as

to keep the audience spell bound. The secret of this phenomenon lies in the assurance given by Lord Shenker to his consort Parvati in Shloka 89 of "DAMAR TANTRA" (five thousand years old scripture) that one who does this therapy for three years as per his strict instruc tions acquires "WAK SIDDHI", becomes effective orator ! I am glaring example of that promise ! This therapy has passed down to us from ancient civilization, sacred groups, Yogis & sages.

My wife was a regular patient for more than 20 years and was suffering from numerous diseases viz. ear trou ble, (tinnitus) vertigo, constipation, pain in the joints, cramps in legs and many more. I had tried for her all the best available talents in Allopathy, Homoeopathy, Ayurveda and even Unani but without any result. At last we stumbled upon this wonderful therapy and she got rid of her almost all the ailments by it miraculously. Even she got rid of a tumor in uterus for which the surgeons had advised operation! Like wise my both the sons were also greatly benefited by its use.

I am the father of two sons. My younger son had been suffering from Hematuria (passing blood in urine) Medi cal treatment continued for one year, but with no relief. In the end the doctors advised to undergo expensive and painful test "Intravenous Polygraph". Under this test sev eral X-ray photos are taken after giving few color injec tions in the veins with a view to ascertain the defect in kidneys. This specific disease of my son had thrown a challenge before me. Although I had full faith through Shivambu Treatment his disease could certainly be cured but the problem was how to convince my grown up son who had also nausea for U.T. Even then I told him to try it but he didn't pay much heed to my advice.

One day my son approached me and posed me a ques tion. "If I do U.T. and no benefit accrues then ? Encour aged by his question I instantly replied. "Son, you follow U. T. with faith for only one month and if you do not get relief I shall abandon my Shivambu propagation mission entirely !",

Accepting my challenge, my son adopted U. T. therapy drinking 1 1/2 cup (200 to 250 ml) of Shivambu 4 times a day. Exactly after one month we got his urine tested and the doctors on seeing the report declared him fully liberated from the disease. Hearing this my son danced with joy and hugging me exclaimed "Papa you are Great !"

Now, my elder son who was frequently suffering from common cold & constipation is also relieved of it by drinking Shivambu through nose. In one SHLOKA of amar Tantra it is mentioned that by drinking SHIVAMBU through the nose one can get rid of eighty kinds of dis eases pertaining to Vaata, Pitta and Kafa

Thus my entire family has become devotee of Shivambu. One's voice becomes melodious by drinking urine through nose, and all nasal problems are solved.

5: HISTORY OF SHIVAMBU

Exactly five decades ago John Armstrong an English author of a book titled "The Water of Life" has done great favor and obligation upon the world, by writing this book and he can rightly be called the pioneer or originator of Urine Therapy. This book became famous in England, India and several other countries. Late Shri Raojibhai Patel, a close associate of Mahatma Gandhi came across it; when he was suffering from Asthma and had heart attack and he experimented U. T. on himself, his friends and relatives and obtained far reaching miraculous results. Inspired by those results he wrote a wonderful book "Manav Mootra" which has gone into more than 25 editions and has been translated into Hindi, English and Kannad languages.

Late Mr. Morarjibhi had received the inspiration to drink Shivambu from "The Water of Life" which was presented to him by Shri. Raojibhai.

A Question must be arising in your mind as to from where Mr. Armstrong received the inspiration to drink Urine ? Let us know that too. There is one quotation in Bible, "Drink Water out of thy own cistern" He interpreted the quotation in plain manner. You drink water from your own bladder (Cistern) i.e. Urine. Armstrong was suffering from T. B. and at that time there was no effective remedy for it. When he was heading towards death this knowledge dawned upon him and he totally got cured !

On discovering this panacea he treated about forty thou sand patients suffering from various incurable diseases discarded by the physicians and on achieving incredible results he authored the book "The Water of Life" thereby doing a great favor to the suffering humanity.

So far we called Mr. Armstrong the pioneer of U. T. but subsequently we discovered that the beneficial reference of U. T. (Shivambu) has been made in our several an cient scriptures like Veda, Mahabharata, Puranas and one dozen volumes of Ayurveda! Not only in Hindu scrip-tures but also in Jain, Buddhist, Sufi and Masonic writ ings too.

Often it has been seen that unless some foreigner awak ens us up we continue lying in slumber. J. W. Armstrong has done the noble job of awakening us. Take the case of YOG Vidya. After its acceptance by the western countries, we realized the value of YOGA!

In one of the volumes of AYURVEDA viz.

BHAVPRAKASHA Urine is termed as "VISHAGHNA" killer of all poisons and "RASAYANA" which can rejuve nate even old person and "RAKTAPAMAHARAW which purifies brood and cures all skin diseases. Reference of Urine Therapy is found in almost all the volumes of Ayurveda viz. SUSHRUT, HARIT, BHAVPRAKASH

GAJNIGHANTU,YOGRATNAKAR,BHAISHAJ
RATNAVALI,RAJNIGHANTU,VAGBHATT
DHANVANTARI NIGHANTIJ and many more. In
SHIVAMBU KALP VIDHI" which is part of "DAMARTANTRA" our oldest scripture, Lord Shankara has ex plained to PARVATI IN 107 verses (SHLOKAS) the pro cedure and rules to be followed while doing U. T. and its beneficial effects when taken with certain herbs.

In TANTRIK YOGA culture this practice is termed as "AMROLI" Amroli comes from the root word AMAR which means IMMORTALITY, UNDYING, IMPERISHABLE. Amroli was therefore a technique designed to bring about immortality AMAR literally does not mean that one will live for ever, but means that one will enjoy full span of healthy life and won't die untimely premature death which is very common these days. Amroli was originally a spir itual practice rather than a method of treatment. They termed it holy liquid i.e. "SHIVAMBU" According to them Urine is more nutritious than even milk I You are not only physically benefited by its practice, but you become spir itually advanced because it is an elixir... for body, mind and spirit I Friends, all caring and merciful God has given us this precious gift (Urine) right from our birth but how miserable and unlucky we are that we are ignorant of it till we die painful premature death at the hands of ex perimenting physicians and surgeons ?

In our scriptures our body is compared with the universe We can't imagine for a moment the existence of our beautiful earth without the presence of salty oceans, similarly in my opinion (as I see), there no possibility of healthy body without Shivambu. In this polluted world the only unpolluted thing is our own urine In all the passenger vehicles there is an emergency exit In the same way merciful all loving and caring God ha: put one panacea in our body at the time of birth (Ever before birth, as the fetus in the mother's womb floats and drinks Amniotic fluid which is 90% Urine!) about which we remained helplessly ignorant, but by God's grace the secret is being disclosed in front of you.

In the event of deadly attack of a disease, Shivambu. works as a life saving shield. I can assure you that the popular maxim "Half knowledge is more dangerous than ignorance" is falsified by Shivambu Therapy as even its little knowledge can prove to be tremendously beneficial !

Friends, what a painful paradoxical surprise that the thing though mentioned in the scriptures of different religions, all the volumes of Ayurveda etc., still it remained hidden for centuries ! It was never lost, for the truth is inde structible, hence it always exits.

We are aware of several medicines whose utility goes on diminishing with passage of time and sometimes it also happens that life saving drugs turn out to be the killer drugs. But the noble effect of Shivambu is perennial due to the sole reason that this is divine panacea prepared in the Divine laboratory

There are several instances of travelers going astray in deserts, mountains or seas, or trapped under the debris during earthquake, or soldiers getting injured in the bat tle fields and people rendered homeless, provision less due to unexpected calamity became liberated from their trials and tribulations by means of their own urine I

One of the great mountaineers of Mount-Everest Mr. Morris Wilson from England has written that he made liberal use of his own urine to save his limbs from becoming benumbed due to excessive cold of the Himalayas; and to save himself from frostbite, apart from maintaining his strength.

Colonel Mark Lyel, a hero of Second World War while fighting on behalf on British Army fell down after receiv ing head injury by bullet and became unconscious near Sahara Desert and got separated from his platoon. In the morning he realized that he was lying alone in the desert. A lot of blood had dripped from his wound caused due to a bullet injury on the head and he was in the agony of pain. He felt thirsty but there was no water in the water bottle. Out of intuition and some knowledge of U. T. he urinated in the mug and drank little and applied a little on the wound. Thus he came back after reaching nearer to death. Next day the soldiers of his platoon went in search of the Colonel with the hope that they will only find his dead body, but when they met him hale & heartily alive and smiling they were wonderstruck ! Col. Mark became a great crusader and propagator of U. T. thereby and his prized articles are published in several magazines and newspapers of England and U.S.A. !!

6: SHIVAMBU AND SCIENCE

Physicians keep on saying that urine is a poisonous ex creta of the body is far from the truth. Had it been true late Morarji Desai who drank his own urine for more then thirty years continuously would not have lived a healthy and graceful life of hundred years to inspire the Shivambu devotees.

Take our own example, we both husband and wife have been using Shivambu for the last more than ten years have not only acquired better health but our youth has also been coming back to us. On 14th October 1995 I have stepped into 67th year of my life. Even at this age I have been winning first prizes in jogging and Dandia com petitions. Also in Bhajan Singing and made for each other contest too. Please don't take it as a self praise. This is the miracle of Shivambu and I am singing its glory otherwise what we are ? Mere leaf of a tree.

After innumerable clinical and laboratory tests carried out over several years in Japan, China, U.S.A. Switzer land and many European countries it has been conclu sively proved that over and above Urea it contains En zymes (of different kinds) Vitamins, Antibodies, Amino acids, valuable salts, and minerals, Carbonates, Bicarbonates, pigments, Carbohydrates and Hormones. It is a watery part of blood.

If we consider human urine from the allopathic point of view, it must be accepted that human urine has close relation to the theory of bacterial infection. The bacteria in urine have proved to be effective in many diseases. Thus this theory can be evaluated vis-a-vis the allopathic bacteria theory. Thus U. T. has the backing of science like allopathic therapy.

Very recently two doctors Dr. Alexander N. Glazer and Dr. Stocker from University of California have discovered that the yellowing dye responsible for Jaundice, present in Urine long dismissed as valueless bodily waste ap pears to have a beneficial function that can lessen tis sue damage in CANCER, AGING, INFLAMMATION and HEART DISEASE. "Instead of spending 95% of our time in developing means to get rid of billirubin, we should spend time on possible beneficial roles of billirubin." Or. Stocker said. The above news appeared in "EXPRESS" (U.S.A.) dated 1-3-87.

Urine Analysis and Research shows that it contains valuable and active constituents such as Urea, Sodium, Potassium, Calcium and other Vitamins, Enzymes and Hormones, which are of vital importance in the maintenance of body and health. Urine also contains antibodies (Antidotes specific & essential) which give im munity against different kinds of virus, bacteria and diseases. Scientists nave so far isolated and specified around 200 as against the estimated figure of more than two thousand elements and compounds in human Urine.

Oncology News (Vol. 16 No. 4) which is a publication of Academy Professional information Service notes in its July Aug. 1990 that "a completely new type of anti-tumor agent, that is nontoxic and seem to make malignant cells revert to normal is capturing the interest of Cancer clini cal investigators with high expectations. The agents known as antineoplastens, discovered by Dr. Burzynski of U. S. A. are naturally occurring peptides and amino acid derivatives. They were first isolated from human urine and are now undergoing undergoing trials in several part of the World."

Way back in 1977 the Economic Times reported and thereafter many other newspapers are still reporting that in advanced countries like Japan and U.S.A. "Urokinase" (an injection that dissolves blood clots and costs as much as Rs. 9,000/- in India) is prepared from Urine collected from public urinals. This is a clear indication that mod ern scientists are aware of the fact that Urine is NOT A WASTE PRODUCT but Valuable most sterile serum, which is a panacea for several major illnesses including AGING. Urine is flesh, blood and vital tissues in living solution. Apart from Urokinase several other injections like Profasi, Perganol, Antineoplastens etc. are manu factured by different multinational companies in advanced countries and are minting vast profits of millions of Dol lars every year, while we are helplessly unaware and ignorant about this precious gift of the nature given to us for our well being. What an irony of fate ? Dr. Burzynski of U.S.A. after carrying out research for 20 years on hu man Urine has developed an injection out of it that can reduce Cancer tumors which he has named

Antineoplastens. One injection of it costs $ 8000 and the full treatment Two lac Dollars ! Still no guarantee of sure cure.

Few months back one revolutionary book has been published in U.S.A. in which mutual relations of SHIVAMBU and Science has been thoroughly discussed. The name of the book is "YOUR OWN PERFECT MEDICINE" written by a lady whose name is MARTHA CHRISTIE. By reading the very first sentence of this 260 paged book you shall learn the secret of science and uropathy. She writes "The incredible untold story of a proven natural miracle cure (U. T.) that medical science has never re vealed. It's the astounding proven natural cure that medi cal science has ever discovered-, and yet none of the incredible research findings on this incomparable natu ral medicine have been revealed to the public. "! In fact she has written two books. One costing $ 250 and other $ 25 !!

Friends. this American lady Martha Christie had a pain ful history of 30 years suffering from various incurable diseases before getting the knowledge of this therapy. She has given her history in the very beginning of the book. Which I have read several times and each time my body hair used to stand -erect by the thrilling sensa tion I experienced. This Lady from the age of 12 right up to the age of 42 (30 years) suffered from different incurable, diseases and surgery was carried out six times on her body She says she was a moving encyclopedia of diseases ! She had become a burden upon her family members because in 30 years lakhs of Dol lars were spent on her treatment by trying various phy sicians and medical systems. She went to Japan & Mexico for treatment. She was totally fed up with the miserable life and very much wished that death should relieve her miseries. Thereafter she became recipient of the knowledge about Urine Therapy from the book written by my friend in U. S. A. Margie Adelman, by practicing which she not only became free from all diseases but the beneficial side-effects of U. T. brought a turning point in her life. She is acknowledged world famous writer which was really a blessing in disguise. I know more than hundred people who after practicing U. T. have become poets or authors of repute due to ben eficial side effects of SHIVAMBU practice ! Such a mas terpiece book containing detailed information about the research done by the scientists of the world on human Urine has never been written by anybody. So now you have known that many elements having the capability of curing various curable and incurable diseases are present in SHIVAMBU. But scientists by themselves will never make such declaration for which they are not to blame, because we all are living in this materialistic selfish world. I have not to add anything further in this respect as you are wise enough to understand and appreciate the whole situation and the things going on in the inhumanly commercialized medical profession.

You better understand one thing that despite elaborate research done or to be done on human Urine as it can benefit us in its original form, the same benefits can never be derived or achieved through injections or medicines prepared out of Urine.

All leading scientists including medical professionals agree that degenerative diseases

like cancer, arthritis, heart diseases, renal failure etc. set in due to the accumulation of toxins in the body. Various method are sug gested for removing these toxins. However, with my years of experience and the testimony of thousands of patients, I can confidently say that there is no greater harmless detoxifying agent in the world like our own Urine. It not only purifies the system but also regenerates and builds up old worn out and even dead tissues, That is why it is very much effective in deaging process and Cancer too.

Scientists have discovered that patients suffering from degenerative diseases mentioned above suffer from lack of certain basic minerals and enzymes like copper, io dine and pancreatic enzymes etc. it will amaze you to know that these very elements are passed out in ad equate quantities in the Urine of the patient in propor tions that can be easily assimilated by the patient and help in the process of tissue building and fight diseases f I fail to understand as to how the intelligent medical scientists are overlooking this simple yet most precious and useful phenomenon ?

craig-oxley - June 27, 2009 05:46 PM (GMT)

7: DISEASES CURED BY SHIVAMBU

My great benefactor and mentor late Mr. Morarji Desai; whom we used to call "Shivambu-Rishi" out of love & re gard used to say "If urine therapy is done with faith, pa tience and observing strict regimentation in diet, before spoiling the disease by resorting to harmful treatments, then any disease can be rooted out by this therapy."

I hereby reproduce the statement of a famous doctor of England, Dr. T. Wilson Ph. D., M.D., "As the urine con tents vary according to the pathological state of the pa tients, its use is indicated in all forms of diseases, ex cept those caused by traumatism or those that are of mechanical nature."

Often we say that every rule has an exception. This ap plies to U. T. also because some patients may not be benefitted fully due to disease reaching last stage or treatment not done in right manner or for any other rea son, but one thing is certain that there won't be any ad verse or harmful reactions which arise in other medical systems.

Here I mention few diseases which got cured by Shivambu, and there are many examples. Different types of Cancer, diabetes, arthritis, heart diseases, ulcers of various kinds, gangrene, leprosy, T.B., S.L.E., pemphigus, herpes, psoriasis, all diseases of eyes, ears, nose, throat, diseases related to teeth and gums, piles, fistula, diseases of women such as tumors of uterus, Leucorrhoea, infections of womb, discomforts of pregnancy such as vomiting, giddiness etc. The couple having no

possibility of having child have conceived and cradle is seen in their homes

If I continue giving the list of diseases then the whole SHIVAMBU GITA will be occupied by the list only. Therefore it is sufficient to state in brief that there are numerous diseases and their names innumerable but for each and every malady the panacea is one and the same. SHIVAMBU.

In a poor country like India how much useful and beneficial Urine therapy would be, can be judged from the under mentioned episode.

I along with my wife had gone to Chitrakoot (M. P.) to offer our services in the eye-camp organized by Sadgure Sava Sangha Trust. There, one day on the road leading to Jankikund we saw a beggar, who was a mere skeleton as only bones were visible in his body. On enquiring we learnt that he was suffering from T. B. for some years. What a predicament ? How can a beggar get costly medicines and/or wholesome and nourishing food for recovering from T. B. ? We explained to him Shivambu treatment of drinking of whole day's Shivambu and of massaging his body with it. He agreed to do so. After two days we passed again from that road, when he jubi lantly told us that his years old cough had cured fifty percent and six month old stomach ache had been cured fully After one week he met my wife again during "Kamad Giri rounds" (PARIKRAMA) and out of gratitude and respect touched her feet and declared that "I have become alright by drinking Shivambu. You can see I am completing the rounds of "Kamad Giri" What else can you call it, except a Miracle of Urine Therapy ?

8: DETAILED INSTRUCTIONS ABOUT URINE THERAPY TREATMENT

There are names and address of hundreds of patients recovered from different incurable diseases in the two famous bulky books "Manav Mootra" written by late Raojibhai Patel and "The Water of Life" of J. W. Armstrong, but I am highly surprised when people after reading those books come to me to get guidance to start U. T. for treating their diseases ! Hence the sole aim of writing SHIVAMBU GITA and putting it in your hands is to impart you the maximum practical information about Shivambu. So that you may become self-reliant in respect of treating any kind of disease you come across without consulting anybody; or even without meeting me. That is why even though I have got testimonials of hundreds of patients of India as well as of several countries, still with a view to make you self reliant in-stead of reproducing the thrilling recovery stories I have given priority to the detailed instructions of U. T. treat ment and its timely significance in the present genera tion. By reading which you will not only get rid of your diseases, but will be transformed into a Urine Therapist and a propagator of it. Of course I do expect that after receiving the benefits of U. T. you will oblige me by send ing your experiences by letters, so that other patients can get inspiration from the same.

For Shivambu devotees there is no other harmless panacea than Shivambu in the

world. Hence the first condition of Shivambu Treatment is that one should commence. U. T. after relinquishing all medicines, non-vegetarian food and intoxicating things like Bidi, Cigarette, Tobacco and liquor etc. However there are two exceptions. Patients suffering from heart trouble and dia betes cannot discontinue medicines abruptly. As such they may drink Shivambu along with their usual medi cines and if they realize that Shivambu suits them, then they can reduce the dose of medicines gradually in a phased manner and increase the dose of SHIVAMBU. Thus in a couple of months they can get rid of the medicines completely.

Peculiarities of U. T. Treatment

1. It has been proved by experience that almost all the diseases are cured by U. T. provided it is done systematically without spoiling the case by harmful medicines and treatments.

2. This treatment is simple like household remedies, can be taken without any expenditure and without any danger or risk.

3. There is no need of any pathological tests of blood, urine, stools etc. in order to diagnose the disease. Most wonderful thing is despite passing blood, pus, sugar or any other abnormality in our urine the same urine cures our disease You all know the popular maxim "Diamond cuts diamond" or "poison kills poison". Hence there is no need of testing urine.

4. External application of urine upon any injury or wounds arising out of cuts or burns gives instant relief and the wounds get dried and healed soon. Even the marks of the wounds would not remain on the body ! Hidden injury due to sprain or swelling in any part of the body gets cured by Shivambu.

5. U. T. Treatment is very effective in counteracting the venom of snake, scorpion, poison due to mad-dog's bite or intoxicating influence of opium, brown sugar and other nasty drugs. It's the most harmless yet powerful detoxifying agent for drug addicts. The drug addicts can't afford to remain ignorant about the most beneficial use of Shivambu for detoxifying their brain, body and whole system by this simple yet most effective therapy !!

Obstructions In Shivambu Treatment & How to Over come Them :

While practicing U. T. two particular obstructions arise due to misunderstandings connected with Urine, but they can be removed easily with right approach. First difficulty is the age old conception prevailing in our society that Urine is the poisonous and dirty excreta of the body. But this fallacy is far from truth, as proved by the scientists of different advanced countries, on the basis of successful research and experiments done upon human Urine. This aspect is already discussed by me earlier. Second

difficulty comes on account of foul smell and disagreeable taste, though it tastes much better than beer and wine ! This difficulty also can be overcome by taking simple food free from chilly and condiments, like milk and fruits - which in turn purifies the color, smell and taste of Urine which will resemble almost like water. In the beginning you may add equal amount of water while drinking it and you won't feel the disagreeable taste of it. If any person or child has too much repulsion about it he can mix honey or syrup along with water in urine for a couple of days. Thereafter you will get into the habit of drinking it without adding anything.

9: METHOD OF MASSAGE WITH OLD URINE

Like old wine, old urine is precious for massage and out ward applications. (Not for drinking) In order to get rid of chronic incurable diseases of cancer, asthma, lep rosy, arthritis and incurable skin diseases doing mas sage with old urine systematically along with Shivambu fasting helps considerably in early recovery. As the urine which enters the body through the pores detoxifies the possible toxins of our body and helps in early recovery. Massage should be done with light hand like anointing all over the body from head to feet for minimum one hour daily. If it is done twice a day still better.

For this purpose you have to arrange 7 clean bottles having half litre capacity putting labels of 1,2,3,4,5,6,7 number. First day collect urine in bottle no. 1 which will be used for massage on the 7th day. Thus fill seven bottles in seven days. When old urine is not available, in the mean time fresh urine can also be used for massage and outward application. If the urine collected in the bottles becomes several months old it will not be spoilt, but its efficacy, will be enhanced for all external use. For drink ing always use fresh urine. Massage should begin with the urine collected in bottle No. 1 seven days back. Keep that bottle in a tumbler or small bucket containing hot water so that the bottle and urine will become warm. It can also be made warm by keeping the bottle in the sun. To reduce the offensive smell of old urine you can mix camphor powder in urine while massaging. Massage the whole body. Thereafter the patient should sit for 15-20 minutes in the open air or sunshine, (If convenient) then he can take bath with lukewarm water without using soap, instead one can use gram flour or clay. Late Shri Morarji Desai had not used soap either for bathing or shaving but was using urine only during the last 30 years ! That was the secret that he hadn't visible wrin kles on his face and body at the ripe age of 99 years.

10: POSSIBLE SIDE EFFECTS OF URINE THERAPY

Some patients in rare cases by drinking urine and/or by massaging the body develop cough, cold, vomiting, loose motions, itching or boils, on skin as a reaction but there is nothing to be alarmed at because such a reaction in dicates that impurities and toxins

accumulated in the body are being thrown out with a view to cleanse it. So there is no need of taking any medicine to put an end to such reactions. For boils, rashes, or skin eruptions you can put bandage cloth soaked in old or fresh urine on the affected parts. in the case of diseases pertaining to dif ferent parts of the body viz. eye, ear, nose, throat, heart, lungs, abdomen, liver, kidney, piles, prostate, thyroid, uterus of woman etc. there is no need of taking any sepa rate treatment or medicine because Shivambu is the guar anteed and assured panacea for all diseases of the body. For dealing with the diseases of some parts the proce dure is given hereunder :

For prostate, fissure and piles retention enema of 50cc of old or fresh urine should be given to the patient twice in a day; over and above regular intake of urine. For piles urine packs can also be put on the piles & anus.

By putting urine drops in the nostrils and or by drinking it through the nose instant relief can be obtained in sinusitis and other nasal problems; and especially instant relief is obtained in common cold. By drinking urine through the nose your voice becomes melodious ! One may become a singer due to beneficial side effect !!

Though numerous diseases of the ear are cured by putting urine drops of old or fresh urine, in some rare cases, some patients had developed ear pain after the use of urine drops. So be careful about it. If you develop pain discontinue it.

Bandages : You can put bandage cloth soaked in urine on wounds, burns, swelling, skin infections, rashes, in sect bites, stings etc. for instant relief.

For the diseases of the women like leucorrhoea, irregularity of menstruation, pre-menstrual tension (PMT) premenstrual inflammation of the ovaries or uterus, fibro sis, tumor etc. along with drinking of urine its douche should be given. If douche is not possible one can insert cotton wool soaked in urine in the vagina, which can be replaced after few hours. In our scriptures our body is compared with the Universe (Brahmand). It is certainly not within our reach to fathom out the mysteries or di vine qualities of Shivambu fully like the mysteries of BRAHMAND. Shivambu does not merely work at the physical level but it works wonders at the mental, intel lectual and spiritual levels. This is the direct experience of all Shivambu devotees.

Use of fresh Urine : For drinking, putting drops in ears, eyes, nose, snuffing, gargling, rubbing on gums on bums or on injury enema etc In case of bums Shivambu is so much effective that by patting cotton gauge soaked in old or fresh urine on the affected part there will be in stant relief and there won't be disfigurement and depigmentation of the skin it all !

Use of stale (old) Urine : Massaging, enema, bandage, poultice, steam inhalation. From practical experience it has been discovered by me that for outward use old urine is hundred times more effective than fresh urine !

Use of fresh & stale (Both) urine : Ear drops, burns on injury, wounds, boils, infections, enema.

Special guidance for incurable skin diseases like psoriases,. Eczema, Leucoderma etc.

Often it has been noticed that different types of skin dis eases and skin infections particularly infections on the genitals of men and women simply go away (disappear) with external application of urine. But even obstinate, lin gering and incurable diseases like psoriasis, leucoderma, pemphigus. S.L.E. Herpes and skin cancer also get cured when U. T. treatment is done systematically particularly following strict regimentation of diet which include totally abandoning salt, chillies acid condiments for 3 to 4 months and only eating raw natural food of salads, fruits, vegetables, dates, raisins (to be eaten after soaking it in water and blending) and vegetable soups etc. Side by side you have to drink whole day's urine, take enema of luke warm water mixed with Urine, and gentle massage of the whole body twice a day one hour each with old urine. This procedure must be continued for 2 to 4 months. It has been discovered after prolonged experimentation that in comparison to fresh urine old one is hundred times more effective on skin problems and massage. Hence for all the skin diseases old urine is a must. This is the SHIVAMBU "Sadhana" and the posi tive results are sure and certain.

11: MULTIFARIOUS USES OF URINE

Friends, you will be astonished to know the multifarious and divergent uses to which we can put our urine at work !

It can be safely & beneficially used as : A conditioner for hair. Shaving Cream, after shave lotion, tanning lotion antiseptic lotion for cuts and wounds, complexion improving lotion, Astringent lotion for pimples and acne, eye wash for ail eye troubles, nasal passage cleaner for sinus troubles, rheumatic and muscular pain killer, soothing & healing lotion for burns & treating piles and fistula antidote for snake and scorpion bites, can be used as aphrodisiac on impotency; as douche for leucorrhoea and other menstrual diseases and last but not the least a instant energizer. If you use it as a mouth wash daily, before going to bed, f can give you life time guarantee for your teeth! No exaggeration. It not only makes the complexion fair but one can also get rid of old age wrinkles of face and body. Urine Therapy Is the nature's most effective de-aging tonic ever known to mankind. It has been recently discovered that even vaginal Herpes is cured just by putting Urine packs on the affected parts.

A friend of mine Dr. B. V. Khare well known Urologist, and one of the most active trustees of our foundation is a staunch SHIVAMBU devotee since 20 years who has guided more than 3000 patients suffering from different incurable diseases over the years says "If a child is given Shivambu right from the birth it will turn out to be a

Computer baby (Genius) with extraordinary intellect, memory and health!"

Suppose any patient has stopped passing urine or very little quantity is coming out, then under such circumstances if urine of a child or any healthy person is given to him/her for drinking the patient will start passing it freely within half an hour. Thus he/she can start drinking his/her own.

12: REGIMENT OR RESTRICTIONS OF DIET

There is prime need of taking special precaution about food, in order to keep our body disease free. Because mostly diseases set-in due to harmful food or eating more than required by the body. In our daily meals we take more of cooked food and less of salads, fruits, green vegetables etc. as such our body does not receive full nutrition. During the process of cooking food, its nutritious elements get destroyed due to heat. By eating such food the quantity of fats and mucus accumulates in the body as a result of which we become victims of killer diseases like cancer, blood-pressure, heart attack and diabetes etc. not only that the stool gets choked in the intestines, which rots there for years together due to which several other diseases crop up. On the other hand ripe fruits, green leafy vegetable and sprouts contain ample nutritious elements, vitamins, salts etc. to keep our body free from disease. By eating such natural food our body develops disease resisting power more and more so as to keep our body healthy and disease free. Therefore we should take less quantity of cooked food and more of natural to keep us healthy. During the practice of Urine Therapy if we do not keep control over our Ahar, Vihar and Manovyaper we will not be able to obtain maximum benefit from Shivambu.

In food out of the following items you can take what ever suits you.

Grains : 1) Wheat porridge 2) Wheat Chapati (Roti) without sieving the flour as the husk (Choker) normally removed by sieving contains more nutrition than the flour. 3)Roti or Bhakri made of Jowar or Bajra 4) Roasted things such as groundnuts, grains, green peas, unpolished rice, red rice, or various rice preparations like Kheer, Lahi, Chivda etc.

Sprouted Foods : By sprouting the food grains its nutritious elements and vitamins increase several times in quantity and quality. You will be amazed to know the tremendous nutritional qualities of sprouted Ragi (Naachni), though it is a staple food of the poor backward aboriginals (Aadiwasi) of Maharashtra and Gujrat. It increases the Hemoglobin in the blood to a great extent at the same time it cures diabetes. Ragi can be eaten by preparing its Chapati or Sprouted Ragi can be blended in a mixer with water and can be taken as a nutritious drink by adding little honey. The above mentioned sprouted cereals after grinding a little can be mixed in Salad or in Curds to be eaten as Raita. It can also be eaten in the form of Khichdi prepared in cooker.

Moong, Gram, groundnut, wheat, tit, fenugreek {Methi) Ragi (Naachani) can be easily sprouted.

Green Vegetables : Gourd {Louki) Zucchini (Turai) Parwal, Reddish, Onion, beet, shagam, garlic, and green leafy vegetables such as, Palak, Bathua, Cholai, Methi etc. amongst the green vegetables whichever available and suits you should preferably be taken raw in salad form without cooking.
You can also extract fresh juice of the above vegetables and drink it. It will be tremendously helpful in curing deadly diseases like AIDS, cancer, S.L.E., Arthritis, diabetes etc.

Ripe Fruits : Papaya or papeeta, chikoo, mango, apple, mosambi, orange (sweet) grapes. etc.

Dry Fruits : Dates, almonds, black raisins (Manuka) should be soaked in water over-night and eaten, kaju, kishmish, ghee, milk of cow or goat.

Things to be avoided : Articles made out of refined flour (Vaida) like bread, biscuits, cakes etc., non-vegetarian food, pickles, papads, fried things, too-much spicy and salty foods must be avoided or abandoned altogether while doing U. T. for serious diseases. White sugar andvegetable ghee (Dalda) is injurious and harmful to health and body. Jaggery (Cur.) can be used in place of sugar. Try to take minimum possible salt, chillies and condiments. Must abstain from Bidi, Cigarettes, tobacco, wine or other intoxicating drugs.

13: SPECIAL INSTRUCTIONS FOR CANCER PATIENTS

Most of the people coming to our consultation center conducted by our foundation for seeking guidance of U. T. are patients suffering from cancer. That is why it is worth while to give special information and guide lines to cancer patients. Of course it is a bitter truth that people take to Shivambu Therapy when they are fed up and tired by experimenting with all paths and therapies, and thereby spoiling the case. But by that time disease reaches the last stage, when U. T. fails to give them complete relief they indulge in blaming Shivambu Therapy. Moreover there is another cogent reason responsible for the present situation that public does not have proper and correct knowledge about U. T. nor there are centers for obtaining relevant information. As such Cancer patients can't do this treatment systematically by following proper method of fasting, massage and enema etc. Hence they do not achieve expected benefits.

One the other hand we have seen that patients at the last stage of cancer though might not have been fully benefitted from U. T. but it is observed that there had been remarkable reduction in their pain and sufferings and they have died a peaceful and painless death I

I have already classified the diseases in two categories and explained the methods of treatment earlier, even then I repeat certain points so that cancer patients can while remaining at home could treat themselves in the right manner without seeking anybody's help and guidance.

Cancer patients should start U. T. only after stopping au allopathic medicines and treatments like chemotherapy, radiation, and antibiotics etc. However there will be no problem if Ayurvedic or Homoeopathy medicines are taken along with drinking urine. They should implement the following instructions.

1. Considering the condition of the patient, 8 to 30 days Shivambu fast ought to be observed by drinking urine and water only. After the fast also the patient must drink whole day's urine for few months, and do massage too.

2. It is absolutely necessary to do gentle massage with old urine for minimum one hour each in the morning and evening during the fast and thereafter too.

3. Enema has to be given to the patient daily for a week by mixing urine with lukewarm water half to half for cleansing the bowels and intestines. Enema of Urine and water has such a tremendous arid powerful effect in detoxifying the body that it is capable of curing more than fifty percent of total diseases suffered by the mankind easily without the use of any medicine or even Shivambu The root of all diseases lies in the constipation and the effective simple, safe and most harmless remedy for it is Enema. There is no substitute of enema for getting rid of the old stools that might be stacked-up to the walls of the intestines and bowels. In the beginning enema should be taken daily after passing the first stools for 8 to 10 days continuously, and thereafter it would be advisable to take once or twice a week. Those patients who don't pass the stools easily they should be given enema without waiting for the first stool. (Motion)

Cancer Myths and realities

Two well known doctors of Bombay, Dr. Menu Kothari & Dr. Lope Mehta have written a revolutionary book titled "Cancer Myths and Realities about its cause and cure" The book is published in London and has been translated in Germen and Dutch languages, while a single copy of the same is not available in any book store in India ! I got the same from the authors and instantly prepared a Xerox copy of the whole book. It has been translated in India in Gujrati language only. They, after deep study and research have written in the book. "If any cancer patient takes routine allopathy treatment his/her life is shortened and his/her death becomes painful whereas those who don't opt for the treatment they survive longer and their death is painless !"

They further write "For the diagnosis of the disease it is not wise to undergo biopsy too, as because of doing biopsy cancer spreads speedily in other parts of the body" That is

why Dr. Kothari had neither done biopsy nor given any treatment to his parents suffering from cancer. They further state "During the last fifty years though Trillions of Dollars have been spent on the research work or medicines of cancer but not an inch of progress has been made in the direction of successful treatment of cancer, still every now and then tall claims of new research are made in the medical journals and newspapers"!

From the above statements made by the authors of that book we can draw a simple conclusion that all are interested in running their own shops and peddling their pharmaceutical products ! When the patients do not get the correct information as to their disease and/or the dangerous and painful side-effects of the medicines given in the treatment of cancer, could there be expectation for correct and successful treatment of it.

Friends, I had decided not to include case histories of the patients recovered by U. T. with a view to avoid making this book bulky, but the recovery story of Srilata Swaminathan (Kidney failure patient) who happens to be the niece of well known Katthak dancer Mrinalini Sarabhai and the story of Mr. Himmat Somaiya (Cancer Patient) are so incredible, thrilling and hair raising that I have decided to print them in their own words here :

14: MY INCREDIBLE RECOVERY STORY

by SRILATA SWAMINATHAN

I had been sick for many years. The problem was supposed to have been with my kidneys. I suffered a lot from edema, as my kidneys were not able to clean my blood properly and my body was full of toxins and poisons that it could not expel. The All India Institute of Medical Science (AIIMS), New Delhi, had told me in 1982 that I would not survive another two years if I did not have a kidney transplant.

I have been working and living for the past Eighteen years among the Bhil adivasis of Banswara, Rajasthan. This is an extremely poor and 'backward' area. It seemed ridiculous to spend thousands, even lakhs, of rupees on a transplant, or on the health of just one person. Very few people in our country are indispensable, and I am not one of them. Moreover, I have very little faith in the allopathic system, and prefer more natural and holistic methods such as Ayurved, naturopathy, homoeopathy, diet control and fasting. I was taking homoeopathic medicine and continued with this. I was able to continue working, but there was a gradual deterioration in my health and abilities over the years.

Gradually, I got worse. It became more difficult to work and to move around. My weight increased. I felt lethargic, and dull and heavy in mind and body. I was subject to

increased irritability. and f became hypersensitive and emotional. The smallest problem took on gigantic proportions and became impossible to deal with. I suffered from edema, weakened eyesight, falling hair, bleeding gums, piles and anal fissure, painful joints, tiredness and being out of breath, inability to retain urine, premenstrual tension bordering on hysteria, constipation or diarrhea. acute depression. In short, I felt that my whole body and its systems were coming to a sluggish halt. 4 had to force myself to go on working.

Working in this tribal area, I saw many adivasis use urine very effectively on cuts, bruises, sprains, wounds and even gangrene. Urine was given to small children for coughs, jaundice and stomach ailments. Much against my natural (or un-natural) instincts, I was forced to admit there was a beneficial side to urine. So, about fifteen years ago, I went to Ahmedabad and met Shri Morarji Desai and asked him to recommend some books on U. T. that I could study studying them. I was still skeptical about the 'scientific' rationale behind Auto-Urine Therapy (AUT), but the books not only convinced me, but made fascinating reading. At that time I was suffering from, what the allopaths railed, 'amoebiasis'. After reading the books, I drank the first urine I passed every morning, for a whole month, and amoebiasis never troubled me again.

To get back to the present, while I was convinced of the efficacy of AUT, I did not practice it consistently or seriously till I became virtually bedridden by the end of 1988. By September '88, my body was so full or toxins that I had massive edema and my legs, ankles and feet had started oozing pus from hundreds of sores. The pain was so, severe that I could not walk or do any work. I did riot get a single night's sleep from 28th September till January 5th, as each contact with the bed sheet or any cloth was painful and each movement led to shooting pains. went to Delhoto be treated by my homeopathic doctor whose knowledge, patience and wisdom I greatly admire. But after a month and a half of treatment, even he felt that there was nothing he could do, since I was not responding to any medication. I went to Jaipur and consulted an Ayurvedic doctor, but then, the sores broke out with even greater ferocity. I returned to Ghantali (the small tribal village where I live), feeling that I would not live much longer and waited for the painful end. What irked me most was the feeling of being a burden to others and not being able to do any work. By now, I was in bed all the time and had stopped all medication, since nothing was working.

One day, at the end of December,88 I remembered the books of AUT and began to read them again. I went through the case histories of patients dying of terminal diseases like cancer, kidney failure, heart complaints and many others, all of whom had been saved by AUT. I decided to make one last effort to survive.

From 1st January 1989, I went on a total fast, eating nothing at all and drinking all the urine I passed and some water. I fasted continuously for five days, at the end of which the pain in my legs and ankles disappeared completely and I was able to sleep properly and begin hobbling around. But the swelling and sores in my legs and feet persisted.

So, on 15th January, I decided to go on an indefinite fast until I was better. Again, I took nothing but urine and water. I fasted for fifteen days continuously, by the end of which, all the edema in my legs, ankles, face, arms, hands and body had disappeared and the sores on my legs almost healed. I could walk around quite normally, and began working on the fourth day of my fast. With each day of fasting and AUT I not only got better but stronger. Initially, my pulse was irregular and I felt slightly feverish but, gradually, my pulse and blood pressure became normal. My mind and body became increasingly active and alert.

It is now June, 89 five months since I fasted on AUT, and I feel younger, more energetic, can work longer hours and easily walk 8 to 10 kilometers without any problem. During the whole of May was able to field work even in temperatures of 45 to 47 degrees centigrade. Let me tell you the ways in which I am benefitted. l can now read and write without wearing glasses. My hair has stopped falling. My teeth are no longer sensitive and painful. My gums no longer bleed. There is not more swelling and I am no longer troubled by piles and constipation. There is no P.M.T. I have lost weight. My memory is better and I am less irritable (my husband will vouch for this). Mentally, I am much improved, with no depression and feel rejuvenated and positive towards life and work. Some friends even say that my hair is not as grey and has become blackish! Anyway, there is not doubt that I have been given another chance to live, a reprieve. Also, 1 do not have to depend on doctors, hospitals, expensive drugs and fancy-equipment. I also feel pleased that no multinational pharmaceutical company is earning profits through me !

I still drink the first urine that I pass every morning, and whenever possible, 2 or 3 times or more in the day. I fast once a week, and stay on urine and water only during the entire day. People who saw me when I was sick are astounded at my recovery. I have also started helping others cure themselves on UT, especially poor tribals and dalits in this area. I know that many feel mental revulsion to the thought of drinking urine, since they have been conditioned to believe that it is unclean, dirty and a waste product. I suggest that they read the books on U. T. which would explain the rationale behind urine therapy much more effectively than I can.

SOCIAL WORK

15: CANCER DOESN'T MEAN CANCELLED FROM LIFE

The amazing recovery story of Shri Himmat Somaiya from terminal liver cancer is so thrilling, sensational, exciting and inspiring that I have decided to reproduce the same here in his own words for the benefit of the readers. Mr. Somaiya, after his miraculous recovery has become a powerful propagator and mighty supporter of U. T. (SHIVAMBU). He has joined our Shivambu Mission wholeheartedly. He is ever-ready to help and guide the people suffering from incurable diseases.

"Friends, Had I not stumbled upon U. T. eleven years before, my family members and friends would have been mourning my 11th death anniversary !

In the year 1984 when I was 42 years old the doctors of the prestigious Tata Memorial Hospital, Bombay diagnosed that I was, suffering from liver cancer of last stage. Prior to getting admitted in Tata Hospital I was treated by several well known Allopaths, Homeopaths and even Ayurvedic physicians for several months, but my health went on deteriorating day by day as I couldn't eat any thing; as a result of which my body was reduced to a mere skeleton weighing 40 kg. against my original weight of 62 kg. Doctors of Tata Hospital had advised me to go for Chemotherapy and thereafter Radiation therapy as a last resort. f shuddered at the very thought of those dangerous treatments as I had seen with my own eyes the miserable and painful conditions of my few relatives and f friends who had undergone those horrible treatments. I prayed God to save me from this dangerous predicament. And, as if God heard my prayer and sent his messenger in the form of one Mr. Nanubhai Chitalia whose incredible recovery story of terminal liver cancer had been published by numerous news-papers and magazines. He had miraculously recovered from liver cancer by U. T. and had healthily survived for more than ten years against the physicians' prognosis of few days

He came to meet me in Tata Hospital to inspire and guide me to do U. T. instead of opting for harmful dangerous treatments. f gathered courage and took voluntary discharge from Tata Hospital against medical advise and doctors' warning that I won't survive for more then ten days if I didn't undergo the proposed treatment.

Being a book-seller by profession I had read few books on U. T. but I had never thought of practicing it. I made up my mind to follow U. T. as a last resort

I started drinking 1 1 /2.to 2 glasses of Shivambu in the morning and within few days my mouth ulcers were cured and the blood that was coming out from my tongue and gums also stopped ! This was not a small achievement for me. I felt great relief as I had suffered these afflictions for several months in spite of spending thousands of Rupees on its treatment. This gave me added confidence and inspiration to do U. T. treatment more systematically and intensively.

I started drinking whole days urine around seven glasses and in between 1 drank ample water, herbal tea of TULSI & PUDINA, Carrot Cabbage juice, Vegetables soups, fruit juices at an interval of an hour. After one month of treatment there was considerable improvement in my general health, and at the end of three months a strange incident occurred. Along with the stools I passed few tumor like substances which I collected and sent for pathological examination. In the report it was mentioned that those were the malignant tumors that might have got separated from the liver ! Thereafter there was fast improvement in my health. After six months t went for check-up to the Tata Hospital and to the amazement of my physicians I was declared totally normal and healthy! Today after eleven years of my recovery from deadly disease I am having extraordinary health and stamina which I had 20 years before ! I have become a legendary personality amongst my friends, relatives and well-wishers. From my own experience I confidently declare that cancer can be certainly cured by Urine Therapy if done systematically.

I am attending Shivambu Seminars without fail and narrate my incredible story to inspire the audience to follow U. T. before it is too late. Anybody can approach me for guidance. Jai Shivambu."

16: URINE THERAPY AND POLITICS

I am deeply pained to write that though this simple and free therapy can prove to be a boon and blessing for our poor country, our Government has not only remained inactive but has miserably failed in its boudan duty to popularize it for the benefit of afflicted poor teeming millions of India and that too despite the fact that the greatest follower, advocate and supporter of this time tested- therapy was none other than our former Prime Minister centenarian Late Shri Morarji Desai who lived a healthy life of 100 years to inspire us. It is universal historical phenomenon that when the Governments fail the public is compelled to ACT. Friends, wait, don't misunderstand me. I am not telling you take the law in your own hands, but the responsibility of your own health.

I do hope and pray before any unpleasant situation arises our Government will wake up from the slumber along with the mass awakening and rise to the occasion of taking urgent steps in the direction of spreading the awareness of this precious but neglected therapy in the interest of ailing humanity and both hand in hand shall succeed in building a healthy self reliant nation.

Before concluding I would like to reproduce a passage from the book named SHIVAMBU KALPA written by Dr. Arthur Lincoln Pauls originally from Canada but permanently settled in England. (Now he has left England and settled in France) This is the book which inspired me to become a propagator of U. T.

"This book however, will attempt to show why we should place the blame where the fault lies, within over selves. To quote Shakespeare, "the fault lies not in our stars but in over selves, that we are underlings'. Even if it is true that we lead "Karmic' existence. It is no excuse for walking around with closed eyes."

"It should not surprise us that the situation is as it is, Anything created with a vested interest in mind is open to all sorts of corruption, especially when it deals with the emotions and fears of man, as healing undoubtedly does,"

Abraham Lincoln however had a line for it. "You can fool some of the people all of the time and all the people some of the time, but you can't fool ALL PEOPLE ALL OF THE TIME".

So friends rededicate this small booklet to those who are tired of being fooled, and are placed in hopeless situation with the hope that they will heal themselves by their own medicine.

We have been looking in vain for a miracle cure for Cancer, AIDS, Arthritis, Heart diseases etc. and for Rejuvenation or KAYA KALPA. The cure is in our own hands, may in our body. The greatest truths are the simplest. Urine Therapy is a case in point. George Bernard Shaw has rightly said "All great TRUTHS begin as blasphemies", which squarely applies to Urine Therapy.

JAI HIND, JAI SHIVAMBU,
JAI SHIVAMBU CITE ! JAI SHIVAMBU CITE I!
JAI SHIVAMBU CITE!!!

18: PERSONAL APPEAL

"Each one Teach one & "Light a lamp with a lamp" These maxims who would not have heard ? Don't you remember that even cow-herd boys had lent their own contribution in lifting Govardhan Mountain along with Lord Krishna ? Hence in this gigantic task we have to do the same thing.

An humble request to all of you that if you have had any expe rience in respect of Shivambu Therapy or you know about the experience of some body acquainted to you, or wish to con any other relevant information/suggestion, don't hesitate to write to me in confidence with open heart.

Your brief hint or small step could assume Global form and significance for the benefit of entire man-kind.

I thank you all on behalf of whole humanity.

Dr. G. K. Thakkar

Title: ALL HUMAN BEINGS HAVE DRINKEN THERE OWN URINE

craig-oxley - June 24, 2009 02:09 AM (GMT)

ALL HUMAN BEINGS HAVE DRINKEN THERE OWN URINE, INCLUDING THE WOMB OF OUR BLESSED MOTHER!

http://www.5thworldcongressurotherapy.org/mision_en.html

In the natural biological heaven of the human reproduction, inside the maternal womb while the formation of our body took place. The first step was the formation of mother cells, the heart, brain, kidneys, bones, basic organs, nerve cells that receives and transmit, and above all the coordination between sensorial organs and the incredible balance of genetic information, biochemist, cell reproduction, and the bio-energetic stimulant. Inside the maternal womb, we are in complete peace and harmony preparing ourselves to come out to a new life in the exterior.
The man's perfect time on earth is during the gestation period.
The Urotherapy is literally a gift from God, it is part of nature.
There is no human on earth that has not taken his or her own urine, we are born inside a womb and after six weeks, he or she will start urinating a few drops into the amniotic liquid, that is water and his or her own urine!
Through the umbilical cord, the baby receives from the mother special nutrients as immunoglobulin, vitamins, but most of all oxygen.
When the baby reaches the age of 5 months, they urinate from 400 to 500 ml. Each day inside the amniotic sac, and between 8 to 9 months the baby urinates 20 to 30 times every 24 hours.

The 98% of the composition of the Urine is water.
ETherefore, 1% is elements are cells and filaments, and the other 1% is more than 1000 healing chemical substances in form of ions. Powerful substances found in milligrams, that carry the genetic information of what works well or not in the body.
When you take your own urine, you take an auto vaccine.

In other words Urotherapy is part of be beginning of life and we believe that we grow up with nature. It is a wonderful cycle of life that should never be interrupted.

Who can live without water?……Nobody
For that reason the water is an element ....SACRED
Who can live without air ?.....Nobody
For that reason the air is an element…SACRED
Who can live without the sun.....Nobody
For that reason the son is an element…SACRED
Who can live without taking the urine inside the mother?……..... Nobody
For that reason the urine is an element…SACRED.

HISTORY OF THE UROTHERAPY

Etiologically speaking Urotherapy means: Treatment utilizing our own urine . The word URO comes from the Greek that means urine and Therapy means treatment. The Urotherapy has always existed, is the oldest therapy of humanity and one of the first therapies created by God, it is older than the Chinese Medicine. One of the oldest therapies utilized by man and applied with wisdom by mystic and intuition. The Urotherapy was born in all Countries at the same time. In the Old Testament it is mentioned in Proverbs chapter 5 versus 15 thru 18th. These remedies are written in the oldest written book known as The “Gootour Schastar” from 6000 years B.C., with recopies, medications, treatments based on drinking or applying his or her urine. THE UROTHERAPY has always existed, it is a method commonly known as Urinetherapy to different cultures long times past such as the Egyptian ferrous, Tibet Lamas, Greeks and Romans. In Mexico, the Native Indians also had valued information and knowledge in regards to this type of therapy. In the European Continent, they also have stories of Greek Doctors that utilized the Urine for healing wounds. In the book No. 28 of the encyclopedia’s NATURALIS HISTORY, (Natural History) of the Roman writer, C. Plínius Secundus writes about the treatment with urine in wounds for dog bites and snakes, as well as venomous spiders, skin diseases, along with eye infections, burns and scars. .

The Historie of the World.

Commonly called,
THE NATURALL HISTORIE OF

C. PLINIUS SECUNDUS.
Translated into English by PHILEMON HOLLAND
Doctor in Physic.
1601

Orient as well as Occident were familiar with this treatment .

INDIA HAS A SACRED BOOK

That has existed more than 500 years from the past, and it is called ”Writings of Damar Tandra about the Shivambu Kalpa (therapy of auto-urine). Hindu version from before Christ were written in Sanskrit. It is a description of the therapeutic systems by utilizing the Urinetherapy directed by the god Shiva to the goddess Parvati. Where the god Shiva describes its benefits to his wife Parvati of this precious book that has a very interesting content of 107 verses that speaks about what happens to the human body through the years when you practice the Urinetherapy.
And states in the book… “He whoever continues with this practice for twelve years will live as much as the moon and the stars and there is no danger with animals like serpents, because no poison can kill you”. Your body will be liberated from aging and its destruction, and you will have the strength of 10,000 elephants and will free the body of all illnesses”

IN MANY COUNTRIES OF THE AMERICAN CONTINENT

As in Argentina, Peru, the natives from the mountains Serrano Andina, Mapuches in Chile and other communities of the Trahumaras in México, along with areas in U.S.A. continue to practice this therapy to this days.

Now days in Mexico exist a valued verbal and written testimonies from people that had recommended this treatment for burns, such as soldiers during war time that had burns due to the gunpowder, so they applied their own urine to alleviate the pain. The NASA Astronauts and survivors from disasters such as earthquakes and shipwrecks, have saved their lives in these types cases of emergency by drinking their own urine. For stomach aches, wounds, along with bites from venomous animals or insects, grandmothers have recommended putting baby diapers on skin for the spots, and we have two books from the year’s 1514 and 1552 that stated that native Indians used there urine for healings. The first book is called:

CODIGO BADIANO

In México, Martin de la Cruz Aztec physician from the XVl Century in 1552 in the Badiano Code makes specific references to the urine treatment.
En la curación de heridas en la cabeza se usaban: orina –para lavarla–, matlaxíhuitl – The Aztecs used to call the urine as… huitztly, they used it for the treatment of spiders and serpent's bites, as well as any other poisonous animal or insect, along with other uses for the urine treatments.
For the hemorrhages, they applied urine with maguey secretion, also in treatment for scars. Florentin Code, lib. X, f. 113r.

NEW SPAIN GENERAL HISTORY OF THINGS.

Written by Fray Bernardino de Sahagún in the year 1514. He is one of the Priests that came with Hernán Cortes to México and learned from the Native Indians whom used the Urine therapy from pages 585, 585, 587, 593, 594 Cáp. XXVIII and states:
…..For the pain of the "horquilla" that usually starts in the hair, the best way is to cut the hair as short as possible and scrape it well, along with washing it with urine, then apply a plant called "Nanacae", to remove the herb it needs to be washed with urine. ¨. ¨
……When you cut the hair it needs to be washed with urine….to combat dandruff cut the hair very short and then wash it with urine.
… … For the illness of " postilla" and " sarna" that normally starts in the head area, you must use the same remedy as before adding these add ional healing agents….
following washing with urine the head area apply the avocado seed's grounded up. Etc. Etc.

.

In this Century, many people have come to know this wonderful secret. Hospitals in the Unites States and Europe actually are creating several medications with the urine, along with Pharmaceutical Industries that are purchasing the urine of several people to manufacture medications, cosmetics as well as dental toothpaste.
Carmen Thomas, a German reporter states that some pharmaceutical firms have united

to the “Shangay” movement. The urine is recollected in public latrines, it is sold to companies that manufacture medications by extracting the Urokinase, and then they export it.
(Published in the Newspaper “El Diario” dated 26th of April of 1996. In Guadalajara, Jalisco. México).

In 1971 in the University of Medicine of Kyoto Japan, it was discovered that the antibodies in the urine such as “interokin”, “renina” and “prostaglandin”, are important hormones used to combat infections or malign tumors.
In the Unites States, a Scientific team from Harvard University discovered several hormones from the Urine that are called “S.P.U”. and “interferón”, which are being released during the sleep time and re utilized as antibodies, anticoagulant for circulatory problems, and they act as pain relive and stimulant for the hormones. The melatonin is substance that helps with memory as well as other substances. The Urotherapy helps to improve the immunological system, which as a result brings on cures of many illnesses.

In 1992 Hayashibara Institute of Chemistry in Japan, discovered during a formal study investigation that urine had many important substances for our health such as the one called, “Interferon” that has analgesic effects and is a natural antibody.

Title: Fasting 'could lower your risk of heart disease
Description: *and diabetes'*

TheUnhivedMind - April 4, 2011 05:52 PM (GMT)

Fasting 'could lower your risk of heart disease and diabetes'

By Daily Mail Reporter
Last updated at 5:57 PM on 4th April 2011
http://www.dailymail.co.uk/health/article-...e-diabetes.html

The 30 volunteers fasted for 24 hours and only drank water. This encouraged the body to start burning up fat cells (posed)

Fasting can lower your risk of heart disease and diabetes, researchers claim.

A study found that periodic fasting not only decreases the risk of heart problems and diabetes, but can also lower blood sugar levels.

Triglycerides (a type of fat), weight, and blood sugar levels all lowered after participants fasted for 24-hours and just drank water.

Scientists from the Intermountain Medical Center Heart Institute said the findings supported a previous study which suggested fasting could be good for your health.

Lead author Dr Benjamin Horne, said: 'These new findings demonstrate that our original discovery was not a chance event.

'The confirmation among a new set of patients that fasting is associated with lower risk of these common diseases raises new questions about how fasting itself reduces risk or if it simply indicates a healthy lifestyle.'

The researchers looked at how the body behaved during the fasting period, and found that the level of cholesterol - both the 'good' and 'bad' versions of the molecule -

actually increased during the 24 hours without food.

However, this could lower the risk of diabetes as it means the body is less likely to struggle with regulating blood sugar levels.

Presenting the new research at the American College of Cardiology, Horne said: 'Fasting causes hunger or stress. In response, the body releases more cholesterol, allowing it to utilize fat as a source of fuel, instead of glucose. This decreases the number of fat cells in the body.

'This is important because the fewer fat cells a body has, the less likely it will experience insulin resistance, or diabetes.'

The study saw 30 volunteers consume nothing but water for 24 hours, then pursue a normal diet over the same period.

Blood tests and other physical measurements were made throughout the period to calculate cardiac risk factors and markers of metabolic risk.

However, the study only looked at the short-term impact of fasting. Doctors aren't ready to recommend fasting to their patients until more research is conducted to fully understand the effects on the human body.

View Full Version: Benefit from Calorie Restriction and Intermittent

Title: Benefit from Calorie Restriction and Intermittent
Description: *Fasting*

craig-oxley - August 26, 2010 01:21 PM (GMT)

Seventy-five years of research shows that dietary restriction (DR) is the one tried and tested means to extend lifespan and to improve many markers of health.

One form of DR is a calorie-restricted (CR) diet with optimal nutrition. The idea is to provide adequate nutrition with the least amount of calories (in other words, under-nutrition without mal-nutrition). Intermittent fasting (IF) is another form of DR. Intermediate fasters eat about the same amount of calories as non-fasters on a carefully restricted schedule. This implies that the episodic deprivation, irrespective of the caloric count, produces the physiological effects of IF.

In almost every species studied, including yeast, fish, rodents, dogs, and primates, DR seems to mysteriously slow aging, extend youth, and postpone diseases associated with old age. In laboratory experiments, some animals have been able to expand their healthy life spans by up to 400% with optimal DR.

The rationale behind the DR theory of longevity is that organisms become stronger and more resistant to diseases in response to the stress of a continual state of mild hunger. Some scientists believe that this could have been an evolutionary adaptation, which allowed our ancestors to survive periods of food scarcity.

The physiological effects of IF and CR are similar. Both CR and IF prompt cells to set up defenses against stress, which protect against aging and degenerative diseases. However, since IF fasters are allowed to eat as much as they want when given access to food, IF is usually more appealing than the continual self-denial of CR.

Many mechanisms of DR induced life extension have been proposed. One of the most prominent is the discovery that DR up-regulates autophagy, or what is called the repair mechanism of the cell. This effect is related to the down regulation of insulin and insulin-related molecules.

Studies indicate that insulin's role as the body's blood sugar regulator is simply a consequence of its major role of regulating cellular reproduction, and therefore lifespan. Insulin -predominantly secreted in response to dietary carbohydrates- signals to the body that it is well nourished and conditions are prime for cellular reproduction. On the other hand, when insulin level is low, the body senses famine, down-regulating reproductive pathways and up-regulating cellular maintenance and repair.

The beneficial effects of DR are plenty. They include:

-Prevention of Alzheimer's Disease
-Improved learning and memory (via increased brain derived neurotrophic factor, BDNF)
-Insulin sensitivity
-Lowers body mass index (BMI)
-Cardio-protective effect (protects heart and brain cells against injury and improves outcomes in stroke and myocardial infarctions; increase levels of circulating adiponectin).
-Less expression of age markers in the liver and brain
-More youthful appearance
-Less inflammation
-Resistance of neurons in the brain against excito-toxins
-Prevention of mitochondrial fatty acid oxidation under stress
-Reduced vascular endothelial (inner lining of blood vessel) damage
-Reduce oxidative stress
-Less chance of developing/improvement of diabetes, cancer, heart disease, brain degeneration

Part 2 will discuss practical ways to take advantage of the latest findings in DR/ longevity research

[Editor`s Note: NaturalNews is strongly against the use of all forms of animal testing. We fully support implementation of humane medical experimentation that promotes the health and wellbeing of all living creatures.]

i can attest, for me, that calorie restrition is helping me out. although i'm doing some other heelthy things simultaneously, i believe calorie restrition or small(yet nutrient packed) portion snacks is making the main differnece. like craig has repeated and suspected, even wholesome food is sort of a poison-- obviously not as bad as say a cupcake--. craig, could you expound a little bit on why even "good food" is sort of bad for us in the wrong quantities?

View Full Version: Man claims to have had no food or drink for 70 yrs

Title: Man claims to have had no food or drink for 70 yrs

craig-oxley - May 1, 2010 02:55 PM (GMT)

Man claims to have had no food or drink for 70 years

Published on 04-29-2010 Email To Friend Print Version
http://www.telegraph.co.uk/news/worldnews/...r-70-years.html

Prahlad Jani is being held in isolation in a hospital in Ahmedabad, Gurjarat, where he is being closely monitored by India's defence research organization, who believe he may have a genuine quality which could help save lives.

He has now spent six days without food or water under strict observation and doctors say his body has not yet shown any adverse effects from hunger or dehydration.

Mr Jani, who claims to have left home aged seven and lived as a wandering sadhu or holy man in Rajasthan, is regarded as a 'breatharian' who can live on a 'spiritual life-force' alone. He believes he is sustained by a goddess who pours an 'elixir' through a hole in his palate. His claims have been supported by an Indian doctor who specializes in studies of people who claim supernatural abilities, but he has also been dismissed by others as a "village fraud."

India's Defence Research Development Organisation, whose scientists develop drone aircraft, intercontinental ballistic missiles and new types of bombs. They believe Mr Prahlad could teach them to help soldiers survive longer without food, or disaster victims to hang on until help arrives.

"If his claims are verified, it will be a breakthrough in medical science," said Dr G Ilavazhagan, director of the Defence Institute of Physiology & Allied Sciences.

"We will be able to help save human lives during natural disasters, high altitude, sea journeys and other natural and human extremities. We can educate people about the survival techniques in adverse conditions with little food and water or nothing at all."

So far, Mr Prahlad appears to be standing up to scrutiny. He has not eaten or drunk any fluids in six days, and similarly has not passed urine or a stool in that time. He remains fit and healthy and shows no sign of lethargy. Doctors will continue observing him for 15 days in which time they would expect to see some muscle wastage, serious dehydration, weight loss,and fatigue followed by organ failure.

It is common in India for Jains and Hindus to fast, sometimes for up to eight days, without any adverse affects, as part of their religious worship. Most humans cannot survive without food for 50 days. The longest hunger strike recorded is 74 days.

According to Dr Sudhir Shah, who examined him in 2003, he went without food or water for ten days in which urine appeared to be reabsorbed by his body after forming in his bladder. Doubts were expressed about his claim after his weight fell slightly at the end of the trial.

Fasting for Detoxification and Weight Loss

Posted by: Michael Tierra in weight loss, nutrition, herbs, diet, Ayurveda on Jan 17, 2009
http://www.planetherbs.com/index.php?optio...8&limitstart=10

We're already halfway through January! How are you doing with your health-centered New Year's resolutions? In my last post on diet and weight loss, I discussed exercise and making reponsible food choices. In this post I'd like to address another option for detoxification, balancing and weight loss: Fasting.

All fasting is essentially a process that gives the body a rest and restores normal metabolic function. There are generally two types of fasts: a more extreme detoxifying juice-only fast, and a milder yet still balancing and detoxifying fast based on legumes and grains.

Four-Day Apple Juice Fast

If you have previously overindulged in rich foods, meat, fat, dairy and so forth, you may reap remarkable benefits from a mono-fruit juice fast. For starters, I recommend the four-day apple juice fast.

Purchase or be prepared to juice the equivalent of at least a half-gallon of organic apple juice per day for three days.

The drill is simple: to maintain blood sugar levels, have at least one 8-ounce glass of warm or room temperature apple juice every two hours or anytime you feel like eating.

To maintain healthy fats during this (or any) diet I also recommend a teaspoon of olive oil three times daily.

After three days of taking apple juice only, you 'break-fast' on the fourth day. This day is the day that can either make or break the gains achieved by the previous three days. On that day, one can have warm vegetable soup with added beans and brown rice, accompanied by a wilted salad garnished with olive oil and Bragg's amino acids (an alternative to soy tamari sauce).

A "wilted" salad is the a traditional Asian dish made by chopping up salad greens and putting them into a cheesecloth bag and dipping them briefly into a pot of salted boiling water for 30 seconds or so. This is then placed on a dish with another dish on top and a weight to press out the excess water in the salad.

The nutrients in greens are encased in a cellulose-like bond that is difficult for our digestive fluids to dissolve. Heat dissolves this bond just as it will quickly crinkle any piece of cellophane passed over an open flame. Many may ask, "Don't you lose some of the nutrients through this flash-heating method?" Yes, but the loss is very little compared to what you will now absorb. The experiential test for this is how comfortable and good your stomach feels when you have your salads prepared in this way as opposed to greens that are raw.

Certain herbs will greatly assist the detoxifying weight loss process you are trying to accomplish with this fast. For this, I recommend Planetary's Triphala Garcinia Program, two to three tablets taken with the apple juice three times daily. This formula combines the legendary balanced detoxification properties of the three Ayurvedic fruits of Triphala with the thyroid supporting effects of kelp and L-Tyrosine, which all purify the blood and lymph. Also included in the formula are burdock and cleavers, which increase the elimination of excess fluid; Chinese white atractylodes, astragalus and ginger to help raise metabolism; and dehydrated apple cider vinegar, which regulates acid-alkaline.

It is important to note that no herbal formula will directly result in weight loss. Stimulants are used medically and do suppress the appetite to some degree, but should not be exclusively relied upon in place of dietary and lifestyle solutions such as the ones I discuss on this and previous posts.

This being said, a formula such as Triphala Garcinia Program can be a powerful aid to all the elements necessary for balanced weight loss. It can be safely used in an ongoing manner to assist the body's normal digestive, assimilative and eliminative processes.

After an initial four-day fast like the one mentioned above is a good time to implement or renew your New Year's diet principles and resolutions.

Kicharee Fast

For those whose diets are not so extreme in indulgences but still would like to detoxify and cleanse, a 10-day diet based on whole grains and beans with the judicious use of

spices is recommended.

The most ideal fast that has been used for millennia is based on the Ayurvedic food called kichari or kichidi. This is one of the most satisfying and healing foods. It can be taken as a complete food for detoxification, purification, weight loss, weak digestion or recovery from illness. You may modify it as you wish, adding vegetables, using chicken stock, adding fish, and so on. However, it is pretty complete unto itself. Depending on the type of fast you would like to do, you may choose to have it once, twice or for all three meals of the day.

With the addition of some cooked vegetables, one can live on kicharee. Here is the recipe:

Kicharee (Indian Dahl and Rice)

You will need the following ingredients:
Split yellow mung beans (dahl)
White Indian basmati rice (or other white rice)
Ghee (clarified butter)

Spices are important to kicharee and have their own healing properties:
Ground turmeric
Ground coriander seed
Ground cumin seed
Sea or rock salt

The final product will be very soupy and not like normal rice and beans. You can choose to make it thicker or thinner by using more or less water in the beginning.

In a saucepan, cook one part rice and mung beans (can be a quarter to a half cup of each) in 7 to 10 parts water until rice is tender.

In a separate large skillet, heat a level tablespoon of ghee. Add and sautee ¼ teaspoon each of turmeric, ground coriander seed, ground cumin seed and ¼ to ½ teaspoon of salt.

This should only takes a few minutes to lightly brown so that the wonderful aroma of the spices begins to arise. Then mix in the precooked mung beans and rice.

During your fast, have a bowl as often as you like. The ancients said that if one eats only kicharee for 10 days, it can cure all diseases. True or not, it is certainly a wonderful foundation to healing. To enhance the detoxification process, take three triphala tablets twice a day with water before or after eating kicharee.

While it is best to make a fresh batch everyday during your fast, kicharee will keep

refrigerated for three or four days. Don't forget that you can add vegetables or small amounts of organic meats to the above basic recipe to make it more like a stew.

I look forward to hearing what your experiences with either of the above fasts are in the comments section.

Juice Fasting Leads to Easy Weight Loss

Wednesday, November 25, 2009 by: Kim Evans
http://www.naturalnews.com/027576_juice_fa...eight_loss.html

Juice fasting is a powerful detoxification method and an easy way to lose weight quickly. With juice fasting, you'll consume considerable nutrition through freshly squeezed fruit and vegetable juices, but forgo any solid foods. Juice fasting is a powerful detoxification method because when your body isn't digesting food, your body can divert its extra energy to cleansing itself and eliminating old, unneeded tissue.

Most people don't know it, but our bodies use considerable amounts of energy just to digest our daily meals. It's estimated that up to thirty percent of all of the energy a person produces each day is used to digest food. Common meat and carbohydrate heavy meals require considerably more energy to digest than meals consisting primarily of fruits and vegetables.

In addition to giving your body considerable stores of energy to cleanse and heal itself, juice fasting can be a very easy way to lose weight quickly. In fact, if you have weight to lose, you'll find pounds and inches melt off in just a few days. It's not uncommon to lose 10 pounds with a week of juice fasting, if you have weight to lose. However, if you're already lean you simply won't lose much weight. It's amazing how intelligent our bodies are when we return to natural methods.

Juice fasting is beneficial for weight loss because your liver, your prime detoxification organ, is also your prime fat burning organ. So when you detoxify your body, you are freeing up your liver's resources to burn fat. However, when your body is overwhelmed with the need to detoxify itself, which is common these days, your liver will have a difficult time getting around to burning fat.

Our bodies are designed to fast occasionally. Many studies have shown that reduced caloric intake leads to health and longer life. A 1930's study from the University of Chicago found that worms who fasted regularly lived 19 generations longer than their non-fasting and regularly fed relatives. In human terms that's equivalent to having a 600-700 year life expectancy. Interestingly, that's about the same life expectancy quoted in the Bible for humans when human life began on earth.

In fact, it's likely that when humans were first around fasting was a regular occurrence simply due to the lack of established food production and distribution systems. At that time the things we regularly poison ourselves with (pesticides, chemical drugs, hormones in foods, plastics, vaccines, and virtually all man-made chemicals) weren't in existence either. Today, many of these poisons are difficult to avoid and it's challenging to even understand what our potential could be since most of us consume poisons with each meal, glass of water and breath - and have been since day one.

Understanding Fasting and Detoxification

Especially if you're new to cleansing and detoxification, you may experience detoxification symptoms when juice fasting. This can mean you might have headaches, nausea, or feel a bit out of it. It's important to understand that this is part of the detoxification process, and simply how people feel when they have large amounts of toxins and poisons in their bloodstream. However, to remove those poisons from your body they'll need to temporarily be in your bloodstream before they can exit, which is the reason you might feel a bit badly. In any case, it's important to know what's going on.

To help ease detoxification symptoms and really detoxify your body, colon cleansing and liver cleansing (with coffee enemas) work wonders when combined with fasting. These methods will help you remove more gunk than you can imagine and they'll help you feel better while cleansing too.

Calorie Restriction Diet Once Again Proven to Extend Lifespan

Wednesday, November 25, 2009 by: David Gutierrez
http://www.naturalnews.com/027577_calorie_..._extension.html

Monkeys fed a calorie-restricted diet were significantly less likely to die from cancer, heart disease or diabetes than monkeys fed a standard lab diet, in a study conducted by researchers from Washington University and published in the journal Science.

Researchers observed 76 adult rhesus monkeys for as long as 20 years. Half the monkeys were fed standard lab chow, while the others were fed a diet with 30 percent fewer calories and a higher concentration of vitamins and minerals. The researchers found that monkeys fed the standard lab diet were three times more likely to die of age-related diseases than the monkeys on the calorie-reduced diet. They were twice as likely to develop heart disease or pre-cancerous growths. While five monkeys on the standard lab diet developed diabetes and 11 became pre-diabetic, none of the monkeys on the reduced calorie diet developed blood sugar problems.

Brain scans revealed that there was less atrophy in the gray matter of monkeys on the reduced calorie diet, leading the researchers to state that monkeys on the restricted diet "appear to be biologically younger than the normally fed animals."

Studies in yeast, worms, flies, spiders, fish, mice and rats have all previously shown that animals on calorie restricted diets tend to live longer, while one study found that humans practicing the diet had the heart function of a people an average of 16 years younger.

Much remains unknown about the mechanisms behind the observed effects, as well as potential side effects, researchers warned. One popular hypothesis is that the diets

lengthen age because they put the body into crisis mode, causing it to shut down processes such as reproduction, which accelerate aging. No studies have been carried out on the psychological or social effects of the diet.

Further, a UCLA researcher concluded from a meta-analysis that humans restricting their calorie intakes by 30 percent would extend their life spans only two years, on average.

People should not practice calorie restriction without consulting a physician to make sure they are getting enough of the right nutrients to remain healthy.

Proof mounts on restricted diet

Thursday, 9 July 2009 00:02 UKE-mail this to a friend Printable version
http://news.bbc.co.uk/1/hi/health/8141082.stm

At 27 both these monkeys are elderly, but it's the one on the left who has eaten more over his lifetime andlooks the worse for wear

Cutting calories may delay the ageing process and reduce the risk of disease, a long-term study of monkeys suggests.

The benefits of calorie restriction are well documented in animals, but now the results have been replicated in a close relative of man over a lengthy period.

Over 20 years, monkeys whose diets were not restricted were nearly three times more likely to have died than those whose calories were counted.

Writing in Science, the US researchers hailed the "major effect" of the diet.

It involved reducing calorie intake by 30% while maintaining nutrition and appeared to impact upon many forms of age-related disease seen in monkeys, including cancer, diabetes, cardiovascular disease and brain atrophy.

Whether the same effects would be seen in humans is unclear, although anecdotal evidence so far suggests people on a long-term calorie-restricted diet have better cardiovascular health.

The precise mechanism is yet to be established: theories involve changes in the body's metabolism or a reduction in the production of "free radical" chemicals which can cause damage.

And here they are again

Seventy-six rhesus monkeys were involved in the trial, which began in 1989 and was expanded in 1994.

Half had their diets restricted, half were given free rein at feeding time.

The rate of cancers and cardiovascular disease in dieting animals was less than half of those permitted to eat freely.

While diabetes and problems with glucose regulation were common in monkeys who ate what they wanted, there were no cases in the calorie controlled group.

In addition, while most brains shrink with age, the restricted diet appeared to maintain the volume of the brain at least in some regions.

In particular, the areas associated with movement and memory seemed to be better preserved.

"Both motor speed and mental speed slow down with ageing," said Sterling Johnson, a neuroscientist at the University of Wisconsin-Madison School of Medicine.

"Those are the areas which we found to be better preserved. We can't yet make the claim that a difference in diet is associated with functional change because those studies are still ongoing.

"What we know so far is that there are regional differences in brain mass that appear to

be related to diet."

Earlier this year, German researchers published findings from their study of elderly people which suggested that calorie reduction appeared to improve memory over a period of just three months.

Various studies on the positive effects of calorie restriction on the life spans of various organisms - from yeast to dogs - have been published over the last 70 years

But dieticians sounded a note of warning.

"Monkeys may be a close relation but there are significant differences which means not everything we see in them can be translated to humans," said Catherine Collins, spokeswoman for the British Dietetic Association.

"And there should be some serious reservations about cutting calories so dramatically, particularly for anyone under the age of 30. Any such diet would need to be very balanced to avoid malnutrition, and it would be a long-term commitment.

"People would have to weigh up whether they are prepared to compromise their enjoyment of food for the uncertain promise of a longer life, and a life which could be dogged by all sorts of problems - including osteoporosis."

View Full Version: CRAIG OXLEY'S ULTIMATE HEART TONIC

Title: CRAIG OXLEY'S ULTIMATE HEART TONIC

craig-oxley - June 5, 2009 07:10 AM (GMT)

[dohtml]
[/dohtml]

CRAIG OXLEY'S

ULTIMATE HEART TONIC

01. 1 CLOVE OF RAW GARLIC 1-3X
02. 5ML 3X CAYENNE PEPPER TINCTURE
03. 5ML 3X MOTHERWORT TINCTURE
04. 5ML 3X HAWTHORN BERRY TINCTURE
05. 5ML 3X GOTA KOLA TINCTURE
06. 5ML 3X GINGER TINCTURE
07. 5ML 3X PURSLANE
08. 15ML 1-3X UNREFINED WHEATGERM OIL
09. 1-3 TABLESPOONS OF BLACKSTRAP MOLASSES (UNSULPHURED/UNMEDICATED)
10. 1 SMALL PLATE OF FRESH UNSHELLED PEANUTS W/RED COATING ON
11. HANDFUL OR MORE OF FRESH WHOLE CHERRYS
12. NICE BUNCH OF RED GRAPES

[dohtml] [/dohtml]

If you can do the above everyday except maybe chop and change your foods (9-11) then you should have great heart health within weeks. Plagues in the arteries will clear and around the body. The heart will beat with vitality and rebuild itself. You may also use the word 'Hawwwwww' on the exhale as used by the Chinese for heart heath via the frequency range from the vocals. Please note how they use the 'hawwwww' sound for the heart and the western king of herbs for the heart is the HAWthorn bush. Coincidence? I doubt it!

[dohtml]

"Also make sure that your Thoracic Spine at T2 is correctly aligned and not in sublaxation. This will help your heart improve quicker. Of course a complete aligned spine is needed with this." **-Craig Oxley**

craig-oxley - June 5, 2009 07:29 AM (GMT)

"Another herb which would be good for the heart would of course be the Purslane herb. This would be mostly due to this herb being the most potent source of the organic magnesium. For those interested, a pandemic flu with cytokine storm would rapidly deplete not only Vitamin C but also the mineral Magnesium. This will result in cardiac arrest! This is another reason why the heart must be built up and protected as much as possible for the near future." **-Craig Oxley**

craig-oxley - June 27, 2009 12:05 PM (GMT)

Peanut butter 'wards off heart disease', say scientists

By Daily Mail Reporter
Last updated at 2:43 AM on 26th June 2009
http://www.dailymail.co.uk/health/article-...-scientist.html

Peanut butter sandwiches could be the secret to beating heart disease, says a study.

Snacking on peanuts or peanut butter at least five days a week can nearly halve the risk of a heart attack.

The nuts are thought to lower bad cholesterol, help reduce inflammation in the body and boost the health of blood vessels around the heart.

Between 1980 and 2002, researchers at Harvard Medical School analysed the diets of more than 6,000 women who had type 2 diabetes, which increases the risk of heart attack and stroke.

All the volunteers completed food questionnaires every two to four years.

When the researchers matched up the results with data on how many went on to suffer heart attacks or strokes, they found those regularly eating peanuts had the greatest protection.

In a report on their findings, published in the Journal of Nutrition, they said the risk was reduced by up to 44 per cent.

'Consumption of at least five servings a week of one ounce of nuts or one tablespoon of peanut butter was significantly associated with a lower risk of cardiovascular disease,' they said.

In the UK, poor diet and lifestyle has led to a surge in cases of type 2 diabetes, from 1.5million five years ago to 2.25million now.

Ellen Mason of the British Heart Foundation said: 'It is beneficial to include nuts in our diets as they are low in the saturated fats that raise our cholesterol.

'However peanut products can be full of added sugar or salt so check the label first. Also don't forget that nuts are high in overall calories.

'Eating more of one food in isolation will not make a dramatic difference to your health if you are inactive and don't have a balanced diet.'

zenmodi - June 27, 2009 02:04 PM (GMT)

the craig-man :)
nice thread.

craig-oxley - December 14, 2009 05:14 PM (GMT)

Please add the use of Artichoke or Milk Thistle to the protocol in order to correct Liver function and deal with fats properly.

dorean - January 1, 2010 12:44 PM (GMT)

would the artichoke or milk thistle also be 5 mls three times a day. would all the tincture be mixed together in 1 glass with the wheatgerm oil or taken individually.

Will any nuts such as brazil or walnuts be a reasonable substitute for peanuts?

craig-oxley - January 2, 2010 03:48 PM (GMT)

Initially you'd want to be on those levels I put forth and yes this would include the Artichoke or Milk Thistle. As time passes the levels can be dropped then eventually mixed in equal parts within a single formula. Wheatgerm oil is taken neat off the spoon my friend and not mixed with anything. All nuts are good but I promoted Peanuts for their Resveratrol content. I don't think those nuts have this compound but they have other benefits especially if rich in Magnesium.

View Full Version: CRAIG OXLEY'S ULTIMATE MALE SEXUAL TONIC

Title: CRAIG OXLEY'S ULTIMATE MALE SEXUAL TONIC

craig-oxley - November 3, 2009 02:58 PM (GMT)

[dohtml]
[/dohtml]

CRAIG OXLEY'S

ULTIMATE MALE SEXUAL TONIC

ALLIUM SATIVUM
ASTRAGALUS MEMBRANACEOUS
CAPSICUM FRUTESCENS
CISTANCHE SALSA
CNIDIUM MONNIERI FR
CODONOPSIS PILOSULA
CORDYCEPS MILITARIS
CRATAEGUS OXYACANTHA FR
SEMEN CUSCUTAE
EPIMEDIUM GRANDIFLORUM
ERYTHROXYLUM CATUABA
EUCOMMIA ULMOIDES
FUCUS VESICULOSIS
GINKGO BILOBA
GLYCYRRHIZA GLABRA
HYDROCOTYLE ASIATICA
LEPIDIUM MEYENII
MENTHA PIPERITA
PFAFFIA PANICULATA
SCHISANDRA CHINESIS FR
RHODIOLA ROSEA
RUBUS COREANUS
SERENOA SERRULATA FR
SIMILAX OFFICINALIS
TRIBULUS TERRESTRIS
TURNERA DIFFUSA

Regular use of this formula will improve the sexual organ and performance over a period of time usually up to six weeks maybe less. I also suggest you take 250ml of water 30 minutes prior to sex with an 8th of a teaspoon of sodium.

"Birds Do It, Bees Do It:" Foods and herbs to spice up your love life

Posted by: Michael Tierra in traditional Chinese medicine, music, holidays, herbs, Ayurveda, aphrodisiacs on Feb 04, 2009
http://www.planetherbs.com/index.php?optio...8&limitstart=10

When the little bluebird
Who has never said a word
Starts to sing Spring
When the little bluebell
At the bottom of the dell
Starts to ring Ding dong Ding dong
When the little blue clerk
In the middle of his work
Starts a tune to the moon up above
It is nature that is all
Simply telling us to fall in love.

And that's why birds do it, bees do it
Even educated fleas do it
Let's do it, let's fall in love!

-- from "Let's Do It" by Cole Porter

The lyrics above and sprinkled throughout this text are from the wonderful collection of tastefully uninhibited Cole Porter songs performed by some of the greatest artists of bygone years, entitled "The Cole Porter Songbook."

If love and romance were meant only for Valentine's Day, all our babies would be born in November. Luckily, amore is in season all year long! Sex, like eating, is a primal urge that should provide some of the greatest satisfaction and joy that life has to offer.

No one knows the true origin of Valentine's Day. Legend has it that St. Valentine was a third-century priest imprisoned by the Romans for secretly marrying young men who would otherwise have been prime candidates for military conscription under the reign of Emperor Claudius II. As for the Valentine's Day cards we exchange, another legend was that when St. Valentine was imprisoned he became enamored with his jailer's daughter and sent her love notes.

Alternatively, Valentine's Day could simply be the product of the church conveniently designating a holiday to coincide with a Roman fertility festival honoring Faunus, the Roman God of agriculture (February 15). Whatever the origin, by the Middle Ages, Valentine's Day was one of the most popular celebrations throughout Europe.

Let's Do It! (Or Maybe Not?): Sexual Taboos

Have you ever wondered why throughout civilization there have been so many sexual taboos? Could it be that the many creative expressions of humanity happen, more or less as a result of sexual repression?

If truth be known, most of us have had reason to lament the fact that just as we try to restrain, twist and contort our gustatory inclinations to deny ourselves the occasional banana split or chocolate sundae, we also try in vain to repress our eroticism. No wonder so many of us are depressed.

When grandmama whose age is eighty, in night clubs is getting matey with gigolos, anything goes!
-- from "Anything Goes" sung by Ella Fitzgerald

"Old" age is just one supposed restriction to enjoying sex.

Not so for the 70,000 residents living in some 40,000 homes who are spending their ‘golden years' at a retirement community called "The Villages" at Lady Lake, Fla. According to a recent article in Fox News, these folks are not wasting any more of their precious time in erotic self-denial. With a female to male ratio of 10 to one, it is a virtual widower's paradise where inhibitions are shed at the slightest inclination. It's not unusual to stumble upon a casual amorous encounter happening on a golf cart. Rumor has it that there is a very active black market in Viagra both for men and women at The Villages. Why not? With families raised, no need for contraception, and obligations and responsibilities to a significant other a thing of the past, I think these people are just making up for lost time.

Do we ever get too old to partake of the joy of sex? For most of us, the answer is NO. Armed with little more than some lubricant (or, in the case of folks at The Villages, an occasional half tab of black market Viagra), most of us remain good to go all the way to the end of our days. So long as we have an appetite for food, we should have an appetite for sex.

We're all alone, no chaperone
can get our number
The world's in slumber

Let's misbehave!!
-- from "Let's Misbehave" sung by Eartha Kitt

Unsurprisingly, religion and spiritual practice present sexual taboos as well.

As a practitioner of Traditional Chinese Medicine, I've had various opportunities to consider the Chinese Taoist teaching that is the bane of women married to too-serious martial artists: that the male should never ejaculate for fear of losing some precious life essence. In my opinion, this is just another form of invasion of the bedroom by a restrictive society. We see evidence in some species that male energy spent as ejaculation is a prelude to death, but for humans, current scientific research shows that sex promotes health.

Let's face it: we only live once. As an herbalist, I suggest that the best aphrodisiac is when we reserve sex as the last frontier of our essential wildness. As long as it's between consenting adults, let's get the government, along with the clerics, hypocritical moralists, and ascetic martial artists out of our bedrooms - or wherever else you choose to "misbehave."

Causes for Low Libido

Just as decreased appetite is an indication of disease or impending illness, so also is a sagging libido. Nowadays, doctors not only don't inquire about a patient's appetite, but they wouldn't dare ask about one's libido. For most of us, a good appetite in all departments is a sign of wellbeing. So if that's you, perhaps you have something to rejoice about.

There are some physiological reasons for low libido. Certainly as we get on in years (despite what you might hear about some of the residents at The Villages), we can expect things to slow down as our hormones diminish. In Chinese medicine these hormones are all encompassed by the concept of Kidney Yang and Kidney Yin with herbs specifically indicated for each. Specifically, the Kidney Yang herbs support the production of all those hormones that increase our motivation in all ways, including sexual appetite. These include testosterone, estrogen, and the androgynous hormones that are necessary and present in varying degrees in both men and women.

One Kidney Yang herb used in Chinese medicine is Epimedium, aptly known as Horny Goatweed. Lesley describes this herb in her blog. I would only add that this is a common ornamental that can be purchased at most nurseries. One can periodically harvest the leaves; make tea or an alcoholic extract by macerating a good amount in a little vodka. This can then be taken in teaspoon doses once or twice a day.

The fact is, unless there are other physical disabilities such as diabetes or cardiovascular disease, there is no age limit for the world's number one pastime.

Side-effects of prescription drugs

Drugs are a major factor causing loss of libido. For example, the popular drug Proscar is commonly prescribed for Benign Prostatic Hyperplasia (BPH) - swollen prostate in common parlance. BPH usually does not occur before the age of 40, but approximately 50% of men in their 60s and 90% of men in their 90s develop this condition. It is characterized by the frequent urge to urinate, which can result in arising several times throughout the night.

Proscar and related pharmaceuticals treat BPH by altering testosterone metabolism, which in turn shrinks the swollen prostate. The drug's effect on testosterone metabolism, however, can cause diminished libido and erectile dysfunction. You could try having a "drug holiday" on weekends - that is, taking a break from your BPH drug for a couple of days - but it isn't clear if this would restore a man's sex drive. An option would be to ask your doctor whether a lower dose might solve the libido problem and still manage the prostate swelling.

So it seems that if you're suffering from BPH, you have to choose between frequent urination with normal erectile function, or a normal-sized prostate with problems getting going in the sack. What kind of a choice is that? The good news is, there are some natural alternatives to prescription drugs for BPH:
Saw Palmetto Berries: Extensive European research on saw palmetto, a common berry found growing in abundance in southeast United States shows that saw palmetto is equally effective to Proscar but is not known to diminish libido, cause erectile dysfunction or any other side effects associated with the drug. Just as Proscar needs to be taken over a period of two to three months to effectively shrink the prostate, so too does saw palmetto need to be taken over time (usually not nearly as long as Proscar) to achieve similar positive results. Saw palmetto comes in the form of a standardized extract of 80- 90% fatty acids and is taken at the dose of 160 mg twice a day or 320 mg daily.
Pumpkin Seeds: Eating a handful of shelled pumpkin seeds three times a week, or better yet daily, is an old time remedy for treating BPH. These contain protective compounds called phytosterols which may be responsible for shrinking the prostate. Like all prostate drugs and herbs these work by preventing the transformation of testosterone into dihydrotestosterone (DHT). High levels of DHT are associated with enlarged prostate. Pumpkin seeds have this action as well, but with no danger of loss of libido.
Other approaches such as a low-fat diet, zinc supplements, and essential fatty acids (from sources such as fish or flax oil) and another herb, Pygeum africanum, are also useful for treating BPH.

Statin drugs and loss of libido

Millions of people in North America are presently on statin drugs making it the number one cash cow for pharmaceutical companies, but few read the small print of adverse side effects, one of which can be loss of libido. This is because statins interfere with our body's ability to create cholesterol and can cause a decrease of sex hormones with a concomitant dampening of Eros.

There is considerable controversy regarding the relation of elevated cholesterol and cardiovascular disease (CVD) because there has been no study demonstrating that high cholesterol causes CVD. In fact, studies show that nearly as many people with so-called normal to low cholesterol die of CVD as those with high cholesterol.

Cholesterol is a hormone precursor that has a strong genetic factor; some people naturally make more or less cholesterol. It is also a substance that the body manufactures as a result of stress. Be that as it may, if one wants to lower cholesterol, instead of taking statin drugs, try red yeast rice which is a more natural alternative with similar chemistry and results. Better yet, it is a far cheaper alternative to statin drugs and will not affect libido. I would still recommend taking a dose of Co Q10 along with the red yeast rice since statins are known to diminish this vital heart nutrient.

If you work out, you're more likely to make out

Finally, it seems like a no-brainer, but I have to mention that lack of physical fitness is another big factor in sexual dysfunction. It's been found that men who exercise regularly (especially with some strength training) rarely have performance problems. That's because exercise generates natural hormones that keep you youthful and able to enjoy sexual health.

What about a natural alternative to Viagra?

Viagra works by enhancing circulation to the penis enabling its erection, and may work in women similarly, by increasing blood flow to the clitoris. L-arginine is an amino acid which in itself is not a cure for impotence or sexual dysfunction, but is used by the body as a vaso-dilator, benefitting circulation and endothelial function. Endothelial cells line the inner surface of blood vessels. Erectile dysfunction and endothelial dysfunction both share the common problem of impaired circulation, for which L-arginine is effective. As such, it is a good supplement to add to an herbal program to enhance sex. The difference is that while Viagra increases the risk of cardiovascular disease and stroke, L-arginine decreases these risks and costs just pennies compared to the current market price of $15 a pill for Viagra.

Foods and herbs for enhanced sexual performance
Oysters: These are high in zinc which is a necessary nutrient for fertility and male

prostate and sexual health. You needn't be too concerned with the fact that oysters have the peculiar ability to change sex many times during their lifespan. They have a high reputation as a sexually nourishing food.
Asparagus root: Asparagus, rich in hormone promoting steroidal glycosides, has a high reputation as an aphrodisiac. Both in China and India, the root of Asparagus racemosa is used to increase sperm count and nourish the ovum. Chinese herbalists believe that the Yin-nourishing qualities of asparagus root induce feelings of peace, compassion and love. Traditionally, Chinese herbalists would reserve the sweetest roots for their personal consumption. In India Asparagus root is known as shatavari, which literally means "she who possesses 100 husbands."
Oregano: Whether it's used as a spice on pizza or in pasta sauce, oregano leaves may help to spice up one's love life. Homeopathic preparations of oregano are claimed to sexual excitability.
Ashwagandha: Withania somnifera is considered the most important single herb in Indian Ayurvedic medicine. It is recommended as a rejuvenative tonic for general debility, brain fatigue, nervous exhaustion, impotence, general aphrodisiac purposes, low sperm count and lack of motility, infertility, and to prevent and treat habitual miscarriage. It works by normalizing male and female hormones. The powder can be taken in capsules, as a tablet, or as an alcoholic extract. One Ayurvedic aphrodisiac formula combines one part ashwagandha to 10 parts milk and one part ghee (clarified butter). You boil the mixture down until only ghee remains. This end product is called Ashwagandha Ghrita. The ancient texts recommend taking a heaping tablespoon of this mixture morning and evening. Eventually, one will experience a significant boost in vitality, libido and sexual stamina.
Maca: Lepidium meyenii is an annual plant which produces a radish-like root. The root of maca is typically dried and stored, and will easily keep for seven years. The plant is cultivated in Peru's Central Highlands, and was highly revered by the Inca. Sometimes known as Peruvian ginseng, maca's sexual boosting properties for both men and women properties are legendary. When Kris Kilham, an ethnobotanist known as "the medicine hunter" asked a native Peruvian woman why she used maca, she smiled and replied, "Well, for sex of course." Maca is a food-grade herb and the Peruvians would consume 3,000-5,000 mg of maca a day or more. For the average consumer, 4 to 5 capsules a day (1,800-2,250 mg each) is an effective dose. I recommend purchasing maca powder by the pound to take in capsules, sprinkle on food or in blend into smoothies. (Read Kris Kilham's short article on maca here.)
A word about consumer expectations of herbs vs. drugs

Most of us are used to the promise of fast-acting drugs. While a drug like Viagra can produce a lasting erection within an hour or so, we have to be realistic when we consider our expectations of herbs and other natural supplements. Herbs bring harmony and health to the body over time. As a result, herbs' actions are accomplished more slowly but are generally longer lasting. Keep this in mind when treating any condition, but especially sexual dysfunction, with herbs.

In the heavens, stars are dancing and the mounting moon is new,
What a rare night for romancing, mind if I make love to you?
-- from "Mind if I Make Love to You" sung by Frank Sinatra

Sexual energy is a reflection of an overall state of health and well-being. A healthy sexual appetite is as natural as an appetite for food. Drugs often interfere with libido and whenever possible we are better off looking for nutritional and herbal substitutes for drugs, not only to treat sexual dysfunction, but also to treat the conditions that may cause loss of libido in the first place! With this approach, may you enjoy your lover in health and happiness not only on Valentine's Day but year-round.

craig-oxley - November 30, 2009 04:44 PM (GMT)

THEN THERE'S THAT VERY SPECIAL GIFT TO
HONOR THAT VERY SPECIAL SOMEONE:

Fragrant Flower Bath

To one gallon of freshly boiled water, add a handful of each of the following dried herbs: lemon balm herb, rose petals, calendula flowers, lavender flowers. Steep covered for 15 minutes while drawing a bath in a specially decorated bathroom space with incense, colored fabric (to tastefully disguise such aesthetically disrupting areas as the toilet, sink or the messy medicine cabinet), a bouquet of flowers (yes men like flowers also), and beeswax candles. Pour the prepared flower water along with several drops of essential oils of rose and lavender into the bath. At the last minute you may add fresh flowers and flower petals (organically grown, please!) to float on the surface of the water. Be sure that the temperature of the water is warm and pleasant before leading your honored recipient into the room.

By candlelight, help your guest out of their clothes and guide them into the tub. Gently ladle the water using your hands or a specially chosen beautiful bowl over their head and back. (Really, try not to employ your everyday kitchenware in this experience, lest you risk the romantic spell being broken.) Allow your loved one to peacefully soak in the wonderful, perfumed water, lingering over the experience as long as they like.

Have a special extra-soft bamboo fiber towel ready for when they arise from the bath. You may also consider a special bathrobe as well. The towel and bathrobe are their take away gift. Every time they wear the robe or use the towel, they will think loving thoughts of you and this wonderful and loving moment you have created just for them.

Afterward, present them with a Go Ji Berry and Ginseng Liqueur which you made yourself using the following recipe:

1 lb. (450 g) Go Ji berries (Lycium Chinensis)
1 full sized root of sliced Chinese Red Ginseng (this can be approximated)
3 cups (710 ml) 80-proof of your favorite vodka (I love Stolichnaya vodka)
1 1/4 cup (300 ml) granulated natural mineral rich, sucanat sugar

Rinse the berries and roughly chop them into small pieces. Place the berries and ginseng slices in a glass container and pour the vodka over them. Close tightly and store in a cool, dark place. Stir or shake this mixture once a week for two to four weeks. Strain through a metal colander into another glass bottle or container with a tight cap. To this, add the sugar. Let this liqueur age for at least three months.

(It's too late to complete this recipe as described for this coming Christmas, but you can perform all the steps and stir until the sugar is dissolved. Then carefully pour perhaps a third of this liqueur into a small, decorative bottle, and add more sugar as necessary for sipping now. You can enjoy the rest of the properly aged product in time for Spring Fever romance!)

Sip this exotic spirit with your special recipient in liqueur glasses as part of your romantic experience. You may enjoy this liqueur any time as an aperitif and blood and energy tonic. It can also be poured over ice cream.

An evening like this is nothing without music. Here are some suggestions:
the love-adagio from Mahler's Fifth Symphony
the Polovtsian dances from Prince Igor by Alexander Borodin
the first movement of Beethoven's Moonlight piano sonata op 27 (be sure to stop this before it goes to the subsequent movements)
the wonderful selection of soft piano pieces on Carol Rosenberger's Perchance to Dream album

What you do afterwards is yours to orchestrate, but one suggestion is to apply the following "love oil" to each other's sensitive areas. Go gentle with this at first to determine if it will be a pleasant sensation. Be sure to liberally apply it on each other's sacrum. Take time and allow the pleasure to slowly engulf and fill your entire being.

Love Oil

2 ounces each of
apricot kernel oil
wheat germ oil

5 to 10 drops each of the following pure essential oils:
cinnamon
rose
chamomile

sandalwood
musk
neroli
ylang ylang
black pepper
ginger
vetiver
clary sage

Have fun experimenting adding these to the base oil. Begin with 3 to 5 drops and increase each according to your own preference (but stay on the low end with the cinnamon, black pepper and ginger). You may purchase the essential oils mentioned above from Mountain Rose Herbs. Alternatively you might try Kama Sutra's massage oils.

Happy holiday gift-giving!

craig-oxley - November 30, 2009 04:56 PM (GMT)

Have a REALLY Happy Valentine's Day!

Posted by: Lesley Tierra in traditional Chinese medicine, holidays, aphrodisiacs on Jan 27, 2009
http://www.planetherbs.com/index.php?optio...8&limitstart=10

With the big hype surrounding St. Valentine's Day already in full swing, many of us turn our thoughts to romance and, perhaps, aphrodisiacs. Now, I don't tend to work with the western concept of aphrodisiacs -- i.e., "Take this herb and you'll have a good sex drive." Rather, I approach the topic energetically -- i.e., "What imbalance needs correcting in the body so the sex drive can increase?"

Come On Baby, Light My Fire: The Role of Kidney Yang in Libido

In most cases of flagging sex drive, the imbalance is what traditional Chinese medicine calls "Kidney Yang deficiency." Kidney Yang is the heating/energizing aspect of the body. It encompasses both Qi -- the circulating, transforming, holding, sustaining, enduring power -- along with dryness, warmth and stimulation, as in the spark that "lights your fires," if you will.

Physiologically speaking, Yang represents the body's functions and organic processes such as warmth, libido, appetite, digestion and assimilation. Emotionally, it is the active, stimulating and outward expression of life. Because of this broad spectrum of functions, tonifying Kidney Yang not only increases sex drive and endurance, but has other

benefits as well, such as reducing night time urination, coldness, cold and sore lower back and knees, white vaginal discharge, loose stools or diarrhea, infertility, impotence and frigidity.

While it might be nice to improve some of the above symptoms, what you probably really want to know about now is the impotence/frigidity part - i.e., "How can I get it on for Feb. 14?" So on to the herbs.

Herbs for Libido (with other added benefits)

There are some specific herbs that improve libido and decrease impotence and frigidity. In China, regular tonics are administered for sex drive, including "Doctrine of Signatures"-type medicinals such as male seal sexual parts (hai gou shen - now there's fodder for pillow talk!). These kinds of medicinals come with their own set of ethical and compliance considerations; luckily, there are several simple herbs which may be used instead.

Be forewarned, however: just one shot of these herbs doesn't always do the trick! Instead, you may need to take the herb for one to two weeks or more to experience results.

Contraindications for these herbs: Because these herbs are heating, they should not be taken if the person experiences any of the following:

Deficient Yin signs: night sweats, malar flush (redness and burning heat along the cheeks and nose), burning sensation in the palms of the hands, soles of the feet and in the chest, afternoon fever or feelings of heat, restless sleep, dry throat or thirst at night, agitation, mental restlessness, dry cough, dry stools, hyper-sexuality, wet dreams and/ or scanty dark urine

Excess heat signs: high fever, thirst, red face, aversion to heat, restlessness, irritability, burning sensations, scanty dark urine, yellow discharges and phlegm, strong body odors and discharges, rapid pulse, hypertension, constipation, possible blood in the stool, urine, vomit, or nose, irritable and aggressive temperament, loud, commanding voice, strong appetite, heavy coarse breathing, yellow or reddish colored eyes, dry and cracked lips, heavy menses which may be early and long lasting, hot, yellowish diarrhea

Discontinue use during the summer months (May through September) unless you live in cold northern climates (then it's June through August).
EPIMEDIUM - Epimedium grandiflorum; yin yang huo

I just have to list epimidium first. After all, when you learn of its common name - horny goat weed - what more needs to be said?

Part used: aerial parts

Energy, taste and Organs affected: warm; acrid, sweet; Kidney, Liver

Actions: tonify Yang - warms the fires at the gate of vitality (ming men - Gate of Life fires)

Properties: Yang tonic, aphrodisiac, antirheumatic, antitussive, expectorant, anti-asthmatic

Dosage: 6-15 gms, infusion; steep in wine to enhance its properties

Precautions: Do not take for prolonged periods as it can damage the Yin, causing dizziness, vomiting, dry mouth, thirst and nosebleed.

Other: This genus is composed of about 25 species and is often grown as an ornamental ground cover for shady borders. Also known as "licentious (or horny) goat wort (weed)," it is commonly available from nurseries. Grow in a shaded, moist environment.

Indications: impotence, frigidity, spermatorrhea, premature ejaculation, frequent urination, forgetfulness, withdrawal, painful cold lower back and knees, dizziness, headache, hypertension, menstrual irregularity, arthritis, rheumatism, spasms or cramps in the hands and feet, joint pain, numbness in the extremities, high blood pressure, chronic bronchitis

Uses: Although epimedium has been used by the Chinese for quite a long time, it is hitting the Western market now as a sexual tonic and aphrodisiac, just as its name, horny goat weed, implies. Indeed, epimedium is used in China to stimulate sexual activity and sperm production, treating symptoms of impotence, frigidity, spermatorrhea, involuntary and premature ejaculation, frequent urination, forgetfulness, withdrawal and painful cold lower back and knees.

Now, as with most Kidney Yang tonics (and tonics in general), results take awhile to appear, so don't expect any immediate miracles like some prescription pills. At the same time, be sure to eliminate all cold/cooling foods and drinks, such as iced drinks, ice cream, raw foods, fruit juices and soy milk, as well as sugar, caffeine and alcohol, as these foods cause all the symptoms for which you want to take epimidium in the first place (sounding harder now?).

Epimidium tonifies Yin along with Yang and harnesses ascendant Liver Yang due to underlying Kidney and Liver Deficiency. All this means that it's useful for lower back pain, dizziness, menstrual irregularity, peri/menopausal symptoms, headaches and hypertension. As well, this versatile herb expels Wind-Damp-Cold, treating arthritis, rheumatism, spasms or cramps in the hands and feet, joint pain and numbness in the extremities.

Epimidium further strengthens the bones (the Kidneys rule the bones), lowers blood pressure and treats chronic bronchitis, especially when there is Coldness (white phlegm) and difficulty on inhalation. I always include it in any peri/menopausal formula along with Yin tonics.

Epimidum is traditionally said to be good taken extracted in wine (Dan Bensky, Steven Clavey, Erich Stoger with Andrew Gamble, Chinese Herbal Medicine Materia Medica, Third Edition, 2004, Eastland Press, Inc., p. 713).

For impotence, take with cooked rehmannia (Rehmanniae Radix preparata - shu di huang), schisandra (Schisandra Fructus - wu wei zi) and astragalus seeds (Astragali complanati Semen - sha yuan zi).
DEER ANTLER - Cornu cervi parvum; lu rong

I have a friend who once complained about no sex drive. She missed intimacy with her husband AND she missed him desiring her as well. Deer antler was administered and bingo! In about two weeks she walked around simply beaming.

Deer antler velvet is regarded as "an intense tonic for the Liver and Kidneys that embodies the youthful male growth of the stag" (Ibid., p. 765).

Part Used: velvet of young deer antler

Energy, taste and Organs affected: warm; salty, sweet; Kidney, Liver

Actions: tonifies Yang - warms the fires at the Gate of Vitality (ming men - Gate of Life fires)

Properties: tonic, stimulant

Dose: 3-4.5 gm, decocted; 1-3 gm powder divided into 2-3 doses. NOTE: It is very important to start off with low doses and gradually work up; otherwise symptoms of dizziness or red eyes can occur.

Precautions: Do not use if you have any of the following: bleeding gums, bad breath, mouth sores and headaches across the forehead (Stomach Heat), blood in the sputum, stools, urine or vomit, coughing up of blood, bloody nose, excessive menses, or red and hot skin eruptions (Heat in the Blood).

Indications: fatigue, infertility, low sex drive, impotence, frigidity, cold extremities, lightheadedness, ringing in the ears, sore and weak lower back and knees, frequent, copious, clear urination; children's physical and/or mental developmental disorders, failure to thrive, mental retardation, learning disabilities, insufficient growth or skeletal deformities; vaginal discharge, uterine bleeding, chronic ulcerations or boils, peri/

menopause

Other: When deer antler is cooked a long time, a residue collects. This is powdered into a different medicinal called antler glue (lu jiao shuang), which is used to nourish Blood, stop bleeding and tonify Kidney Yang. This powerful Yang tonic also supports Yin and Essence and tonifies Qi and Blood, thus making it very beneficial for many conditions.
CHINESE GINSENG - Panax ginseng; Ren Shen

Panax ginseng is a premier Qi tonic - building staying and holding power (get my drift?). After all, its nickname is "man root" because the shape of the root actually resembles a man.

Because ginseng tonifies the primal Qi which "underlies and supports all the Qi activities of the body, this herb is used in a wide variety of situations where a stronger primal Qi will indirectly aid in their resolution" (Ibid., p. 711).

Generally, though, ginseng has to be taken for a while to build the sex drive and sexual power. In fact, ginseng increases adrenal cortex function and stimulates the pituitary gland to produce more sex hormones. Traditionally it is taken regularly by men age 40 and over, although women may take it, too.

I remember a Chinese pharmacist once showing me a selection of very old and large ginseng roots, valued from $1,000 to $10,000 each (all truly looking like a man!). According to Michael, who studied with him, this Taoist herb teacher claimed certain wealthy Chinese and American celebrities visited him once a year for his rejuvenation technique: a week of avoiding all greasy and fried foods along with drinking the Yin tonic formula Liu Wei Di Huang Wan two to three times a day. Afterward, they'd purchase an expensive ginseng root (costing thousands), cook and eat it along with drinking the tea to rejuvenate their physical and sexual energy. It must have worked, for they returned year after year for this expensive protocol.

The most potent variety of panax ginseng is the red Korean ginseng, which has a warmer in energy, as it's prepared by steaming and then sun-dried or dried by heating.

Part Used: aged Chinese ginseng root

Energy, taste and Organs affected: slightly warm; sweet, slightly bitter; Lung, Spleen

Actions: tonify Qi

Properties: stomachic, stimulant, nutritive, rejuvenative, demulcent, adaptogen

Dose: 1-9 gms, up to 30 gms for hemorrhage shock; decoct 1 tsp./cup water; 20-60 drops tincture, 1-4 times/day; freeze-drying may increase potency

Precautions: according to Sharol Tilgner in Herbal Medicine from the Heart of the Earth, concurrent use with the drug phenezine has resulted in manic-like symptoms

Indications: all Deficiency diseases, chronic fatigue, shortness of breath, profuse sweating, lethargy, lack of appetite, chest and abdominal distention, chronic diarrhea, prolapse of stomach, uterus or rectum, palpitations with anxiety, insomnia, forgetfulness, restlessness, excellent for convalescence, debility and weakness in old age, debility, weakness, tiredness, poor appetite and digestion, emaciation, shock

Uses: As a primary herb for Deficiencies, ginseng revitalizes the body and mind, strengthening weakness, low energy and vitality, shock, collapse due to loss of blood, chronic fevers, heart weakness, debility, convalescence and weakness in old age. It promotes weight and tissue growth and increases longevity and resistance to disease.

Ginseng particularly benefits digestion and Lung function, treating lethargy, lack of appetite, abdominal and chest distention, chronic diarrhea, prolapse of stomach, uterus or rectum, shortness of breath, profuse sweating, wheezing, tuberculosis and restlessness. As a cardiac tonic, ginseng relieves palpitations with anxiety, insomnia and forgetfulness.

Ginseng may be used when the root is four years old, but it's best to harvest when it is at least seven years old, as the older the root, the more potent its medicine (and unfortunately, the more expensive it becomes as well).

craig-oxley - November 1, 2009 01:41 PM (GMT)

Heres Dr John Ray Christopher's work which I've extended upon:

> **QUOTE**

Adrenals

Definition:

The adrenal glands, seated on top of each kidney, are part of the endocrine system, that is: the internally secreting or ductless glands which release their secretions directly into the blood stream. The adrenals, often referred to as the suprarenal, are the Creator's most intricate chemical factories. "It would take acres of chemical plants" to synthetically manufacture "the 50 odd hormones or hormone-like substances" produced by the adrenal glands. (Ratcliff, 1975, p. 69) Not only do these hormones control all the oxidation processes of the human body through the anterior pituitary body, but they regulate growth, mental balance, sexual development and maintenance, and a host of other phenomena... The adrenals, the pituitary, and the thyroid are functionally united comprising the adrenal system. THE ADRENALS ARE ABSOLUTELY ESSENTIAL TO LIFE.

Symptoms:

1. Licorice & the adrenals: Most hypoglycemics have problems feeding themselves, for they crave protein and sugar, yet these substances are wearing on the adrenals, which are often exhausted in hypoglycemics. You need to feed the adrenals with licorice root and hawthorne berries, the latter being said to produce natural adrenalin. You need to take high-quality protein, as in the nuts and seeds and legumes. Sprouted sunflower seeds, sprouted almonds, and chia seeds are all high-quality sources of protein. The other seeds and nuts are good as well. You can soak and low-heat legumes, particularly pinto beans, which are high in potassium and easily digested, for satisfying and long-lasting protein. Be sure that you eat plenty of vegetables, both raw and cooked, in preference to too many fruits, which can overload the system with sugar.

When suffering with hypoglycemia, I devised a power-packed drink which helped every time. In a blender place a handful of soaked or sprouted almonds, a cup or two of water, a banana, some pineapple juice, a tablespoon of brewer's yeast, and a handful of chia seeds. Blend until the seeds thicken the drink. This is mild but very helpful in feeding high-vibration protein to the system.

2. Addison's Disease: When a person's adrenal glands become so exhausted that they simply do not function anymore, the condition is called Addison's disease, which is a terminal disease. It is characterized by blotchy pigment appearing suddenly on large parts of the body, intolerance to heat or cold, reduction in capacity for muscular work, weakness, inability to stand any stress or emotional excitement, whether positive or negative, sometimes nervous breakdown or even insanity, complete exhaustion, feeling that one is going to die, inability to digest food, and other similar symptoms. The synthetic cortisone is given to supply the need of the natural substance, but it produces complications, side effects and eventual disillusionment as it will not in any way heal the adrenals.

3. Sarsaparilla also contains cortin one of the hormones secreted by the adrenal glands. The body will die almost immediately if this hormone is stopped but if there is only a small or insufficient amount the body becomes easily ill and develops nervous depression and general weakness. So many maladies are related to adrenal weakness and exhaustion, including hypoglycemia, so people should take note if they are striving to rebuild their adrenals. Sarsaparilla may be able to help.

4. Cell Deterioration: Anytime a person has cell-deterioration, be it called by whatever name medical science can come up with, melanoma, carcinoma, malignant or benign, the adrenal function must be investigated...so that if there is some dysfunction, it can be remedied through diet and herbs.

Herbal Aids:

Dr. Christopher's Adrenals Formula: (Adrenal Formula) Contains **mullein, licorice, Siberian ginseng, gotu kola, hawthorne berries, cayenne, and Ginger.** As this formula helps promote the correction of any imbalance in the adrenal gland it also compensates for any stress placed on the heart.

Licorice: The steroidal content has also brought the herb into some prominence for healing and restoring the adrenal glands. About every five hours, the adrenals need some sort of nourishment in order to continue supplying strength to the body. If a meal or some other nourishment is not forthcoming, Licorice can supply the adrenals. The armies of Alexander the Great, mentioned above as carrying Licorice with them on their long marches for allaying thirst, also benefited from this strengthening agent to give them stamina and endurance--a far cry from today's chocolate candy bar, Dr. Christopher noted, which is given to the poor G.I. in the military.

Pancreas Formula: Dr. Christopher's Herbal Aid for Pancreas and Companion Glands Formula: Dr. Christopher in speaking of why he developed the Pancreas Formula to help not only the pancreas, but other supporting glands. Hypoglycemia and hyperglycemia involve the breakdown of the adrenal glands as well as the pancreas...As time went on, we found that some of our ailing pancreas patients, though the sugar and insulin problem was adjusted, would have problems with the pituitary, pineal or adrenal glands. We had not, at this time, taken the thought into our mind that the pancreas doesn't work alone, but is assisted by other glands. When the pancreas was healed, toxic burdens centered more, now, into the other glands. This was the time we added additional herbs to take care of these other glands--and since then they all are rejuvenated and healed together. The formula we have used for years, with success in all age groups from children to old aged patients is as follows: Cedar berries sixteen parts and one part of each of the following--golden seal root, uva ursi, cayenne, licorice root and mullein.

Adrenal Formula: Dr. Christopher's Adrenals Formula: In our monthly seminars with doctors, we are asked repeatedly - "What can be done for malfunctioning adrenal glands?" A larger and larger number of their patients are suffering from this problem.
Because of so many requests for an aid to the adrenals, we formulated a group of herbs consisting of mullein and lobelia, Siberian Ginseng, Gotu Kola, licorice, Hawthorn berries, cayenne and ginger. ... I wish it noted that two of the important herbs recommended are mullein and lobelia. They are a natural pair to use in repair and rejuvenation of the glandular system. Also, the balance of each additional herb added.

This formula for the adrenal glands has done much good, but it is, as we have explained frequently before, working on the effect. In addition to this, we must go to the cause--watch the diet, the liquid intake, remembering to use deep breathing exercises, and above all, keep a positive and good mental outlook on life.

Appetite Formula: Dr. Christopher's Anti-Obese Herbal Food Combination: Licorice is used here because it decreases the desire to overeat while it gives energy to the body. The licorice root actually feeds the adrenal glands. Every 5 hours or so, the adrenal glands need a "meal", that is, some sort of nourishment. Many people try to fill this need by filling their intestines with empty calories. Licorice root provides this lift for the adrenals and thereby can sustain an individual's stamina without them having to eat a large meal for energy.

Juices for the Adrenals: Carrot & spinach, pineapple.

Testimonials:

1. LaDean Griffin, in a very interesting article on Licorice, explained the use of Licorice to build the adrenal glands. She noted that we call adrenal exhaustion hypoglycemia in today's modern world. Since we are so stressed at our modern pace of life, the adrenal glands become exhausted easily and frequently. "In hypoglycemia, where sugar is taken to give a stimulating lift in the hope of overcoming (stress), the problem is compounded as sugar leaches the Vitamin B and calcium, causing more stress, losing more potassium and body tone. The insulin is raised to an unnatural high to take care of the sugar, somehow extending past its needs and afterwards dropping to a new low, causing a low blood sugar called insulin shock (overdose of insulin). Immediately we take sugar to lift us up again and a vicious cycle has begun. Having found the herbs that act like cortisone (cortin hormone), I feel it is important for me to make this known".

2. Poke: Malstrom tells of a young man from Salt Lake County who had been suffering from congestion of the lymphatic system for a period of time. It began from a cold that would not leave and developed into a period of tension in which he slept very little. This caused adrenal exhaustion and swollen lymph nodes over most of the body. He was listless, had no energy and could work only a few hours a day, but only inefficiently. Dr. Malstrom told him to take a mild fast, to use green drinks for a week or so and then only take raw root vegetables with the green drink and some seeds. After a time he could take some fruit. After three months of this strict regimen along with the use of Poke root and other herbs to clear the lymphatics, he got strong again and could live a normal life once more (Mal:196).

QUOTE

Adrenal Formula

Formerly Adrenetone Formula

Usages

Adrenals Formula: As this formula helps promote the correction of any imbalance in the adrenal gland it also compensates for any stress placed on the heart.
Relaxation, meditation, recreation, or some form of stress reducing activity will certainly help the cause of exhausted adrenals. We should wish to eliminate hate, anger, fear, and other negative emotions as they take their toll on the physical body. Listening to relaxing music has proven to be wonderful in easing hostile attitudes.

Dosages

This formula may be taken as capsules or as a tea. It may safely be given to a person suffering from hypertension. For those who wish to rebuild the adrenals and do not have the sodium retention problem, Licorice root can be used as a supplement the above formula in tablets, capsules, extract, or as a tea. The suggested dosage is one #0 capsule daily - six days each week.

Ingredients

Contains mullein, licorice, Siberian ginseng, gotu kola, hawthorne berries, lobelia, cayenne, and Ginger.

Mullein and Lobelia: the perfect glandular foods.

Siberian Ginseng: Successfully used in the Soviet Union to ease stress in everyday situations and tend endurance to athletes under great strain during training.

Gotu Kola: Known to help promote the stimulation of the brain and relieve fatigue when given in small amounts. Wonderful for the functioning of the pituitary in disorders of the adrenal system when used in conjunction with other herbs.

Hawthorn Berries: A celebrated cardiac tonic for many centuries. Under conditions of stress, the heart often "works overtime." Hawthorn berries can help in treatment of high or low blood pressure, tachycardia, and arrhythmia. It is also anti-spasmodic, sedative, and soothing to nerves, especially in nervous insomnia.

Cayenne: Nature's finest stimulant; source of calcium and vitamin A. Aids in circulation of blood which brings oxygen and other nutriments to cells in need of repair.

Ginger: A stimulant and a 'lead sheep' herb, bringing the other herbs in the formula into the abdominal

area. Ginger differs from cayenne as a stimulant, in that the cayenne stimulates the heart, arteries, veins and then the capillaries. Ginger starts its stimulating effect in the capillary, flushing out the "constipated" capillary, driving these wastes into the veins for disposal.

The Adrenal Glands

ENDOCRINE SUPPORT PRODUCTS

The following data are from:

Michael Lam, M.D., M.P.H., A.B.A.A.M. is a specialist in Preventive and Anti-Aging Medicine. He received his Bachelor of Science degree from Oregon State University, and his Doctor of Medicine degree from Loma Linda University School of Medicine, California. He also holds a Masters of Public Health degree and is Board Certification in Anti-aging Medicine by the American Board of Anti-Aging Medicine. Dr. Lam pioneered the formulation of the three clinical phases of aging as well as the concept of diagnosis and treatment of sub-clinical age related degenerative diseases to deter the aging process. Dr. Lam has been published extensively in this field. He is the author of The Five Proven Secrets to Longevity and Beating Cancer with Natural Medicine.

Dr. Walter Schmitt DC, DIBAK, DABCN; a graduate of Duke University and the National College of Chiropractic. In 1991, he became the first physician to hold Diplomate status in both Applied Kinesiology and Chiropractic Neurology. As a practicing chiropractic physician since 1974, Dr. Schmitt has served on the Board of Directors of the International College of Applied Kinesiology (ICAK) and as a trustee for the Foundation for Allied Conservative Therapies Research (FACTR). He is an adjunct member of the postgraduate faculty of Logan College of Chiropractic and serves on the Editorial Review Boards of Chiropractic Technique and Alternative Medicine Review. The author of over 70 papers for the ICAK, two books for physicians, Common Glandular Dysfunctions in the General Practice and Compiled Notes on Clinical Nutritional Products, and one book for laypersons, Stop Your Pain Now. Dr. Schmitt lectures nationally and internationally and is renowned for his innovative use of muscle testing for functional neurological and neurochemical assessment..

James L. Wilson D.C., N.D., Ph.D. has helped hundreds of people with Adrenal Fatigue regain their health and vitality during his 24 years of private practice. For the past 10 years he has lectured extensively to physicians and is acknowledged as an expert on

endocrine imbalances and their impact on health, including the effects of stress on adrenal function. He is the first person to have presented Adrenal Fatigue as a distinct, diagnosable syndrome. A scientist as well as a physician, Dr. Wilson holds 3 doctorate degrees and 2 master's degrees, all from different disciplines. He was one of the founding fathers of the Canadian College of Naturopathic Medicine (CCNM) in Toronto, Ontario and is listed in The International Who's Who in Medicine (Cambridge, England). His new book, Adrenal Fatigue: the 21st Century Stress Syndrome (Smart Publications, 2001) is a comprehensive self-help book on the diagnosis and treatment of Adrenal Fatigue. Dr. Wilson currently resides in Tucson, Arizona.

One of the most common clinical patterns seen in health care clinics is stress-related illness. Some health care practitioners report as high as 85% of their patients fitting this category. Persons with this condition have reactions to stress which are either causing their illness or aggravating it. Adrenal glands are the anti-stress glands of the body—the reserve which the body falls back on when it is faced with stressful situations. It is their job to enable your body to deal with stress from every possible source, ranging from injury and disease to work and relationship problems. Your resiliency, energy, endurance and your very life all depend on their proper functioning. Your adrenal glands respond to every kind of stress in the same way, whatever the source. Adrenal fatigue occurs when the amount of stress overextends the capacity of the body to compensate and recover from that stress or the combined stresses. Once this capacity to cope and recover is exceeded, some form of adrenal fatigue occurs. The number of stresses, whether or not you recognize them as stresses, the intensity of each stress and the frequency with which it occurs, plus the length of time it is present, all combine to form your total stress load.

There are four major categories of stress:

1. Physical stress—such as overwork, lack of sleep, athletic over-training, etc.

2. Chemical stress—from environmental pollutants, diets high in refined carbohydrates, allergies to foods and additives, endocrine gland imbalances (due to the interaction of all of the endocrine glands).

3. Thermal stress—over-heating or over-chilling of the body

4. Emotional and mental stress

Early studies by Hans Selye, M.D., identified a pattern of stress-related illness in both test animals and humans. Selye discovered a series of events that occur as a reaction

to chronic stress. This series of events is known as the General Adaptation Syndrome (GAS). The GAS has three stages:

1. The alarm reaction. The body's initial complex chain of physical and biochemical responses to stress brought about by the interaction of your brain, nervous system and a variety of different hormones, involving an increased amount of adrenal activity. Your body goes on full alert. The adrenals produce extra amounts of hormones. The adrenals are working harder to respond to an immediate stress situation. That is a function for which they are designed. There is actually an initial hyperadrenic response to stress. After the alarm reaction is over, you body goes through a temporary recovery phase that lasts 24-48 hours. During this time there is less cortisol secreted, your body is less able to respond to stress, and the mechanisms over-stimulated in the initial alarm phase by the involved hormones become resistant to more stimulation. In this let-down phase you feel more tired and listlessness, and have a desire to rest. If the stress is continued long enough, the adrenals will finally be overtaxed to the point of depletion as a reaction to this alarm state. Sometimes a person will seek a doctor's help for the symptoms caused by this type of hypoadrenia.

2. The resistance stage. After a period of time of continued, severe stress, the adrenals begin to adapt and to re-build themselves. The adrenals have a great capacity for increasing their size and function. If one adrenal is surgically removed, the other adrenal can hypertrophy to twice its normal size, giving the person the same amount of adrenal tissue he previously had. This capacity for increased size and function is the basis for the resistance stage. The prolonged alarm reaction starts as a hyperadrenia which leads to a hypoadrenia which then progresses into another state of hyperadrenia as the resistance stage takes over. This phase of resistance can last months or even up to 15-20 years. The adrenal hormone cortisol is largely responsible for this stage. It stimulates the conversion of proteins, fats and carbohydrates to energy through gluconeogenesis so that your body has a large supply of energy long after glucose stores in the liver and muscles have been exhausted. Cortisol also promotes the retention of sodium to keep your blood pressure elevated and your heart contracting strongly. If the stress is prolonged and severe, it will continue beyond the resistance stage and into the third stage of the GAS. Dr. Selye and subsequent researchers produced this GAS pattern over and over, resulting in hemorrhaged adrenal glands, atrophied thymus glands (the chief gland in immunity), and biochemically devastated bodies of animals exposed to repeated stress. The adrenal glands were the pivotal glands in the countless experiments involving stress.

3. The exhaustion stage. The exhaustion stage of the GAS is a hypoadrenia to the point where the person loses the ability to adapt to stress. The adrenal cortical enlargement of the triad of chronic stress is due to the hypertrophy of the resistance stage. However,

adrenal function in the exhaustion stage is severely limited. In the exhaustion stage, there may be a total collapse of body function, or a collapse of specific organs or systems. The body has little or no ability to resist any further stress. Two major causes of exhaustion are loss of sodium ions (decreased aldosterone) and depletion of adrenal glucocorticoid hormones such as cortisol, leading to decreased gluconeogenesis, rapid hypoglycemia, sodium loss and potassium retention. Simultaneously, insulin levels are still high. Body cells function less effectively in this condition as they rely heavily on a proper amount of blood glucose and the ratio of sodium to potassium. As a result, your body becomes weak. When energy is not available, every energy-requiring mechanism of the cell slows dramatically. This lack of energy, combined with the electrolyte imbalance produces a cell in crisis. This is when the person will surely seek a physician's help because he or she has symptoms which will not go away. Most hypoadrenic persons seen clinically are in this third or exhaustion stage of the GAS. The anti-stress mechanisms are lost and there is no more reserve potential for the person to fall back on.

Life's stresses at their worst come in the form of such cataclysmic events as the death of a loved one, an automobile accident or a serious illness. But stress can also take its toll in less obvious ways, like an abscessed or infected root canal tooth, a bout of the flu, intense physical exertion, a severe quarrel with a loved one, pressure at the workplace, an unhappy relationship, environmental toxins, poor diet, etc. If these smaller stresses occur simultaneously, accumulate or become chronic, and the adrenals have no opportunity to fully recover, adrenal fatigue is usually the result.

Your adrenal glands command powerful hormones to extend their influence throughout your body and your life. No bigger than a walnut and weighing less than a grape, each of your two adrenal glands sits on top of a kidney. From this location they not only significantly affect the functioning of every tissue, organ and gland in your body, they also have important effects on the way you think and feel. You cannot live without your adrenal hormones and how well you live depends a great deal on how well your adrenal glands function. The adrenal glands largely determine the energy of your responses to every change in your internal and external environment. Whether they signal attack, retreat or surrender, every cell responds accordingly, and you feel the results.

The hormones secreted by your adrenal glands influence all of the major physiological processes in your body. They closely affect the utilization of carbohydrates and fats, the conversion of fats and proteins into energy, the distribution of stored fat, normal blood sugar regulation, and proper cardiovascular and gastrointestinal function. The protective activity of anti-inflammatory and anti-oxidant hormones secreted by the adrenals helps to minimize negative and allergic reactions to alcohol, drugs, foods and environmental allergens.

After mid-life (menopause in women), the adrenal glands gradually become the major source of the sex hormones circulating throughout the body in both men and women. These hormones have a host of physical, emotional and psychological effects, from the level of your sex drive to the tendency to gain weight. Even the propensity to develop certain kinds of diseases and your ability to respond to chronic illness is influenced significantly by the adrenal glands. The more chronic the illness, the more critical the adrenal response becomes. The worse the overload relative to the ability of the body to respond is, the worse the adrenal fatigue is. Each person has a different capacity to handle the total stress load, and the capacity of each person varies over time and events.

Adrenal fatigue, or hypoadrenia, has been one of the most prevalent, yet rarely diagnosed conditions for over fifty years. Adrenal fatigue affects millions of people around the world in many ways and for many reasons. Despite being described in medical texts back in the 1800s, and despite a development of an effective treatment back in the 1930s, most “conventional” physicians are unaware that this problem even exists!

Hypoadrenia

The most common symptom seen by the hypoadrenic patient is that of low energy. The person may have barely enough energy to make it through the day, or may be tired all the time. Many middle-aged or older persons will attribute their low energy to “getting older.” A more accurate assessment of the situation is that they have had more years to accumulate stress’s adverse effects on their health.

A person may slow down a little as he gets older, but it is not normal for a person to be fatigued all the time merely because he is past 40, or even 80 years of age. Other physiological systems operating inefficiently may also cause fatigue or low energy, but any person in this category must have hypoadrenia ruled out as a primary cause for the lack of energy. Hypoadrenia and stress-related illness must also be suspected in any person whose symptoms begin after a stressful event, such as an accident, flu, pregnancy, etc. It is not necessary that the symptoms originate during or immediately following one of these stressful situations. They may develop several months later. Or there may not be a specific event, but merely prolonged exposure to stress.

The human system can take only so much abuse, and after years of abuse many people become lack the energy to do the things they did in their youth. This need not be the case, but it is accepted behavior in our society. People take such a change of life style for granted, never understanding the reasons behind the change and the

associated long-term adverse effects on their health. If they would eliminate the unnecessary stresses in their life, they would be able to continue the same activities for a much longer period of time. But the body will only take so much abuse before it makes the person stop.

Hypoadrenia is not a readily identifiable entity, rather a collection of signs and symptoms, known as a “syndrome.” People with adrenal fatigue often look and act relatively normal. They may not have any obvious signs of physical illness, yet they are not well and live with a general sense of dis-ease or “gray” feelings. They often use coffee, colas, sugar, and other stimulants to get going in the morning and to prop themselves up during the day. These people may appear to be lazy and unmotivated, or to have lost their ambition, when in reality quite the opposite is true; they are forced to drive themselves much harder than people with healthy adrenal function merely to accomplish life’s everyday tasks.

People who suffer from adrenal fatigue frequently have erratic or abnormal blood sugar levels in the form of hypoglycemia. In fact, people who have functional hypoglycemia are usually suffering from decreased adrenal function. With hypoadrenia there is more of a tendency to experience allergies, arthritic pain and decreased immune response. The adrenals also have an effect on mental states.

As a result, people with adrenal fatigue show a tendency toward increased fears, anxiety and depression, have intervals of confusion, increased difficulties in concentrating and less acute memory recall. They often have less tolerance than they normally would and are more easily frustrated. When the adrenals are not secreting the proper amount of hormones, insomnia is also one of the likely outcomes.

Addison’s Disease, the extreme pathological form of hypoadrenia, was named for Sir Thomas Addison, who first described it in 1855. It is life-threatening if untreated and can involve actual structural and physiological damage to the adrenal glands. People suffering from Addison’s usually have to take corticosteroids for the remainder of their lives in order to function. Fortunately, it is the rarest form of hypoadrenia with an occurrence of only about 4 persons out of 100,000. Approximately 70% of cases of Addison’s disease are the result of auto-immune disorders. The other 30% arise from a variety of other causes, including very severe stress.

In the more serious cases of adrenal fatigue, the activity of the adrenal glands is so diminished that the person may have difficulty getting out of bed for more than a few hours per day. With each increment of reduction in adrenal function, every organ and system in your body is more profoundly affected. Changes occur in your carbohydrate

protein and fat metabolism, fluid and electrolyte balance, heart and cardiovascular system, and even sex drive. Many other alterations take place at the biochemical and cellular levels. Even your body shape can transform when your adrenals are fatigued.

Normally functioning adrenal glands secrete minute, yet precise and balanced amounts of steroid hormones. But there are numerous factors that can interfere with this finely tuned balance. Too much physical, emotional, and/or psychological stress can deplete your adrenals, causing a decrease in the output of adrenal hormones, particularly cortisol.

The adrenal glands are often depleted from stress. Since the adrenal glands give the body something to fall back on in times of stress, when they are run down a person loses his reserve capacity and has lowered resistance to disease processes. When a hypoadrenic person becomes sick, he becomes sicker for a longer period of time, and with a greater likelihood for recurrence of the problem than if his adrenals were functioning at full capacity. This person gets into a chronic state of ill-health and that is when they show up in a practitioner's office. But modern medicine does not recognize hypoadrenia as a distinct and fully recognizable syndrome. Modern medicine only officially recognizes the pathological Addison's disease as hypoadrenia and not the functional hypoadrenia. Nevertheless, it can wreak havoc with your life.

Hypoadrenia is such a common complaint and occurs in so many other conditions, that today's medical doctors rarely consider pursuing an adrenal-related diagnosis when someone complains of fatigue. Very few physicians have read and understood the entire range of medical journal reports that have been around for over one hundred years. Fifty years ago, physicians were far more likely than their modern counterparts to correctly diagnose this ailment. Information about non-Addison's hypoadrenia has been documented in medical literature for over one hundred years but unfortunately, this milder form of hypoadrenia is missed or misdiagnosed in doctors' offices every day, even though the patient clearly presents its classic symptoms. The fact that it usually remains undiagnosed does not lessen its debilitating influence on their health and feelings of well being.

Two reasons why conventional medical treatment for hypoadrenia is so hard to find is 1) Money: There are no patentable treatments for hypoadrenia produced by the pharmaceutical companies. There is no money to be made. 2) Politics: Since the 1970s, the FDA has "outlawed" and actively persecuted one of the chief natural remedies for hypoadrenia, an extremely safe remedy called adrenal cortical extract (ACE).

Symptoms

People will develop a variety of different complaints depending on which of the adrenal's functions have been the most compromised and the general areas of susceptibility which they have inherited or acquired. The adrenals produce a variety of hormones, and it is quite likely that the same combination of symptoms will not be seen twice in a whole series of hypoadrenic patients. The body's reaction to stress is different in different people. The symptoms will depend on the nature of the person and the nature of the hormone depletion. In chronic stress states, the lymphatic system, particularly the thymus gland, atrophies, and there is also a tendency for development of stomach and duodenal ulcers in these persons. The person with stress-related illness might also have symptoms from lowered output of the adrenal glucocorticoids: cortisol, corticosterone, and cortisone. Of these, cortisol is the most important.

Heart Sounds and Hypoadrenia

Another common finding during the physical examination of the hypoadrenic person is made during auscultation of the heart. Normally the first and second sounds of the heart make a "lub-dub" sound, with the first sound being louder than the second. If you record the heart sounds on a phonocardiograph Endocardiograph), the second sound should be one-third the intensity (height) of the first sound. In the hypoadrenic person, the second sound will be equal to or greater than the first sound in the pulmonary valve area. The same may be true in other valve areas also, but in hypoadrenia, at least, the pulmonary second sound is greater. This accentuated pulmonary second sound is due to the pulmonic valve slamming shut because of pulmonary hypertension. Epinephrine causes vasoconstriction throughout most of the body, including the lungs. In the lungs this vasoconstriction causes a shrinkage of the mucosa and decreased mucus secretion. Epinephrine also relaxes the bronchiolar musculature, creating a bronchodilation.

This is why epinephrine inhalers are so helpful for asthma sufferers. The bronchodilation, which normally occurs with epinephrine, cannot occur in a person with hypoadrenia. Instead, he gets a bronchoconstriction—a constriction of all the bronchial musculature with subsequent symptomatology. Likewise, the hypoadrenic person does not have the benefit of epinephrine's action on the pulmonary capillaries and mucous membranes, with a resultant swelling of the mucous membrane and an increase in mucus production or secretion. In the hypoadrenic person, physical evidence of this is heard as the loud second heart sound at the pulmonary area. The bronchoconstriction, combined with the vasodilation and mucous membrane swelling, creates a back pressure in the pulmonary circulation that causes the pulmonary valve to slam shut, thus creating the louder second sound over the pulmonic valve.

Any person who has abnormal lung function, especially asthma or bronchitis, should be checked for hypoadrenia. This is particularly true if the person's symptoms are relieved by using an epinephrine inhaler. The muscles related to the lungs (deltoid, serratus anterior, etc.) are usually strong in these persons. Many lung problems are related more to the adrenals than to the lungs. The sartorius and gracilis, etc. should be checked in any lung case.

Several years ago, it was reported that asthma was totally a psychosomatic illness. Patients were put under emotional stress and an asthma attack would ensue. Therefore it was concluded that the asthma problem was all in the patient's head. If the adrenals are in the exhaustion stage of the GAS, they will be unable to respond to the added burden of emotional stress since there is no reserve available to fall back on. The epinephrine will not be available for normal function and the person will experience bronchoconstriction, swelling of the mucous membranes, and increased mucus production. The result is an asthma attack triggered by the increased emotional stress. The attack has nothing to do with the emotional stress except that the stress affects the adrenals. Fix the adrenals and the person can physically tolerate the emotional stress.

It is important to note that lung pathology, such as malignancy, tuberculosis, etc. will also create a loud second heart sound at the pulmonic valve area. Also, if there is an increased second heart sound only at the tricuspid valve area, this is usually indicative of liver congestion. There will be a weakness of the pectoralis major sternal, in these cases, and the sound can be normalized by treatment directed at the liver.

Hemmorhoids are another problem which is associated with blood pooling in the abdomen. A hemorrhoid is a vein which has pushed its way (or been pushed) to bulge outside the anal sphincter. The anal sphincter then becomes very tight, and the hemorrhoid, with the pressure of the abdominal and pelvic blood above it, and gravity pulling from below it, cannot get back inside the rectum. Treatment of hemorrhoids must be directed at two areas. First, the hemorrhoids must be treated locally, and second, the source of intra-abdominal and intra-pelvic pooling of blood must be corrected.

Most commonly, the cause of the blood pooling in the abdomen and pelvis is from hypoadrenia. But severe liver congestion can also cause portal hypertension and result in hemorrhoids. You must differentiate between liver and adrenal problems as the underlying cause of the hemorrhoids. For this reason, whenever a person complains of hemorrhoids, one of the first things to be done is listen to the heart. The person does not understand this, but you are listening for the relative loudness of the second sounds at the pulmonic valve area (for the adrenals) and the tricuspid valve area (for the liver).

In treating hemorrhoids locally, it is necessary to recognize that the hemorrhoidal veins can not get themselves back inside the rectum, due to the tightness of the anal sphincter. In order to treat the hemorrhoids successfully, the anal sphincter must be dilated. This is done by putting on a glove (not a finger cot) and, using a lubricant, inserting your index finger into the rectum. Stretch the anal sphincter with the index finger. Then insert the first two fingers and stretch the sphincter. Then insert three fingers and insert them slowly about as fat as they will reach. Finally (if the person is still on the table) insert all four fingers, stretching the sphincter up to the point which the size of the patient will tolerate.

This is a difficult procedure for the patient, but there will be an immediate and dramatic reduction in the extent of the hemorrhoids protruding through the anus. If done correctly, this procedure may only have to be performed once. Then again, you may only get one chance! Occasionally it is necessary to repeat the sphincter dilation once or twice in the future.

Varicose veins in the lower extremities are frequently caused by hypoadrenia for the same reasons that cause hemorrhoids. This can be seen in many pregnant women who only have a flare up of varicosities during pregnancy. It may be difficult to eliminate the varicosities, but it is possible to arrest their progression and to keep them in check throughout the pregnancy.

The pooling of blood in the abdomen and pelvis also creates and contributes to other symptoms. The patient with this problem will often complain of fullness or bloated feeling in the abdomen. Sometimes the sluggish circulation in the abdomen and pelvis actually affects digestion. Since the GI tract depends on an adequate supply of blood not only for its function, but for the absorption of nutrients, one can readily imagine how hypoadrenia can affect digestion. Symptoms of indigestion as well as inadequate absorption of nutrients can be caused or aggravated by hypoadrenia.

Other Symptoms of Hypoadrenia

One of the commonly overlooked sources of stress and resistant adrenal fatigue is chronic or severe infection. Adrenal fatigue is often precipitated by recurring bouts of bronchitis, pneumonia, asthma, sinusitis, or other respiratory infections. The more severe the infection, the more frequently it occurs or the longer it lasts, the more likely it is that the adrenals are involved. Adrenal fatigue can occur after just one single episode of a particularly nasty infection, or it can take place over time as the adrenals are gradually fatigued by prolonged or recurrent infections. If there are other concurrent stresses, such as an unhappy marriage, poor dietary habits or a stressful job, the downhill ride is deeper and steeper.

People who are involved in a weekly rotating shift have magnified stress because their bodies never have a chance to adjust to the new circadian rhythm produced by each sleep change. People on alternating shifts with less than three weeks between shift changes are continually hammering their adrenal glands. Every time the wake/sleep cycle is altered, it takes several days to weeks to establish a normal pattern for the new wake/sleep cycle.

The glucocorticoids are the body's own anti-inflammatory hormones. Persons who have had inflammations such as arthritis, bursitis, or other joint problems which have been helped by the injection or oral ingestion of cortisone and cortisone derivatives are usually persons who have had insufficient production of these substances by their own adrenal glands. This is particularly the case in the person who was originally helped by cortisone treatment once or twice, but on whom further attempts at cortisone therapy were fruitless. Any person who has been benefited by a course of cortisone therapy should be examined for hypoadrenia. Not only is this true of the obvious reason that the adrenals' cortisone output may be lowered, but also for the reason that cortisone therapy tends to lower adrenal gland output in the long run.

Cortisone causes a negative feedback to the pituitary, causing a diminished pituitary output of adrenocorticotropic hormone (ACTH). In prolonged cortisone therapy, the person's adrenal glands will atrophy, even to the point of non-function. Since the adrenal cortical hormones are necessary for life, a person on cortisone products should never have them withdrawn rapidly, as this could cause a life-threatening crisis. When a person is withdrawn from cortisone, it should be done so very gradually, over a long period of time in order to allow the adrenal glands to rebuild themselves to an adequate level of activity.

The adrenal glands are also implicated in most types of allergies. Most allergies involve an inflammatory process. Frequently, the allergen is merely the straw that breaks the camel's back. The allergen would not cause the person any trouble if he had an adequate level of his own adrenal production of the anti-inflammatory glucocorticoids. The same anti-inflammatory effect is important in limiting the lung congestion in asthma and bronchitis, as has been previously discussed.

As the adrenal glands become depleted, the blood glucose levels will tend to drop below normal levels. In an effort to counter this potential low blood glucose, the person will get cravings for anything which will rapidly increase the blood glucose. He will eat a candy bar, drink a cup of coffee, smoke a cigarette, or drink a soft drink. Everybody has their favorite "fix." The abuse of alcohol, marijuana, and hard drugs fits this pattern as

well. But the rapid rise in blood glucose provided by the “fix” only serves to re-initiate the whole cycle again.

The symptoms of the hyperinsulinism/hypoadrenia/hypoglycemia person are too numerous to mention here. Basically, though, epithelial tissue, nervous tissue, and the retina of the eye do not store glucose. Hence, these tissues are the most likely to be affected. Low blood glucose creates symptoms of blurred vision, headache, nervousness, unstable behavior, allergies, and on and on. Another symptom which is occasionally encountered in hypoadrenia is that of increased pigmentation of the skin. There may be unusual brown patches or areas of bronzing somewhere on the body’s surface. When the adrenal function is low, the pituitary responds by making ACTH. In the exhaustion stage of GAS, the ACTH effect on the adrenal is like whipping a tired horse. Since the adrenal can not respond to this pituitary drive, the pituitary keeps elaborating ACTH until its levels in the circulation are quite elevated.

The extra ACTH will affect other areas of the body. For example, ACTH has somewhat of an effect on the ovary, causing it to increase estrogen production. Also, ACTH has about 1/100th of the effect of melanocyte stimulating hormone (MSH), the pituitary hormone which stimulates melanocytes in the skin to produce the dark pigment melanin. In a severe hypoadrenia, the effect of bronzing or increased areas of pigmentation of the skin will sometimes be seen as a result of the ACTH mimicking the effect of MSH. Although this symptom is more common in the pathological hypoadrenia, Addison’s disease, it is occasionally seen in functional hypoadrenia as well.

Mercury and the Adrenal Glands
Mercury Detoxification

Mercury accumulates in the adrenal glands and disrupts adrenal gland function. Two primary nutrients for the adrenal glands are pantothenic acid and vitamin-C. A deficiency of pantothenic acid can lead to adrenal exhaustion (chronic fatigue) and ultimately to destruction of the adrenal glands. A deficiency of pantothenic acid also causes a progressive fall in the level of adrenal hormones produced. One of the largest tissue stores of vitamin-C is the adrenals; it is exceeded only by the level of vitamin-C in the pituitary. Physical and mental stress increases the excretion of adrenocorticotropic hormone. The increased adrenal activity, in turn, depletes both vitamin-C and pantothenic acid from the glands.

Humans cannot produce vitamin-C. They therefore attempt to replenish the needs of the adrenals by taking the vitamin from other storage locations in the body. If your overall ascorbate status is low, there may be an insufficient amount available to satisfy the needs of the adrenals. Under this condition, normal adrenal hormone response may

become inadequate, leading to an inadequate immune function. Mercury builds up in the pituitary gland and depletes the adrenals of both pantothenic acid and vitamin-C. Stress and the presence of mercury will have a very negative effect on the adrenal production of critical steroids. The ability of the adrenal gland to produce steroids is called steroidogenesis and is dependent upon reactions mediated by the enzyme cytochrome P-450. Cytochrome P-450 reacts with cholesterol to produce pregnenolone, which is then converted to progesterone. Cytochrome P-450 can then convert progesterone to deoxycorticosterone which is then converted to corticosterone or aldosterone by other enzymes in the adrenals. These adrenal functions are also affected by metal ions.

All steroid hormones produced by the adrenal glands are derived from cholesterol through a series of enzymatic actions, which are all stimulated initially by ACTH. Steroid biosynthesis involves the conversion of cholesterol to pregnenolone, which is then enzymatically transformed into the major biologically active corticosteroids. cAMP is produced from adenosine triphosphate (ATP) by the action of adenylate cyclase. Adenylate cyclase activity in the brain is inhibited by micromolar concentrations of lead, mercury, and cadmium. One of the key biochemical steps in the conversion of adrenal pregnenolone to cortisol and aldosterone involves an enzyme identified as 21-hydroxylase.

Mercury causes a defect in adrenal steroid biosynthesis by inhibiting the activity of 21a-hydroxylase. The consequences of this inhibition include lowered plasma levels of corticosterone and elevated concentrations of progesterone and dehydroepiandrosterone (DHEA). DHEA is an adrenal male hormone. Because patients with 21-hydroxylase deficiencies are incapable of synthesizing cortisol with normal efficiency, there’s a compensatory rise in ACTH leading to adrenal hyperplasia and excessive excretion of 17a-hydroxyprogesterone, which, without the enzyme 21-hydroxylase, cannot be converted to cortisol.

The inhibition of the 21-hydroxylase system may be the mechanism behind the mercury-induced adrenal hyperplasia. Adrenal hyperplasia can stress the adrenal glands by their accelerated activity to produce steroids to the point that production begins to diminish and the glands will atrophy. The result is a subnormal production of corticosteroids. Both lead and mercury can precipitate pathophysiological changes along the hypothalamus-pituitary-adrenal and gonadal axis that may seriously affect reproductive function, organs, and tissues. Leukocyte production, distribution, and function are markedly altered by glucocorticosteroid administration. In Addison’s disease (hypofunction of adrenal glands), neutrophilia occurs 4-6 hours after administration of a single dose of hydrocortisone, prednisone, or dexamethasone. Neutrophilia is an increase in the number of neutrophils in the blood. Neutrophils are also called

polymorphonuclear leukocytes (PMNs). Mercury not only causes a suppression of adrenocorticosteroids that would normally have stimulated an increase of PMNs, but at the same time also affect the ability of existing PMNs to perform immune function by inhibiting a metabolic reaction that destroys foreign substances. Still today, the ADA and other governmental agencies tell us that the mercury in your mouth, or from vaccinations, is perfectly safe. Scientists say this is a ridiculous statement that is in violation of science and common sense.

Adrenal Gland–Related Muscles

Dr. Goodheart identified five specific skeletal muscles which are related to adrenal gland function. These are 1) sartorius, 2) gracilis, 3) posterior tibialis, 4) gastrocnemius, and 5) soleus. There will be weakness in one or more of these muscles when the adrenal glands are malfunctioning. Because of the attachments of the sartorius and gracilis on the pelvis, (sartorius—anterior superior iliac spine; gracilis—pubic ramus), their weakness in persons with adrenal stress problems may allow the sacroiliac joint to subluxate posteriorly. The sartorius and gracilis stabilize the innominate (one side of the pelvis), holding it in an anterior direction. Many persons with hypoadrenia seek chiropractic help for the care of sacroiliac pain and/or low back pain which is due to the lack of pelvic stabilization normally provided by these muscles.

The sartorius and gracilis have a common insertion (along with the semitendinosis) on the medial side of the knee and rotate the tibia medially on the femur. When weakness of these muscles occurs, there is a loss of stability on the medial side of the knee. The sartorius and gracilis (along with the semitendinosis) act as dynamic ligaments, protecting and supporting the medial knee joint during various ranges of motion. Their function is particularly important in situations where the knee ligaments alone offer inadequate support.

It is very important to check for hypoadrenia in any person with knee problems. One can see how one hypoadrenic person will present with knee problems and another with back problems, and some persons will have both.

Due to the relationship of the posterior tibialis, gastrocnemius, and soleus to the stability of the foot and ankle, many hypoadrenic persons will complain of symptoms of tired feet, weak ankles, or aching calves. The posterior tibialis holds up the medial longitudinal arch of the foot, especially during gait. In some persons exhibiting hypoadrenia-related weakness of the posterior tibialis, the medial arch will drop, causing a pronation problem and strain to the foot and ankle. The one common factor in persons with the above-mentioned musculoskeletal complaints will be the weakness of one or more of the five adrenal gland related muscles accompanied by improvement of

their symptoms following treatment of the adrenal glands.

The adrenal gland cortex produces three major categories of hormones:

1. mineralocorticoids,

2. glucocorticoids, and

3. gonadal (sex) hormones (testosterone, estrogen, progesterone, etc.).

Depending on the relative amount of depletion of each of these hormone groups, one will see varying symptoms in the person suffering from stress-related hypoadrenia.

Cortisol and Epinephrine

The adrenal cortex and the adrenal medulla are the two parts of the adrenal gland. Although each has separate functions, it is no mistake that they are placed next to each other anatomically, since some of the functions of one are dependent on the other.

Epinephrine is a vasoconstrictor. But for epinephrine to have its vasoconstricting effect on the body's arterioles, it is imperative that cortisol be available. Cortisol sensitizes the arterioles to the constrictive action of epinephrine. If there is low adrenal cortical output and adequate cortisol is not produced, epinephrine will have a reduced effect in its function of constricting the blood vessels. These two hormones work together in affecting blood pressure. Therefore, in the hypoadrenic patient one of the major findings observed on physical examination is related to blood pressure.

Normally when a person goes from lying down to standing, the systolic blood pressure should elevate 4-10 mm Hg. (millimeters of mercury). In hypoadrenia, the systolic blood pressure from lying to standing will either stay the same or drop. This systolic drop is usually between 5 to 10 mm. Hg., but sometimes as much as 30-40 points. This is a classic sign in the hypoadrenic person which is known as the Ragland effect, or postural hypotension, and which is reported in over 90% of hypoadrenic persons. Blood pressure should always be checked in three positions: sitting, then lying, then standing. From recumbence to standing, the systolic blood pressure should rise 4-10 points. If the blood pressure drops, suspect functional hypoadrenia.

There are valves in the veins of the lower extremities which keep the blood from pooling in the feet when a person maintains an upright position. The fact that there are no valves in the veins of the abdomen and pelvis means that the only mechanism which prevents the blood from pooling there when the body goes from lying to standing is the

vasoconstriction of the local vessels. If there is a low cortisol level, epinephrine can not function correctly and there will be inadequate vasoconstriction in response to upright posture. This causes the blood to pool in the abdomen and pelvis and the systolic pressure in the arm to drop. This same person may complain of dizziness or light-headedness, especially when arising from a seated or lying position. Or he may experience transient spells of dizziness during the day or he may be dizzy all the time. The patient may be complaining of headaches, which are due to the pooling of the blood in the abdomen and pelvis, interfering with the supply to the head. Frequently these persons have had totally normal neurological examinations or some have been diagnosed as having Meniere's disease. Some are being treated unsuccessfully with manipulation to the upper cervical vertebrae. But all therapeutic approaches are ineffective in relieving the symptoms until the hypoadrenia is treated.

Some persons who have postural blood pressure dumping are being treated for hypertension. The hypertension is from another paradoxical body response. When the person changes positions from recumbence to standing and the systolic blood pressure drops 10, 20, 30 points, the body senses this low blood pressure and reacts. The body does not want all the blood pooling in the abdomen and pelvis because it decreases the amount of blood in the head and other areas. In an effort to change this situation, the body may elevate the systolic pressure to an extremely high level. The systolic blood pressure may go as high as 180 mm Hg. or more. Then, when the person changes positions from lying to standing, the systolic blood pressure will drop to only, say, 150 mm. Hg.

If the blood pressure is taken only in the seated position, the person will show a very high systolic pressure. But, when you change the person's positions, he will show the dumping blood pressure on arising from recumbence to standing. These persons are often treated with diuretics when the real problem is with the adrenal glands. Combine this with the fact that many hypoadrenic persons are also dehydrated, as previously discussed, and you can see the senselessness of a diuretic approach in these cases.

Anatomy

The adrenals are orange-colored glands that sit on top of the kidneys near the spine, just underneath the last rib and extending down about an inch. The right adrenal is shaped something like a pyramid, whereas the left is shaped more like a half moon. Each gland is highly vascularized and is only about 1" high by 1¼" to 2" wide by ¼" thick, and weighs just 4 to 6 grams (about one-eighth to one-quarter ounce). They are usually heavier in females than in males.

–

Although in contact with the kidney, there is no direct connection from the adrenals to the kidney—the arterial blood supply to the adrenal glands is separate from the kidneys. Both adrenal glands are only a very short distance from the aorta, the major artery of the body, and the vena cava, the major vein. This strategic placement allows for a very rapid adrenal response to hormonal messages transported via the blood. For example, Adrenal Corticotropic Hormone (ACTH) is a hormone messenger from the pituitary gland that tells the adrenal glands how much cortisol to secrete. Within a few seconds of receiving this message the correct level of cortisol is on its way from the adrenals to the rest of the body. The adrenals are also placed in close proximity to the liver, pancreas, major fat storage areas and the kidneys, as these are the organs that need rapid communication with the adrenals in situations requiring their immediate response to adrenal hormones.

–

Regions of the Adrenal Glands

Each adrenal gland is composed of two endocrine components—a medulla (inner part) that constitutes 20% of the gland and a cortex (outer part) that constitutes the remaining 80% of the gland. The cortex consists of four zones. The medulla and each of the zones in the cortex each produce different hormones that serve a variety of functions in your body. The adrenal cortex and medulla, like the anterior and posterior lobes of the pituitary, are obtained from separate cells in the developing embryo. The medulla is derived from ectodermal neural crest cells, and the cortex is derived from mesodermal cells.

–

The Adrenal Medulla

The functional unit of the adrenal medulla is the chromaffin cell, which functions as a neuroendocrine cell. In response to stimulation, chromaffin cells secrete the hormones epinephrine (adrenaline) and norepinephrine (noradrenalin) directly into the blood. Epinephrine and norepinephrine are important mainly in crisis situations. During a crisis, they work together to dilate bronchi (air passages of the lungs) and blood vessels to the muscles, increases heart beats and strength of contraction, and cause other physiological changes to help the body respond to the stressful situation via “fight or flight.” These adrenal hormones are responsible for the superhuman abilities that occasionally occur during a crisis. The medulla is involved in extreme stress and, within this context, epinephrine and norepinephrine both work with cortisol from the adrenal cortex.

–

The Adrenal Cortex

Most of the ongoing daily regulation and modification of bodily processes arises from the adrenal cortex. The adrenal cortex is divided into four zones which each secrete different hormones that carry out specific functions throughout your body. 1) The outermost zone is the zona glomerulosa from which the hormone aldosterone is secreted, and consists of cells arranged in 'whorls' (glomeruli). Cells of the zona glomerulosa produce hormones called mineralocorticoids. Aldosterone is the major hormone controlling the sodium and potassium levels, and thus fluid balance, within your bloodstream, cells and interstitial fluids (the area between the cells).

_

1) The outermost zone is the zona glomerulosa from which the hormone aldosterone is secreted. Aldosterone is the major hormone controlling the sodium and potassium levels, and thus fluid balance, within your bloodstream, cells and interstitial fluids (the area between the cells).

2) The next zone is the zona fasciculata in which cortisol is produced. Cells of this zone are arranged into fascicles separated by venous sinuses. Cells of the zona fasciculata produce glucocorticoid hormones. Cortisol controls or greatly influences the metabolism of fats, proteins and carbohydrates to maintain blood glucose within a narrow optimal range and keep it there even under stressful conditions. Cortisol also has many other important functions.

3) The innermost zone is the zona reticularis where progesterone, DHEA and its relatively inactive precursor, DHEA-S are produced. Although the sex hormones are made primarily by the gonads (ovaries and testes), the adrenal zona reticularis manufactures an ancillary portion of sex hormones for each sex and also produces male hormones in women and female hormones in men to keep the effects of the dominant sex hormones in balance.

In humans and other primates, between the zona fasiculata and the zona reticularis, there is a narrow space called the interface zone. Although the zona reticularis has traditionally been thought to produce the sex hormones such as the estrogens and testosterones, it is now believed that this interface zone is the actual site of production of most of the sex hormones. Because most adrenal research uses rodents and other non-primate mammals, little attention has been paid to this interface zone until recently.

These zones of your adrenal cortex collectively produce over fifty hormones. Most of these are intermediary hormones that only act as bridges to form other adrenal

hormones. However, about a dozen hormones end up in your circulation and actively affect the rest of your body.

The Adrenal Glands (Cont.)

Physiology

The Regulation of Cortisol

The hypothalamus of the brain influences both portions of the adrenal gland but by different mechanisms. The Secretion of glucocorticoids from the adrenal cortex is regulated by negative feedback involving the corticotrophin-releasing hormone (CRH) secretion by the hypothalamus. CRH then acts on the anterior pituitary to stimulate adrenocorticotropic hormone (ACTH) secretion, which then stimulates the adrenal cortex into cortisol secretion. Although cortisol is secreted by the zona fasiculata in the adrenal glands, it is regulated primarily from the brain.

–

Normally about 80% of blood cortisol is bound to a carrier protein called cortico-steroid-binding globulin. Another 15% is bound to albumin, and the remaining 15% exists free in solution. Cortisol secretion has numerous physiological effects, its main target tissues being the liver, skeletal muscle and adipose tissue. Cortisol is responsible for many of the life sustaining functions attributed to the adrenal glands. Many of the symptoms of adrenal fatigue arise from decreased cortisol levels in the blood or inadequate levels of cortisol during times of stress when more cortisol is needed.

–

Excess cortisol secretion results in Cushing's Syndrome. This can either occur as a primary abnormality in steroid hormone production by the adrenal cortex, or as a result of overproduction of ACTH by the pituitary resulting in excessive stimulation of the adrenal cortex. Cushing's patients have thin arms and legs, due in part to the loss of muscle mass as a result of the protein-catabolic effects of excess cortisol, and also as fat is redistributed from the extremities to the trunk. There is an increase in fat in the face, the trunk, across the shoulder blades, and at the base of the neck. Connective tissue is lost from the skin, causing it to become thinner. As a result, blood vessels are located closer to the surface making the skin have a slight red appearance.

–

The HPA Axis

The amount of cortisol circulating at any particular moment is regulated by a complex interaction between the hypothalamus (a regulatory part of the brain), the pituitary gland at the base of the brain, and the adrenal glands. This regulatory trio operates through a negative feedback system and is referred to as the Hypothalamus/Pituitary/Adrenal (HPA) Axis or HPA System. In your body, your hypothalamus is analogous to a thermostat, your pituitary to a relay switch, your adrenals to a furnace, and your body to a room. The amount of cortisol released is comparable to the heat released from the furnace. To a large extent you control the thermostat through the demands you place on your body. These demands arise from the physical situations your body has to deal with (diet, exercise, work, climate, etc.) and your reactions (emotional and physiological) to them.

The HPA Axis is one of the most important elements of the whole body process known as homeostasis, the process that maintains a steady internal bio-chemical and physiological balance in your body. The HPA Axis adjusts cortisol levels according to the needs of the body, under normal and stressed conditions, via a hormone called the Adrenal Corticotrophic Hormone (ACTH). ACTH is secreted from the pituitary gland in response to orders from the hypothalamus and travels in the bloodstream to the adrenal cortex. There it activates cells in all four zones to produce their various hormones.

Each zone generates different hormones as end products, but the process of making all hormones in all zones begins with ACTH biding to the walls of the adrenal cells. This initiates a chain reaction of intracellular enzymes that release cholesterol within the cell. The cholesterol is then used inside the adrenal cells to manufacture pregnenolone, the first hormone in the adrenal cascade. No matter which adrenal hormone is being produced, pregnenolone is the first hormone formed in the series. In the zona fasciculata, pregnenolone is processed to form cortisone and then cortisol. Cortisol, once manufactured, is released into circulation. It takes less than a minute after the initial stimulation by ACTH for newly synthesized cortisol to be circulating through your blood to every part of your body, including to your hypothalamus where the concentration of cortisol is being constantly measured.

Your hypothalamus, in its regulatory function, analyzes and integrates input from many different external and internal sources. This input includes information from brain centers about overall excitability, energy requirements of you body, and sensory data from your brain centers for hearing, seeing, smelling, touch and taste. Based on this information, your hypothalamus determines how much cortisol your body requires and subsequently releases its own hormones as messengers. The primary hormone messenger from the hypothalamus is Corticotrophin Releasing Factor (CRF) which signals the pituitary gland to secrete a specific amount of ACTH. Thus ACTH is sent

from the pituitary to your adrenal glands to begin the process described above all over again. Alterations in ACTH levels, and hence cortisol levels, are made minute by minute using this negative feedback loop, modulated by other information received by the hypothalamus.

Cortisol, ACTH and aldosterone are not secreted uniformly throughout the day, but rather follow a diurnal pattern with the highest levels secreted at approximately 8:00 AM and the lowest between midnight and 4:00 AM. As a matter of fact, it is the rising cortisol level that helps us wake up in the morning. After its peak at approximately 8:00 AM, it downtrends through the rest of the day, often with a small dip in the afternoon between 3:00 and 5:00 PM. This curve of cortisol secretion however, is not a nice smooth curve, but is filled with episodic spikes that generally fit into an increasing and a decreasing pattern throughout the day and evening. Eating something, even a little snack, causes a small burst in cortisol levels. People who have regular snacks and meals keep their cortisol at higher levels for more of the day compared to people who do not snack. This is another reason to have regular healthy snacks in addition to regular meals if you have adrenal fatigue. Exercise also elevates cortisol levels similarly to food, so the combination of regular means, small snacks and exercise can do a lot to enhance depressed cortisol levels.

Some people with hypoadrenia have an overall low pattern of cortisol secretion with circulating cortisol levels lower than normal between 3:00 and 5:00 PM. Still others fluctuate throughout the day and can even vary from day to day so that their cortisol levels are unpredictable. They may go through part of their day with elevated cortisol levels, part of the day with low levels and part with normal levels. Although cortisol has its diurnal pattern of variations each day, it remains at an amazingly consistent level throughout your lifetime, under normal conditions. In later life, some people actually experience a small rise in cortisol. If this rise is excessive it may be related to some disorder. However, a rise in cortisol in response to stress is a natural reaction that actually protects the body in several ways.

Actions of Cortisol

Blood Sugar

Cortisol is essential for maintaining blood sugar (glucose) levels in the proper balance. A drop in blood sugar triggers the adrenals to make more cortisol. The cortisol increases blood sugar levels by converting fats and proteins into energy in a process called gluconeogenesis. In this energy production process first fats are broken down into fatty acids and proteins into peptides and then these are converted into the needed blood glucose. This process is vital to keeping the blood glucose levels relatively constant throughout the day. Your body depends upon glucose as its most consistent

form of energy. Cortisol works in tandem with insulin from the pancreas to provide adequate glucose to the cells where it is burned for energy. Cortisol ensures adequate levels of glucose in the blood while insulin unlocks the cell membranes to let glucose into the cells. When your body is under stress from any source, there are more demands placed upon its various tissues and organs, requiring more available glucose to fuel more energy production in the cell.

Inflammation

Cortisol is a powerful anti-inflammatory, even when secreted at normal levels. It acts quickly to remove and prevent redness and swelling of nearly all tissues. These anti-inflammatory actions keep mosquito bites from flaring into giant wheals, bronchial tubes and eyes from swelling shut from allergens, and mild scratches from looking like lacerations. For any physical body to remain in homeostatic equilibrium every inflammatory reaction must have an opposite and equal anti-inflammatory reaction. Although there are other anti-inflammatory responses occurring at local sites, cortisol is the main anti-inflammatory agent circulating naturally in your body. You can assume that almost any time you have an inappropriate amount of redness and/or swelling, there is too little cortisol in circulation. Cortisol has similar anti-inflammatory control over auto-immune reactions. In auto-immune reactions white blood cells attack parts of your body as if they were foreign. These reactions can range from mild to life threatening. In most auto-immune reactions cortisol levels are inadequate for the degree of reaction taking place in particular tissues or locations in the body. This is one of the reasons why strong corticosteroids (prednisone, prednisolone, etc.) are used with all diseases involving inflammatory processes, including auto-immune diseases. They imitate the anti-inflammatory effects of cortisol, although unfortunately with some very serious undesirable side effects. Cortisol not only affects the redness and swelling but also the actions of the white blood cells.

Immune System

Cortisol influences most cells that participate in immune reactions and/or inflammatory reactions, especially white blood cells. It specifically regulates lymphocytes, the commanders of the white blood cells. Cortisol and corticoids (cortisol-like substances) also affect the actions of other white blood cells such as natural killer (NK) cells, monocytes, macrophages, eosinophils, neutrophils, mast cells and basophils. These white blood cells gather in defense of the body at places of injury or perceived invasion and some flood the area with very powerful chemicals to attack the invaders. Although they are a great defense, these chemicals irritate the surrounding tissues, causing redness and swelling. Cortisol rushes to the site to put out the fire made by the lymphocytes and other white blood cells. It keeps the local white blood cells from sticking to the site and releasing their chemicals and also controls the number of

circulating lymphocytes and other white blood cells, so there are fewer white blood cells available. This prevents an overreaction by the immune system and controls the irritation and tissue destruction that takes place at the site of congregating white blood cells.

Cortisol also reduces the rate at which lymphocytes multiply and accelerates their programmed cell death to further protect the body from this overreaction. In fact, when cortisol is elevated during the alarm reaction, there is almost a complete disappearance of lymphocytes form the blood. That is why your immune system is suppressed when you are under stress or taking corticosteroids. On the other hand, when circulating cortisol is low, its moderating effect on immune reactions is lost and lymphocytes circulate in excess. In this situation, inflammation is greater with more redness and swelling, and it takes a longer time for the inflamed tissue to return to normal. So, directly and indirectly cortisol dramatically influences most aspects of immune function.

Cardiovascular System

Cortisol has complex and sometimes opposing effects on the cardiovascular system. The most significant of these effects is probably the control of the contraction of the walls of the arteries in regulating blood pressure. The more circulating cortisol, the more contracted the mid-sized arteries. Thus, people who are deficient in cortisol usually have pervasive low blood pressure (hypotension) and reduced reactivity to other body agents that constrict blood vessels.

Cortisol also directly affects the heart. It helps regulate sodium and potassium in the heart cells and increases the strength of contraction of the heart muscle. Sodium and potassium levels are critical for normal heart function. Cortisol also tends to increase blood pressure, but this hypertensive effect is moderated by calcium and magnesium. These minerals are required to prevent the heart muscles from cramping when they contract, thus keeping the heart beating smoothly. They also help relax the walls of the arteries, counteracting and balancing the increase in smooth muscle contraction produced by cortisol.

Central Nervous System

Cortisol influences behavior, mood, excitability and even the electrical activity of neurons in the brain. Behavior changes frequently occur in cases of excess and deficient cortisol levels, for example, sleep disorders are common with both high and low cortisol. Many of the signs and symptoms of adrenal fatigue involve moodiness, decreased tolerance, decreased clarity of thought, and decreased memory. These occur because the brain is affected by both too little and too much cortisol. The right

amount is needed for proper function during stress.

Stress

An intimate association between stress and cortisol is manifested in several ways. No matter what the source of stress, most challenges to homeostasis stimulate the HPA axis, resulting in increased secretion of cortisol. In animal experiments, the animals with weakened adrenals died in response to even mild stress. However, when animals with weakened adrenals were given cortisol or similar agents, they survived those same kinds of stress. People with adrenal fatigue can often tolerate mild stress, but succumb to severe stress. As stress increases, progressively higher levels of cortisol are required. When these higher levels of cortisol cannot be produced, as in adrenal fatigue, the person cannot fully or appropriately respond to stress.

Even at normal levels, cortisol serves the very important function of priming the different mechanisms of your body so they can respond when called into action. During stress cortisol must simultaneously provide more blood glucose, mobilize fats and proteins for a back-up supply of glucose, and modify immune reactions, heartbeat, blood pressure, brain alertness and nervous system responsiveness. Without cortisol, these mechanisms cannot react adequately to a significant stress challenge. When cortisol levels cannot rise in response to these needs, maintaining your body under stress is nearly impossible. The more extreme the difference between the level of stress, and the lack of cortisol, the more significant the consequences.

Cortisol can be viewed as sustaining life through two opposite but related kinds of regulatory actions: releasing and activating existing defense mechanisms of the body and shutting down and modifying the same mechanisms to prevent them from overshooting and causing damage or cell death. If this regulation is defective during stress, as it is when cortisol levels are low, an animal can be endangered or even die because its defense mechanisms cannot react or because they overreact. When your body is stressed cortisol is also needed to restrain various physiological mechanisms, to prevent them from damaging your body. For example, the elevation of blood sugar by the adrenals during stress helps control the insulin induced hypoglycemia that would occur if more blood glucose was not available. But cortisol also protects the cells against the detrimental effects of excessive amounts of glucose by helping create insulin resistance at the cell membrane to keep too much glucose from flooding into the cell.

This damping down action of cortisol can also be seen in the way cortisol modifies the immune response to control the amount of inflammation in the involved tissues and suppress potentially toxic chemicals secreted by white blood cells, thus protecting the

body from auto-immune processes and uncontrolled inflammation. Cortisol is so important that when the HPA axis cannot increase cortisol activity in response to stress, these unrestrained mechanisms overshoot and can damage your body.

These actions of cortisol have evolved to both enhance the body's response to stress, yet protect it from excessive responses to stress. These mechanisms were probably needed only occasionally in our distant ancestors' lives. However in modern life, with the myriad of physical, emotional and environmental stresses we face daily, our adrenals' capacity to rise to the occasion is challenged day after day. It is possible that we experience more stressful events in a year than our ancestors experienced in a lifetime. Yet your adrenal glands require some recovery time each time they are challenged. The constant "pedal to the metal" lifestyle leaves little room for an adequate adrenal response when the adrenal glands never get the chance to recoup and are already responding at their maximum capacity.

The more we understand about the physiology of stress, the more obvious it is that, unless we quickly evolve to have adrenal glands the size of footballs, we must learn to give our adrenals the opportunity they need to recover on a regular basis. This means modifying the effects that stress is having on the body. Otherwise we will rapidly devolve into a society of the chronically sick and tired that even coffee, colas and other stimulants cannot rally.

Low Cortisol, Adrenal Fatigue and Hypoglycemia

It's been known for almost a century that people who suffer from low blood sugar frequently suffer from adrenal fatigue. It's also been known that people who suffer from adrenal fatigue almost always have some form of irregular blood sugar pattern, of which hypoglycemia is the most common. With hypoglycemia there are usually cravings for sugar. There are real physiological reasons why these cravings exist.

When your adrenals are fatigued, their cortisol output is diminished and you have lower levels of circulating blood cortisol. With lowered blood cortisol, your liver has a more difficult time converting glycogen into glucose. Fats, proteins and carbohydrates, which normally can be converted into glucose, also cannot be as readily converted into glucose. These reserve energy pools controlled by cortisol are critical to achieving and maintaining normal blood sugar levels, especially during stress. Further complicating this matter is that during stress, insulin levels are increased because the demand for energy in the cells is greater. Insulin opens the cell wall membranes to take in more glucose in order to provide more energy to the cells. Without adequate cortisol levels to facilitate the conversion of glycogen, fats and proteins to new glucose supplies, this increased demand is difficult or impossible to meet. All this combines to produce low

blood sugar.

People with adrenal fatigue are in a real bind because when they are under stress, demand for blood glucose increases, but their fatigued adrenals cannot produce enough cortisol to generate higher glucose levels from reserves. In the presence of increased insulin and decreased cortisol, blood sugar drops rapidly. When this happens at the same time as an increasing demand for glucose, the stage is set for tragedy. In a physical survival situation this might lead to death because response times slow down, thinking easily becomes confused, muscular strength is weakened, and other problems occur which render the individual too helpless to effectively defend themselves or escape.

Typically in our society in which physical survival is not usually a daily source of stress, people handle their low-adrenal related hypoglycemia symptoms with a double-edged sword; they eat something sweet with a cup of coffee or cola. This is a short acting emergency remedy that temporarily increases blood sugar with nearly immediate impact. They can almost feel it hit the back of their brain as their blood sugar moves out of the basement and shoots for the stars, relieving their hypoglycemic symptoms for about 45-90 minutes. However, this is inevitably followed by a precipitous plunge back to even lower blood sugar levels than they started with. Many individuals do this day in and day out, not realizing that hypoglycemia itself is a significant stress on the entire body, and especially on the adrenals.

To the body, hypoglycemia is a strong stressor, an emergency call to action that further drains already fatigued adrenals. People who treat their own hypoglycemia like the common example given above are on a constant roller-coaster ride throughout the day with their blood sugar erratically rising and then falling after each “sugar fix.” This throws not only cortisol and insulin levels into turmoil, but also the nervous system and the entire homeostasis of the body. Therefore, by the end of the day, the person may feel nearly exhausted without having done anything. It might take an entire evening or weekend to recover from this daily/weekly roller coaster ride. It has sometimes been characterized as driving with both the brakes and the accelerator pushed to the floor at the same time.

Low blood sugar times are most likely to occur at around 10:00 AM, 2:00 PM, and between 3-4:00 PM. The old Dr. Pepper commercials had this pattern of hypoglycemia pegged when they created the slogan encouraging people to have a Dr. Pepper (high in sugar and caffeine) at “10, 2 & 4” each day. It is not by accident that work breaks are scheduled at about these times or that people typically have something sweet and/or caffeine during these breaks. We have a nation of hypoglycemics. 60% of people

suffering from hypoglycemia go on to become diabetics. So is it any wonder that we have a nation suffering from diabetes in epidemic proportions?

Your brain also requires increased energy during times of stress and is especially affected by a lack of glucose. Although your brain uses several different fuels, when it is low on glucose, it often does not do well. In fact, most of the mechanisms involved in regulating blood sugar are designed to ensure that your brain always has adequate glucose with which to function. Many of the symptoms of adrenal fatigue and most of the symptoms of hypoglycemia are the result of insufficient glucose available to brain tissues.

Hypoglycemia, without proper snack and meal placement, also encourages overeating when food is available. The overeating causes rapid weight gain because the increased insulin is circulating in your blood, ready to usher that excess energy (glucose) from the extra food into your fat cells where it can be stored as fat. Even though you may not like its effects, this is an elegant compensatory mechanism that has helped us survive.

Much of human history is a story of feast or famine; excess calories are a luxury in evolutionary terms. Therefore, after coming out of a situation of temporary famine (hypoglycemia) into a situation of excess calories (fat and sugary junk food), our evolutionary history urges us unconsciously to overeat and our bodies are designed to store that energy while it is available. In this way hypoglycemia creates a tendency to put on weight.

If you do not want to gain weight you should avoid those low blood sugar dips that not only make you so hungry you overeat, but, also create a tendency in your body to store energy as fat. This means regular exercise and eating the kinds of meals and foods that control hypoglycemia. It also means not eating those sugary foods and caffeine that send your blood glucose levels on a roller coaster ride and worsen your adrenal fatigue and hypoglycemia.

Fasting

Many persons and many doctors are great advocates of fasting. Yet many of these same people have considerable difficulty when on a prolonged fast. They will always rationalize the problems encountered on a fast as being due to the body detoxifying. However, many of these people are really showing symptoms of hypoadrenia during their fasts, and actually may be doing themselves more harm than good.

During a fast, the body will call on the adrenals to produce glucocorticoids to maintain a level of blood glucose which is adequate for a normal level of activity. The glucocorticoids can elevate blood glucose by breaking down protein into carbohydrates through the process of gluconeogenesis. A person on a fast puts a great strain on his adrenals and if he is already hypoadrenic, or borderline hypoadrenic, he may suffer from many problems during the fast. Severely hypoadrenic persons should almost never be put on a total fast. If they must be fasted, it should be a raw fruit and vegetable juice diet, with the juice taken at frequent intervals. It is also best that they fast for only a day or two at a time.

Regulation of Adrenal Sex Hormones

The manufacture of adrenal sex hormones in the zona reticularis of the adrenal cortex is primarily triggered by the same signal that initiates the production of aldosterone and cortisol in the other adrenal zones—the stimulation of the cell membrane by increased ACTH. This releases cholesterol to start the complicated cascade by which cholesterol is converted to pregnenolone and pregnenolone to various sex hormones. In the zona reticularis, unlike in the other adrenal zones, the cascade can follow a number of routes to produce various end product hormones. For example, pregnenolone can be converted to progesterone, which can then be converted to androstenedione, or pregnenolone can be converted to DHEA, which can then be converted to androstenedione in turn can be converted to estrone or testosterone, either of which can then also be converted to estradiol. The sex hormone precursors such as DHEA are only somewhat diurnal, having small fluctuations throughout the day.

Actions of Adrenal Sex Hormones and Their Precursors

Both male and female hormones are made in the adrenals of each person, regardless of gender. Any masculinizing in the female or feminizing in the male can be due to adrenal stress-related states. In males, the adrenals provide a secondary source of testosterone and are the exclusive source of the female hormone estrogen. In females, the adrenals provide a secondary source of estrogen and progesterone, and are the nearly exclusive supplier of testosterone. Although science may not yet understand the exact role the adrenals play as a supplier of ancillary sex hormones, it is known that many women suffering from premenstrual syndrome (PMS) and difficult menopause have low adrenal function, and vice versa. It is also known that when these women are given adrenal extracts, they often report their PMS or menopausal symptoms vanish or greatly improve. In boys entering puberty, low adrenal function is often associated with a lighter beard or less drive to achieve, with sparser hair on their arms and legs. Libido in both sexes is usually diminished by low adrenal function.

In addition to its effects on secondary sexual characteristics, estrogen has very important metabolic functions at the cellular level in both the male and the female. It is a

factor in certain transhydrogenase reactions which are essential in energy metabolism. Some investigators implicate estrogen in the increased rate of coronary heart disease (CHD) in men over women, since CHD incidence in postmenopausal women approaches that of men. The only source of estrogen in the male is his adrenal glands while the premenopausal woman has a usually abundant estrogen supply from her ovaries.

Females are more likely to show secondary sexual characteristics of men than vice versa, although both are encountered. Women with excessive body hair, particularly on the face, or men with gynecomastia, seem to be the persons who seek help for their problems most readily. These symptoms result from excessive production of the sex hormones by an overactive adrenal cortex. The common medical approach to the woman with facial hair is to prescribe prednisone or some other cortisone derivative in an effort to suppress the pituitary drive of the adrenal, thereby hopefully decreasing the output of testosterone. Although this is sometimes valuable, the person must put up with the side effects, both seen and unseen, of the cortisone derivative. If you look at the person from a holistic, long-range perspective, you can see the likely imprudence of such therapy.

When one recognizes that they are dealing with a hyperadrenia in these persons and examine them from the perspective of the GAS, it will be evident that it is a stress-related illness. These persons usually fall into the category of the resistance stage of the GAS. What is really seen is a person whose system is reacting to stress by increasing adrenal function. To suppress the pituitary drive of the adrenal is to interfere with the body’s attempt to adapt to stress, and the person may well be sacrificing long-term health for short-term symptomatic relief. A far better approach is to aid the person in his ability to adapt to stress by identifying and eliminating (as much as possible) the sources of stress, and by treating the adrenal glands (and the entire endocrine system) with the nutritional and other natural therapies available.

During menopause, as the estrogen levels begin to decrease, the adrenals are supposed to increase their production of estrogen to help make up for part of the estrogen deficit. In many persons, menopause hits “like a ton of bricks.” Menopause frequently takes place very rapidly, not allowing the adrenals adequate time to increase their capacity to meet the increased estrogen requirement. This is further complicated by the fact that many of these persons are already on the verge of adrenal exhaustion.

The menopausal hypoadrenia woman will have a variety of symptoms—from just feeling poorly to severe psychosis. This is because the adrenals are not able to take the extra load that has been dumped on them without any warning by the ovaries. Any

woman who has a rapid menopause with accompanying symptoms must be checked for hypoadrenia. She may complain of low back pain that started at about the time of menopause, or a knee problem, or eyes which began to become sensitive to light, and so on. These are diagnostic clues which you can obtain from her history. And she will show kinesiological muscle testing evidence of adrenal involvement.

Pregnancy is quite a stressor for many women. A common occurrence, however, is the woman who, upon reaching her third trimester of pregnancy, says that she all of a sudden “feels better than I have felt in years.” This is often the case when the first two trimesters were particularly difficult. The fetus’s adrenal glands mature to the point of being able to produce hormones at about the beginning of the third trimester. If the mother is in the exhaustion stage of the GAS, it is not uncommon for the baby’s adrenals to try to make enough adrenal hormones for both the baby and the mother. The mother feels great. The baby’s adrenals are really supporting the mother’s adrenals. But the baby’s adrenal glands are being stressed before it is even born! The results are doubly negative. The baby is born in a state of adrenal depletion and often exhibits symptoms of hypoadrenia. These symptoms may be varied, but two of the more common symptoms are allergies and recurrent infections. During chronic stress states, the thymus and other lymphatic structures atrophy, lowering the capabilities of the body’s immune mechanisms.

Likewise, with the support of the baby’s adrenals pulled out from under her, the mother is dropped back into a state of adrenal exhaustion. This accounts for the common occurrence of “post partum blues” or even psychosis. Quite frequently, both mother and child must be treated for hypoadrenia.

Protective Effect of Adrenal Sex Hormones and Their Precursors

The adrenal sex hormones and their immediate precursors such as DHEA, pregnenolone and androstenedione do more than add to or balance other sex hormones. They also help balance the effects of cortisol and act as cellular anti-oxidants. DHEA is itself a weak androgen, however it can be converted in peripheral tissues to testosterone, a much more powerful androgen. Thus, the sex hormones and DHEA both limit cortisol’s possible detrimental effects on cells and at the same time facilitate its actions by functioning as hormonal anti-oxidants. These precursors have their own actions as well as serving as raw material from which the sex hormones are made. For example, DHEA is exported to most cells and once inside the cells, it often becomes the resource material from which small amounts of local hormones can be created to carry out various specific tasks.

Physiological Effects of Stress and Aging on Adrenal Sex Hormones

The more the adrenals are stimulated by stress and internal demands, the less responsive the zona reticularis becomes. Consequently, the adrenal output of sex hormones and their precursors decrease with chronic stress and adrenal fatigue. When less DHEA-S is manufactured in the zona reticularis, less DHEA-S and DHEA is available for export and use by other cells. This diminishes your ability to respond adequately to the demands placed on the body for increased DHEA-S and DHEA, thus, in turn, increasing the negative effects of chronic stress.

Loss of libido is commonly associated with adrenal fatigue, probably due in large part (in both men and women) to a drop in testosterone production by the adrenals. From your body's point of view, when you are under a lot of stress, it is not a good time to feel amorous because your energy must be used for survival.

Output of adrenal sex hormones and their precursors also decreases with age. A decline in DHEA and testosterone levels accounts for many of the degenerative processes of aging. In fact, the levels of these two hormones in males track the progression of biological aging more closely than do any other markers. As we lose the available DHEA and testosterone, we become less able to counter the intense effects of cortisol in the cells. With age, cortisol levels remain relatively steady, while DHEA and testosterone decline and the other hormones range somewhere in between. In general, as the levels of sex hormones and their precursors such s DHEA and testosterone decrease because of age, stress and adrenal fatigue, their many and varied beneficial effects decrease as well.

Regulation and Actions of Aldosterone

Adrenal Fatigue and Craving for Salt

As mentioned in the "Anatomy" section, aldosterone is manufactured in the zona glomerulosa of the adrenal cortex. Like cortisol, aldosterone follows a diurnal pattern of secretion with its major peak at around 8:00 AM and major low between midnight and 4:00 AM. Also like cortisol, its production and secretion increases and decreases in response to stimulation of the adrenal cortex by ACTH. This means that aldosterone levels generally rise in stressful situations. However, aldosterone is not part of the negative feedback loop controlling its release. Instead, it depends on the negative feedback loop in which cortisol levels trigger ACTH activity. This means that cortisol determines the amount of ACTH which controls production of both cortisol and aldosterone with aldosterone having no say in the matter.

The only thing the cells that produce aldosterone can do to regulate production is to alter their sensitivity to ACTH. Therefore, after about 24 hours, the adrenal cells of the

zona glomerulosa become less sensitive to the demands of ACTH and stop manufacturing more aldosterone. The amount of circulating aldosterone then begins to decrease, even though the ACTH levels are high and the need for increased amounts of aldosterone may continue. This decreased production continues until the cells of the zona glomerulosa recover their sensitivity to ACTH, but in the meantime the decreased aldosterone leads to many of the symptoms of adrenal fatigue.

Aldosterone is the most important mineralocorticoid, but corticosterone and desoxycorticosterone are also included in this category. The effects of aldosterone depletion can be observed in a large number of hypoadrenic persons. Aldosterone depletion may create one or more different symptoms which are specifically related to the diminished mineralocorticoid levels.

In the chronically stressed person, the levels of sodium and chlorides in the urine should be measured as well as the specific gravity in the urine. Chlorides in the urine are measured by Koenisburg's test. This test also provides information of the sodium levels being excreted in the urine. Excessive sodium in the urine is one of the first clues that a person has a hypoadrenic problem.

Aldosterone is responsible for the maintenance of fluid (water) and the concentration of certain minerals (sodium, potassium, magnesium and chloride) in the blood, the interstitial fluid (area between the cells) and inside the cells. Working with other hormones such as anti-diuretic hormone from the pituitary and rennin and angiotensin I and II from the kidneys, aldosterone keeps the fluid balance and salt concentration intact, in roughly the same concentration as sea water. In the blood and interstitial fluid, sodium is the most dominant of the four minerals. Inside the cells, potassium has the highest concentration. These four minerals are called electrolytes because they carry minute electrical charges. These electrolytes are very important for proper cell function and fluid properties and they must remain in a relatively constant ratio to each other and to the body fluids. Small deviations in their ratios to each other, or to their concentration in the body fluids, means alterations in the properties of the fluid, the cell membrane and the biochemical reactions within the cell. In fact, most of the physiological reactions in the body depend in some way on the flow or concentration of electrolytes.

Aldosterone, in times of stress is the major director of these relationships by its influence on sodium and water concentrations. Although this interaction is somewhat complex, the overall process is easy to understand if you just keep an eye on the sodium in relation to aldosterone. As the concentration of aldosterone rises, the concentration of sodium rises in the blood and interstitial fluid. Wherever sodium goes, so follows water.

In adrenal fatigue, the craving for salt is a direct result of the lack of adequate aldosterone. As mentioned above, aldosterone controls sodium, potassium and fluid volumes in your body. When aldosterone secretions are normal, potassium, sodium and fluid levels are also normal. When aldosterone is high, sodium is kept high in the fluids circulating in your body.

However, as circulating aldosterone levels fall, sodium is removed from your bloodstream as it passes through the kidneys and is excreted in the urine. When sodium is excreted it takes water with it. Initially, there is some loss of volume of your body fluids but it does not become severe unless the condition worsens. Once your circulating sodium level drops to about 50% of its original concentration in body fluids, even a small loss of sodium or sodium restriction in your diet begins to have severe consequences. Tiny fluctuations in blood sodium concentration have a significant effect o blood volume when sodium is depleted to this level.

When the sodium supply of the blood is not replenished by eating salt-containing foods or liquids, sodium and water is pulled from your interstitial fluids into the blood to keep your blood sodium levels and water volume from getting too low. If too much salt or fluid is pulled from the interstitial fluids, the small amount of sodium in the cells begins to migrate out of the cells into the interstitial fluid.

The cell does not have a great reserve of sodium because it needs to maintain its 15:1 ratio of potassium to sodium. As the sodium is pulled from the cell, water follows the sodium out.

This leaves the cell dehydrated as well as sodium deficient. In addition, in order to keep the sodium/potassium ratio inside the cell constant, potassium then begins to migrate out in small quantities. However, each cell has minimum requirements for the absolute amounts of sodium, potassium and water necessary for its proper function. When these requirements are not met, cell function suffers, even if the proper ratio is maintained.

If you are suffering from moderately severe adrenal fatigue, you must be careful how you re-hydrate yourself. Drinking much water or liquid without adequate sodium replacement will make you feel worse because it will dilute the amount of sodium in your blood even further. Also, your cells need salt to absorb fluids because sufficient sodium must be inside the cell before water can be pulled back across the membrane into the cell.

When you are already low on body fluids and electrolytes, as you are in this situation, you should always add salt to your water. Do not drink soft drinks or electrolyte-rich sports drinks, like Gatorade, because they are high in potassium and low in sodium, the opposite of what someone with low cortisol levels who is dehydrated needs. Commercial electrolyte replacement drinks are designed for people who produce an excess of cortisol when exercising, not people who are low on cortisol and aldosterone. Instead, yo are much better off having a glass of water with ¼ - 1 teaspoon salt in it, or eating something salty with water to help replenish both sodium and fluid volume.

In a nation of people suffering from adrenal fatigue, the fast food restaurants come to the rescue. Such restaurants use an excessive amount of salt in their foods; a custom left-over from the old road houses where lots of salt was used in the food to stimulate appetites and whet the thirst (for alcohol, the biggest profit item). Although not a good solution, it supplies “emergency” rations daily to people living in marginal health. It averts the crisis and replenishes their supplies for another few hours.

When your aldosterone levels are low and you are dehydrated and sodium deficient, you may also crave potassium because your body is sending you the message that your cells are low on potassium as well as sodium and water. However, after consuming only a small amount of potassium containing foods or beverages (fruit, fruit juice, sodas and commercial electrolyte replacement drinks), you will probably feel worse because the potassium/sodium ration will be further disrupted.

What you really need in this situation is a combination of all three, water, salt and potassium in the right proportions. One of the easiest ways to accomplish this is to drink small repeated doses of water accompanied by a little food sprinkled with kelp powder. Kelp powder contains both potassium and sodium in an easily assimilated form. Depending upon taste and symptoms, extra salt can be added. Sea salt is a better choice than regular refined table salt, because it contains trace amounts of other minerals in addition to the sodium. Another choice is to drink a vegetable juice blend containing some celery and chard and diluted with purified water.

Usually, within 24-48 hours, your hydration and electrolyte balance will have stabilized enough that you can proceed to an adrenal-supporting diet. You must continue to be careful to drink salted water or vegetable juices 2-4 times during the day, varying the amount of salt according to your taste, and you should avoid potassium-containing foods in the morning when your cortisol and aldosterone levels are low. Never eat or drink electrolyte-depleting or diuretic foods and beverages such as alcohol and coffee, especially if you have been out in the sun or are otherwise dehydrated. One of the problems people with adrenal fatigue constantly deal with is a mild dehydration and

sodium depletion.

When there is inadequate aldosterone, the kidney allows sodium, chlorides and water to spill into the urine, and maintains ionic balance by retaining, rather than excreting, potassium. Some of these low aldosterone persons present with symptoms of dehydration. The appearance of the tongue is one of the easily monitored indicators of dehydration. Normally, one should feel considerable slickness when running a finger down the protruded tongue of a person. It should slide easily across the tongue like a cube of ice across a wet piece of waxed paper. If the tongue is rough like sandpaper, or if you feel friction, with your finger catching or sticking to the tongue's surface, it is an indication of inadequate tissue hydration. The person needs more water intake.

The person may report excessive urination, up to 15 or 20 times daily. Likewise, due to the effect of aldosterone on the sweat glands, the person may report excessive perspiration or perspiration with little or no physical activity. The common factor in all of these persons is a weakness of sartorius, gracilis, posterior tibialis, gastrocnemius, or soleus, and a background of some type of stress.

A person with lowered aldosterone may also demonstrate other symptoms. For a nervous system action potential to take place there must be an adequate supply of sodium on the outside of the cell membrane and an adequate supply of potassium inside the cell. They must be balanced. If this balance is undermined by a loss of sodium and retention of potassium, the nervous system will find it difficult to propagate normal action potentials and maintain itself at a good functional level. This may result in a wide variety of symptoms, including muscle twitches and even cardiac arrhythmias (heart palpitations).

With a chronic sodium-potassium imbalance, the person will show the sign of a paradoxical pupillary reflex. Normally, shining a light into a person's eye will cause the pupil to constrict. This papillary constriction to light should be able to maintain itself for at least 30 seconds. In the hypoadrenic person (especially in the exhaustion stage of the GAS) you will find one of three things:

1. The pupil will fluctuate opened and closed in response to light.

2. The pupil will fluctuate opened and closed in response to light. (This is a deliberate opening and closing, not the minor flutter or twitch of the normally encountered hippus activity.)

3. The pupil will initially constrict to light, but it will dilate paradoxically with continued

light stimulation of less than 30 seconds. This patient will frequently complain of eyes that are sensitive to light (such as when going from indoors to outside on a sunny day) or will be seen wearing sunglasses whenever outdoors or even indoors under bright light.

Another problem related to lowered mineralocorticoid levels in hypoadrenia is a paradoxical, non-pitting edema of the extremities. When the patient with hypoadrenia spills sodium and water into the urine and perspiration, and has a tendency to be dehydrated, we would hardly expect him to show signs of holding water, such as edema. But that is exactly what we do see in some hypoadrenic patients.

With the body spilling large amounts of extracellular sodium and likewise retaining intercellular potassium, we can see how an osmotic differential could develop in the patient's tissues. If the osmotic difference (created by the increased potassium seeking its intercellular position and the lowered extracellular sodium levels) is severe enough, the body will most often attempt to correct this osmotic imbalance by allowing extracellular fluid to enter the cells. (It is also possible that the body could kick the potassium out of the cell and into the extracellular fluids, and although this occasionally occurs, we rarely see signs of this in the blood potassium levels.) The body is trying to dilute the potassium in the cell with water, to bring the system into osmotic equilibrium. The cells take on water, and the patient has swelling.

Often, these patients are placed on a diuretic by an unenlightened physician whose only basis for this prescription is the patient's symptoms. The diuretic in these patients rarely helps the condition and often aggravates the tendency toward dehydration. Further, many diuretics act as adrenal (aldosterone) inhibitors, adding even more stress to the adrenals and tending to make the patient worse in the long run.

Even in adrenal fatigue, the body is still wonderful, beautiful and incredibly wise. It is our society, our maladaptation to the stresses of modern life, and our poor judgment that need to change. We may not be able to change society but we can learn to use better judgment when it comes to taking care of ourselves and to respond to stress in healthier ways.

Title: OXLEY TWO HERB COMBO TINCTURE FIGHTING
Description: *CHRONIC FATIGUE & OVER EATING*

craig-oxley - August 20, 2009 09:56 PM (GMT)

OXLEY TWO HERB COMBO TINCTURE FIGHTING BOTH CHRONIC FATIGUE AND OVER EATING

Hi folks,

Just thought I'd share something which may interest some on the topic of my herbal tinctures. My aunty has for a long time now been suffering really bad with chronic fatigue and getting worse by the day. Its been a real struggle for her to do her usual daily things she has to do. She was very much a feminine who liked to get about and travel to places etc on many buses etc. She's been not wanting to go out and do anything through being really tired, aching you name it.

I'd asked her about her thyroid and she claimed it had tested fine. I don't believe in a lot of their tests and many with fine allopathic tests for thyroid turn out to need a little more kick. Anyhow after rediscovering the Olive Leaf extract I decided this may just be the herb she needed. My mother persuaded her to try it which didn't take much persuasion as she is in agony. The doctors haven't done anything for her and don't know what it is. What I did though was make her a combination formula up which I thought was best for her right now. I wanted to feed up the thyroid, adrenals and kill any fungus/U.N bio-weapon that might be a possible cause along with boost her immunity.

In the end I made her a tincture of 50/50 Olive Leaf extract and Withania Somnifera. Both were 1:2 organic high potency medicinal herb tinctures. She was told to take 5ml 1-3x daily and so far took only 5ml a day. She is unaware of the Withania in the formula otherwise she'd have been a sheople and paniced at more than one herb being present. Anyhow on day two she told my mother that she didn't feel any better. Well whoopy do expecting miracles from just a total of

10ml over 24 hours haha c'mon sheople. I've found out today that she did some gardening yesterday and stripped some wallpaper off the walls. Theres no way that she could have entertained this before. Now folks remember she's only taken it now four days and she's doing this already? She's only taken a third of my dosage!! Imagine if she'd been a good girl not a sheople and taken it correctly?

Please folks remember that herbal medicine is the most powerful medicine there is. As long as the herbs are organic and prepared correctly, not gas and destroyed etc then they will serve you well. My tinctures are specially grown and grown to the occult methods of old for even more potency. Their almost always 1:2 although I can get 1:1 Fluid Extracts which are even more powerful. Most of them infact are fresh and not from dried herb, therefore their even more potent.

This Olive Leaf is definately a powerful herb indeed. Theres four of us on it at the moment and noticing the same effects. The suppression of wanting food is a very good side for a lot of people. Its released crap from the system of all of us but not so much me as I'm hygiene cleansed as you know. Its gone to old spots where I used to have eczema and made the areas itch for a day then totally gone. Its made me not want to eat more than I need too. Its removed my mothers swollen feet within a day after them being swollen for two weeks. Oh theres a few things I've forgotten but its definately something special. During any pandemic this herb is a must along with Boneset and Garlic of course. What a lovely combination, especially if you utilise Elderberry and Echinacea correctly too. This Olive Leaf would be a most wonderful herb to fight the effects of chemtrails. It will also work well on Barium induced arrhythmia for instance.

View Full Version: Dr. John R. Christophers "Mucusless Diet"

Title: Dr. John R. Christophers "Mucusless Diet"

craig-oxley - September 13, 2008 05:30 PM (GMT)

Dr. John R. Christophers "Mucusless Diet"

http://www.herballegacy.com/mucusless_diet.htm

The second step to healing the body is for an individual to eliminate the mucus-forming foods from the diet. Using this procedure, not only are the sinuses, the bronchi, and the lungs cleared but also the constipating mucus (catarrh) in the tissues of the body from the top of the head to the bottom of the feet.

If this diet is followed as outlined, we guarantee that after a short time you will have much more satisfaction from the foods we recommend, for better health, than you ever had from the food of your former diet.
Now, what can you eat?

The Do's:
Any whole, live, raw foods. Fruits, vegetables, whole grains, nuts, seeds, and a small amount of fresh fish or chemical free chicken.

The Dont's:
Salt, eggs, all refined sugars, meat, all milk products, flours and flour products.
Do not be concerned because this diet omits meat and the commercial types of protein and don't worry about adding protein, as you will get all that you need in these foods. The gorilla is built on the same order as the human being, and he gets all the protein he needs from just fruits, nuts and seeds.
The best food to start the day is fresh fruit or a good low heated whole grain. This should be a cereal in its wholesome state (with life in it). It can be prepared in a thermos bottle: Take a thermos bottle, fill in the early afternoon or evening one-third full of grain,

then finish filling the thermos bottle with boiling water. Turn the thermos over two or three times to mix the grain and water. The next morning the grain is ready for consumption.
Sprouted grains are another excellent and nutritious food source. Alternate the grains. Almost any live seed or grain can be sprouted, find the one you like and enjoy.
Fruit and vegetable juices along with dried fruits are another wonderful source for this diet.
There are also thousands of salad combinations available, with some investigation and experimentation, you will never run short of interesting combinations. This diet can be challenging as well as rewarding. The health and wellness that will result from following this diet is reward enough.
For additional information and recipes, see Dr. Christopher's book. Regenerative Diet.
"To your good health!"

craig-oxley - September 13, 2008 05:31 PM (GMT)

Mucus is a normal body secretion. All mucus membranes continually secrete mucus as a means of keeping the surfaces moist and lubricated. Ingesting any food, or even water, will give rise to an increased level at the back of the mouth of a healthy, lubricating type of mucus. These facts are often presented as disproving the validity of the mucus theory. Yet it is easy to distinguish healthy mucus from mucus formed as a reaction to toxicity. Healthy mucus is clear and slippery. Unhealthy mucus is cloudy, thick and sticky, and this is the type of mucus produced by mucusforming foods. The difficulty encountered here between proponents and detractors of the mucus theory lies in the area of communication and terminology. Some proponents of the mucus theory prefer to use the word "catarrhalforming" instead of "mucusforming" because "catarrh" refers to an inflammation of a mucus membrane, and so clearly points to an unhealthy condition. Perhaps ther is wisdom in this because all foods and even water produce mucus of the healthy type. Most proponents of the mucus theory consider the healthy type of mucus to be not mucus at all, but merely a normal body fluid. On the one hand, detractors of the mucus theory have defined mucus as any secretion of the mucus membrane, while, on the other hand, the proponents have implicitly defined mucus as a morbid secretion of the mucus membrane. At any rate, the important thing to know is that the healthy type of mucus does not call attention to itself. There is probably some mucus of the healthy type in what the author has termed a nonmucoid stool, but it is completely non-sticky and unobtrusive. Whenever there is noticeable mucus in the respiratory system, or whenever discernably mucoid stools are present, you can be sure that a potentially toxic condition is being indicated."

ALSO: re the "mucus condition":

"Mucus is a sure sign of a body in a state of extreme agitation. The heavy, over-processed, dairy-rich makeup of the North American diet demands the human body to react as if it is fighting a viral invasion every day. In the morning we can feel its effect, foggy clogged head, puffy eyes and dulled senses. The answer, a large mug of strong coffee to kick-start the system so that we can face the rigors of the day. Most of us have forgotten what it is like to awaken, clear-minded and full of energy...

Not all mucus is bad. Healthy mucus is a clear, slippery, lubricating secretion, used to protect mucus membranes along the digestive, respiratory, urinary and reproductive tracts. Unhealthy mucus is cloudy, thick, and sticky. Mucus is secreted to stop irritants, pollutants, or carcinogenic compounds, created by putrefying, undigested food residues. It's like a blanket of protection. Certain foods such as milk and bread cause an increase of mucus secretions. These foods have large protein molecules (casein and gluten) which are difficult to digest and are more prone to putrefaction, and may be toxic or an irritant to the body. For many, bread and milk cause sinus congestion.

Mucoid is a mixture of large gelatinous particles, which has a sticky or jelly-like consistency. The word mucoid encompasses the terms mucin, colloid, mucoproteins and glycoproteins. Mucoid is caused by many toxins, pollutants, food additives and allergies. Mucoid can be present in any body tissue but is most commonly associated with the respiratory system, gastrointestinal tract, lymphatic system, uterus, vagina urinary system and the joints. Cartilage in a joint contains mucus membrane cells which secrete a clear slippery mucus to keep joints lubricated. When mucoid-forming substances are present, toxic mucoid builds up deposits within the joint.

Mucoid within the body tissues, drains into the lymph which filters waste from the intercellular fluid. The blood absorbs 90% of this cellular waste fluid and the lymph absorbs the other 10% composed of the larger waste particles. The lymph glands contain one-way valves, lined with muscle tissues that behave like pumps. If an overload of mucoid from the cells accumulates in the lymph and is not cleansed from the system, it can become stagnant and prone to infection.

Dr. Robert Gray, a nutritionist, determined, through intensive testing that certain foods are mucus-forming and others are mucus cleansing. The foods shown to cause mucus are dairy products, white flour, meat, eggs, potatoes, beans, rice, grains, fish, peanuts and fats.

MAKING CELL FOOD FROM CELLS

The relationship between mucus and diet is not a new theory. In 1912, Dr. Arnold Ehret released a book called, The Mucusless Diet and Healing System. He discusses in great detail, the mucus-forming effect of various foods. Ehret theorized that all disease is caused by a clogging of the tube and membrane structures within the body due to a build-up of restrictive mucus.

The process of digestion is to liquefy food small enough to be infused by the absorptive cells on the villus in the intestine. For any nutrient to pass through the membrane of a cell, it must be less than 44,000,000,000 th. of an ounce. The rest of the substance not absorbed remains within the colon until elimination.

Foods that form mucus have a glue-like bond, tightly holding their molecules together. In milk, it is casein, in wheat, rye, oats and barley, the glue-like substance is gluten. The dictionary defines gluten as a tough, sticky mixture of plant proteins, obtained by washing out the starch from wheat or other cereal flour and used as an adhesive and thickener. These glue-like bonds require strong stomach acids for digestion.

Lack of chewing and poor food combinations make it impossible for the stomach acids to properly dissolve the bond between these molecules. After digestion, many food particles are still too large to be used by the body. In a short time, the oversized, partly-digested food particles start to putrefy and are coated with mucus to prevent further putrefaction while still in the intestine.

The intestinal wall is contains over four million microvillus. Their job is the absorption of nutrients. Due to the vast number of microvilli the total effective area for absorption, within the colon is more than 2,200 square feet. On the surface of these microvillus is mucus-secreting cells. Mucus is secreted by these cells to protect the intestinal wall and to impede the absorption of harmful substances through the colon.

Eighty percent of all absorption takes place in the small intestine. Only 20 percent is absorbed by the stomach and large intestine. The stomach performs very little absorption because the gastric contents are so acidic. The entire gastric epithelium must be devoted to mucus production. Without mucus to protect the stomach, ulcers would develop in a few hours. Within the duodenum (small intestine) the submucosal glands produce copious quantities of mucus. This mucus contains buffers that elevate the pH balance. The more acid forming the food, the greater the amount of mucus secreted.

As the mucus and food particle solution pass through the intestines, moisture is removed. As more moisture is removed, the mucus becomes sticky and gluey. In passing, it leaves a coating on the intestinal wall. Layer after layer of gluey feces build up over the years. It forms into a tough, rubbery, black substance found in lumps in the corners of the intestinal tract. X-ray studies show that the accumulation of hardened feces badly deforms the intestines. Autopsies have shown that an average male has seven to nine pounds of this hardened feces within his intestine. This coating causes constipation, a reduction in the absorption of nutrients through the intestinal wall and is a breeding ground for parasites.

Imagine a drain, clogged with human hair, dust, old soap and pieces of decaying food, all forming a sticky mass of rotting waste that cannot be removed. The medical names labeled for these diseases are diverticula, colitis, stricture, prolapsus, hemorrhoids, worms, yeast infection, chronic constipation, colon cancer and appendicitis.

Colonics are given by naturopaths or colon therapists using a device to circulate water through the intestine while your stomach is being massaged. Numerous clients have been helped through this therapy. Removal of clogged waste allows the human machine to work again. But, unless there is dietary change, the symptoms will simply return.

Without the natural, sponge-like properties of fruits and vegetables, intestinal diseases will continue to abound, especially amongst the elderly.

Grapes and citrus fruits are some of the greatest mucus-cleansers. They help the body to remove mucus and toxins, supplying vital nutrients in the correct balance for rejuvenation and healing.

The most powerful method of removing mucus from the intestines and mucoid from the organs and lymph glands is the combined cleansing effect of a non-mucus/mucoid-forming diet and fasting.

Factors Which Increase Mucus

LARGE MEALS. Our body's need for food is often much less than what we eat. Any foods eaten beyond our body's need is a burden. Some of this excess food will be converted into fat. Yet the body can create only so much fat per day. If you eat above digestive capacity, the excess must be eliminated. During elimination, the lymph glands are overloaded and mucoid forms in response to putrefaction.

EATING WITHOUT HUNGER. When food is eaten before complete digestion of the previous meal, partially-digested food will be released into the colon thus causing mucus.

GULPING FOOD. Improper chewing overworks the digestive system. If the food particles are too big to be assimilated, they must be eliminated through the colon. On the way, these particles putrefy, thus causing mucus.

IMPROPER COMBINATIONS. A typical meal contains starch, protein, sugars and fats, each requiring a completely, different digestive secretion. Complex food mixtures create mucus because the food molecules cannot be dissolved efficiently.

A polluted intestinal tract means dirty blood, poor digestion and low energy.

When the intestines have too much waste matter, parasites, fungus and harmful bacteria, there results a serious interference with the digestive process. Even if a person's intestinal tract were polluted with just a mild amount of this undesirable filth, he or she could have sluggish peristaltic action, which causes constipation. How does the body adjust to cooked food, processed food and refined food - dead foods? Victoria Boutenko in her book, "12 Steps to Raw Food", explains it this way: "The body creates mucus and uses this mucus as a filter. All the surfaces of the digestive tract that are designed to absorb the nutrients from food become covered with mucus film that protects blood from toxins. The mucus film begins at the tongue and continues all the way through the intestines.

Many people can see this mucus on their tongue. People who have a thick mucus coating on their intestines usually have white tongues as if they just ate sour cream. The body creates a little mucus, to begin with, to filter out the toxins from the dead food. The more dead food we consume, the more mucus the body produces as a protection. The more harmful the food substances are to the body, the more this mucous film builds up.

As the years go by it becomes thicker and harder. Portions of this thick mucus get pushed into pockets called diverticuli as we cram through more and more dead food into the digestive tract in an effort to squeeze some nutritional value out of it.

You may ask: What is the mucus made of? The human body, brilliant as always, creates the mucus from the dead food itself! This mucus covers our entire digestive tract, to prevent us from absorbing the toxins in dead food that would make the body too sick. Because of the mucoid plaque, our nutrient assimilation becomes low. The mucoid plaque protects us from absorbing toxins, but at the same time we cannot absorb nutrients.

The more mucus we have, the fewer nutrients we can receive. After a number of years of eating too much dead food, we develop severe Nutritional deficiencies, become less energetic and finally sick with diseases."

When we go on raw-live food and stay with it, this mucoid plaque can be dissolved. With the aid of herbal preparations and exercise, the body will eliminate it faster. The longer we eat raw-live food, the more plaque gets dissolved.

Where has my pep gone?

Any build-up of old pockets of waste matter (diverticulitis) produces fermentation, putrefaction and stagnant packets of poisons and harmful bacteria (a condition of autointoxication or self-poisoning. These toxins constantly seep into the bloodstream and lymph. They eventually settle into the weakest areas of the body, then various symptoms develop and are given names according to those areas and the degree of cell degeneration.

Unfortunately the symptoms found elsewhere in the body resulting from the toxic overload in the bowel, are generally treated rather than the cause in the bowel. Even if one succeeds in strengthening the weak area or suppressing the symptom, the toxic flow from the bowel will simply find another weak area to break through. As Dr. Jensen puts it, "Every tissue is fed by the blood, which is supplied by the bowel. When the bowel is dirty, the blood is dirty and so on to the organs and tissues."

Parasite heaven - a dirty, unhealthy intestinal tract.

This is the ideal environment for worms and parasites. There are over 300 varieties that can live in the human body. Worldwide, worms outrank cancer as our deadliest enemy. It has been estimated that 150 million people in America have intestinal parasite infestation. Medical textbooks have revealed that over 55 million American children have worms. Parasite infestation is growing rapidly, due to a lack of raw fruits and vegetables in the diet and an increased consumption of cooked and acid-forming foods, i.e., processed foods of all kinds, refined sugars, meat, dairy, poultry and coffee. Once in the intestinal tract, parasites have easy access to other parts of the body where they bring on various symptoms and diseases.

How can I get back my "get up and go"?

It is crucial to realize the importance of removing unhealthy bacteria, mold and fungus from the intestinal tract and re-establishing the beneficial bacteria. This flora is essential to a strong immune system, assimilation of vitamins, proteins, fats, carbohydrates and the manufacturing of Vitamin B-12, K and amino acids. It helps reduce cholesterol in the blood, control the pH in the intestines and detoxify the poisonous materials in our diets, while producing cancer-suppressing compounds that strengthen the immune system, increase calcium assimilation and help retard Candida, excess gas and bad breath. When unhealthy bacteria overrun the healthy bacteria, outside pathogens penetrate the immune barriers and clog the blood and lymph with further toxic substance. Proper implantation of healthy bacteria begins with cleansing and removing the harmful bacteria/fungus from the digestive system.

A Complete Colon Cleanse/Nutritional Program can prepare the intestinal environment for beneficial bacteria. Water, juice-fasts or colonics by themselves are unable to remove all these substances. There are various preparations that can remove easily accessible build-ups from the colon alone, but for best results it is necessary to cleanse and restore the strong function of the stomach and entire digestive tract. This can only be accomplished by restoring the beneficial flora balance, ridding the system of accumulated waste pockets and introducing highly nutritious raw-live food sources to replace the over abundance of processed/refined foods, meat, dairy, poultry and excessively cooked foods. This is a crucial change for those who are determined to have better health and sustain it for the rest of their life.

craig-oxley - September 13, 2008 05:31 PM (GMT)

QUOTE

Mucus

For 99.9999999999999% of us if we are not murdered die from our own mucus. Cause of mucus? Diet and lack of exercise. Accumulated mucus attracts parasites/bacteria to come to the rescue, resulting fevers/diseases.

The cure
Diet, remove those hot clothes, stay active.

JOEL BERRY

craig-oxley - September 13, 2008 05:32 PM (GMT)

Dr John Christopher's

THE THREE-DAY CLEANSE AND MUCUSLESS DIET

This cleansing program will purify the body so it may be healed. If you are overweight, this program will take you down to your normal body weight, and if you are underweight, it will bring you up to normal. The purpose of the entire program is to eliminate mucus from the body so that the patient is healed in a natural way.
Remember, there are no incurable diseases--only people who think they are incurable. After cleansing the body with this program, continue with the mucusless diet and other health-preserving procedures outlined in this booklet. In this way, you will not only help rid the body of disease-causing impurities but also maintain and build vibrant good health.
Pg. 157 The Detoxification Procedure
The Detoxification Procedure
The detoxification procedure we recommend is taken in part from Dr. N.W. Walker's book, Raw Vegetable Juices: to Detoxicate (Phoenix, Arizona: Norwalk Press, Publishers, n.d., pp. 68-71) (P.O. Box 13206).
Supreme cleanliness is the first step towards a healthy body. Any accumulation or retention of morbid matter or waste of any kind will retard our progress towards recovery.
The natural eliminative channels are the lungs, the pores of the skin, the kidneys, and the bowels. Perspiration is the action of the sweat glands in throwing off toxins which would be injurious if retained in the body. The kidneys excrete the end products of food and body metabolism from the liver. The bowels eliminate not only the food waste but also waste matter known as body waste, in the form of used-up cells and tissues, the result of our physical and mental activities, which if not eliminated cause protein putrefaction resulting in toxemia or acidosis. The retention of such body waste has a much more insidious effect on our health than is generally suspected, and its elimination is one of the first steps toward perceptible progress toward health. The cleansing procedure will effect such elimination quickly, particularly for adults.
Page 157
Pg. 158 Juices
Juices
First thing in the morning we drink sixteen ounces of prune juice. The purpose of this prune juice is not primarily to empty the bowels, which, however, it will do anyway, but rather to draw into the intestines from every part of the body such toxic matter or body waste as may be there, and eliminate it through the bowels.
If nothing were done to replace in the body something in volume equal to the quantity of matter so eliminated, then the body would naturally be dehydrated to that extent.

Therefore, we replace the toxic or acid material so removed by drinking fruit juices. This has an alkaline reaction on the system. There are various types of juice therapy--apple, carrot, grape, citrus, tomato, etc.--but use only the one chosen for the three days, and chew each mouthful thoroughly.

One of the most effective blood purifiers known is the common apple. Dr. Edward E. Shook states in his Advanced Course, Lesson number 30, page 4:

"There is no other remedial agent or herb in the whole range of known therapeutic agents, that can compare with the apple tree and, although it would be difficult to say which of its many virtues is the greatest, we suggest that its abundance of nascent oxygen compound is probably the main reason why it is such a precious food, blood purifier, and unfailing remedy for so many forms of diseases."

Other juices, of course, may be used, depending on the individual's preference and condition. Those who live in the citrus belt may use a combination, prepared fresh in the following proportions: four to six grapefruit, according to size; two to three lemons, according to size; and enough oranges to complete a total mixture of two quarts.

Page 158

The combination may be varied, as you may prefer. Grape juice may also be used; however, frozen grape juice is not recommended because many unacceptable additives are combined in nearly all cases.

The brands of juices sold in the health stores grown on unsprayed and organic soils, are definitely superior to other types that are sold in grocery stores; nevertheless, for many years we have seen many tremendous cures done with brands such as Church, Tea Garden, Queen Isabella, and Welch. They still have great potency, but are not preferred when better juice is available.

After taking the sixteen ounces of prune juice first thing in the morning, within one half hour take an eight ounce glass (regular tumbler) of apple juice. Swish each mouthful thoroughly in the mouth (called chewing) so the saliva will mix with it, thereby getting all the nutritional and healing value from it. In fact, all meals should be eaten without liquids so the food is chewed thoroughly enough to become a liquid by being mixed thoroughly with saliva, which is the key that opens the door to digestion.

We repeat, do not gulp the juice. In this way, there will be no danger of regurgitation to a weak stomach, but it will be very soothing and affable. By using the saliva properly, the healing program is greatly accelerated, for the rest of the digestive juices then are able to function properly instead of haphazardly. When desired, drink a glass of plain water (preferably a glass of distilled water), followed another half hour later with more apple juice. One gallon of apple juice is consumed throughout one day. This, of course, is an approximate and suggested dosage, as age, ability to hold liquids, etc., determine the capacity for each specific case. The alternating procedure, however, has proven to be the best way, with any juice you may choose for the therapy.

Do not eat anything all day, although if you become very hungry towards evening, you may take an apple or two with the apple juice, and carrots or celery with the carrot juice, or other suitable vegetables or fruits with the respective juice.

Page 159

Pg. 160 Other Aids

Other Aids

During the three-day cleanse, take one or two tablespoons of olive oil three times a day, to aid in lubricating bile and liver ducts, etc.

Breaking up the mucus during juice cleanse generally causes constipation throughout these three days; use more prune juice, or take some of our Lower Bowel Tonic, two or more capsules three times or more a day.

Begin the castor oil fomentation (explained later) during this three-day juice cleanse.

Continue this detoxification for three consecutive days. Approximately three gallons of toxic lymph will have been eliminated from the body and will have been replaced by three gallons of juices. This will result in speeding up the realkalinizing of the system. If there is a jaundice condition or pain in the liver-gall bladder area, also use three times a day formula number 3 (on page 178).

Pg. 160 After the Three-Day Cleanse

After the Three-Day Cleanse

Preparatory Fast: After the first three days of cleansing, if a person has the desire or ability to do so, it is always profitable to fast one to three days using only distilled water, then a day of juice, before returning to salads and other regular foods. Do not eat any heavy foods immediately after a cleansing period or after a fast, but add these to your diet gradually. This is the best and smoothest way to get back onto solid foods.

On subsequent days, begin taking vegetable juices and vegetables and fruit, preferably all raw. For breakfast, for example, eat fruit in season, sliced, chopped or grated, some honey for sweetening, and one or two tablespoonfuls of finely grated unsalted almonds sprinkled over. Also drink one or two glasses of fresh fruit or vegetable juices thirty minutes before or after eating fruit. For lunch, eat more fruit and one pint fresh raw vegetable juices. For dinner add any one of the salads given in the menus in Diet and Salad Suggestions (by N. W. Walker, published by Norwalk Press).

Page 160

If there is the slightest tendency toward appendicitis, also take high enemas, two, three or more daily for one week or longer if necessary.

Cleansing Symptoms: As the cleansing begins the housecleaning process throughout the entire system, it will be accompanied by periodic aches and pains in the areas where the cleaning action is most acute and the wastage is loading the elimination system. There are times when you will feel very rough! Do not panic on your days after cleansing or during your periods of healing. In fact, the cleaning action may produce all the symptoms and effects of severe illness, but the patient should here act with knowledge and not blame the temporary problem condition onto the cleansing solution that is taking place--for patience is required here, and much comfort should be derived in the realization that the healing process is well under way, and the sooner such discomforts come and are felt, the better.

This elimination and cleansing will not be accomplished instantaneously, and one should not expect these lifetime accumulations that are packed into the system to be miraculously squeezed and flushed out of the tissues and organs in some "colonic

fashion." This will all take time. You will have high days and low days, and these will take place in cycles. These "cleansing sicknesses" come in cycles of seven days, seven weeks, seven months, and seven years in most cases, and on each of these cyclic periods there will be healing and cleansing crises. As the toxic poisons break loose and are dumped into the blood stream so they can be eliminated from the physical body, you will feel pretty rough and quite frequently during a crisis you may feel worse than you ever did before starting the program--but again, do not panic! These crises are, again, merely toxic poisons trying to get from your body (wherein they heavily load the excretory channels) and are doing you the favor of leaving as rapidly as possible (causing pain and discomfort in the elimination process). But the bad days will become fewer and fewer and the good days greater and greater, if you are faithful to the program. Professor Arnold Ehret's book Mucusless Diet Healing System (which can be purchased from any health food store) may help you to understand some of the reactions you might experience while ridding the body of toxins, wastes, and mucus.
Page 161
Do not be unduly alarmed if you feel somewhat weak during or after this detoxification. Nature uses our energies for a housecleaning within us, and we soon regain greater energy and vitality as a result of a cleaner and a healthier body. It is good to do the three-day cleanse monthly or several times a year.
Pg. 162 The Mucusless Diet
The Mucusless Diet
We should not put mucus into the body faster than it can be taken and eliminated. With this preventative diet, not only are the sinuses, the bronchi, and the lungs cleared, but also the constipating mucus (catarrh) in the tissues of the body from the head to the bottom of the feet.
Harmful or Mucus-Forming Foods
Secondary, denaturized, or inorganic food substances are to be eliminated from the patient's diet.
Salt: For those who are accustomed to large amounts of salt, this may sound difficult, but if you will substitute coarsely ground pepper and savory herbs, adding powdered kelp, you will find that the craving for salt will immediately begin to disappear. The black pepper is a good nutritional herb and helps rebuild the body when used in its natural state. But, when pepper is cooked in food, the molecular structure changes, so it becomes an inorganic irritant (as high heat changes the cayenne, black pepper, and spices from organic to inorganic), and this is the only time when damage results. The use of salts of a vegetable or potassium base (such as Dr. Jensen's, Dr. Bronner's, and other various ones, which in some cases contain some sea salt) is all right, providing it is not overdone.
Page 162
Eggs: No eggs should be eaten in any form.
Sugar and All Sugar Products: You may use honey, sorghum molasses, or blackstrap molasses, but no sugar of any type.
Meat: Eliminate all red meats from the diet. A little white fish once a week, or a bit of

young chicken that has not been fed commercial food or inoculated with formaldehyde and other anti-spoilage serums, would be all right (as these are the higher forms of edible flesh), but do not use them too often.
Milk: Eliminate all dairy products, which includes butter, cheese, cottage cheese, milk, yogurt, etc. These are all mucus forming substances and, in most cases, are extremely high in cholesterol. As a substitute for butter or margarine (hardened vegetable oils, etc.), you can train your taste buds to enjoy a good, fresh, bland olive oil on vegetables, salads, and other foods and you will discover this is one of the choicest foods there is.
Flour and Flour Products: When flour is heated and baked at high temperatures, it changes to a mucus-forming substance. This is no longer a food, which means it has no life remaining therein. All wholesome food is organic, where unwholesome food or dead food is inorganic. This is the key to our whole mucusless program.
Supplements: Revitalizing and Healing Aids
Our supplement recommendations will build up strength in the body and start cutting the mucus out of the tissues and remove the catarrh from the system.
Cayenne: Take one teaspoonful of cayenne three times a day. Start gradually with 1/4 teaspoonful in a little cold water. Add 1/4 teaspoonful to this dosage every three days, until you are taking one teaspoonful three times a day (the graduated dosages will accustom your system to the pungency of the herb).
Page 163
Honey and Apple Cider Vinegar: Place one tablespoonful of honey and one tablespoonful of vinegar in warm water, so that the honey will liquify. Sip this amount three times a day so that at the end of the day a total quantity of three tablespoonfuls are consumed. This must be apple cider vinegar, do not use malts or other types of vinegars, as these are damaging to the body. The apple cider vinegar is medicinal and very beneficial.
Kelp: If there is any indication of a thyroid problem, you should use between ten and fifteen kelp tablets daily. Otherwise, two or more will keep the body in good condition as preventative nutrition. This can take the place of salt and helps build a new thyroid gland. Kelp powder can be used on salads and in other foods.
Molasses: Take one tablespoon three times a day of either sorghum or blackstrap molasses.
Wheat Germ Oil: Take one tablespoonful of a good, fresh wheat germ oil three times a day.
Pg. 164 Dietary Suggestions: Regenerative Foods
Dietary Suggestions: Regenerative Foods
If this diet is followed as outlined, we guarantee that after a short period of time you will have much more satisfaction from the foods we recommend for better health than you ever had from the food of your former diet. You will also come to your normal weight. If you are overweight, you will lose with this diet; and if you are underweight, you will gain after having passed your "new low," as mucus must be expelled from the body before the good flesh can be restored.
Do not be concerned because this diet omits meat and the commercial types of protein,

and don't worry about adding protein, as you will get all that you need in these foods. The gorilla is built on the same order as the human being, and he gets all the protein he needs from just fruit and nuts (and for the human, the greens will round out the body requirements). You can prove this program to yourself!

Page 164

Pg. 165 Morning

Morning

It is best not to "break-the-fast" (breakfast) until at least noon, except in cases of young or very active people. You will find that this will not be hard to do when you use items that we recommend (such as wheat germ oil, cayenne, etc.). These will lower the appetite while providing the need nutrition, so you will feel satisfied and will have taken these items even the second time during the morning because it is time to eat the regular noon meal but if (after taking the lower bowel tonics, wheat germ oil, cayenne, apple cider vinegar, honey, molasses, herbal teas, etc.), you have room left, are hungry, and want something to eat, the best food to start the day is a good low heated whole-grain cereal; however, this should be cereal in its wholesome state (with life in it). Or eat fresh fruits.

The cereal is prepared by first soaking the whole grain in water sixteen to twenty hours, then heating in stainless steel double boiler at a very low heat, 135 degrees or under, which can be done by pouring hot water over the grain and then applying low heat. It can also be prepared in a thermos bottle, as follows: Take a wide-mouth thermos bottle (pint, quart or whatever size you need for your size of family or individual); fill it in the early afternoon or evening one-third full of high-protein turkey red wheat; then finish filling the thermos bottle with boiling water (turning the container on its top and back once or twice, so that during the evening the water circulates completely into the bottom, or else some wheat in the bottom will not be treated).

When you uncover your vessel in the morning, after low heating the grain all night long, it should be ready for consumption. The wheat is popped open, is soft and very tasty (as none of the flavor has been lost in cooking); this procedure is still improved by pre-soaking. With a little oil or fresh butter added, it is a very delectable food. Some folks like to add cinnamon, nutmeg, allspice, etc.

Page 165

Wheat contains all of the potential nutrient values needed in the human body. The wheat herb or wheat grass especially is a complete food, as it provides you with protein, calcium, and all the needed enzymes, vitamins, minerals, etc., to rebuild and regenerate the cell structure of your body. The grain is alive until it is killed in some chemical storage procedure, or high heat. The test for germane wheat (which is still in a "wholesome" state, having the life therein) is to plant is and see if it will grow.

This test is also valid for testing cooked wheat, and when low-heated in stainless steel, it will retain the life power and will grow! The foods, prepared in this manner, are organic; consequently, this is the manner that grains must be prepared for use. We are told in holy writ that "all wholesome grains and herbs are for man, and grain is the staff of life," but it does not say that it is permissible to grind it to a face powder fineness or to

heat it above 212 degrees F., and change the molecular structure from organic to inorganic, and thereby make it very mucus-forming. The results of man's inventions indicate otherwise. Sprout the grains if you wish, in preference to popping them open with moist heat.

Sprouted grains are excellent and nutritious but if you give a growing child a bowl of sprouts for breakfast, he is hungry in a short time, so a good serving of soaked, low-heated grain tastily prepared will "stick to his ribs" for hours. Alternate the wheat with barley, millet, buckwheat, rye, oat groats (whole, not rolled oats).

Pg. 166 Noon

Noon

If you prefer only a light lunch, then have a tossed salad--a salad as large as you want of mixed vegetables and leafy greens, using homemade olive oil dressing:

1 cup olive oil

2 tablespoonfuls apple cider vinegar

Pinch herbs, black pepper, etc.

Page 166

Make this dressing to your own taste, for there are so many varieties you can make--avocado, onion, garlic, etc.--but do not use the processed dressings of the commercial market.

Juices may be taken during the afternoon: carrot, grape, apple, etc. Dried fruits and nuts are very nourishing and beneficial, and the latter are better (as a whole protein) when used in combination with the garden greens. If a person has cancer or is inclined toward cancer, do not overdo eating protein, such as nuts. This is one thing that does damage to the pancreas and, in these cases, eat the nuts only in the morning. But stay away from peanuts and concentrate on almonds. A person with a cancerous condition should use from eight to ten almonds in the morning and the same at noon. But do not take any protein from evening time until the next morning, allowing sixteen to eighteen hours for the pancreas to clear and start to work on enzymes again. All protein should be taken early in the morning. And, of course, in cancer cases, never any secondhand or secondary protein, such as meats.

Proteins are a fad and are highly over-advertised. All fruits, vegetables, grains, nuts and seeds have protein in them. If you are eating a good live mucusless diet and wonder what to eat for protein, ask any gorilla. Their body organs are built just like a human's, and they live a number of years longer than humans. They are one of the strongest animals, for their weight, on the face of the earth. They are fruitarians, eating that which grows above the ground, fruits, grains, nuts and seeds. We enjoy underground roots and tubers, but they do not dig as we do; so with carrots, potatoes, beets, etc. added to the above-the-ground vegetation, we should do better than the gorilla.

We kill the cow to eat the steaks for the protein she gets from eating grass. Let's get our protein fresh and natural, not secondhand as from animal's flesh or from something in its dead state concocted by man. Commercial protein will work on the effect and give quick relief from certain ailments, but overuse of commercial types will overwork the pancreas and other glands, causing low blood sugar (hypoglycemia) and/or diabetes

(high blood sugar). The natural live protein in foods on the mucusless program will be used as needed and the surplus discarded from the body naturally when not needed. The sedimentation of the commercial type of protein of lower vibration remains in the gland of the body and causes future trouble.
Page 167
Regular meals can start off with a nice cup or bowl of potassium broth. Dehydrated vegetables in the form of potassium powder or broth can be purchased from most health stores or you can prepare your own. Some health books provide instructions for making potassium broth. You can add the left-over, savory vegetables and here you have one of the most exotic-tasting, low-heated vegetable soups that is imaginable. The broth starts the meal off, and is followed with salad. There are thousands of salad combinations, and with some investigation and experimentation, you will never run short of interesting ones.
After that, serve the low-heated vegetables (many types can be prepared with various savory herbs, and these can be removed from the low heat just before serving), and these will always be tasty and beneficial as long as they are low-heated and are still in a wholesome state. At least five to six vegetables should be eaten each day, of which two should be green, leafy ones. A small amount of bland oil (such as olive oil) added to the baked potato, baked squash, etc., is very good. If you are using cayenne regularly, you may use fresh butter on your vegetables. You can explore and concoct some very interesting, intriguing meals with a little daring and imagination, and you will never need to worry if you eat copiously until you are satisfied, and you will have all the nutrition that is needed for ample physical strength; use casseroles with whole grains, etc.
You can prepare delicious casseroles with barley, rye, millet, wheat soaked as above and while low heating add fruits or vegetables, tasty herbs, etc. All lentils, beans, soys, etc., prepared this way are alive and good eating. Soys and most beans can be soaked for two or three days and then low-heated twelve to twenty hours adding onion, garlic, peppers, etc., during low-heating.
Do not drink liquids during mealtime. Mix food thoroughly with saliva. Wait 1/2 hour after eating before drinking.
Page 168
Pg. 169 Evening
Evening
This is generally the heavy meal of the day, but you can reverse this at will if you like, eating the heavy meal maybe at noon, then the light meal with a salad at night. If you prefer a warm meal, start off with a cup of vegetable broth (regular potassium broth). The broth should be followed with a salad, then the main course is steamed vegetables that have been prepared at low-heat. Be sure to always cook in stainless steel, Pyrex, or some approved vessel, but never in aluminum!
Juice or nuts, dried fruits or fresh fruits are all excellent. Whenever you use a fresh fruit, use it alone, only one type of fruit at a time. When you want to eat some other type of fruit, wait for one half hour or more at least before eating it, and this will prove much easier on your digestive system. The monodiet is also recommended for people on a

healing routine. If the individual feels he is well and healthy, a fruit salad or mixed fruits at times is permissible.

craig-oxley - September 13, 2008 05:32 PM (GMT)

We frequently here the phrases "mucusless diet" and "mucus-forming diet". The following excerpt puts into practical terms in a way that makes it easy to see and understand some of the practical effects involved.

Some of you may be familar with William Donald Kelley. In 1963 at the age of 37 he was told by his regular doctor there was nothing more they could do and it was time for him to go home and die within 2 to 4 weeks. He had late-stage pancreatic cancer that had also spread to the liver, lungs and other areas. He was a doctor and dentist, by the way, and one of my favorite all time quotes of his, from his Lesson #14 on how to self treat cancer: "shoot your dentist. Since the dawn of history, dentists have been responsible for more deaths than all wars combined, and they have never been given proper credit for this" Undoubtedly he had managed to learn and apply something as it concerns cancer after having been sentenced to die. The cancer protocl he developed has many parallels with what is taught here in regards to obeying nature; it was very big on promoting a diet of organic substances (fruits, vegetables, grains and nuts). At the same time there were methods that he used that do not necessarily agree with what is taught here. His protocol also highly recommends the uses of supplements such as molasses (he preferred black strap) as the ideal source of minerals. Perhaps this excerpt of a seminar he presented in 1971 can be used as a means for rallying around things we agree on rather than focusing on what we dont' agree on. Also try to remember that he developed his protocol during the process of saving his life over 40 years ago, a time when he didn't have the WWW to aid his frantic search, and we 40 years later may have the advantage of information that was not readily available to him back then. Dr. Kelley died January 30, 2005 at the age of 79.

What do we do in our society? We go out and we eat a salad and we eat it first at the meal. That tells the stomach and the hydrochloric acid function to turn off. So turn off. So we don't need that, we're having salad today. Or we’re having fruit and we really don't need (typo in the source document says "really need") hydrochloric acid particularly for that, right now. So it turns it off. You need the hydrochloric acid mostly for meat and for the protein's. We eat things backwards in our society. We should, when we go to the restaurant, and they serve you a salad, set it aside and slap the waiter's hand if he takes it away before he serve's you, and then eat it after you eat the meat. Then eat your vegetables and stuff, which would be the ideal way. You eat the meat first, why? It turn's on your hydrochloric acid. However, if you're an ulcer prone person, it's OK to eat your salad first. That cuts off the hydrochlorlic acid so you don't

get too much of it and that will help you along with ulcers. But the vast majority of us don't have ulcers. Unless it's specifically a regional thing. Maybe in New York City you do but in most of the country, not everybody has ulcers. But you might consider that possibility.

Now that you've got the food into your stomach with a good hydrochloric acid supply, then it comes down into your small intestine and here, really, this is where the whole factory blows up. You have several factors in the small intestine. It is really significant. First of all your pancreas has dumped a lot of enzymes into there, and we assume that's right. Your liver has to dump a lot of digestive juices, a lot of bile, and so forth. From the factors the liver dumps into your intestinal tract, makes it alkaline. It gets bile and does the fat metabolism. If you don't have a good liver, why then you have a strike against you.

So now we need to balance, and get your liver working better. And this is not too bad a job, but anyhow we must consider this possibility. We must always have your liver working right. So you have a small intestine that really is a beautiful machine and it has millions of little finger-like projections out from the inside of the intestine, and these little finger-like projections give a mass surface of many miles of digestive capacity so that it absorbs. Inside this little, villi finger-like, thing sticking out into the intestinal tract are the blood vessel's where the food is absorbed and goes into the main artery, goes into the liver, into the body to supply the body with food. We've eaten so much milk that these little finger-like projections into the intestinal tract have got mucus stacked about this deep in there. There's nothing, short of dynamite, that can get this mucus out of the way long enough for the food to get up here to these finger-like projection's. So all these finger-like projection's are just coated and filled with mucus. This is why we eat so much and we're so hungry all the time. You take a big heavy girl and she is starving to death. You look at her and say, "Why, does that big girl eat so much?" Sure she eats like a lot. Why? This finger down here is starving to death. It sends a message up to the brain, "Give me something to eat, my God, give me something to eat, for heaven's sake, I'm starving to death". After that turns on, this poor lady eats and eats and eats and it goes down into the intestinal tract, and what happens? Some of the water and a little bit of the sugar trickles into these villi (coated with mucus) that's working there. She's starved to death for minerals and proteins and vitamins. She lives on a little bit of sugar and a whole lot of water. She's just stuffed full of water and sugar.

Now you take a real skinny 'ol guy, and he is so skinny, he'd eat you out of house and home, and he's still skinny. There's no way on earth you can put weight on him. He's suffering from the same thing, he's got so much mucus attached in there. This mucus is selective. On some people, it only lets sugar go through, and on some people, only protein. On this guy, it only lets protein go through or maybe a few minerals, but mostly, just proteins. All he can assimilate is protein. He can't assimilate any of the vitamins and minerals and carbohydrates. He's starved to death. You say, "My God, he's got a tape worm. It's bad enough to have one kid to feed, but to have one kid with three tape

worms is an impossible grocery bill."

But it coud be the mucus, because you've fed him milk all of his life, and cottage cheese. Now cottage cheese and milk is so good, such a good mucus builder that you can just kill yourself with it. And Metracal is anther one, and all these things that you're trying to reduce with. You eat more and more Metrecal, and this type of junk, and this wipes you out. You can't absorb any food. So that's OK, you just go around starving for the rest of your life. And then people expect you to function good at work. Your husband expects you to feel good all the time and you can't. It's impossible for you to starve to death and feel good. The boss expects you to perform, and you can't do it. The teacher expects you to perform at school, and you can't do it...because you're starved to death. Basically, we're just starved to death. There's great malnutrition in our nation, just unbelievable. It's from many causes, but this is one.

So let's assume that, in some miracle way, barring dynamite, we can get this mucus out of the intestinal tract. We can digest it off with enzymes. And finally get this upper intestinal tract cleaned out. Now, a lot of people say, "Well, I'm going to go home and take a lot of colonics and enemas." Well, they won't ever get up to your small intestines, so don't try that for this reason. Don't try to take enough enemas to clean out your small intestinal tract, because you can't do it. But you can digest this off with enzyme's. And let's assume you've gotten that digested off. Now you've got a villi sticking out here that's just coated with food and now it's ready to absorb all this food. You've got a blood vessel inside that little villi just circulating blood. Then you've got two primary factors involved there that's keeping you from getting the food down here to this little cell at the end of your finger. One is, this blood vessel should be this big around, say, and it's about that big around. You just barely get anything through it. Most of this blood vessel is coated with white sugar. You've eaten white sugar all your life and your body can't utilize all that and it can't even store it all so it has to do something. It can't even throw it off as waste, you've put so much down from lemon meringue pie to chocolate eclairs. You've just jammed your body with so much white sugar it has to store it somewhere. So it store's it on the blood vessel and the blood vessel get smaller and smaller and smaller, mixed up with cholesterol and other junk that you eat. So you have a little tiny hole and your blood flow should be, maybe, a gallon through this vessel in an hour, and maybe you get a pint through there. And so that's a problem. The best way we've found to clean up this blood vessel is just plain simple "Terribly expensive", black strap molasses. If we could make it more expensive, some way, why people might utilize it more, but it's so cheap, black strap molasses is so cheap that they won't ever use it. This sugar can be cleaned out with this simple black strap molasses. Take a tablespoon in a cup of hot water, twice a day, or three times a day, twice a day is adequate. Now, you take grandma who's senile or grandpa, and you get them on black strap molasses a couple of times a day, or three times a day, and in about 6 month's they'll be sharper than you are and you'll have to hustle to keep up with them. If you don't live with them, just make the nursing home take care of that problem. Anyhow, they'll run circles

around you. At the nursing home, you can let them have the black strap molasses. And so we get this blood vessel cleaned out. Now you've got a big vessel there that's got plenty of freedom, but the next factor involved, you just hate to drink water or anything. I guess it is kind of dangerous to drink water anymore.

http://www.whale.to/cancer/kelley.html

Parting quote:

"Cancer can be attacked directly by metabolic enzymes and then be assisted by the enzyme diet programme. The second greatest cancer breakthrough of the 20th century is the metabolic organic effect on malignant tumours of correcting ***the body fluid pH to a non-acidic pH 7.1 to 7.5****. A neutral pH 7.0 resists cancer formation.* ***An acid body fluid pH of 6.44 and below permits tumours to biochemically become malignant****. At pH 7.5 cancer may become inactive; at 8.5 tumours may disintegrate."—Dr Carson*

Mucus Clearing Diet

Excerpt from NORTH AMERICAN DIET

http://www.freedomyou.com/nutrition_book/mucus.htm

Bug the body enough, and it's going to react. The cold virus is a great example of a body being bugged and, boy, do you know it. Sore throat, puffy eyes, and loads and loads of you know what!

Mucus is a sure sign of a body in a state of extreme agitation. The heavy, over-processed, dairy-rich makeup of the North American diet demands the human body to

react as if it is fighting a viral invasion every day. In the morning we can feel its effect, foggy clogged head, puffy eyes and dulled senses. The answer, a large mug of strong coffee to kick-start the system so that we can face the rigors of the day. Most of us have forgotten what it is like to awaken, clear-minded and full of energy. Yet, within two weeks, of a changed diet, the transformation can be quite remarkable, jumping out of bed in celebration of the new day; a throwback to a younger, healthier you.

The human body is an incredibly, complex system. It transfers vital fluids through miles of tubes and membrane highways. The circulatory system is 60,000 miles long. You would need a truck load of road maps to travel a small portion of your body. The kidneys, alone, contain 500 miles of internal plumbing. Each time you breathe, 300 billion—yes billion—capillaries in the lungs await to absorb life-giving oxygen. However, mucus can slow down or stop the important movements along the many pathways of the body, creating a feeding ground for viruses and pathogens (disease-producing bacteria).

Let’s look at an antibody soap opera. Antibody X must seek and demolish Microbe Z, a bacterial bad guy, responsible for an irritating cold. The body is tracking his position, Agent X has been assigned to a search-and-destroy mission to intercept Microbe Z before he does greater damage to the host. On his way through the lymph, he finds himself in a traffic jam, an underpass full of mucus. In this vulnerable position, Agent X is a sitting duck. From above, he is ambushed by two million bacterial bad guys who have been feasting on the mucus for days. The last thought in Agent X’s mind before he dies is, in spite of his perfect conditioning and training, nothing had prepared him to deal with the obstruction of thick, sticky mucus. Finally, after the host had suffered for days with a raw throat, coughing, sneezing, reinforcements were able to destroy the bacterial bad guys.

Not all mucus is bad. Healthy mucus is a clear, slippery, lubricating secretion, used to protect mucus membranes along the digestive, respiratory, urinary and reproductive tracts. Unhealthy mucus is cloudy, thick, and sticky. Mucus is secreted to stop irritants, pollutants, or carcinogenic compounds, created by putrefying, undigested food residues. It’s like a blanket of protection. Certain foods such as milk and bread cause an increase of mucus secretions. These foods have large protein molecules (casein and gluten) which are difficult to digest and are more prone to putrefaction, and may be toxic or an irritant to the body. For many, bread and milk cause sinus congestion.

Mucoid is a mixture of large gelatinous particles, which has a sticky or jelly-like consistency. The word mucoid encompasses the terms mucin, colloid, mucoproteins and glycoproteins. Mucoid is caused by many toxins, pollutants, food additives and allergies. Mucoid can be present in any body tissue but is most commonly associated with the respiratory system, gastrointestinal tract, lymphatic system, uterus, vagina urinary system and the joints. Cartilage in a joint contains mucus membrane cells which secrete a clear slippery mucus to keep joints lubricated. When mucoid-forming

substances are present, toxic mucoid builds up deposits within the joint.

Mucoid within the body tissues, drains into the lymph which filters waste from the intercellular fluid. The blood absorbs 90% of this cellular waste fluid and the lymph absorbs the other 10% composed of the larger waste particles. The lymph glands contain one-way valves, lined with muscle tissues that behave like pumps. If an overload of mucoid from the cells accumulates in the lymph and is not cleansed from the system, it can become stagnant and prone to infection.

Dr. Robert Gray, a nutritionist, determined, through intensive testing that certain foods are mucus-forming and others are mucus cleansing. The foods shown to cause mucus are dairy products, white flour, meat, eggs, potatoes, beans, rice, grains, fish, peanuts and fats.

MAKING CELL FOOD FROM CELLS

The relationship between mucus and diet is not a new theory. In 1912, Dr. Arnold Ehret released a book called, The Mucusless Diet and Healing System. He discusses in great detail, the mucus-forming effect of various foods. Ehret theorized that all disease is caused by a clogging of the tube and membrane structures within the body due to a build-up of restrictive mucus.

The process of digestion is to liquefy food small enough to be infused by the absorptive cells on the villus in the intestine. For any nutrient to pass through the membrane of a cell, it must be less than 44,000,000,000 th. of an ounce. The rest of the substance not absorbed remains within the colon until elimination.

Foods that form mucus have a glue-like bond, tightly holding their molecules together. In milk, it is casein, in wheat, rye, oats and barley, the glue-like substance is gluten. The dictionary defines gluten as a tough, sticky mixture of plant proteins, obtained by washing out the starch from wheat or other cereal flour and used as an adhesive and thickener. These glue-like bonds require strong stomach acids for digestion.

Lack of chewing and poor food combinations make it impossible for the stomach acids to properly dissolve the bond between these molecules. After digestion, many food particles are still too large to be used by the body. In a short time, the oversized, partly-digested food particles start to putrefy and are coated with mucus to prevent further putrefaction while still in the intestine.

The intestinal wall is contains over four million microvillus. Their job is the absorption of nutrients. Due to the vast number of microvilli the total effective area for absorption, within the colon is more than 2,200 square feet. On the surface of these microvillus is mucus-secreting cells. Mucus is secreted by these cells to protect the intestinal wall and to impede the absorption of harmful substances through the colon.

Eighty percent of all absorption takes place in the small intestine. Only 20 percent is absorbed by the stomach and large intestine. The stomach performs very little absorption because the gastric contents are so acidic. The entire gastric epithelium must be devoted to mucus production. Without mucus to protect the stomach, ulcers would develop in a few hours. Within the duodenum (small intestine) the submucosal glands produce copious quantities of mucus. This mucus contains buffers that elevate the pH balance. The more acid forming the food, the greater the amount of mucus secreted.

As the mucus and food particle solution pass through the intestines, moisture is removed. As more moisture is removed, the mucus becomes sticky and gluey. In passing, it leaves a coating on the intestinal wall. Layer after layer of gluey feces build up over the years. It forms into a tough, rubbery, black substance found in lumps in the corners of the intestinal tract. X-ray studies show that the accumulation of hardened feces badly deforms the intestines. Autopsies have shown that an average male has seven to nine pounds of this hardened feces within his intestine. This coating causes constipation, a reduction in the absorption of nutrients through the intestinal wall and is a breeding ground for parasites.

Imagine a drain, clogged with human hair, dust, old soap and pieces of decaying food, all forming a sticky mass of rotting waste that cannot be removed. The medical names labeled for these diseases are diverticula, colitis, stricture, prolapsus, hemorrhoids, worms, yeast infection, chronic constipation, colon cancer and appendicitis.

Colonics are given by naturopaths or colon therapists using a device to circulate water through the intestine while your stomach is being massaged. Numerous clients have been helped through this therapy. Removal of clogged waste allows the human machine to work again. But, unless there is dietary change, the symptoms will simply return.

Without the natural, sponge-like properties of fruits and vegetables, intestinal diseases will continue to abound, especially amongst the elderly.

Grapes and citrus fruits are some of the greatest mucus-cleansers. They help the body to remove mucus and toxins, supplying vital nutrients in the correct balance for rejuvenation and healing.

The most powerful method of removing mucus from the intestines and mucoid from the organs and lymph glands is the combined cleansing effect of a non-mucus/mucoid-forming diet and fasting.

Factors Which Increase Mucus

LARGE MEALS. Our body's need for food is often much less than what we eat. Any

foods eaten beyond our body's need is a burden. Some of this excess food will be converted into fat. Yet the body can create only so much fat per day. If you eat above digestive capacity, the excess must be eliminated. During elimination, the lymph glands are overloaded and mucoid forms in response to putrefaction.

EATING WITHOUT HUNGER. When food is eaten before complete digestion of the previous meal, partially-digested food will be released into the colon thus causing mucus.

GULPING FOOD. Improper chewing overworks the digestive system. If the food particles are too big to be assimilated, they must be eliminated through the colon. On the way, these particles putrefy, thus causing mucus.

IMPROPER COMBINATIONS. A typical meal contains starch, protein, sugars and fats, each requiring a completely, different digestive secretion. Complex food mixtures create mucus because the food molecules cannot be dissolved efficiently.

View Full Version: SLIPPERY ELM GRUEL - WEIGHT GAIN & SURVIVAL

Title: SLIPPERY ELM GRUEL - WEIGHT GAIN & SURVIVAL
Description: *FOOD + INTERNAL & EXTERNAL HEALER*

craig-oxley - September 13, 2008 05:29 PM (GMT)

SLIPPERY ELM GRUEL - WEIGHT GAIN & SURVIVAL
FOOD + INTERNAL & EXTERNAL HEALER

By Dr. Richard Schulze
Revised 8/1/04

Therapeutic Action:
SLIPPERY ELM is a Demulcent and Nutritive, plus it promotes Tissue REGENERATION! Slippery Elm Gruel is a SOOTHING and HEALING Herbal Food for the Digestive System. Slippery Elm is as NUTRITIOUS as Oatmeal and can be eaten as a food frequently. It is especially GOOD for Children or Elderly, if they are having DIFFICULTY digesting foods, while recuperating from an illness.

Formula:
Slippery Elm Gruel is made by the following Method:
1. Put 1 tablespoon of Slippery Elm Inner Bark Powder in a small Bowl.
2. Slowly stir in 1/2 - 3/4s of a Cup of Boiling Water, making the Mixture into a Paste.
3. Add a little MORE Water to thin-out the Paste to the consistency NEEDED for a Poultice.
4. Add enough Water to make the Paste into a Gruel, that is THICK, like Cream of Wheat!

Applications & Dosages:
If someone can NOT HOLD FOOD DOWN and/or has WASTING SYNDROME, then he/she should:
1. Eat 1 tsp. of Slippery Elm Gruel at a time, until FULL.

2. ADD Honey, Maple Syrup for sweetening and/or Cinnamon for flavor.
3. Continue feeding, until the desired RESULTS are achieved.

If someone has NO Food, then he/she should:
1. Eat Slippery Elm Gruel as a Survival Food.
2. ADD Honey, Maple Syrup for sweetening and/or Cinnamon for flavor.

If someone has Holes in Body Tissue INTERNALLY, then he/she should:
1. Eat Slippery Elm Gruel as a REPLACEMENT for a Meal.
2. Continue until the desired RESULTS are achieved.

If someone has Holes in Body Tissue EXTERNALLY, then he/she should:
1. Fill in the Holes with Slippery Elm Gruel.
2. Wrap a CLEAN Cotton Cloth over the filled Holes.
3. Continue until the desired RESULTS are achieved.

View Full Version: "INCURABLES" Program by Dr Schulze

Title: "INCURABLES" Program by Dr Schulze

craig-oxley - September 13, 2008 05:27 PM (GMT)

Dr. Richard Schulze's "INCURABLES" Program: Part 1 - Getting Started

Use "Distilled" or "High-Grade Reverse Osmosis" Water ONLY, for ALL Teas, Enemas, Colonics, etc.

Begin a Juice Fast IMMEDIATELY, using 8-10 ounces of FRESH Juice per hour (1 Gallon/day) for at least 14 days MINIMUM, and 30 days, if you're willing. That's 1 Gallon, 5000 calories, of PURE, RAW, liquid food and nutrition DAILY! After the Fast, then go to RAW Fruits and Vegetables, with LITTLE, being cooked or steamed, while continuing to Juice, along with PLENTY of "SuperFood" and Green Drinks DAILY, ALWAYS doing your Drinks between Meals ONLY!

Castor Oil Packs on and around the afflicted area, or areas, a MINIMUM of 3 nights per week.

A 5 Gallon HIGH Enema EVERY other day, made up of 1/3 part Chaparral, 1/3 part Oregon Grape Root, 1/3 part Red Clover Tea, as a MINIMUM for the FIRST 2-3 weeks. (Very SIMPLE, and is ONLY 7-10 sessions TOTAL.)

Purchase a "Shower Wand" and do a MINIMUM of two (three would be BETTER) HOT & COLD Showers per day, also CONCENTRATING over the afflicted area for a TOTAL of 60 days, then going to a MINIMUM of 1 per day. If the Person is TOO WEAK to stand, then give the Treatment with them lying in the Tub.

One "COLD SHEET Treatment" EVERY 7-10 days for the FIRST 4 months, then going to 2 Treatments per month for the REST of the year.

Drink Cancer/Virus/Immune Tea - 3 tbl. Chaparral, 3 tbl. Red Clover, 2 tbl. Echinacea, 2 tbl. Pau D'arco, 1 tbl. Lobelia. Bring 3 quarts of PURE Water to a boil, remove from

heat, put in the Contents with lid on, and let STEEP till COOL enough to drink. Always STEEP and let COOL with the lid on.

Put 2 dropperfuls of "Black Walnut Tincture" 6 times a day in anything that you are drinking.

ALL "Water" which is consumed is to be in Tea form, and anytime you just want to sip on a simple cup of tea, use "Red Clover" with aVERY SMALL amount of RAW Honey, if desired.

Be sure to get some Exercise. With a walker, or otherwise, move around as MUCH as you can!

For FRESH Oxygen, be SURE to sleep with your Bedroom Window either WIDE OPEN during the Summer, or cracked during the Winter, sleeping and living ONLY in Clothing and Bedding that breathe (100% Cotton, Wool, Linen, Silk, or a combination of 1 of these 4 ONLY!)

The above is WORK, but is also very SIMPLE and will get you started. All you have to do is just begin, so just do it! Follow this Program, and you will be ABSOLUTELY AMAZED!

craig-oxley - September 13, 2008 05:28 PM (GMT)

Dr. Richard Schulze's "INCURABLES" Program: Part 2 - Curing Oneself

(FIRST 30 Days)
I HIGHLY suggest for anyone who has been diagnosed as "Incurable" or "Hopeless" to THROW out THAT diagnosis! Whether you are NEW to Natural Healing or have years of Natural Healing knowledge, this 30-Day Program can SAVE YOUR LIFE!! I used this very program in my "LAST CHANCE" Clinic for people, who had been written off as HOPELESS by other Doctors and Health Professionals! This program is INTENSE and it WORKS!! You will get OUT of it what you PUT into it! You can either WAIT for someone to do it for you and hold your hand, but that will NOT be me or you can JUMP in and give 110% and take RESPONSIBILITY for your HEALTH and HEALING! NOTHING LESS WILL DO!!.

So let's get STARTED!!

Here are a few things to HELP your success rate:

Tomorrow is what you BELIEVE TODAY!

Read ALL of this material top to bottom, take a DEEP breath, then read it AGAIN!

Make SURE that you THOROUGHLY read the section on each of the individual formulas in the "INCURABLES" Program!

Have ALL of the supplies, that you will need for the NEXT 30 days.

A Juicer is NOT an option! If you do NOT have one, then buy one today! It will SAVE your life!! If you're NOT going to buy a Juicer, then FORGETabout doing The "INCURABLES" Program!

Be RESPONSIBLE for yourself! You created this problem and you can HEAL yourself! No one ever got BETTER by feeling SORRY for themselves. The doctors were WRONG, you can get WELL!!

FORGIVE EVERYONE in your past, including ALL of your doctors!

LOVE, giving it and receiving it, is the most POWERFUL Cleansing and Healing Tool!!

TRUST yourself and STOP asking so many questions! You will find your own ANSWERS as you go through the HEALING Process!

You must have a GOOD Support System! A friend to HELP you along the way, and one, who will NOT give into your victim stuff, your "Why Me?" bull, somebody who will KICK your butt, when you NEED it!

Another part of your Support System will be my Audios, Videos, and anything, that I've written on Natural Healing. READ and RE-READ, WATCH and RE-WATCH! You have to EAT, DRINK, SLEEP and BREATH Natural Healing! EMBRACE yourself and SURROUND yourself with Natural Healing!

The MAIN Function of the body is to REPAIR and to HEAL itself!

STOP doing the things, that have HURT you and START doing the things, that will HEAL YOU!

There are NO "INCURABLE" Diseases! Be POSITIVE, RIGHT NOW, and BELIEVE, START NOW! Again, Tomorrow is what you BELIEVE TODAY!

THE FOOD PROGRAM

If you are SERIOUSLY ill, I HIGHLY suggest that you do a Fresh Organic Juice Fast for the ENTIRE 30 days! Drink at LEAST 1 Gallon of liquid per day. That's 8-16 ounce servings. Liquids should ONLY be Distilled or Purified water, Detox Tea, Herbal Teas (Non-Caffeine) and ORGANIC Fruit and Vegetable Juices. You can DILUTE your Juice

with 50% Distilled Water. If you do NOT have a Juicer, then BUY one, it will SAVE YOUR LIFE!!

Your 2nd option, you may consume ONLY 100% ORGANIC (Vegan) Vegetarian RAW food and ORGANIC Fruit and Vegetable Juice. RAW means NO cooked food! This includes ALL Fruits, Vegetables, RAW Nuts and Seeds, and Soaked and Sprouted Beans and Grains. Try to eat Fresh ORGANIC produce, that is grown locally and in season. If you do choose to eat RAW food, then you must take at LEAST 1 day per week and Juice Fast.

EVERYBODY must consume a combination of at least 8 to 16 ounces of Fresh ORGANIC Carrot, Apple and Parsley Juice DAILY!

ABSOLUTELY NO Animal Flesh, Eggs, Milk or Milk Products (Cheese, Yogurt, Butter)!! NO Cooked Foods (Bread, Pasta, Baked Potatoes, Tofu, etc.)!! NO Alcohol, Coffee, Black Tea or Sugar!!

Although ORGANIC is the BEST way to go, if you can't get ORGANIC, then do NOT let that STOP you! Do the very BEST, that you can!!

craig-oxley - September 13, 2008 05:28 PM (GMT)

Dr. Richard Schulze's "INCURABLES" Program: Part 3 - Beginning To End

(FIRST 30 Days)

The Food Program:
ALL Food consumed must be 100% TOTAL (Vegan) Vegetarian RAW Food! This includes ALL Vegetables, Fruits, RAW Nuts and Seeds, and soaked and sprouted Beans and Grains. Try to eat Fresh ORGANIC Produce, that is grown locally and in Season. Liquids, ONLY Distilled Water, Herbal Teas (Non-Caffeine) and Fruit and Vegetable Juices.
NO Animal Flesh, Eggs, Milk or Milk Products (Cheese, Yogurt, Butter) can be consumed. NO Cooked Foods (Bread, Baked Potatoes, Tofu, etc.) NO Alcohol, Coffee, Black Tea or Sugar. If you are SERIOUSLY-ILL, do a Water and Fresh Juice Fast for the ENTIRE FIRST 30 Days, drinking at least 1 gallon daily, and then use RAW Foods. In any case, FAST at least one day EVERY Week. Also, drink at least 8, if NOT 16 ounces of Fresh Carrot, Apple and Parsley juice DAILY. If you do NOT have a Juicer, BUY one. It will SAVE YOUR LIFE!!

The Herbal Nutritional Program:
4 tablespoons per day, 2 tablespoons A.M. and 2 tablespoons P.M. (a DOUBLE dose)

of Dr. Schulze's SuperFood is suggested EVERY day! Make the following Nutritional Drink (mix in a Blender) 8 ounces of Freshly Squeezed Fruit Juice, 8 ounces of Distilled or Pure Water, ½ to 1 cup of FRESH Seasonal Fruit and 2 tablespoons of Dr. Schulze's SuperFood.

The Cleansing Morning Drinks and Teas:
Every morning must begin with Morning Drink #1 or #2 and the Herbal Tonics and Teas from the 5-day Cleansing and Detoxification Program. You can alternate these flushes weekly.

Herbal Detoxification Programs:
Dr. Schulze's Intestinal Corrective Formula #1 (Cathartic formula): You must use an Herbal Formula EVERY Day to keep your Bowels VERY ACTIVE. Start with 1 Capsule just after Dinner and INCREASE by one Capsule DAILY until the desired effect is reached.
Dr. Schulze's Intestinal Corrective Formula #2 (Drawing and Detoxifying Formula): You must use a Bowel Drawing and Detoxification Tonic EVERY Day (once you have your bowel working with Formula #1) to keep your Bowel CLEAN.

The Bloodstream and the Immune System:
Alternate these Formulas Weekly, starting with the Detox Formula Tonic and then the Echinacea Plus Tonic during Week No. 2.

Dr. Schulze's Detox Formula Tonic (Blood and Lymphatic Cleanser):
Use 2 Dropperfuls (70 Drops) 4 times DAILY.

Dr. Schulze's Echinacea Plus (Immune System Stimulant):
Use 2 Dropperfuls (70 Drops) 4 times DAILY.

If you do ONLY 1 Program or use ONLY 1 Herb, it should be Garlic. In the MANY Years at the Clinic, I have seen it HEAL MANY, HURT NO ONE, and create MIRACLES! Garlic is one of the MOST POTENT and RELIABLE Herbal Healers known. It is a POWERFUL Broad-Spectrum Antibiotic. It is also Anti-Viral, Anti-Fungal, Anti-Parasitical and has PROVEN itself to RID the Body internally and externally of any Antigen or Pathogen.
Garlic has been PROVEN in Hospitals and Laboratories worldwide to DESTROY CANCER and break up Tumors, THIN the Blood and NORMALIZE Blood Pressure and Cholesterol Levels. Hundreds of my Female Patients used Vaginal Garlic Implants to do EVERYTHING from HEAL Infections to ELIMINATE CANCER!
Garlic externally is an Herbal Surgeon. It's 700+ various Sulfur Compounds will DESTROY INFECTION and, if used FULL strength, will BURN off ANYTHING in it's way! Garlic nutritionally is a GREAT Strength-Builder and has been REVERED throughout History in numerous Cultures as a Food to INCREASE Health and Energy. It can be eaten RAW, swallowed WHOLE, chopped up and mixed with Food and put

through your Juicer. Just get it in!
The BEST Garlic is the HOTTEST, and, of course, ORGANIC! If NONE is available, which is RARE, then use your HOTTEST Onions, which is Garlic's next of kin. Consume at least 3 cloves of FRESH RAW Garlic EVERY Day.

Hydrotherapy Program:
High Enemas: You must use a High Enema 2 times a week with an implant afterwards. Use ONLY Distilled Water for the High Enema! The implant can be:
8 oz. of Aloe Vera Gel and 8 oz. of Distilled Water (soothing) or 2 oz. Wheat Grass Juice with 16 oz. of Distilled Water (Detoxifying) or 1 - 2 Cloves of Garlic blended into 8 ounces of RAW Apple Cider Vinegar and 8 oz. of Distilled Water (Anti-Bacterial, Anti-Viral and Anti-Fungal).

HOT & COLD Showers: This is the MOST EFFECTIVE way to move the Blood and create Circulation. Once DAILY, you must do a COMPLETE HOT & COLD Shower! You will start with HOT Water for 1 minute, then COLD for 1 minute. REPEAT this Routine 7 Times, so that the Shower lastS about 15 minutes.
Another time, DAILY, you can do a COMPLETE HOT & COLD Shower Routine again or a partial one, just applying the Water DIRECTLY to the AFFECTED Area. Make SURE, while you are doing BOTH HOT & COLD Showers, that you pay SPECIAL Attention to the AFFECTED Area and massage it VIGOROUSLY. If the Shower is IMPOSSIBLE, then use HOT Packs and ICE Packs.

Hot Castor Oil Packs (breaks up congestion):
Use HOT Castor Oil packs in the Evening over the AFFECTED Area and leave on ALL Night long. They can be kept Warm with a HOT Water Bottle.

The "COLD SHEET" Treatment:
Do the NEW "COLD SHEET" Treatment once weekly.

Massage/Bodywork:
Massage the ENTIRE Body EVERY Day with SPECIAL Emphasis on DEEP Foot Reflexology and ALL around the PROBLEM Areas. Do NOT be AFRAID to touch your SORE or SICK Parts. Put some LIFE back there. Alternate Castor Bean Oil and Olive Oil for your Massage Oils. Skin Brush with a NATURAL Bristle Skin Brush and SCRUB yourself thoroughly EVERYDAY!

Exercise:
You must exercise EVERYDAY! Do whatever you can do to PUSH yourself! INCREASE the amount EVERYDAY! You should breathe hard and work up a SWEAT! 1 hour EACH Day is to be your eventual goal. If you rest, YOU RUST!

Attitude:
I HIGHLY suggest for ANYONE, who has been diagnosed as "INCURABLE" or

"HOPELESS" to THROW OUT that Diagnosis and start on a HEALING Program IMMEDIATELY! The "INCURABLES" Program has NO POWER, unless you put ALL of the Time and Energy, that you have into it! You must give l00%!
LOVE, giving it and receiving it, is the MOST POWERFUL Cleansing and HEALING TOOL! Be RESPONSIBLE for yourself! You created this PROBLEM and you can get RID of it! NO one ever got BETTER by feeling SORRY for themselves! The Doctors were WRONG; you can get WELL! FORGIVE EVERYONE in your PAST, including ALL of the Doctors! The MAIN Function of your Body is to REPAIR and HEAL itself, so let's get STARTED! THERE ARE NO "INCURABLE" DISEASES! GET POSITIVE RIGHT NOW! BELIEVE, START NOW!

Additional Routines:
EVERY Day strip naked and take a Sun and Air Bath for 10 to 15 minutes. EVERY Day take a walk outside in your BARE Feet and shuffle them in the Grass or Dirt, and even lie down on the Earth. Do DEEP Breathing, while you are outside; FRESH Air will HELP you to HEAL FASTER! Use ONLY NATURAL Soaps, Shampoos and Toothpastes. Do NOT use ANY Deodorants, Perfumes, Colognes, etc.! You may use PURE Herbal Essential Oils, if you want to smell BETTER. Wear ONLY Natural Fiber Clothing (i.e.- Cotton, Wool and Silk)! NO Polyester, Acrylic, Nylon or even Blends! Drink as much of the Potassium Broth as you can stand! This is a GREAT tasting addition to your Cleansing Program. It will FLUSH your system of UNWANTED Salts and Acids, while giving you a CONCENTRATED amount of Vitamins and Minerals!

Final Thoughts, a NATURAL Death:
We will ALL eventually experience a Physical Death! For ALL of us, this Time will come! By using NATURAL Healing, Herbs and my Programs, we are NOT trying to CHEAT Death; we are INCREASING the QUALITY of Life!
Medical Universities tell us that the Human Body should LAST 125 Years. We are lucky today, if we make it to HALF of that! There have been MANY People, who have lived to 150 and even a FEW over 200!! Looking at this MIRACULOUS Being, that we have been BLESSED with, I know that the Ages in the Old Testament of the Bible are CORRECT! When we finally die, after living a HEALTHY NATURAL Lifestyle, what I have seen is that we go with NO PAIN, a BIG SMILE on our Face and in a Room with our LOVED ones! Considering the SCREAMING Hospital Death Drama, my Patients preferred the NATURAL Death!

craig-oxley - September 13, 2008 05:28 PM (GMT)

Dr. John R. Christophers "Incurables Program"

Excerpt taken from the booklet "Curing the Incurables" by Dr. John R. Christopher

http://www.herballegacy.com/incurables.htm

The following suggestions are for a persisting, chronic condition, not an acute one requiring emergency treatments.

First Week:
Food:
For the first week, drink as much fresh carrot juice as possible. Some people are satisfied with a quart while others need a gallon or more. Drink by chewing an eight-ounce glass or more each hour during the day for six days the first week.
Drink one cup or more of slippery elm gruel each day. The liquid can be as thin or thick as desired. With this herb, you take the powder and carefully mix it with enough water (preferably distilled) to form a paste because it does not mix easily. Then thin it to desired consistency by adding more water. A little honey can be added if preferred. In addition, drink one cup or more of comfrey leaf or root tea each day. Twenty minutes before or after drinking the juice, tea or gruel, drink as much steam-distilled water as desired.

Herbal Formulas:
One cup or more of the cell-building tea should be used for the rebuilding of cells in flesh, cartilage, and bones. Also, take one cup three times a day of Blood Purifying Combination.
Take the following every day with some liquid:
Two or more #0 capsules of Lower Bowel Tonic three times a day. This is for regularity, as solids are not now cleansing the bowels.
Two or more #0 capsules of Nervine Tonic three times a day. This formula contains herbal nervines.
Two or more #0 capsules of Pancreas Combination, three times a day. This assists the lower bowel tonic.
Two or more #0 capsules of Calcium Combination three times a day. This formula is a good source of organic, assimilable calcium.

Breathing with Depth:
Learn to breathe deeply, as it taught in yoga, to get the breath of life into the upper lobes of the lungs.

Clothing:
We should use only natural fibers for the clothes we wear and also for our bed covers. Never use synthetic cloth for straining herbal drinks or for fomentation's and bandaging.

Use only natural fibers such as cotton, wool, linen, or silk.

Releasing Static Electricity:
Walk or jog barefoot on the lawn to get rid of the static electricity in the body and to allow new electrical vibration to come from the atmosphere.

Three Oil Massage:
For the first two days, massage the patient with castor oil, using a clockwise circular motion from the top of the head to the bottom of the feet, always working towards the heart. The next two days use olive oil, and the last two days of the week massage with wheat germ oil.
On the seventh day, rest the patient, using no foods, herbs, or juice, only steam-distilled water as much as is desired.

Sunbathe:
Immediately after the massage, have the patient take a sunbath each day in the nude, not through glass but in direct sun. Only allow two minutes on the front and two minutes on the back the first day. Add two minutes front and back each day but no more. In six days you will be up to twelve minutes front and twelve minutes back. Do not sunbathe between eleven in the morning and one o'clock in the afternoon, that is, not at high noon. If it is a cloudy or cold day, use a sun lamp, but do not allow a burn.

Baths:
Each day the patient should have a hot bath followed by a cold shower or cold bath. No soap should be used for the bath unless it is a good biodegradable cleanser. Each day before the bath, give a dry skin brushing (always towards the heart), using a natural bristle brush (not nylon).

Herbal Fomentation's:
We use an herbal fomentation each night of the six days of the week. It should cover the head area (hair line), down the spine, all the way down to the end of the tailbone. Make a cap fit down to the ears (or use a cotton or wool skull cap) and stitch a flannel strip four-to-five inches wide down the back over the spine area. After wetting the fomentation cloth with the B & B formula and lightly wringing it out, cover it with a plastic over the head (shower cap, etc.) and a strip down the spine.
To aid the motor nerve and spinal cord, use the B & B formula, inserting with an eye dropper four to six drops of oil of garlic and four to six drops of this herb tincture into each ear six nights a week. Plug the ears with cotton overnight, and on the seventh day flush out the ears with half and half warm apple cider vinegar and distilled water. Repeat this each week during the program.

Zonal Foot Massage (Reflexology):
If possible, use zonal therapy on the feet three times a week, leaving one day in between. Zonal therapy will greatly speed up the program.

Second Week:
The second week will be the same as the first except, instead of fresh carrot juice, substitute apple juice. During this second week use the Three Oil Massage, sunbaths, zonal therapy, fomentations, etc. With the sunbaths add two minutes front and back onto the final total of the last week.
On the day of the fast there may be some physical reactions because you have reached a cleansing cycle. This same cyclical reaction can happen in any healing program in the third week, the seventh week, seventh month, and seventh year. If a cleansing crisis happens at this time, be happy with it, as it shows the program is working well.

Third Week:
Repeat the full program, except instead of carrot or apple juice use grape juice.

Fourth Week and On:
Continue to rotate the three juices each week as before. If the patient desires more solid food, just add one solid meal each day. See the Mucusless Diet for meal guidelines.
Use no salt, sugar, eggs, meats, bread, milk, or milk products.

Case Histories:
In Mesa, Arizona, a young man in his middle twenties was brought into our lecture hall in a wheel chair. He was badly crippled with a combination of polio and arthritis. He was lifted out of his chair and placed on a pile of pillows. Looking at him, you could see the severe pain he was suffering.
During the lecture we discussed the program we have just outlined. After the lecture, he said he would like to try it. A practical nurse from another town offered to take him into her home and help him get well.
They followed the routine accurately and one year later we saw him again. Just before the lecture started, in the same hall as the year before, this young man walked down the aisle to the front of the hall and asked to speak. We granted him permission. In his

short talk he advised the people to listen to the lectures and put them to use. He described how just one year before he had listened to this lecture in the hall as he sat on pillows. He had gained the desire to start on this natural program. Prior to that night he had been told he would never be out of the wheelchair unless it was to be in a hospital bed the rest of his days.
With the help of the kind nurse, he was now able to walk so well that he was traveling on foot, house to house selling, to pay off his large hospital and doctors bills. As he walked back to his seat, he had tears of gratitude in his eyes.

A young man came to us with advanced curvature of the spine. He had been told that the case was so bad his back would have to be broken in several places to fuse it, but with no guarantees as to results. He tried our program, and in shortly over six months, he had a back that was straight and perfect. He had regained the three inches he had lost with the curvature and is now 6'6" as before his curvature. He could now go back to yoga and the sports, which he enjoyed.

Conclusion:
There are many outstanding cases, but these two can give you a picture of what can be done by following the Incurables program. Use it carefully and accurately for complete, long-lasting health.

View Full Version: POTASSIUM BROTH

Title: POTASSIUM BROTH

craig-oxley - September 13, 2008 05:25 PM (GMT)

POTASSIUM BROTH

This is a GREAT tasting addition to your Cleansing Program. It will FLUSH your Body of TOXINS, Poisons and UNWANTED Salts and Acids, while giving you a CONCENTRATED amount of Vitamins and Minerals.

1. Fill a LARGE pot with 25% Potato peelings, 25% Carrot peelings and WHOLE chopped Beets, 25% chopped Onions, including 50 cloves of Garlic, 25% Celery and DARK Greens.

2. Add HOT Peppers to taste.

3. Add enough Distilled Water to cover the Vegetables and simmer on very LOW temperature for 1-2 hours.

4. Strain, or just dip your mug in, and drink ONLY the Broth.

5. Make enough for 2 days, refrigerating the leftover Broth.

NOTE: Put the Vegetables in your Compost. It is IMPORTANT, that you use ORGANIC Vegetables, because you do NOT want to consume ANY Toxic Insecticides, Pesticides or Inorganic Chemical Fertilizers, while you're doing a Cleansing and Detoxification Program!

NOTE: Since the Potassium Broth is a POWERFUL Electrolyte BALANCER, it must to be taken by SICK People ONLY, otherwise the Electrolytes, but especially Potassium, will QUICKLY become OUT-OF-BALANCE in the Body!

craig-oxley - September 13, 2008 05:26 PM (GMT)

RAW POTASSIUM BROTH

Dennis Hardy ND

There are many vegetables rich in potassium, the outstanding of which are carrot, celery, parsley, and spinach. To obtain the full value of this potassium element, it should be taken as a drink in its raw, undiluted state so that the body may absorb and assimilate it completely in its natural form.

The organic minerals and salts in this combination of raw potassium "broth" embrace practically the entire range of those required by the body. Its effect in reducing excessive acidity in the stomach has been truly remarkable. There is probably no food more complete in every respect than this for the human organism.

When the sick are unable to assimilate other food, it has been found that raw potassium broth has usually furnished the nourishment to bring the patient back to normal. In the case of convalescents, raw potassium broth is invaluable, and it is astonishing that all hospitals and sanitoria have not adopted this food as a regular part of their daily diet.

Some people do not find Potassium as palatable as the straight carrot juice or some of the other juice combinations. We must bear in mind, however, that when the body is starved for the live atoms of food so essential for the regeneration of the cells and tissues of the body, the time has passed when the matter of taste has any bearing whatever on the choice of the juices we need.

As we have previously stated, no drug in the entire Pharmacoepia will supply the body with the live organic food atoms, vitamins, and hormones essential for the regeneration of the wear and tear that results in sickness and disease. Such food is most quickly obtained by the body when we drink fresh raw vegtable juices.
As the atoms composing the cells and tissues of our anatomy are mineral and chemical elements, and the glands, organs, and in fact, every part of the system represent combinations of such atoms in certain definite patterns, so we are able to determine that certain combinations of chemical and mineral live elements in our food, and particularly in our juices, can nourish corresponding parts of our body.

craig-oxley - September 13, 2008 05:26 PM (GMT)

Just a couple notes added to this from a segement recently viewed in the John Christopher 3-day seminar, 1980. See the Video/Health forum where links have been copied to view this seminar in 8 tapes / discs.

The general class of herbs beign discussed were Astringents, and the general topic of discussion in the conext of this segment was Potassium Deficiency. This in turn lead to discussion of common treatments for ridding moles, warts, cysts and tumors. Some casual advice for these include putting 6 to 8 drops of either Black Walnut Tincture, or

Elderberry Tincture (both plants are excellent sources of natural Potassium) to a cup of tea, drunk 2 to 3 times a day, more or less as conditions warrant. Doc also mentions that a slice of a clove of raw garlic can be placed over a wart to heal it, but this advice includes the necessity to cover the garlic slice in olive oil so as to lessen the chance for it to burn the skin where it is placed.

A student asks for advice about a person who just does not have a mole, or wart, but has an entire face riddled with many warts, warts upon warts. Doc replies that this requires the healer to go further, to go inside the body to get at the cause. He then describes the recipe for "building a Potassium Drink":

- take some raw potatoes, make sure the skin has been cleaned and had any blemishes removed / cut out, then peel the potato so that the peel contains a good hunk of potato underneath....around 1/4 to 1/2 inch or so. Put these skins in a pot with a bit of water and begin to low simmer. The skins contain a lot of nutrient content "then add in the leaves of numerous plants, like Comfrey, and Marshmallow (note - the leaves).

- add some leaves of celery (note: anyone notice the trend these days for produce to be sold with tops already removed?...quite common at the big grocery chain stores here in the states... last week I had to search through a bundle of celery packs before I found one that still had a good bunch of leaves "tops" still attached

- add some tops of Turnips

- add some Beet tops... and some Carrot tops, and after this has simmered a while, add a small handfull of whole pepper corns, and some slices of raw garlic

- low simmer this for 6 to hours. Doc suggested it might help to use a double boiler to keep the temps low

- near the end, add a bit of olive oil.

This drink can be eaten as a meal - soup, and it can be drunk as a mid-day cocktail.

FWIW, last week I did a 3.5 day juice fast. When I broke fast, I was very conservative. It's amazing, after going three days without eating solid food, I did not want to spoil that effort by jambing a bunch of routine hard food into my mouth. So with anticipation, I slowly simmered the above recipe. The only beets I had were topless, so I peeled it thick and put the peels in the pot, then I put the rest of the beet in too, plus a few slices of Parsnips. Around hour 5, the fast was up to 3 days, 15 hours, so i was ready to have something other than juice. I took a taste of this broth. Let me tell you, to a regular person, this might not look so appetizing, but after 3.5 days, it tasted really good to me. I added a bit of sea salt to the rim of the cup. It was not long before I had downed 3 cups of this broth. There was enough left over to get provide two more soup meals.

View Full Version: The "COLD SHEET" Treatment

Title: The "COLD SHEET" Treatment

craig-oxley - September 13, 2008 05:21 PM (GMT)

The "COLD SHEET" Treatment

Compiled And Edited By Tom Harrelson (Revised 6/30/02)

NOTE: The "COLD SHEET" Treatment is the MOST EFFECTIVE HYDROTHERAPY Procedure today and the MOST POWERFUL Natural Healing Method in Dr. Schulze's Arsenal! This NATURAL and POWERFUL Healing Method induces an Artificial Fever known as "HYPERTHERMIA" and can be used with Common Health Problems, such as Flus and Colds, and DEFINITELY should be used with MORE SERIOUS Pathogenic Disease Processes, such as Pneumonia, Cancer and AIDS!!

This Hydrotherapy Treatment produces a process in the Body, known as "Leukotaxis", DOUBLING the SPEED of the White Blood Cells for EVERY degree over the NORMAL Temperature of 98.6 F.! So that when the Body has a Temperature of 103 degrees, the White Blood Cells are moving 16 times FASTER!

Be FOREWARNED - the "COLD SHEET" Treatment is SO INTENSE that it can bring out BURIED Emotional TRAUMA, because it's like doing a 30-day Fast in 1/2 Hour!!

Please read and understand this Article COMPLETELY, before doing this POWERFUL HEALING Procedure, thus ensuring SAFE and EFFICACIOUS Results!

STEP ONE: FIRST, you should take a COLD Enema to clear LOOSE Fecal Matter out of your Colon, before you begin this Procedure. You can add Herbs to the Water, such as Catnip or Red Raspberry. A COLD Enema causes the Rectal Area to contract, which HELPS you to RETAIN the Fluid LONGER, before you EXPEL the Herbal Tea and the LOOSE Fecal Matter.

STEP TWO: After expelling the Herbal Tea, the next Step of the "COLD SHEET"

Treatment is the "GARLIC INJECTION"! You will need a Rectal Syringe (Enema Tubes get CLOGGED) from the Drug Store to do this Procedure. Put 8-10 LARGE Organic Garlic Cloves in a Blender with 50% Apple Cider Vinegar (preferably Bragg's or Spectrum Naturals) and 50% Distilled Water. Dr. Richard Schulze says it's like NAPALM in your Rectum! Put this Solution in with the Rectal Syringe, but you have to get it in QUICKLY ALL at once, because once you get it in, you will want to EXPEL it right back OUT!

According to Dr. Schulze, "It's POWERFUL and it BURNS and really LIGHTS that Person UP! They will RUN to the Toilet, but it doesn't ALL come out. In about 2 minutes, the Burning and the Cramping go away. It's incredibly GROUNDING! It seems to break ANY Psychological ARMORING, that the Person may have! He/she will know IMMEDIATELY, that this is DEFINITELY something, that they have NEVER had in that Area of the Body BEFORE!"

STEP THREE: Get in a HOT Bath, which is as HOT as you can make it, without HURTING the Flesh! The Water is kept at it's HOTTEST for as LONG as the Patient can stand it! Before you enter the Tub, have your Helper place the following Herbs in the HOT Water, 1 oz. or more of Cayenne Pepper, 1 oz. or more of Ginger, and 1 oz. or more of dry Mustard. Get GOOD HIGH-POTENCY Mustard, since MOST of the American Mustard is quite WEAK! Then coat your Genitals with PLENTY of Vaseline (Editor's Note: VEGELATUM - Vegetable-based Substitute is preferable) for Protection, because Olive Oil ALONE can't do the Job! The Cayenne, Ginger, and Mustard, that you use in the "COLD SHEET" Treatment are NOT LOOSE in the Water, but are put in a VERY LARGE (made-up) Tea Bag.

If you put them in LOOSE, you'll plug up the Drain and create a REAL MESS!. So the BEST way to do it, if you don't have any Cloth, is to just cut a square out of an old T-shirt, put in a LEVEL Handful of about 1 oz. of Cayenne Pepper, 1 oz.of Ginger Root, and 1 oz. of Mustard Seed, preferably powdered, but use ANY form, that you can get them in. Put them into this piece of Square Cloth, tie it up with a piece of String, and just toss that in the VERY HOT Bath and then squeeze it, so that you ACTIVATE it MULTIPLE Times for about 10 minutes before getting into the HOT Bath. The Water will turn a Yellowy Orange, and it'll CHOKE you! The Fumes will CHOKE you somewhat, because there are VOLATILE Oils, that are coming out of the Cayenne. These HOT Herbs, that are now in the Water will HELP to induce an Artificial Fever known as HYPERTHERMIA.

To further ACCELERATE this Artificial Fever Process, drink HOT Herbal Tea, while you are in the Bath. According to Dr.Schulze, "For adults, the BEST bitter Diaphoretic (fever-inducing) Tea is Yarrow, which was what Dr. Christopher suggested."

I prefer Ginger instead, since it is a taste, that I and most People KNOW and LIKE!

Ginger really ACTIVATES the Digestive System, makes you SWEAT, and it's also readily AVAILABLE! I'm always looking for the Herbs, that really WORK and are EASY-to-get at your local Health Food Store. Yarrow's GREAT, but what if it's NOT available for whatever Reason and you've got an EMERGENCY Situation? You can ALMOST ALWAYS get Ginger, and if there isn't any FRESH Ginger Root in the Produce Department, then just go to the Spice Section and buy Ginger Powder. In fact, in the Spice Section, you can get the Cayenne, Mustard, and Ginger for the Bath and you can get the Ginger for the Herbal Tea. And if and when you have NO other choice in an EMERGENCY, then you'll have to go to the nearest Grocery Store for these Herbs!

NOTE: Dr. Schulze also uses Peppermint Tea or a combination of Ginger & Peppermint Tea.

You can even get minced, dehydrated Garlic Cloves, if you have NO other choice. Now you've got the Garlic for the Rectal Injection, and everything that you will need for the "COLD SHEET" Treatment, from the Grocery Store. Drink as many Cups of the Herbal Tea as you can get down, but the MINIMUM is 6!

If you get LIGHT-HEADED and you feel like FAINTING, have your Helper place a COLD Towel or Washcloth on your Forehead. Also, there are 2 Herbal Tinctures (Home-Made, American Botanical Pharmacy or Herb Pharm), that you should ALWAYS have on hand: CAYENNE and LOBELIA! CAYENNE PREVENTS People from fainting and LOBELIA STOPS FULL Body Spasms, that can occur SOMETIMES!

When you get to the Point, where you know, that you can't stand it 1 Minute MORE, your Helper should push you for about 5 MORE minutes! By then, you may be in TEARS and MOST People are!

STEP FOUR: Now, your Helper should HELP you out of the Tub, and then wrap you up in the "COLD SHEET"!. This is a Double bed-size, clean, White Cotton Sheet (NOT Synthetic Fabric), that has been soaking in a Bucket of 20 Pounds of ICE, so that this "COLD SHEET" is definitely ICE-COLD! You won't even NOTICE it though, because you're going to be in ANOTHER World! Besides that, this "COLD SHEET" will actually signal the Body to raise it's Temperature even HIGHER! The sides of the Sheet are then pinned, so that you can NOT throw it off. This "COLD SHEET" will now draw-out the POISONS and TOXINS, that have come to your Skin's Surface as a result of the HOT Bath!

STEP FIVE: Now, your Helper should put you into Bed. The Bed has been prepared by putting a Plastic or Rubber Sheet over the Mattress, then a Cotton, Wool, Linen, or Silk Sheet (ANY Material that BREATHES - NO Synthetics) is laid over that. Now, you can lie down, while wrapped in the "COLD SHEET" and another dry, Non-Synthetic Sheet is put over you and then you are covered with Non-Synthetic Blankets.

STEP SIX: Lastly, with your Feet uncovered, your Feet and Ankles are oiled with Olive Oil, a thick Paste of Vaseline [VEGELATUM (vegetable-based substitute) is preferable] is then applied and the Garlic Paste, that you made with Apple Cider Vinegar (preferably Bragg's or Spectrum Naturals) is applied to the Bottoms of your Feet to help get RID of ANY Infections in the System. Use 2-inch gauze or torn, White Cotton Strips as a Bandage to hold the Garlic Paste on the Sole of the Foot. White, Cotton or Wool Socks are placed over the bandaged Feet.

The Feet are RECOVERED with the "COLD SHEET". The bottom of this "COLD SHEET" is pinned, so you will be in a WET Sack. Then the DRY Sheets and Blankets are pulled over your Feet for WARMTH.

If you have to urinate, then just do it where you are, and do NOT take the "COLD SHEET" OFF!! The Urine won't HURT anything, and it's NOT worth being REWRAPPED in the "COLD SHEET" and then having the Garlic Paste REAPPLIED!

STEP SEVEN: You are now left in the Sheets OVERNIGHT and, by the Morning, the Sheets will have turned Multi-Colored from ALL of the POISONS and TOXINS, that have been drawn OUT of the body. Dr. Christopher said that sometimes the Sheets turn ALL Shades of Purple, Yellow, Black and Green. These are the different POISONS and TOXINS, that have been in the Person for Years - sometimes for the Person's WHOLE Life!

STEP EIGHT: In the Morning, you are SPONGED off with 1 Part each of WARM Apple Cider Vinegar (preferably Bragg's or Spectrum Naturals) and Distilled Water to get the remaining POISONS and TOXINS out of the Pores, and then you are put into CLEAN Clothes and sent back to Bed.

NOTE: You should ONLY be given Fruit and Vegetable Juices, Herbal Teas, and lots of Distilled Water to drink and Fruit to eat for 1-3 Days to provide a TOTAL Cleansing.

NOTE: KEEP REPEATING (up to 12 times) this Hydrotherapy Treatment EVERY 1-2 days until the DESIRED Results are achieved.

Children and Elderly People can do a modified WEAKER version of this Hydrotherapy Treatment.

Dr. Schulze says that he NEVER saw a Fever get OUT-Of-Control in or out of the "COLD SHEET" Treatment, just so long as the Person was drinking ENOUGH Liquids (6 cups -Ginger &/or Peppermint Tea), because if that Person DRYS up, it would be like a Radiator in a Car running dry, so then he/she must keep HYDRATED, so that there won't be a PROBLEM!

craig-oxley - September 13, 2008 05:22 PM (GMT)

Here are some additional notes to Cold Treatment discussed on tape/Disc 5 of the 3 Day Seminar, 1980. This is from Day 2 of the seminar.

NOTE: this may seem a dumb question, but since it was not addressed, I'm gonna ask it - what to do with the sheets afterwards? Should they be burned, put in the garbage, or can they be re-used? There are two sheets involved here: the one the patient is wrapped in "sack", and the other that is placed over top that once the patient is in bed and tucked in for the night. It seems logical that the "sack" sheet should be discarded afterwards... I can't imagine that all those toxins can be laundered out and the sheet put back in useable condition....but I don't know for sure. I do know that cotton sheets - even the cheap ones, are kind of expensive. Likewise for the top sheets - can they be re-used after being laundered, or should they be thrown out?

Part of the rationale behind the cold sheet treatment is taking advantage of the situation often present with a person who is already quite ill, in which they may well arleady have a natural fever. To quote Doc "especially for people who may be near death, the cold sheet will either cure them or kill them"... he was of course trying to make a valid point; really sick people may die no matter what you do, but he also said that he's had a lot of success revitalizing near-dead people using Cold Sheet treatment... he also said that in many cases, it requies a person being very ill, perhaps even near death for them to give the okay to have the Cold Sheet treatment. There is a flip side to this too; Doc warned about giving this treatment to a reluctant person "beware".

Specifically on the issue of building the fever, whether there is already a fever present, or whether one will be artificially created: Doc said in plain, blunt terms (paraphrased) "properly used, the patient's temperature can be made to go as high as humanly possible with no ill effects SO LONG AS there is moisture present; dry heat is the dessert, it is death, and this is why a high fever that is left dry can kill a person; moist heat is the Garden of Eden, it is life". Doc also explains that part of the plan here is to create a condition to incubate the germs / bacteria inside the person that is causing them to feel ill in the first place... "we want to give them the environment they need to rapidly reproduce....germs live on one thing - the waste inside your body... a germ cannot harm a healthy cell... but it can feast upon unhealthy ones, and this is what we want to encourage them to do...to gobble up all of the waste lying inside the patient's body". In retrospect, this may also be related to the phenom/effect that Shulze mentioned - Leukotaxix....the speed of movement of those White Blood Cells ....maybe that effect is hastened by the other effect...of giving the bacteria the environment they need to rapidly reproduce....?

Red Raspberry or Catnip are good for the cold enema, Catnip is preferable since it has an effect that causes the bowells to relax....yes, the cold water causes the anus to stay shut so the enema can be held, but the Catnip allows the bowells to relax and therefore release fecal matter. Eventually, the cold enema liquid will be warmed up by the insides

of the bowell, by that time the liquid will have loosened up impacted fecal matter that can then be expelled. As an aside, Catnip enema can also be used to save the life of somebody with "telescopia" of the bowells, or in plain terms, a blocked / collapsed bowell that prevents a person from eliminating fecal matter.

For the Garlic Injection, ideally a slant board is used, if one is not on hand, do whateve can be done to help eleveate the feet above the head while the person receives and holds in the Garlic Injection. Doc says that some people may do okay with the Garlic and not need to expell it right away...instead, they may not need to evacuate it at all and may instead have it all absorbed into the bowell whee it quickly gets into the blood and then travels all over the body quickly eliminating infections and bacteria. Either way, if the person can't hold it in, have them hold it in as long as they can before getting rid of it. ** The instructions for this recipe are - 1/2 pint of distilled water, 1/2 pint of ACV, put into a blender, then after blended a while, begin dropping in average size, peeled, Garlic cloves, about 6 or so, give or take. Note that this Garlic is separate from the Garlic to be made into a paste (with vaseline....petroleum jelley....or other similar lubricant....try to use a brand that does not contain all kinds of additives, perfumes, etc, just plain Patroleum Jelly will work).

** Doc gave a little test to demonstrate how quickly Garlic is absorbed into the body and then into the blood supply. Take a slice of raw garlic clove and place it on the floor. Have a person place their bare foot onto that and stand on it for 90 seconds. After 90 seconds, a second person should be able to smell the odor of garlic on this person's breath. This indicates how quickly it acts and gets into the blood system. Placing it into the bowell speeds up this absorption process!

While the patient is soaking in the hot tub DO NOT allow them any cold drinks, They can have as much hot Yarrow tea, or Cayenne, or Ginger, as they want (pick one and stick with it).

"every person has living inside, dormant, in their body, nearly every germ type that exists.....just waiting for the person to not behave themselves and give the germ a cause to rise to the surface ....could be Jungle Fever....Flu...Syphilis... it really all depends on 'where that person has been'... and the types of material they have taken into their body that shouldn't be there". Doc uses this statement to make the point that as the fever is being built, and the germs given a nice, warm, moist environment to rapidly reproduce in, this germ-reproduction will eventually reach a climax "either clearing or killing the person, depending on whether there is someone there to monitor them'... NOTE: I take this as a warning to not attempt this procedure alone. Doc also says that by the time the patient gts a little bit punchy (acting / talking giddy or goofy), "as most of them will", this indicates it is time to get them out of the tub.

- note that when pinning the person into the cold sheet "sack" leave them a little bit of wiggle room so that they will not fuss so much while sleeping... wiggle room will allow

them to turn over a bit while sleeping. When they come out of the tub, get them into the cold sheet as soon as possible, then get them into a prepared bed as soon as possible.

- also note, so long as the person stays inside their sack, so long as they do not throw off the sheets, there will probably be no problem with them needing to urinate. The internal fever/heat is still being generated at this point....it will actually serve to dry out the sheet during the course of the evening. If, however, the person does throw off the sheet during the night, as soon as the (relatively) cold air hits their abdomen, their bladder will immediately fill and they will want to urinate right away. It may not hurt to advise the person why they must resist the urge to throw off the sheets during the night. Part of the message seems to be, once they are tucked into bed, they are likey to sleep soundly through the night, but again, remember the warning about doing this procedure with a reluctant patient.

- the Garlic paste applied to the bottoms of the feet is a 50/50 paste made with Garlic and Vaseline / Petroleum or Vegelatum. This paste should be slathered on really good and heavy, only on the soles of the feet, which have previously been massaged with olive oil to protect the feet AND to help keep the garlic in suspension with the vaseline. IF the olive oil is not put on the feet (from the ankles, down the sides, to the soles), once the garlic paste is applied, the vaseline will absorb into the feet and leave the garlic their all alone to burn the feet. The olive oil helps to keep the vaseline in suspension.

- the next morning, after the person has been sponged off, they are likely to feel like a million bucks and will want to get up, go, go out and do something, solve the problems of the world, etc. After getting them cleaned and into a new change of bed clothes, put them back to bed and allow them some light things to eat (fruit, tea, etc). If possible, they should spend the day resting if not sleeping. This will allow them to contemplate how it was they got into their previous sorry state of ill health to begin with. Doc says that the worse their condition was before the cold sheet, the better they will feel afterwards. This procedure can be done on infants as well as the aged, but again "to do this with a reluctant person, BEWARE".

Somebody in the class asked about doing with a pregnant woman, Doc said bluntly "I don't know, I've never tried it, without some previous experience to go on I'd be reluctant to try it, but on the other hand, if the emergency is dire enough (like, double pneumonia) and if it is felt the mother is strong enough to pull through, this might be the only thing that saves her...but the real concern is whether or not the young baby is healthy enough to pull through this.... Doc stuck to his previous comment - I'm reluctant to do it, but I think this is something that perhaps some of you might need to try and get back to me to let me know how it turned out"

craig-oxley - September 13, 2008 05:25 PM (GMT)

Dr. John R. Christopher's
"Cold Sheet Treatment"

Excerpt taken from The Cold Sheet Treatment

by Dr. John R. ChristopherTo do this program properly, you should have at least two people. This treatment takes time, and is best to do in the evening so your patient can sleep through the night after the treatment. It is wise to make all your preparations before you proceed with the Cold Sheet Treatment.

Cold Sheet Treatment Preparations:

Iced Sheet
Take a large double sheet and soak in ice water.

Diaphoretic Tea
Prepare a gallon of diaphoretic tea. This can be any good sweating herb, preferably yarrow. But it can also be blessed thistle, chamomile, pleurisy root, boneset, thyme, Hyssop, garden sage, catnip, spearmint, or any other good, diaphoretic herb.
For one gallon:

1 cup of diaphoretic herb
1 gallon or 4 liters distilled water

Preparation: Pour boiling water over herbs, cover, allow to steep (not boil) in a warm place 30 minutes. Strain and sweeten with honey if desired. Keep warm until used.

Garlic Paste
To prepare a garlic paste for an adult, use 1 part garlic and 1 part petroleum jelly.

Reduce the amount of garlic for a child or small infant to 1 part garlic to 3 parts petroleum jelly. For an adult, you will want about 1 cup of paste.

Crush or finely grate peeled garlic cloves. Blend with an equal amount of petroleum jelly.

Hot Bath
Fill a hot tub of hot water. Add to the water, according to your tolerance, one or all of the following diaphoretic herbs, ginger being the most mild, then dry mustard, with cayenne as the most stimulant. Use 1 ounce of each herb.

Bed with Plastic
Prepare a bed by placing a rubber or plastic sheet over the mattress, with a cotton sheet over it. Have several natural blankets on hand, such as wool or cotton.

Enema
4 tablespoons catnip, sage, or red raspberry cut or powdered herb

1 quart distilled water

Preparation: Bring distilled water to a boil and pour over cut herb. Steep for 30 minutes. Strain the herb and set in refrigerator until tea is cool. Pour tea into enema bucket or bag. Lubricate the end of the enema hose to be inserted into the rectum.

Garlic Injection
1 cup apple cider vinegar
1 cup distilled water
3 or more cloves of garlic

Preparation: Combine vinegar and water. Grate, squeeze through garlic press, or puree in blender 3 cloves of garlic until finely crushed. Blend in water and vinegar mixture. Put mixture into syringe and check flow. If flow is loose, add additional crushed garlic. Continue adding as much garlic as you can, making sure the mixture flows from syringe without clogging.

Cold Sheet Treatment:

Step One: Cleansing Enema
Give the patient an enema using catnip, sage, red raspberry or some other herb, but preferably catnip. You will want to administer this enema cold.

Important Note: Do not use enemas except in the case of emergencies.

Step Two: Garlic Injection
In herbology an injection is never a needle; it is a syringe type application into an already existing orifice of the body, i.e. the rectum, ears, or nose. Insert the prepared injection into the rectum with a syringe. Use the full pint for an adult and less for a child. Have your patient retain the injection for as long as possible before voiding.

Step Three: Hydrotherapy
After the patient has voided the garlic injection, help him or her into a hot bath prepared with diaphoretic herbs. Have the water as hot as your patient can possibly tolerate. Cayenne, dry mustard, and ginger will increase the perspiring of the patient by opening the pores wide.

Step Four: Diaphoretic tea
Do not give cold drinks. Instead, give them cups of hot diaphoretic tea, such as yarrow or another type. You will want to stay with only one type of tea. Have your patient drink as much as possible. This will keep the patient from a dry fever. You should give them a cup to drink about every 10 to 15 minutes.

Your patient may get lightheaded and feel like fainting. If so, place a cold towel or washcloth on their forehead. Leave the patient in the hot bath as long as possible, at

least 45 minutes (may reduce for a small infant). You will know when to get a child out when perspiration starts to bead up on the face. At this point, give them 10 to 15 more minutes.

When your patient is ready to leave the tub, you will need to lift him or her out, as they will be unable to support themselves. Fainting can occur when you pull the patient out of the bath. Keep a cayenne tincture on hand in case your patient goes into shock.

Step Five: Cold Sheet Therapy
After you have helped the patient out of the bath, wrap the large double cotton sheet, dripping wet from being soaked in ice-cold water, around the standing patient. With just the head and the feet protruding, pin the sheet down the side. Help your patient into the prepared bed that has been covered with plastic and with a cotton sheet. Then place dry cotton sheet covers over the patient while they are still wrapped in the cold sheet. Add additional natural fiber blankets over the top of the sheet for warmth and to continue the sweating routine.

Step Six: Garlic Paste
With your patient lying down in bed, thoroughly massage their feet from the ankles down with olive oil. Allow as much of this oil to be absorbed into the skin as possible, covering the soles, sides, and entire foot area. After you have massaged each foot, prepare a strip of cotton that is wide enough to cover the bottom of the foot with ½ inch of the garlic paste. When this is done, place the strip of cotton with the past on the sole of the foot, then take a roll of two-inch gauze and gently wrap the foot to secure the strip of garlic to the foot. With this in place, gently pull over the foot and gauze bandage a large white cotton wool sock to hold everything in place.
Do not allow the paste to get up on the sides or on top of the foot. Put it only on the sole.

Put the bandaged feet back under the cold, wet sheet and pin the bottom of the sheet together so that the patient will be in a wet sack. You will want to use a large double sheet instead of small because it will allow your patient to roll or turn around without being too closely confined.

Step Seven: Sound Sleep
In most cases, your patient will sleep soundly all night in the cold sheet. You do not have to worry about them wanting to get up to urinate because of the large amount of tea they drank. While the body is in the cold, wet sheet, the subconscious mind will build an artificial fever to warm the body. From this incubation process, the patient's body will use the fluid from the ingested teas and accumulated moisture from their bath to warm the outside of their wet body. While this is being done the body breaks loose old toxins, drugs and medicines, mucus and poisons which have accumulated and carries them out of the body through the sweating process. Your patient will lie all night in a deep sleep, sweating out the poisons of their body.

When your patient wakes in the morning, they will be refreshed and invigorated from having such a thorough cleanse. The large, white sheet, which was wrapped around your patient, will no longer be wet. In addition, it should no longer be white. It will often be stained with toxic residue secreted out of the body during the night.

Step Eight: Sponge Bath
After your patient awakes out of the deep sleep, take them out of the bed and sponge them down thoroughly with a warm mixture of 1 part apple cider vinegar and 1 part distilled water. You will probably want 1 quart of solution, so use approximately 1 pint of each. This removes any remaining toxic residue from the outer layers of the skin. It is very important that you do not leave toxic residue on the skin.

Put fresh clothing on the patient and fresh bedding on the bed. Now you will want your patient to go back to be and relax for a while to regain their strength.

Step Nine: Juice Therapy
Your patient should by this time have a desire for something to drink or to eat. This is a critical moment for your patient; what they eat will either retain or cause them to lose their health. They may even have cravings from the past. They may desire a steak, a full meal, processed beverages, ice cream, or other junk food. Do not respond to these desires. Instead give your patient fresh fruit or vegetable juices (juices from Dr. N.W. Walker's Fresh Vegetable and Fruit Juices or Wheat Grass drink in School of Natural Healing, pp. 610-614), or bottled fresh grape juice, apple juice, etc, with no additives. Each mouthful of juice should be swished or chewed thoroughly to mix it with the saliva for good assimilation. In addition, chewing your juice will prevent an unpleasant sugar reaction if your patient is hypoglycemic or diabetic.

Do not mix the patients juices. If a different juice is desired, wait at least one half hour before using a different one. After a few hours, if your patient is very hungry, let them have a little ripe fresh fruit, but it must be chewed to a liquid before swallowing.

During the day it is good for your patient to have as much distilled water as desired and some good herb teas. It is best to keep your patient on juice therapy for one to two days to allow thorough cleansing of the digestive organs before going into the Mucusless diet.

Step Ten: Teaching Your Patient
After a bad siege of body malfunction, it is wise to instruct the patient why they were in this condition, and what to do from this point on to prevent a reoccurrence of the disease. Your patient may get immediate relief from the Cold Sheet Treatment, but if they do not change their health habits, they will not be able to retain their health.

View Full Version: Super Tonic Formula by Dr. Schulze

Title: Super Tonic Formula by Dr. Schulze

craig-oxley - September 13, 2008 05:18 PM (GMT)

Super Tonic Formula by Dr. Schulze

Therapeutic Action: This may be the FAMOUS Plague formula! My patients swore it was the CURE for the Common Cold and they were right!

The Basic Formula goes back to Medieval Europe and the Plagues. It is a Broad-Spectrum Antibiotic, destroying Gram-Positive and Gram-Negative Bacteria, a POTENT Antiviral and Antifungal! It will INCREASE Blood Circulation to EVERY Cell, and KILL ALL of the BAD Guys!

Formulas: FRESH ORGANIC JUICES of Horseradish Root, Garlic bulb, Onion Bulb, Ginger Root and Habanero Cayenne Peppers in a base of Raw Unfiltered Apple Cider Vinegar.

Dosage: 2-10 dropperfuls (70-350 drops) gargle and swallow. Use 1 to 5 times daily as needed.

craig-oxley - September 13, 2008 05:18 PM (GMT)

Super Garlic Immune

Formerly Anti-Plague FormulaUsages

1. This is a good formula to help with car, plane, or boat sickness; in fact, for most any motion sickness. It is also for nausea from pregnancy, etc.

2. Historically speaking this formula has been used to help clear up flu, earache, eruptive diseases, car-sickness, etc.

3. The best insurance in the world against the "predicted coming plagues" and "killing diseases" is to have the body in a good healthy condition. Disease germs are merely

scavengers and can only live on toxins, mucus and residue from junk foods. They cannot and will not be damage healthy cell structure. Therein lies the key! Have a healthy, clean body and disease germs will by-pass you--wanting nothing to do with your body, because it would be "obnoxiously clean" (in their language) and no filth for them to live on.

If the plague, or some other epidemic hits before you are in a good healthy condition, it is good to have an aid for a fast cleaning.

4. Nausea: Tendency to vomit, sickness of the stomach. Use the anti-nausea formula... You may also use the Super Garlic Immune formula.

Dosages

Dosage is as follows: 1 tsp. 3 times a day; or 1 tablespoon every 1/2 hour if infected.

Ingredients

Super Garlic Immune contains the following herbs.
Fresh garlic
apple cider vinegar
pure vegetable glycerine
U.S.P.
honey
garlic juice
fresh comfrey root
wormwood
lobelia
marshmallow root
oak bark
black walnut bark
mullein
skullcap
uva-ursi

This has also been called Four Thieves. The origin of the name "Four Thieves" is as follows. "It in Marseilles, a garlic-vinegar preparation known as the Four Thieves was credited with protecting many of the people when a plague struck that city. Some say that the preparation originated with four thieves who confessed that they used it with complete protection against the plague while they robbed the bodies of the dead. Others claim that a man named Richard Forthave developed and sold the preparation, and that the "medicine" was originally referred to as Forthave's. However, with the passing of time, his surname became corrupted to Four Thieves."

Testimonials

1. Garlic Wormwood Soup: From a letter to Dr. Christopher's newsletter. We have been making and giving the "Super Garlic Immune" remedy all last winter and spring, and I must say, I am amazed at its power! There hasn't been a case of acute respiratory or gastrointestinal illness that hasn't responded favorably, and quickly! It tastes like broth to me so I call it "garlic-wormwood soup". [NL 1-8]

2. Dr. Christopher's First Super Garlic Immune: (Ant-Plg) While lecturing in Snowflake, Arizona one night, one of the group asked if we had an Super Garlic Immune formula, and I was prompted to give them a "certain combination" of herbs to use.

The people there were very impressed to go right to work and prepare this liquid, having it read for use. We had told them that plagues come at unexpected times and it could be tomorrow or maybe even years away, but expect the unexpected and be ready now. If the formula was still unused, from "no need" years later, we could all be happy but "TIS BETTER SAFE THAN SORRY".

These good people made it up in gallon lots and had it on hand. Months later while speaking in Tucson, Arizona, someone asked for the "Super Garlic Immune remedy." I was surprised and asked where they had heard of it, as we had only given it out once. We were informed that a plague-like condition or flu had hit the Snowflake area and when other aids failed, this combination of herbs in liquid form performed its job with amazing speed.

At our next series of lectures in Snowflake, some time later, we heard one testimony after another about the many different types of ailments that were given quick relief by using this formula. The formula has now spread in many areas from coast to coast and is being used with good results. A man picked us up at an airport on the west coast a short time ago, and on the floor of his car was a bottle with liquid in it. When asked what it was he said, "oh, that's your Super Garlic Immune remedy, we never travel without it as it works good on about any sickness that comes up while we are traveling. We are also never without a bottle of it at home." [NL 2-9]

3. Dr. Christopher said that the tea of the leaves is a perfect remedy for colds and flu. He said to take no foods or other liquids but to drink large amounts of Red Raspberry leaf tea. His son, David, used this method when he came down with a cold and became well so fast that he and his wife went out to eat that night before the cold was completely cleared. His cold returned and so he decided to repeat the Red Raspberry treatment but it would not work the second time. He had to use the Super Garlic Immune formula which is somewhat nasty but effective. [UW-Red Raspberry]

Useful in Treating:

* Earaches
* Flu
* Motion Sickness
* Nausea

craig-oxley - September 13, 2008 05:19 PM (GMT)

Dr. John R. Christopher's
"Super Garlic Immune Formula"

Dr. John R. Christopher received the following formula while prayerfully seeking to answer a question posed to him during a lecture in Snowflake, AZ. The topic was on the plagues prophesied in the last days and the question was whether there was an herbal formula that could counter the plagues. Inspired with this formula, Dr. Christopher said to prepare gallons of it to assist family and neighbors. Three months after the lecture, Dr. Christopher received a phone call reporting that the Snowflake area was hit by a very hard flu that took the life of some children, but that this formula restored the health of all who used it.

Instructions for the Super Garlic Immune Formula:

Make a coarse blend of garlic in apple cider vinegar and store it in a dark, cool place for four days. Filter the blend in cotton, muslin cloth and squeeze out as much garlic juice as possible. **Ultimately you will use 8 parts of apple cider vinegar and 2 parts fresh garlic juice**, so use enough garlic to obtain your proportion and record the amount of vinegar used as part of its proportion and to calculate the amount of garlic juice expressed (2 to 3 pounds of garlic is a good range to use for one gallon of Super Garlic Immune). It takes approximately 1 pound of garlic to extract 8 oz. of juice.

Make a seventh power, distilled water decoction of each of the following herbs. Each herb should be prepared separately.

2 parts Comfrey root decoction
1 part Wormwood herb decoction
1 part Lobelia herb or seed decoction
1 part Marshmallow root decoction
1 part White Oak bark decoction
1 part Black Walnut bark or husk decoction
1 part Mullein leaf decoction
1 part Skullcap leaf decoction
1 part Uva-Ursi leaf, hydrangea, or gravel root decoction

If you consider one part of the formula to equal 4 ounces of solution you will produce approximately three and ¾ quarts of finished product. For one part herbs, according to

this ratio, soak 4 ounces of the herb for four hours or more in enough distilled water to cover it completely.

After soaking, add enough distilled water to bring the amount of solution to 16 ounces.

Simmer the herbal solution over very low heat in a covered pan for thirty minutes.

Strain the liquid into a clean pan and reduce the amount of liquid to ¼ (4 oz. for the one part herbs) by simmering uncovered over very low heat. Set each aside till all are prepared (refrigerate if not completed on the same day).

Warm to liquid state: 5 parts unfiltered, raw honey and 5 parts U.S.P. grade vegetable glycerine and the remainder of the vinegar and then add all your decoctions, mix well, let cool and store in dark bottles. Refrigerate for long term storage.

craig-oxley - September 13, 2008 05:19 PM (GMT)

Famous Four Thieves Vinegar

During the Dark Ages in Europe when plagues were rampant, those who ate garlic daily were not infected. The Famous Four Thieves garlic preparation was credited with saving many lives when a plague struck the city of Marseilles in 1722. This preparation is supposed to have originated with four thieves who plundered the dead bodies of plague victims while being protected the liberal use of aromatic garlic vinegar during the plague.

Recent research corroborates this protection.

Cod Liver Oil: The Number One Superfood

Written by Krispin Sullivan, CN
Saturday, June 29 2002 21:54
http://www.westonaprice.org/cod-liver-oil/...r-one-superfood

Several visitors to our website have noted inconsistencies in various statements about vitamin A, vitamin D and cod liver oil. These issues revolve around questions of dosage and safety. Please see Vitamin A, Vitamin D and Cod Liver Oil: Some Clarifications.

Doctor Price was right, as usual. Cod liver oil is very good for you, more than you ever knew. Research studies ranging from 1918-2001 give cod liver oil an A+ rating. This marvelous golden oil contains large amounts of elongated omega-3 fatty acids, preformed vitamin A and the sunlight vitamin D, essential nutrients that are hard to obtain in sufficient amounts in the modern diet. Samples may also naturally contain small amounts of the important bone- and blood-maintainer vitamin K.

There is hardly a disease in the books that does not respond well to treatment that includes cod liver oil, and not just infectious diseases but also chronic modern diseases like heart disease and cancer. Cod liver oil provides vitamin D that helps build strong bones in children and helps prevent osteoporosis in adults. The fatty acids in cod liver oil are also very important for the development of the brain and nervous system. "If you want to prevent learning disabilities in your children," said David Horrobin, distinguished medical and biochemical researcher, "feed them cod liver oil."

Cod liver oil contains more vitamin A and more vitamin D per unit weight than any other common food. One hundred grams of regular cod liver oil provides 100,000 IU of vitamin A, almost three times more than beef liver, the next richest source; and 10,000 IU vitamin D, almost four times more than lard, the next richest source. Of course, cod

liver oil is only consumed in small amounts, but even a tablespoon (about 15 grams) provides well over the recommended daily allowance for both nutrients.

In addition, cod liveroil contains 7 percent each of the elongated omega-3 fatty acids EPA and DHA. EPA is the precursor of important prostaglandins, localized tissue hormones that help the body deal with inflammation; and DHA is extremely important for the development and function of the brain and nervous system. So it's no surprise that in numerous studies cod liver oil has proven to be a powerhouse in fighting disease.
Good for What Ails You

Cod liver oil greatly improves heart function to prevent heart disease and to treat it even in advanced stages, after a heart attack and after heart surgery. Cod liver oil alters the linings of the arteries in such a way as to improve healing after damage. This is attributed to the omega-3 fatty acids but vitamin A, D and K all have important roles to play in facilitating mineral absorption, improving muscle function and supporting elasticity of the blood vessels. The inflammation-reducing prostaglandins made from EPA help mediate the inflammatory response in the arteries. In other studies the heart-protective effect was associated with changes in the muscle response to serotonin, increasing the heart's ability to "relax."1-15 In a study with rats, treatment with cod liver oil actually caused artery-blocking atheromas to become smaller and blood vessel diameter to enlarge.55 Weston Price noted that heart attack deaths increased during periods when the vitamin A content of the diet was low. Cod liver oil can provide vitamin A on a continuous basis throughout the year.

Many of the conditions addressed by cod liver oil are considered related under the title Syndrome X. These include obesity, hypertension, insulin resistance, adult onset diabetes and stroke. Evidence is accumulating that these diseases of civilization are the result of high levels of omega-6 fatty acids and low levels of omega-3 fatty acids along with deficiencies of fat-soluble vitamins. We may be paying a very high price for our rejection of parental wisdom to take our cod liver oil.

In numerous studies, the elongated omega-3 fats found in cod liver oil have been shown to improve brain function, memory, stress response, immune response, allergies, asthma, learning and behavioral disorders, including bipolar syndrome and manic-depression.

Cod liver oil is most famous for contributing to bone health, preventing and reversing rickets in children and osteomalacia in adults.16, 17 Before the discovery of cod liver oil as a source of vitamin D, many children suffered greatly with deformed bones. Osteoporosis responds to vitamin D and to cod liver oil. Sufficient elongated omega-3 oils found in cod liver oil are one of the keys to keeping and rebuilding bone.18, 19 In women, higher levels of vitamin D from cod liver oil improve bone mineral density.20

Two of the symptoms of low levels of vitamin D are bone pain and muscle pain. This

may manifest as pain in the legs, muscle weakness and difficulty climbing stairs. Numerous studies have shown improvement in muscle pain, muscle strength and bone pain scores with cod liver oil.40, 41

Cod liver oil is effective in treating arthritis as well. Researchers funded by Great Britain's Arthritis Research Campaign found that the elongated omega-3 fatty acids in cod liver oil reduce both pain and damage in inflamed joints.56

Pregnant women using cod liver oil have infants with a lower risk for juvenile type 1 diabetes.21 This effect was found only in mothers taking cod liver oil, not in mothers taking multivitamin supplements. Cod liver oil taken by nursing mothers improves the fatty acid profile in breast milk to promote optimal brain development and also increases levels of vitamin A to prevent infections. Interestingly, cod liver oil does not provide increased vitamin D in breast milk.23,24

Cod liver oil given to infants after birth and during the first year had no protective effect against type 1 diabetes but it nevertheless is an important source of nutrients for optimal infant health.22 In more than forty trials, vitamin A has been shown to reduce morbidity and mortality of children.25 Cod liver oil was the supplement of choice in many of these trials. Books on feeding infants published in the 1930s and 1940s routinely recommended cod liver oil, starting with 1 teaspoon at the age of three weeks. It was Dr. Spock who threw this wisdom out the window by recommending vaccinations instead of the powerful nutritional support of cod liver oil. Few modern books on infant care mention the importance of the fat-soluble nutrients in this wonderful superfood.

As for treating diabetes in adults, cod liver oil has been used in a number of trials with both insulin-dependent and non-insulin-dependent diabetes. In both conditions cod liver oil improved glucose response and other markers of the disease.26-31 Vitamin A in cod liver oil helps promote healing and protects the retina, both problem areas in the diabetic patient.

Cod liver oil has lowered blood pressure induced by stress-elevated levels of cortisol.32-35 Cod liver oil given to rats reduced intraocular pressure suggesting a use in prevention and treatment of glaucoma.36 Vitamin D in cod liver oil promotes absorption of calcium and magnesium, thereby lowering blood pressure.

Colitis responds more effectively to the type of omega-3 fatty acids in cod liver oil than to medication.37-38 Cod liver oil should be the first protocol for this condition as well as irritable bowel syndrome and Crohn's disease.

Topically applied, cod liver oil contributes to faster wound healing and improvement in skin quality.39 An excellent treatment for diaper rash and other skin conditions is cod liver oil mixed with zinc oxide. And cod liver oil taken orally helps maintain soft skin and minimize wrinkles.

And what about cancer? All the nutrients in cod liver oil help prevent cancer. Vitamin A has been part of every successful alternative cancer therapy so far. In a study in China, use of cod liver oil was found to be protective against childhood leukemia.57 In a study of Norwegian men and women, consumption of cod liver oil was found to protect against lung cancer.58
Practical Aspects

Eating fish will not provide the levels of nutrients that are found in cod liver oil. Even in heavy fish-eating populations, the addition of cod liver oil improves health.42-43 And taking fish oils is not the same as taking cod liver liver oil. One tablespoon of regular cod liver oil and one-half tablespoon of high-vitamin cod liver oil provide the amount of elongated omega-3 fatty acids found in twelve 1,000 mg fish oil capsules.

As for vitamin D, body oils of fish can be good sources as long as you are willing to eat a lot of them. One-half pound of fatty herring or sardines gives a dose of vitamin D equal to that of about one tablespoon of cod liver oil. But salmon oil has one-fifth the potency of cod liver oil.

One concern about taking cod liver oil is the presence of contaminants--heavy metals (such as mercury, cadmium and lead), PCBs and so forth. Fortunately, consumers need not worry when it comes to cod liver oil. All cod liver oils in the US must be tested according to protocols of the Association of Analytical Communities (AOAC) and approved free of detectable levels of 32 contaminants before they can be imported into this country. Furthermore, mercury is water soluble. It may be present in the flesh of fish, but it is not present in the oil.

Another concern is rancidity. Cod liver oil can become rancid if improperly handled. In a 1988 study, peroxide values (indicating rancidity) ranged from a low of 2 to a high of 44.7.44 Nevertheless, properly handled cod liver oil is relatively stable. It contains 21 percent saturated fatty acids and 57 percent monounsaturated fatty acids, which provide stability. The fishy smell of cod liver oil is due to the presence of small amounts of fish protein and is not a sign of rancidity. To ensure that your cod liver oil is fresh, avoid buying the large economy size or the end-of-season sale item. Buy cod liver oil in small dark bottles and keep them in a cool dark place. Cod liver oil need not be refrigerated after opening if it is used up quickly--within two months.

Virtually all cod liver oil imported into the US comes from Norway, and while all of it is safe, there are different grades, depending on vitamin levels. The lighter oil from the "top of the barrel" has a lower molecular weight, goes rancid more quickly and has lower levels of vitamins, while the heavier oil, which sinks, is richer in vitamins. The heavier oil is what Dr. Price referred to as high-vitamin cod liver oil. It contains double the amounts of vitamin A and D as regular cod liver oil. Virtually all cod liver oil imported into the US is the lighter, "top of the barrel" variety. The Norwegians keep the best for

themselves!

Whenever taking cod liver oil, remember the findings of Dr. Price. He noted that he did not get good results from cod liver oil unless he gave it concurrently with high-vitamin butter. Just why this is so is a matter of speculation, but we do know that the very unsaturated fatty acids found in cod liver oil cannot be effectively assimilated and stored in the tissues without the presence of adequate saturated fatty acids, the kind that would be provided by butter. This means that even regular butter would help support cod liver oil therapy; but Price found that the combination of cod liver oil with high-vitamin butter, from cows eating rapidly growing green grass, was nothing short of miraculous, reversing tooth decay and bringing patients back from the brink of death.

I do not find it hard to take Carlson's cod liver oil on a spoon, but for many, the big challenge is how to get this oily substance down. One technique is to add cod liver oil to a small amount of water or fresh juice, stir and then quickly send it down the hatch. If you can't bring yourself to take cod liver oil on a spoon or in water, then use the capsules. For babies and small children, use an eye dropper.
Old Research Brought to Light

In researching this article, I had the great fortune to stumble upon a book published in the 1930s--it is truly exciting to come upon material found and lost and found again. Ultraviolet Light and Vitamin D in Nutrition, by Katharine Blunt and Ruth Cowan, published by the University of Chicago, contains fascinating material, including a chapter on the research of Mrs. May Mellanby published in 1918 in The Lancet II, page 767.

The book describes the work of scientists E. M. Honeywell, A. F. Hess and C. E. Bills (after which the Bills's Scale for determining antirachitic value for vitamin D is named) who studied all aspects of fish oil potency, production and seasonal distribution. Early in their research they discovered that oil extracted from cod when the fish were fat in the summer contained much lower amounts of vitamin D. Summer oil scored 100 on the Bills scale but winter oil scored above 1,000 and some oils scored 20,000. Their conclusion: "For a fish of a given size, antirachitic potency varies inversely with the amount of fat or oil in the liver." In other words, the less oil in the fish, the more concentrated it was.

In one fascinating study, they found that fish kept in darkened aquariums and fed on trimmed raw veal muscle had the same amount of vitamin D as free-swimming fish exposed to sunlight. So how the fish obtain vitamin D remains a mystery. Perhaps they are able to extract it from microscopic plankton and algae.

It is important to note that the amount of vitamin A in cod liver oil does not have any consistent relation with the amount of vitamin D. In numerous samples, oils rich in vitamin A were poor in vitamin D, and oils rich in vitamin D were poor in vitamin A.

According to the book, in 1922 the US imported about 1.8 million gallons of cod oil and cod liver oil. By 1927 this amount grew to almost 5 million gallons based on data from the Bureau of Foreign and Domestic Commerce of the United States Department of Commerce. Cod oil is rancid oil used in the tanning industry, not for human consumption. The figures don't distinguish the difference, but most of the increase was in the edible cod liver oil due to research showing its benefit in preventing rickets. According to the Commerce Yearbook of 1928, "Medicinal oil production has increased greatly, and the advance in its price has lessened the supply of common cod oil for tanning."

In 2000, America imported only about one tenth that amount (less than half a million gallons), indicating a huge decline in use.

In 1930, when the book was compiled, the technology was just being developed to determine vitamin D potency. The accepted value as of August 31, 1929 was " one rat unit of vitamin D," defined as "that amount of vitamin D which, when uniformly distributed into the standard vitamin D deficient diet-ration, will produce a narrow and continuous line of calcium deposits on the metaphyses of the distal end of the radii and ulnae of standard rachitic rats." "Potent cod liver oil" is defined as that containing one of these rat units per 0.75 mg. The International Units started out as rat units!

Testing of 18 oils in use at that time showed great variations in potency. Luckily today we have methods of standardization and much better methods of transportation and storage to improve the amount of vitamin D and freshness of our cod liver oil.
Eat Your Eggs

In 1929, researchers tested a variety of foods for vitamin D content and found the second most potent source of vitamin D was egg yolk. The book describes studies in which Hess both cured and prevented rickets in rats by giving them egg yolks. He also gave prophylactic treatment to 12 infants to forestall development of rickets in the winter months, which his experience had taught him to expect in the great majority of bottle-fed infants. He gave them one egg yolk added to their regular formula starting in December. None of the 12 developed rickets in March as expected and, unlike prior years, blood phosphates remained stable at summer values.

About this same time, Johns Hopkins University investigators cured seven African-American children of rickets, in most cases severe, by adding one or two eggs daily to their diet of milk and cereal.

Like the vitamin D in cod liver oil, the amount of vitamin D in egg yolks also varies. Researchers in Kansas looked at four groups of hens: one group got sunlight in the yard plus 30 minutes under a quartz mercury vapor lamp producing UV-B light; another got sunlight through glass plus 30 minutes under the lamp; the third group got sunlight

alone; and the fourth group got sunlight under glass alone. Eggs from hens under glass produced rickets in rats. Those with considerable UV-B prevented rickets completely and those with less (no lamp) caused the development of slight rickets. Only the sunlight plus lamp completely prevented rickets, showing that the natural UV-B in Kansas did not provide sufficient light for optimal vitamin D. Giving cod liver oil to the chickens had the same effect as exposure to UV-B light. Cod liver oil as two percent of the ration increased levels of vitamin D in the egg yolks fivefold.

The surprising conclusion is that chickens should either be given sunlamp treatment or cod liver oil. Poultrymen and consumers alike need to recognize that the axiom "an egg is an egg" is a mistaken one. Rather, "an inadequate ration may yield impoverished eggs as well as animals." The authors suggest that eggs be graded by vitamin content. What a concept! Too bad no one listened. What would they think of our so-called "organic" eggs from hens raised in barns, never exposed to light and given "all-vegetarian" feed?
Meet Mrs. Mellanby

The most fascinating part of this little book is the chapter describing the experiments done in England by a Mrs. May Mellanby. Her husband, Dr. E. Mellanby, was the author of over 400 studies and the first to control rickets with diet. Cod liver oil had been used for centuries as a remedy but the specific application to rickets was first demonstrated by Dr. Mellanby. (Control of rickets using UV-B light was demonstrated almost simultaneously by investigators at Columbia and Johns Hopkins University in 1921.) In his research into rickets in dogs, he discovered the mineral-blocking effect of phytic acid in grains and legumes. Dr. Mellanby demonstrated that diets containing high levels of cereals, especially oatmeal, and lacking vitamin D, are the most effective producers of rickets. If vitamin D is inadequate there is poor tooth development, but Mrs. Mellanby then went on to prove that no matter how much cereal is fed, if vitamin D is adequate tooth formation is normal. Mrs. Mellanby believed that as cereals increase in the diet, vitamin D must also be increased to offset their anticalcifying effects--think of the implications of this research on today's baby-feeding habits, where infants are given cereals as their first food but denied egg yolks until they are one year old!

Mrs. Mellanby also determined that vitamin D must be present from conception in order for proper tooth formation to occur. If vitamin D is absent during the early gestational period, the enamel cannot form properly, and it cannot be repaired by giving vitamin D later.

In her initial studies Mrs. Mellanby used dogs as the source of data but she later examined more than one thousand "baby" teeth from children. She divided these teeth into four categories--normal, hypoplastic (slightly underdeveloped), moderately underdeveloped and grossly underdeveloped. Only 149, or about 14 percent, of the total 1,036 were sound. About one-quarter were slightly underdeveloped, but nearly two-thirds were moderately or grossly underdeveloped.

It is more difficult to examine teeth in place, but of 266 adult teeth examined by Mrs. Mellanby, not one was sound. The teeth were extracted only for purposes of straightening the teeth, which means that they were erupting in a jaw that was underdeveloped. Thus, children with narrow faces most likely have underdeveloped teeth. Tooth structure and later decay are directly related. Prevention of cavities must start in the womb.

Curing Cavities

A final plum from this most fruitful book regards secondary dentine. Secondary dentine, a less well-organized form of tubular dentine, is produced throughout life as a patching material where cavities have begun, where the overlying enamel has been worn away, and within the pulp chamber as part of the aging process. Sometimes when cavities occur, production of secondary dentine can "heal" the decayed spot or rebuild portions of the tooth that have worn away. If vitamin D is adequate, secondary dentine will be well calcified. If vitamin D is lacking, dentine will be of poor quality or not present at all.

There is some evidence that the mineralization of dentine may depend on calcium derived from saliva rather than blood; in other words, it is deposited from the exterior rather than the interior of the tooth. The book describes studies by Dr. C. L. Pattison who, working with Mrs. Mellanby, determined that the calcium content of saliva doubled or even tripled when the diet contained adequate vitamin D from cod liver oil.

Downside

Now that I have told you all this good news about cod liver oil, I need to comment on the research surrounding its possible toxicity. Over-elevated serum levels of vitamin D are a possibility if you combine summer or southern sun and cod liver oil. So if you are spending a lot of time out in the sun during the summer months, it's probably best to cut back on the dose. If you are unsure, you should test your blood levels of vitamin D.

Cod liver oil is no longer recommended in Great Britain and in the US pregnant women are advised to avoid most vitamin A and vitamin A-containing foods, including cod liver oil. Both countries have adopted this policy because of the recognized teratogenicity (may cause birth defects) of retinoic acid, a synthetic form of vitamin A. But low vitamin A also causes birth defects. In the developing countries, such as Brazil, Pakistan and India, vitamin A deficiency is widespread, afflicting millions. A 1992 survey of the US population determined that 50 percent of Americans consume 19 percent or less of the Recommended Daily Allowance (RDA) or 400 IU.

The original study showing birth defects associated with intake of mostly synthetic vitamin A exceeding 5,000 IU daily was published November 23, 1995 in the New England Journal of Medicine.46 Other studies showing an association of birth defects with vitamin A concerned topical creams containing vitamin A derivatives such as Accutane, or extremely high doses of A used in animal studies.47-52

A later study, less well publicized, from the National Institute of Child Health and Human Development (NICHD), found no association with birth defects in women who took up to 10,000 IU of vitamin A during pregnancy. Because few women took more than 10,000 IU, researchers could not determine whether higher doses were a problem. Later Mills and others continued their research and determined that after serum testing and determining safe serum levels, women taking 30,000 IU of preformed vitamin A from animal foods (not beta-carotene) daily had the same blood levels of A as healthy pregnant women in the first trimester who had healthy babies. The conclusion is that a dosage over 30,000 IU vitamin A daily may be teratogenic for a certain few, but anything up to that amount is safe.53-54

Thus if you are or may become pregnant, limit cod liver oil intake to not more than a total vitamin A value of 30,000 IU. If using my favorite brand, Carlson Labs cod liver oil, that would equal the amount of vitamin A found in 12 teaspoons or 4 tablespoons, more than anyone would ever take. If using high-vitamin cod liver oil, the limit would be 2 tablespoons. Two tablespoons of regular cod liver oil provide 15,000 IU vitamin A, 2600 IU vitamin D and 6 grams of mixed omega-3 fatty acids, safe for pregnancy and good for mom and baby.

There is one situation in which high levels of vitamin A are not recommended and that is the condition of certain types of liver disease in which there is altered vitamin A metabolism. This is frequently the case with alcoholism. Alcoholics should not take high doses (not more than 1-1.5 tablespoons of regular cod liver oil) and what they do take should be accompanied by zinc supplements. The enzymes needed for vitamin A metabolism in the liver are zinc dependent.

The most likely culprits for production of birth defects in humans are topical and oral vitamin A analogs, not cod liver oil. Researchers have criticized the original 1995 study, from which governmental policy has been derived, for overstating the negative effect. Only 1.4 percent took supplements exceeding 10,000 IU a day, not a large enough sample from which to draw conclusions. However, it is important to never combine cod liver oil or vitamin A from supplements with oral or topical medications for acne or other skin disorders treated with retinoic acid derivatives.

If you sunbathe regularly and have found that your vitamin D levels are within the normal range, do not use cod liver oil unless you are willing to test and retest to determine that your blood levels of vitamin D have not gone too high. We do not know enough to say whether or not sunbathing and cod liver oil work synergistically or antagonistically. If you decide to get lots of sun and also use cod liver oil, please send me your vitamin D tests for my continued research. Cod liver oil use is safe in most of the US and all of Canada in winter but it should not be combined with other sources of vitamin D without careful testing and monitoring.
Price Was Right

Dr. Price was right. . . we all need to take cod liver oil (and eat plenty of good butter). For growing children, and for almost every disease condition, cod liver oil is the number one superfood, the supplement of choice.

For Vitamin D testing and monitoring information, send for the Sunlight and Vitamin D protocol from www.sunlightandvitamind.com or send $38.50 to K. Sullivan, PO Box 961, Woodacre, CA 94973. You can wait until May 2002 for the publication of Naked at Noon--The Importance of Sunlight and Vitamin D, which will contain the sunlight and vitamin D protocols in greater detail. We are also working with DiagnosTechs laboratory to develop a saliva test for vitamin D, calcium and vitamin K. Since these are the factors regulating teeth and bone it will be an easy way to diagnose and to monitor treatment. Stay tuned.

Note: High-vitamin cod liver oil is available from Radiant Life (888) 593-8333, www. radiantlifecatalog.com.

SIDEBAR ARTICLES
What If We Run Out of Cod Liver Oil?

Cod liver oil is not the only rich source of vitamins A and D. In 1926 Hess and Weinstock determined that puffer fish liver oil was 15 times more potent than cod liver oil in vitamin D, or what was then called antirachitic factor. On the rating scale with cod liver oil as 100, puffer liver oil posted 1500. (Haddock liver oil posted a lowly 10.)

The best cod liver oil replacement for Americans is the burbot or Lota lota, a fish found extensively in most of the Great Lakes. The burbot was not typically consumed as a food in the US, but burbot liver oil was found to be eight times as active as cod liver oil, scoring 800 on the antirachitic Bills scale.

Commonly called "lawyers" in the Great Lakes region, the burbot is a mottled olive-green fish weighing 1-3 pounds and measuring 15-22 inches. These elongated, cylindrical, freshwater codfish inhabit most waters of Alaska, Canada and northern United States as well as corresponding latitudes of Eurasia. Despite the burbot's homely form, its meat is palatable and nutritious and considered a delicacy in Scandinavia.

Early Great Lakes fishermen derided the burbot as trash fish. In the middle of the 20th century, the Great Lakes burbot populations declined under the onslaught of the sea lamprey. Today, however, burbot are returning to the lakes in increasing numbers. Burbot spawn under the midwinter ice, usually in one to four feet of water, though sometimes deeper. By midsummer, they move out to the cool depths of the lake, where they roam the open waters with lake trout, lake whitefish and other deepwater fish.

Many knowledgeable fishermen savor burbot. When boiled and buttered, the sweet flavor of burbot has earned it the title of "poor man's lobster." Though they continue to have an undeserved reputation as "trash fish," the commercial harvest of burbot from Green Bay and northern Lake Michigan increased nearly fivefold during the early 1980s to a total of nearly 100,000 pounds annually. Perhaps it's time to look into the burbot as a commercial source of high-vitamin oil. Of course it will be important to test the oil for the presence of heavy metals and pesticides. Development of a domestic source of high-vitamin fish liver oil provides additional incentive to clean up the Great Lakes!
Dosages and Dangers

If pregnant or pregnancy is possible, limit cod liver oil intake to not more than 30,000 IU A per day. Two tablespoons of regular cod liver oil, one tablespoon high-vitamin cod liver oil is a dose that is safe and adequate for pregnant women and, in fact, all adults. There is no indication that anyone needs a dose of cod liver oil exceeding two tablespoons except in certain special circumstances. More is not better.

Infants and growing children can tolerate higher-per-pound doses of vitamin D and cod liver oil. Recommended dosages are as follows: one teaspoon from birth to six months, two teaspoons from six months to three years, one tablespoon from 4-10 years and two tablespoons thereafter during winter months or when not sunning.

Never combine sources of vitamin A. Vitamin A and its derivatives are found in skin lotions and creams, oral medications and vitamin supplements. The 30,000 IU limit is from all sources.

If you sun regularly and spend winter months in the South, you need to find another way to get elongated fatty acids (such as organ meats). You really do not want too much vitamin D. High doses of cod liver oil are used to promote atherosclerosis in animal studies. Too much D is too much D.

When using a UV-B meter and sunning to raise vitamin D, you will need the Vitamin D and Sunlight protocol. Cod liver oil can be reduced or eliminated depending on your location and exposure times.

Cod liver oil mixed with zinc oxide is better for the skin than any of the prescription medications, and safer.

Cod Liver Oil Manufacturing

Written by David Wetzel
Tuesday, February 28 2006 21:58
http://www.westonaprice.org/cod-liver-oil/...o-manufacturing

How Our Most Important Dietary Supplement Is Produced

When I began my quest to market cod liver oil, the biggest hurdle I had to overcome involved the myths and inaccuracies that are discussed in the market place. After 18 months of research, I was comfortable placing my first order.

Eighteen months after making that first order it became apparent that to do justice to my efforts and to my customers, I needed to do a close-up, first hand study of the industry, including the harvesting and processing of raw materials and the various processing techniques to extract and purify the oil. I needed a full and unabridged understanding.

I have interviewed manufacturers, laboratories, fisheries, fish meal plants, fish farms and many fish oil mills throughout the world. The final phase of my work included a careful study of the facts to select a region of the world that offered the largest and most

modern fish oil industry and then a personal visit and inspection of the various enterprises.

The culmination of my research was two weeks spent in Iceland and Norway visiting six different mills, a cod fish farm, fishing boats and a slaughter house.
Cod Liver Oil by the Glass?

The Arctic explorer and anthropologist William Stefansson reports in his book Not By Bread Alone that "There are European districts where certain oils are drunk in limited quantities. For instance, Scandinavian fishermen often have a belief in the nearly magical value of cod or halibut liver oil, and some of them will toss off, most likely in the morning, the equivalent of a wineglassful." Among the Eskimos, however, "Nobody drinks large swigs of oil."

But the Eskimos did use seal oil in prodigious amounts. According to Dr. Price, "Seal oil provides a very important
part of their nutrition. As each piece of fish is broken off, it is dipped in seal oil." He noted that the Eskimos preserve foods like berries and sorrell grass in seal oil. "I obtained some seal oil from them and brought it to my laboratory for analyzing for its vitamin content. It proved to be one of the richest foods in vitamin A that I have found."
Meet Mr. Cod

The cod family (Gadus sp.) is one of the largest and most successful families of fish, found in all oceans of the world. There are more than 90 species of cod, of which 40 are commercially available as oils.

Even in the same waters, different species of the Gadus family can have great a variation in fatty acid profile and vitamin A and D content. In Norway, the species that produce the greatest concentrations of A and D are Gadus virens and Gadus pollachius. Their oils contain as much as to 5000 IU vitamin A and 500 IU vitamin D per gram. (That’s 25,000 IU vitamin A and 2500 IU vitamin D per teaspoon!).These two varieties are common in waters off the Shetland Islands. At the other extreme is Gadus gadiculus thori, which produces 500 IU vitamin A and 50 IU vitamin D per gram of oil--just one-tenth as much. This species is found close to the shores of Norway.

Cod also grows in fresh waters. The Great Lakes are host to a species of fresh water cod called burbot or "lawyers," which tests carried out during the 1940s indicated to be a very rich source of vitamin D. Unfortunately, the Great Lakes fresh water cod has received little interest since then, and most recreational fishermen consider the burbot a nuisance fish.

The great difference in levels of fat-soluble vitamins is due principally to differences in enzymatic liver activity in the various cod species. Within the same species, feed, age and location will account for additional variations in the nutrient profiles of the oil.

Cod liver oil provides not only vitamins A and D, but also valuable fatty acids eicosapentaenoic acid (EPA) and docosahexaenoic acid (DHA). As with vitamins A and D, levels of EPA and DHA vary according to the species and the temperature of the waters in which they dwell. For example, Gadus morua from the Atlantic typically provides oil containing 8 percent EPA and 12 percent DHA while the same species in the Baltic Sea provides 9 percent EPA and 20 percent DHA. Another species, Gadus merluccius, typically has 17 percent EPA and 10 percent DHA.
The Changing Market for Cod Liver Oil

Today, standards set by the United States Pharmacopeial Convention limit the level of A and D in cod liver oil to 2500 IU and 250 IU per gram respectively. EPA must fall in the range of 7-16 percent, and DHA in the range of 6-18 percent. One mill described this narrowing of definitions as a restriction on the market and opportunities, resulting in a tightening up of the market supply, as it excludes some species of cod that fall outside the EPA and DHA range of the specification. Many of the cod that fall outside the EPA and DHA guidelines are the species with higher vitamin liver oils. Two other market forces are likely to have an effect on the price and availability of good cod liver oil. One is the increasing demand and profitability of supplying fresh cod livers to the Eastern European market. These folks still understand the value of cod liver, and as their prosperity grows, so will their consumption of this nutrient-dense food.

The other force that is likely to cause fundamental changes in the cod liver oil market is the growing emphasis on ultra-clean fish oils along with a focus on fatty acids rather than natural high-vitamin content.
Cod Farming?

In my opinion, farmed cod is a long-term supply possibility as it is possible to farm the cod in a way that could reduce the risk of liver contamination through controlled feed. Furthermore, farmed cod is very different from most farmed fish in that a low 14 percent protein diet is preferred, thus limiting or eliminating the need for soy meal. Currently, limited cod fish farming takes place in the north Atlantic--my guess is that today less than 5 percent of the livers used for cod liver oil are from farmed cod--but fresh water cod could also be farmed in lakes and ponds throughout the world.

Most of the food for the cod is fish meal and oil and if the fish farm has incentives, careful selection of clean food can and is being used. The end result could be a cod that has limited exposure to most contaminants and an increase in the availability of good clean cod and cod livers.

The reason cod fish farms use a low-protein diet is because a high-protein diet produces cod with very large livers. The livers are a by-product and the fish farmer’s efforts are focussed on growing the meat. A cod’s liver typically is 10-13 percent percent of the total fish weight. The liver oil is about 50 percent of the weight of the liver.

One cod weighing 5 kilograms (about 11 pounds) renders about 8 ounces of cod liver oil.

Cod fish farming may become more and more necessary because of increasing pressure to limit the number of cod caught. Much of this pressure is coming from the European Union and environmental activist organizations such as Green Peace. These groups view farmed cod as an environmentally friendly way to satisfy the growing demand for cod liver oil.
Traditional Cod Liver Oil Preparation

A description of traditional cod liver oil processing is provided by F. Peckel Möller in an article entitled "Cod-Liver Oil and Chemistry," published in London, 1895. "The primitive method. . . is as follows. As soon as the fishermen reach the Voer [pier], and finish separating the livers and roes, they sell the fish and carry the livers and roes up to their dwellings. In front of these are ranged a number of empty barrels into which the livers and roes are placed, separately of course. The fishermen do not trouble to separate the gall-bladder from the liver, but simply stow away the proceeds of each day's fishing, and repeat the process every time they return from the sea, until a barrel is full, when it is headed up and a fresh one commenced. This is continued up to the end of the season, when the men return home, taking with them the barrels that they have filled. The first of these, it may be noted, date from January, and the last from the beginning of April, and as on their arrival at their homes the fishermen have many things to arrange and settle, they seldom find time to open their liver barrels before the month of May. By this time the livers are, of course, in an advanced state of putrefaction. The process of disintegration results in the bursting of the walls of the hepatic cells and the escape of a certain proportion of the oil. This rises to the top, and is drawn off.

"Provided that not more than two or three weeks have elapsed from the closing of the barrel . . . to its being opened, and if during that time the weather has not been too mild, the oil is of a light yellow colour, and is termed raw medicinal oil. As may be supposed, however, very little oil of this quality is obtained. Indeed, as a rule there is so little of it that the fishermen do not take the trouble to collect it separately. Nearly all the barrels yield an oil of a more or less deep yellow to brownish colour: this is drawn off, and the livers are left to undergo further putrefacton. When a sufficient quantity of oil has again risen to the surface, the skimming is repeated, and this process is continued until the oil becomes a certain shade of brown. The product collected up to this point is known as pale oil. . . . By this time the month of June has generally been reached, and with the warmer weather the putrefaction is considerably accelerated, and the oil now drawn off is of a dark brown colour, and is collected by itself. It is rather misleadingly called light brown oil. . . When no more can be squeezed out, the remainder is thrown into an iron caldron and heated over an open fire. By this process, the last rests of oil are extracted from the hepatic tissues, which float about in the oil like hard resinous masses. . . . In order to fully carry out the extraction, it is necessary to raise the temperature considerably above the boiling point of water. . . . The oil prepared in this way is very

dark, almost black, and with a greenish fluorescence in reflected light. In thin layers and by transmitted light it shows a brown colour, and it is therefore termed brown oil. . . "

The writer then describes processing methods introduced to Norway in the 1850s by Peter Möller, which resulted in a much purer, consistently light-colored oil made from fresh, not putrefied livers, considerably more palatable in terms of taste and smell. He notes, however, that the "brown oils are actually used to a certain extent for medicinal purposes at the present day." Perhaps the dark brown oils contained, in addition to vitamins A and D, vitamin B12 and other nutrients from the hepatic tissues.
Manufacturing

On my recent trip, I visited six cod liver oil mills in Iceland and Norway. Each mill was no older than two years and they all had identical protocols, plant layout and equipment.

I learned that there are five steps to the refining
process:
Alkali refining, which removes free fatty acids and some metals (I view this is as a type of chelation operation.)
Bleaching, which removes color substances, metals and dioxins. This is a chelation-type of process that uses clay or other natural earth absorbents.
Winterization, which removes sterins (saturated fats). This is a cold press or filter type of operation.
Deodorization, which removes pesticides, PCBs, most of vitamin D and quite a bit of the vitamin A.
Add vitamins (either natural or synthetic) to meet standards or the requirements of the retailers.

Each of the first three stages removes some vitamins but it is the deodorization step that takes out the most. This is why processors then add the vitamins back in. The shocking discovery I made is that usually the vitamins added are synthetic--retinol palmitate and vitamin D3 made by irradiating lanolin with ultra-violet light.

All but one of the mills I visited adds back synthetic vitamins. The mill that adds natural vitamins takes the time to collect the vitamins from the oil and clean the oil of contaminants, then add the natural vitamins back into the final product. This is an old technology, with a few proprietary twists, which used to be common. The industry views this process as cost prohibitive in today’s market place and the risk is that it will be phased out completely. My hope is that as demand for high-vitamin cod liver oil containing only natural vitamin A and D increases, more manufacturers will use this technology.

Thus, the cod liver oils on the market today fall into one of four categories:
Fully cleaned and deodorized with nothing added back in. These oils have a reduced vitamin A content and virtually no vitamin D. This type of cod liver oil might be

appropriate for life guards and others who spend a lot of time in the sun, and who want the benefits of vitamin
A, EPA and DHA without overdosing on vitamin D. But since vitamin D works synergetically with vitamin A, this would not be a good choice for most of us.
Non-deodorized with a fair amount of natural
vitamin A and D left. According to the company website, Garden of Life cod liver oil falls in this category. It contains 500-1500 IU vitamin A per gram (2500-7500 IU per teaspoon) and 100-175 IU vitamin D per gram (500-875 IU per teaspoon).
Fully cleaned and deodorized cod liver oil with synthetic vitamins added back in. Most of the cod liver oils on the market fall into this category. (You'll need to check with the individual manufacturer to verify whether their cod liver oil falls in this category.) These vary in dose from about 1100 to 4600 IU vitamin A per teaspoon and 180 to 460 IU vitamin D per teaspoon.
Fully cleaned and deodorized, with natural vitamins added back in, standardized at 2340 IU vitamin A per gram (11,700 IU per teaspoon) and 234 IU vitamin D (1170 IU per teaspoon). This is the type of cod liver oil sold as Blue Ice and by Radiant Life and Dr. Ron's UltraPure.
Deodorization

The deodorization step is a new technology and replaces molecular distillation that many mills formerly used to fully clean the oil.

In molecular distillation, the oil is heated under a vacuum to about 190oC by direct heat on a hot surface. The volatile compounds are distilled from the oil.

The newer deodorization process heats the oil to 170-180oC by flushing steam through it. The steam removes the volatile compounds and carries them out. As the heat is indirect and the temperature lower than distillation, there is less likelihood of damage to the polyunsaturated fatty acids. The new deodorization process is more efficient in removing compounds that impart flavor and odor to the oil--which is why the process is called "deodorization." This, according to the industry, is a real advantage because "the oil is of better sensoric quality than before."

To summarize, the benefits of deodorizing (compared to molecular distillation) include a lower peroxide value, better flavor and odor, and a cleaner product. The disadvantages include a much lower natural vitamin A content and virtually no vitamin D.
Is Ultra-Clean Really Necessary?

But are either deodorization or molecular distillation necessary? The industry says yes. According to the owners of one mill I visited: "We have done some tests on non-deodorized CLO and have observed . . . . dioxin-like PCB's at a concentration of 6-8 picograms TE [WHO designation of Toxic Equivalent] per gram and some pesticides are also observed."

However, during my studies, I talked to two fish oil scientists and one marine biologist who questioned the necessity for ultra-clean oils. They did not want to go on record but this is what they said in a nut shell: There have been metals,dioxins and PCBs in fish livers and our environment since the beginning of time. And while there may be a difference between man-made contaminants and naturally occurring contaminants, there are just as many or more contaminants in tomatoes and strawberries than in most fish oils. Left unsaid was the fact that vitamin A in cod liver oil protects against dioxins and pesticides (see page 32). Much of this protective nutrient is removed in the process of making the oil ultra-clean.

They also believed that concerns for mercury content in cod liver oil were misplaced, explaining
that mercury has always been in the sea. The red color in plankton is methyl mercury. Plankton is the grass of the sea. Methyl mercury has always been part of man's diet through the consumption of ocean fish. Said on of my interviewees: "One day we may find that some of the contaminants are actually nutrients."
Vitamin A Toxicity--It's the Form that Matters

Many warnings against taking too much vitamin A permeate the scientific literature, yet primitive peoples consumed very high levels of this nutrient and enjoyed excellent health. A recent study, published in the American Journal of Clinical Nutrition (December 2003), solves the apparent contradiction. Researchers performed an extensive literature review to create a database of 259 cases of vitamin A toxicity, as chronic (from long-term ingestion), acute (from short-term ingestion) and teratogenic (causing birth defects). Symptoms of toxicity included problems with skin, hair, vision and the nervous and gastrointestinal systems (such as vomiting). Adult subjects of chronic hypervitaminosis A experienced mostly symptoms of the gastrointestinal system and skin and hair, and symptoms of a deteriorating state of health.

The remarkable finding was that vitamin A taken in emulsified, water-miscible (mixable in water) and solid form was ten times more toxic than vitamin A taken in oil-based preparations. Chronic hypervitamininosis A is induced after daily doses of 2 mg retinol per kilogram of body weight in oil-based preparations for many months or years while acute toxicity is induced in daily doses as low as 0.2 mg retinol per kilogram of body weight in water-miscible, emulsified and solid preparations for only a few weeks. Expressed in terms of International Units, this works out to about 200,000 IU per day for adults and 20,000 IU per day for children of oil-based preparation and 40,000 IU per day for adults and 4,000 IU per day for children of water-miscible, emulsified and solid preparations.

The US Recommended Daily Allowance for vitamin A is 1000-2000 IU for children, depending on age, 2330 for women, and 3000 IU for men, well below the range of toxicity for even the non-oil-based forms, although some cases of toxicity have been reported in children, even with these low dosages. In adults, several conditions

enhance retinol toxicity, including alcohol ingestion, low-protein intakes, viral hepatitis, environmental pollutants and drugs, and diseases of the liver and kidney. As for the oil-based form of vitamin A, the toxic dose is well above the amount one would ingest by following our dietary recommendations of cod liver oil, eggs, butterfat and liver at least once a week. The report notes that clinical studies of secondary cancer prevention indicate that daily doses of 90 mg retinol (over 300,000 IU), in adults are well tolerated for many months or years; the adverse clinical side effects reported after 1-2 years of treatment were mild dermatologic symptoms in 40-55 percent of subjects. By contrast, a similar dose of retinol in a water-miscible and emulsified form given daily for 12 months resulted in earlier and more pronounced side effects.

Interestingly, the researchers found that vitamin D appears to protect against retinol toxicity, which means that natural cod liver oil, with its combination of vitamin A and D, is particularly safe.

This ground-breaking review reveals the fallacy--even the danger--of vitamin A fortification programs. Currently many third world countries are engaging in programs to add vitamin A to corn flour and sugar as a way to combat widespread health problems due to vitamin A deficiency. Vitamin A is also often added to powdered dry milk, a key commodity in food giveaway programs. In some European countries, vitamin A is added to liquid milk, including (and mostly) lowfat milk, a fact that explains the correlation in some studies of high vitamin A intake with increased risk of osteoporosis.

The researchers did not specify the type of vitamin A in oil-based preparations--was it natural vitamin A in (or added back to) cod liver oil, or synthetic vitamin A in cod liver oil or some other kind of oil? In any case, this study indicates that as far as toxicity is concerned, even synthetic vitamin A is safe when added to cod liver oil. It may not be as effective or beneficial, however, because natural vitamin A is composed of a variety of isomers that have varying degrees of activity and play a variety of roles in the body chemistry.

Oils from Elsewhere

I did locate other natural high-vitamin cod liver oils produced in a low-tech manufacturing environment in many parts of the world, such as China and India, but what I found was an industry that did not measure or care about contaminant levels. I discussed these oils with various representatives of the industry and they confirmed my findings. "Rarely do we find a contaminated fish oil from the North Atlantic region. Maybe one in a hundred fish oil samples we will find a contaminant and usually it will be very minimal, perhaps one element slightly higher than standard out of several hundred tested. We do find contaminated fish oils from other parts of the world, such as China."

Focus on Purity

Purity will be the focus as the industry readies for a big boom in the fish oil market. This big boom will be driven by food manufacturing and the pharmaceutical industry. The

emphaisis will be--indeed already is--on the fatty acids EPA and DHA, not the vitamins, since the vitamins are removed by the processing and the fatty acids are not. Natural vitamin cod liver oil is not wagging the dog in this new emerging market. In my opinion, good quality cod liver oil, as defined by oil that is clean and contains a natural high-vitamin content, has the potential to become a thing of the past as this product is no longer a focus of the market, in fact hasn't been for years.

It seems to me that development of a quality cod liver oil manufacturing ability in the US--where there is growing consumer demand for such a product--is a necessary step to ensure the continued existence of this endangered species.
Lawyers to the Rescue

If it is not necessary to purify cod liver oil--and if obtaining high-vitamin cod liver oil is going to become more and more difficult--resourceful folk can fill the gap by making their own, as the Eskimos did. That means keeping the livers from those "lawyers" you catch, simmering them in water and then chilling to remove the oil. And since cod can be farmed, why not grow them in clean, freshwater ponds on farms throughout America? That way, when you pick up your meat, dairy products and eggs at the farm store, you can pick up locally produced cod liver oil as well.
Some Studies on Cod Liver Oil

1937: When calcium plus viosterol (synthetic vitamin D2) was given to pregnant women, researchers found definite calcification of the placenta and indications of adverse effects (such as calcification of the kidneys) in newborns. No such effects occurred with calcium plus cod liver oil, a source of natural vitamin D (Ohio State Medical Journal 33(9):990-994).

1986: Cod liver oil prevented atherosclerosis in swine fed a highly atherogenic diet for eight months (New England Journal of Medicine 315(14):841-846).

2003: Supplementation during pregnancy and lactation with cod liver oil resulted in higher IQ in offspring at 4 years of age (Pediatrics 111(1):e39-e44).

2003: Use of cod liver oil during the first year of life is associated with lower risk of type-1 diabetes (American Journal of Clinical Nutrition 78:1128-34).

2004: Researchers relate the recent decline in cardiovascular disease mortality in Norway to increased use of cod liver oil, among other factors (Medisin Og Vitenskap 124:1532-6).

2005: Women who took cod liver oil during pregnancy were 11 times more likely to give birth to normal-weight babies, thus avoiding the many health problems to which low-birth-weight babies are prone (British Journal Gynecology and Obstetrics, April 2005).

This article appeared in Wise Traditions in Food, Farming and the Healing Arts, the quarterly magazine of the Weston A. Price Foundation, Fall 2005.

About the Author

David C. Wetzel, BS, served as vice president of a steel company from 1995 to 2000 before purchasing a farm with his wife Barbara in Nebraska. His company Green Pasture Products has developed high-vitamin butter oil, first manufactured and described by Dr. Weston Price, and made it commercially available. David is currently developing an American cod liver oil industry, with emphasis on fermented cod liver oil. He and his wife Barbara serve as chapter leaders for Page/North Central Nebraska.

Update on Cod Liver Oil Manufacture

Written by David Wetzel
Thursday, April 30 2009 18:07
http://www.westonaprice.org/cod-liver-oil/...oil-manufacture

Returning to Traditional Production Techniques for the Quintessential Sacred Food

When I began to import cod liver oil, in order to sell it along with the high-vitamin butter oil I was manufacturing, I felt it imperative to go to Iceland and Norway to visit the various cod liver oil factories there. At that time, most cod liver oil in America was imported from Scandinavia, with a small amount coming from China. What I learned is described in an article published in the Fall, 2005 issue of Wise Traditions, Cod Liver Oil Manufacturing: How Our Most Important Dietary Supplement Is Produced.

To summarize my findings, all the factories were engaged in industrial processing of cod liver oil, which involved alkali refining, bleaching, winterization and deodorization. Each of these steps, especially the deodorization, removes some of the precious fat-soluble vitamins, especially vitamin D. The resulting products can be divided into four categories. First is a fully cleaned and deodorized product with nothing added back in. Products with very low levels of vitamin A with virtually no vitamin D are of this type. To obtain meaningful levels of vitamins A and D from these products would require consuming many tablespoonfuls—a practice that is not only difficult to achieve, especially for children, but poses the danger of supplying an excess of polyunsaturated fatty acids.

The second type is a non-deodorized product with a fair amount of natural vitamin A and D left in. According to the company website, Garden of Life cod liver oil falls in this

category. It contains 500-1500 IU vitamin A per gram (2500-7500 IU per teaspoon) and 100-175 IU vitamin D per gram (500-875 IU per teaspoon).

The third type is the fully cleaned and deodorized cod liver oil with synthetic vitamins added back in. Most of the cod liver oils on the market fall into this category. (You'll need to check with the individual manufacturer to verify whether their cod liver oil falls in this category.) These vary in dose from about 1100 to 4600 IU vitamin A per teaspoon and 180 to 460 IU vitamin D per teaspoon. One company, Nordic Naturals, now adds supplemental vitamin D to their Nordic Naturals Vitamin D brand, to compensate for the vitamin D removed during processing.

The final category is the fully cleaned and deodorized product with natural vitamins added back in. This is the so-called high-vitamin cod liver oil, standardized at 2340 IU vitamin A per gram (11,700 IU per teaspoon) and 234 IU vitamin D (1170 IU per teaspoon). This is the type of cod liver oil I imported into the U.S. and sold under the Blue Ice label; it is also sold by Radiant Life and Dr. Ron's UltraPure.
Handwriting on the Wall

With only one factory still engaging in the relatively expensive process of adding natural vitamins back into processed cod liver oil, it was easy to see the handwriting on the wall. The odds that this factory would soon fall in with the others and start adding synthetic vitamins instead of natural ones were great. I was also concerned that we had no cod liver oil manufacture in the U.S. What would happen if FDA found some reason to prohibit imports? And finally, I was offended by the industrialization of a sacred food. I now fully understand that today's fish oil industry has committed the same crime to a historically sacred food as the dairy industry has committed on milk.

As predicted, the factory in question ceased using natural vitamins early this year. When my current stock runs out, this relatively natural high-vitamin cod liver oil will no longer be available.
Return to Old Methods

Fortunately, I had anticipated this eventuality several years ago when I began contemplating manufacturing cod liver oil myself. I wanted to produce a cod liver oil that contained only natural vitamins and, if possible, do it without the industrial alkali and deodorizing treatments. I also wanted to produce cod liver oil in the traditional way, which is by fermentation. I had read that in Roman times, long before refrigeration, fish guts were placed in a barrel with sea water and allowed to ferment. What came out the bottom of the barrel was a watery fermented fish sauce called garam, widely used as a seasoning (probably the precursor of Worcestershire sauce). The oil floated to the top and was collected carefully. This fermented fish oil was undoubtedly the civilized world's first health elixir, reserved for the soldiers and nobility. It is said that the soldiers refused to march without their daily ration of liquidum.

South Sea Islanders put great store in shark liver oil—enduring considerable danger to procure the sharks even though other, less dangerous-to-catch seafood was plentiful. To prepare the oil, they put the livers inside the leathery stomachs of the shark and hung them in the trees for several months. As it ferments, the oil gradually comes out of the livers and fills the hanging stomachs! The yield is about one liter per shark.

Shark stomachs containing shark livers from Tahiti, hanging in the trees to ferment. Photo courtesy Kay Baxter.

A description of traditional European cod liver oil processing is provided by F. Peckel Möller in an article entitled “Cod-Liver Oil and Chemistry,” published in London, 1895. “The primitive method. . . is as follows. As soon as the fishermen reach the Voer [pier], and finish separating the livers and roes, they sell the fish and carry the livers and roes up to their dwellings. In front of these are ranged a number of empty barrels into which the livers and roes are placed, separately of course. The fishermen do not trouble to separate the gall-bladder from the liver, but simply stow away the proceeds of each day’s fishing, and repeat the process every time they return from the sea, until a barrel is full, when it is headed up and a fresh one commenced. This is continued up to the end of the season, when the men return home, taking with them the barrels that they have filled. The first of these, it may be noted, date from January, and the last from the beginning of April, and as on their arrival at their homes the fishermen have many things to arrange and settle, they seldom find time to open their liver barrels before the month of May. By this time the livers are, of course, in an advanced state of putrefaction. The process of disintegration results in the bursting of the walls of the hepatic cells and the escape of a certain proportion of the oil. This rises to the top, and is drawn off.

“Provided that not more than two or three weeks have elapsed from the closing of the barrel . . . to its being opened, and if during that time the weather has not been too mild, the oil is of a light yellow colour, and is termed raw medicinal oil. As may be supposed, however, very little oil of this quality is obtained. Indeed, as a rule there is so little of it that the fishermen do not take the trouble to collect it separately. Nearly all the barrels yield an oil of a more or less deep yellow to brownish colour: this is drawn off, and the livers are left to undergo further putrefaction. When a sufficient quantity of oil has again risen to the surface, the skimming is repeated, and this process is continued until the oil becomes a certain shade of brown. The product collected up to this point is known as pale oil. . . . By this time the month of June has generally been reached, and with the warmer weather the putrefaction is considerably accelerated, and the oil now drawn off is of a dark brown colour, and is collected by itself. It is rather misleadingly called light brown oil. . . When no more can be squeezed out, the remainder is thrown into an iron

caldron and heated over an open fire. By this process, the last rests of oil are extracted from the hepatic tissues, which float about in the oil like hard resinous masses. . . . In order to fully carry out the extraction, it is necessary to raise the temperature considerably above the boiling point of water. . . . The oil prepared in this way is very dark, almost black, and with a greenish fluorescence in reflected light. In thin layers and by transmitted light it shows a brown colour, and it is therefore termed brown oil. . .”

The writer then describes processing methods introduced to Norway in the 1850s by Peter Möller, which resulted in a much purer, consistently light-colored oil made from fresh, not putrefied livers, considerably more palatable in terms of taste and smell. He notes, however, that the “brown oils are actually used to a certain extent for medicinal purposes at the present day.”

After reading this passage, and foreseeing the demise of the last natural cod liver oil from Europe, I was determined to produce a light brown fermented cod liver oil according to the old methods.
Production of Fermented Cod Liver Oil

But how to do this on a large scale? That was the challenge I was facing. It has taken six dedicated years of work to get to the point of offering the fermented cod liver oil to the community. The first challenge was to figure out a way to ferment the livers in large vats; and the second was to find the livers.

The method we have developed processes the cod liver oil through a proprietary non-heating natural lacto-fermentation. The process can take up to six months and is carefully handled throughout the process to ensure the oil is clean and natural. Industrialized fish oils, including cod liver oil, are heavily carbon filtered and heated after rendering or extracting. We have developed a unique cleaning process that does not use carbon filters or heat. Both heat and carbon filters remove flavors, odors, colors and nutrients, and also denature the fragile unsaturated fatty acids such as DHA and EPA.

Our cod liver oil “factory” is a large building in north central Nebraska. We prefer to call it our cod liver oil green house. The building was built to store potatoes, but was gutted by fire soon after completion. It had been sitting empty all these years and came on the market at just the time we were looking for a facility, and became available to us at virtually no cost. We cleaned it out, washed and painted the walls, painted it and installed a new steel roof. The building currently holds six fermenting vats of just under 10,000 gallons each.

The roof is a solar roof and we use natural sunlight for heat and light—we have lots of sunlight in Nebraska. Our next project is to start sun drying fish eggs in a part of the building.

My other task was to find the livers. The search began several years ago—I picked up

the phone and made many cold calls, most of which got me nowhere. People said I was crazy to want to purchase thousands of pounds of cod livers. Finally I met a Russian who took an interest in the project and found the livers for me—in Russia, they know about cod livers.

The first load of 10,000 pounds, which we used for experimental purposes, arrived two years ago. The first load for commercial production— 40,000 pounds of frozen cod livers —arrived in a tractor trailer—packed into pallets. Future deliveries will come by railroad!
Testing Cod Liver Oil

Our next challenge was to test the oils for nutrient content. Of course, we do the standard tests for pathogens, PCBs and heavy metals. We do this to every batch, and our batches are small, so the number of tests per gallon of product is substantially greater than typically carried out in the industry. The heavy metal levels are “not detectable” and the PCBs meet WHO .090 ppm standards, the limit to which these compounds can be measured.

Measuring nutrient levels turned out to be complicated. When you test industrial cod liver oils to which have been added synthetic vitamins A and D, you get graphs with well defined peaks, indicating the presence of vitamin A or D. But the tests for our fermented cod liver oil came back showing a jagged line, with numerous peaks, no matter which method we used, and these peaks did not always match up with synthetic control peaks. The lab technicians were as surprised as we were. Their explanation was that this natural oil contains many isomers of vitamins A and D. We have to add the peaks to get some idea of the total. We currently receive a wide range of nutrient values depending on the laboratory test method and interpretation of the analysis.

In general, the test totals are substantially higher for vitamin D than one would find in any industrialized cod liver oil. Whereas the highvitamin cod liver oil contains almost 12,000 IU vitamin A and 1200 IU vitamin D per teaspoon (five milliliters), the fermented oil contains 4,000 - 9,000 IU vitamin A per teaspoon and 3,000 - 4,000 IU vitamin D. The vitamin levels likely test lower because we are only testing for retinol and palmitate, not for all the other vitamin A isomers.

Anticipating increasingly stringent controls on supplements, we have decided to label the fermented cod liver oil as a food—which it certainly is. Thus the label will contain a suggested dose and list vitamin A as a percentage of the RDA. There will be no mention of vitamin D on the label.

The suggested dose will be 5 ml or 1 teaspoon for adults, double for pregnant and nursing women and those under stress, and half that for children. Some practitioners are giving larger doses to treat serious health problems. The experience of Dr. Rosann Volmert (see page 31) indicates that best results are obtained using a combination of fermented cod liver oil and high-vitamin butter oil—a confirmation of Dr. Price’s own

experience.

Since this product is a fermented one, we surmised that it would contain vitamin K2 as well as vitamins A and D. What we found was a range of quinones, which include the various forms of K2. The fermentation increases the total quinone count by 700-1600 percent compared to readings prior to the fermentation process. We have not identified the specific quinones but I suspect that the K2 category and Co-enzyme Q family will be important components within the quinone nutrients. The fermented cod liver oil tests at 4-8 mg per gram, compared to the high-vitamin butter oil at 23-25 mg per gram. Quinone testing presents a fertile field for future research.
Taking Cod Liver Oil

Most of those who have consumed the fermented cod liver oil report that it is not as fishy tasting as the industrialized varieties. However, because it is a lacto-fermented product, it can leave a slight sting on the back of the throat, which some find bothersome. It is best to take the oil mixed with a small amount of warm water, swallowing quickly. Adding something acidic such as lemon juice, apple cider vinegar or kombucha may help with the tingling at the back of the throat. Others report good results adding a little honey or maple syrup or “chasing fat with fat” by following the cod liver oil with cream, egg yolk or butter. Another way to minimize the throat tingle effect is to take it during or after a fatty breakfast.
New Products

Our current batch of fermented cod liver oil will come in plain, cinnamon and liquorice flavors, as well as in one-milliliter capsules. In the future we will offer Viking strength (unflavored), Mediterranean (garlic, oregano, pepper oil and unrefined salt), salty cod (unrefined salt) as well as a gel product in several flavors that can be eaten off a spoon. We will also offer a cod liver oil-butter oil combo in gel as well as capsules. The products will be available through Green Pasture Products and also through several distributors, including Radiant Life, Dr. Ron’s UltraPure and others in the U.S., as well as in Canada, Australia, New Zealand, the UK and the European Union.

Finally, we will be offering skate liver oil in capsules and possibly liquid. Our Russian supplier swears by the many benefits of skate oil. We are also exploring different types of packaging. Currently the products are packaged in green glass from China. We are looking into recycled PETE plastic products that do not leach oils, and which are made in the U.S. This keeps our product completely domestic and also cuts down on shipping costs.

Other products in the works: dried fish eggs and an all-natural fish sauce. It’s been quite an adventure. Stay tuned!

SIDEBARS
Cod Liver Oil in Britain

“The British desperately needed not only food but cod-liver oil. They had a history of being great cod-liver oil enthusiasts. For centuries before it was refined for ingestion, a blackish residue from livers left in barrels was used as a balm, as it still is in West Africa. In the 1780’s British medicine decided that cod-liver oil was a remedy for rheumatism, then a catchall diagnosis for aches and pains.

“During the nineteenth century, it was used to treat tuberculosis, malnutrition, and other poverty-related diseases. Between the wars, cod-liver oil became a major business in Hull and was used both for livestock and humans. During World War II, the British Ministry of Food, concerned about the effect of a tightened food supply on health, provided free cod-liver oil for pregnant and breast-feeding women, children under five, and adults over forty.

“School nurses forcefully administered spoonfuls of the vile-tasting liquid, while adults were often given it with orange juice. All this oil came from Iceland, where it contributed to a secondary Icelandic trade that remained and prospered after the war.

“The British government, believing that the oil had produced the healthiest children England had ever seen, despite bombings and rationing, continued the program until 1971. It was finally discontinued because people refused to take the oil. Icelanders, however, still take it, as do many Americans.”

From an 1893 Physicians' Handbook

The Cottage Physician, published 1893 was “prepared by the best physicians and surgeons of modern practice.” It contains an introduction by George W. Post, AM, MD, Profe ssor of the Practice of Medicine in the College of Physicians and Surgeons, Chicago, Illinois.

According to the handbook, “Cod liver oil is obtained from the livers of the common cod fish. There are three varieities according to the mode of extraction, known as pale, light brown and dark brown. . . the pale is the most palatable. . . . as a remedy for consumption and other constitutional diseases of an exhausting nature, cod liver oil takes high rank. It is really more of a food than a remedy, its power of producing fat is well known. In scrofulous diseases generally, hip joint diseases, white swelling of the knee, caries of the spine, lumbar and psoas abcesses, rickets, etc., cod liver oil will nearly always do good. It is also useful in skin diseases, some forms of eye troubles and syphilis. Young children who have grown weak from diarrhoea in summer, and who seem unable to assimilate the food given them, can often be saved by rubbing cod liver oil into their skin. The common dose of cod liver oil is from one to two tablespoons, three times daily.”

Father John's Medicine

Father John O'Brien was an Irish-born priest who came to America before his ordination. He served in Virginia and Newburyport, Massachusetts before coming to the mill city of Lowell in 1848. It was the time of massive Irish immigration with each newcomer seeking employment and a new life. The good pastor understood the balance that was needed for these people who were caught between two worlds, the need to retain their own identity as Irish men and women, and that of identifying themselves as Americans. It was during his pastorship that the Irish became an active and prominent factor in Lowell's population.

Tradition has it that Father John was taken ill in 1855. He made his way to the pharmacy of Carleton and Hovey on Merrimack Street to get something for relief. He was given a tonic that was composed of cod liver oil, which had a licorice taste. Unlike many other medicines of its time, the prescription contained no alcohol. It worked so well for the priest that he began recommending folks to visit the apothecary and ask for "Father John's Medicine." From this, a legend was born.

Soon the shop was packaging the medicine for sale. Father John was given a small stipend for using his name and picture. It was agreed that anyone Father John sent to the shop personally would not have to pay for the medicine. The pastor was always looking after his flock. For many years the company was overseen by the Donehue family. The generosity of the management to its employees was well known, even so far as keeping workers long past the need to, just so an employee could have a job. Within 50 years the medicine was known far and wide. Early literature claimed it worked on "consumption, grip, croup, whooping cough, and other diseases of the throat," which it most certainly did. Pamphlets given to customers stated, "All disease is due to a run-down condition of the body, unhealthy tissue, blood poisoned with impurities, and general weakness." Guarantees were made by the manufacturer of its restorative powers. The potion was sold in numerous countries. Pharmacies built huge displays in their windows advertising the product.

The factory building was a model of production. Every process from manufacturing, to bottling, to packaging, to advertising was done in that one spot. Freight cars pulled in back of the building to ship cartons to parts unknown. A second factory was built in Montreal, Canada. In the 1970s the company was sold. The building was made into an elderly housing complex, and the product no longer made its home in Lowell. It continued to be produced by the Oakhurst Company in New York for a number of years. The brown-orange bottle with the trusting face of Father John O'Brien was a sign of assurance to people for 140 years.

Benefits of Fermented Cod Liver Oil and Butter Oil Are Many and Varied

by Rosann Volmert, DO

I am a family practice physician in Pasadena, California. I have been using Green Pasture's fermented cod liver oil and high-vitamin butter oil with my patients for only nine months now, and I have noticed dramatic results. The most dramatic of these is the effect the oils have had on lowering blood pressure in patients with hypertension. This effect has enabled several of my patients to lower their dose of prescription medication, and hopefully eliminate it all together. In addition, I have found that patients have lost weight and lowered their blood sugars without any change in diet or activity. I have also had reports of less stiffness and pain of joints in arthritic and temporomandibular joint dysfunction patients, improvement in eczema, elevated mood in depressed patients, lessening of symptoms of PMS and increased energy and overall well being. I have a very small practice so these testaments are drawn from a few patients here and there, but they are indicative of tremendous benefits for a large number of people.

All of this has really illustrated for me the huge nutritional deficiency people have been suffering from due to a fear of cholesterol. For many years now a fear of cholesterol-containing foods has kept people from consuming healthy amounts of butter, eggs, cheese, milk, animal fats and many other foods rich in nutritious fats and fat-soluble vitamins. It is no wonder that the vitamin D level is pitifully low in 95 percent of my patients. Due to continued bias against cholesterol-rich foods, I am at times unable to convince my patients to eat more of these foods. However, I have been successful in getting them to take the Green Pasture's oils. This is mainly because they are easy to take, and only small amounts are needed. Using these products has enabled me to give back to my patients the fat-soluble nutrients their bodies have been lacking for some time now, and they are feeling better for it.

Because Green Pasture's fermented cod liver oils and butter oils contain such a wide variety and potency of fat-soluble nutrients, they not only enhance my patients' lives, but simplify them as well. Patients are able to take much less cod liver oil than with their old brand and eliminate the need for additional supplements, which are lacking in other brands. (I recommend 3 ml or 3/4 teaspoon fermented cod liver oil and 2.5 ml or 1/2 teaspoon butter oil.) When I introduce them to the oils, I ask them to bring in all the supplements they are taking. I show them that with taking this oil combo they can eliminate one-half to two-thirds of their other supplements, and sometimes all of them. Often my patients are taking so many different types of synthetic vitamins, they literally walk in with a big box full of them. The reason they are taking so many is because each bottle usually contains only one or maybe a couple types of synthetic vitamins or nutrients. Obtaining nutrients through natural food sources allows them a more potent and broader range of nutrition, thus eliminating the need for boxes of bottles and huge dosing.

One of the nutrients found in cod liver oil is vitamin D. I found that it took just 2,800 IU of

the vitamin D contained in Green Pasture's fermented cod liver oil in combination with the butter oil to raise one patient's serum 25-hydroxy vitamin D level from 12.6 ng/ml to 82.3 ng/ml in just three months. According to the guidelines for supplementing synthetic vitamin D3 it would have taken 7,000 IU to achieve this and without all the benefits of the many other fat-soluble nutrients found in these oils. What a testament to the power of nutrients in their natural form!

I am finding similar results in other patients. Several have raised their vitamin D levels from the teens or low twenties into the forties within several months using the combination of fermented cod liver oil and high-vitamin butter oil alone, in easy-to-take capsule form, and without any other vitamin D supplementation. Since the patients are also getting substantial amounts of vitamin A with this regimen, it is difficult to conclude that vitamin A interferes with vitamin D assimilation as critics of cod liver oil have claimed.
What About Fish and Krill Oils?

Fish oil and krill oil, sold as supplements to provide omega-3 fatty acids, are by-products of the fish and krill meal industries. They are produced in large factories humming with the noise of conveyer belts, grinders, separators, extractors and dryers. We provide two descriptions of fish oil manufacture and one of krill oil manufacture, and let our readers decide whether or not they want to consume these products. Remember that omega-3 fatty acids are very fragile and highly subject to damage when exposed to heat and oxygen.

FISH OIL MANUFACTURE, METHOD ONE: "The bulk of the world's fish meal and oil is today manufactured by the wet pressing method. The main steps of the process are cooking for coagulation of the protein thereby liberating bound water and oil, separation by pressing of the coagulate yielding a solid phase (presscake) containing 60-80% of the oil-free dry matter (protein, bones) and oil, and a liquid phase (press liquor) containing water and the rest of the solids (oil, dissolved and suspended protein, vitamins and minerals). The main part of the sludge in the press liquor is removed by centrifugation in a decanter and the oil is subsequently removed by centrifuge. The stickwater is concentrated in multi-effect evaporators and the concentrate is thoroughly mixed with the presscake, which is then dehydrated usually by two-stage drying. The dried material is milled and stored in bags or in bulk. The oil is stored in tanks. . . . An important prerequisite for efficient [oil] separation is high temperature, implying that the press liquor should be reheated to 90°-95°C before entering the centrifuges. This applies to sludge removal as well as to separation of oil and water. . . Oil polishing, carried out in special separators, is the final refining step done at the factory before the oil is pumped into storage. Polishing is facilitated by using hot water, which extracts impurities from the oil and thus ensures stability during storage. . . . good temperature control is required; the temperature of the feed should be maintained at about 95°C, but not less than 90°C" (The Production of Fish Meal and Oil, http://www.fao.org/

DOCREP/003/X6899E/X6899E00.HTM).

FISH OIL MANUFACTURE, METHOD TWO (We are not making this up!): “Phospholipid-deprived fish oil is obtained by mixing fish oil with water and a monosodium glutamate (MSG) by-product with stirring, fermenting the mixture in the presence of urea, processing the mixture with steam, and centrifuging the mixture to separate water and phospholipids from the fish oil. Further steps are neutralizing the separated fish oil with NaOH [caustic lye], washing and drying the washed fish oil in vacuum; mixing the dehydrated fish oil with powders of earthworm excrement, subjecting the mixture to reaction at least 30 °C or higher for 0.5-1 hour, bleaching the fish oil absorbed into the earthworm excrement powders by use of activated clay, and filtering the bleached fish oil through a filter, and deodorizing the bleached and filtered fish oil under a steam atmosphere in a high vacuum, deodorizing apparatus, cooling and filtering the fish oil and packaging it into a closed vessel. The refined fish oil is significantly improved in acid value and peroxide value” (Method for Manufacturing Refined Fish Oil, http://www.wipo.int/pctdb/en/wo.jsp?wo=2001042403).

KRILL OIL MANUFACTURE: Frozen Antarctic krill are crushed and the lipids and proteins are extracted using acetone. Following extraction, the krill proteins and lipids are filtered through an organic solvent-resistant filter under reduced pressure to enable physical separation of lipids and proteins. Excess acetone is evaporated and water is separated from the oil. The oil is subjected to additional filtration and purification to remove impurities and is packaged in a modified nitrogen-containing atmosphere and stored. The notifier provides product specifications for krill oil, including specifications for fatty acids, total phospholipids, esterified astaxanthin, saturated fatty acids, and trans-fat (<0.1 percent). Specifications also include limits on residual acetone (<10 milligrams per kilogram (mg/kg), lead (<0.1 mg/kg), mercury (<0.1 mg/kg), arsenic (<0.1 mg/kg), cadmium (<0.1 mg/kg), pesticides, and microbiological contaminants” (http://www.fda.gov/Food/FoodIngredientsPackaging/GenerallyRecognizedasSafeGRAS/GRASListings/ucm154374.htm).
Some Cod Liver Oil Testimonials

After about two weeks taking a one-half teaspoon high vitamin cod liver oil I noticed that my hands were not cracked anymore. I have had dry skin my whole life and in winter they will crack and bleed. My mother is 99 years old and has had skin cancer on her forehead. They have burned it off several times but it always bleeds and never really healed. I got her to take the cod liver oil so she wouldn’t get a cold. Incredibly, her forehead has now healed up. -WL

Since I started using fermented cod liver oil in my naturopathic practice, I have two completely resolved cases of endometriosis, women experiencing pain-free periods for the first time in their lives, surprisingly within two or three weeks of starting the fermented cod liver oil at a dose of 5 ml per day. Up to this point in my six-year career, I had yet to have any luck whatsoever when it came to endometriosis. I have another

very complicated case of endometriosis combined with Wolf-Parkinson's-White-like heart problems and this particular woman experienced twelve to fifteen days of excruciating pain monthly related to the endometriosis. Within six weeks of starting the fermented cod liver oil she is down to three days of pain per month, which she is thrilled about. While her WPW symptoms persist, her endometriosis symptoms are all but a thing of the past. Again, I put her on a dose of 5 ml per day. I have another patient who came to me, a mother in her thirties, who was experiencing hair thinning and had not had a period in over nine months for no apparent reason. Within three weeks of starting the fermented cod liver oil, she had a period again. -Laura Margaritis, ND, Hamilton, Ontario, Canada

I have a handful of clients that I have on high vitamin or fermented cod liver oil and when they stop taking it, they have discomfort and pain rather quickly in their arthritic areas, not to mention a return of depression and mood problems. They tell me they won't give up cod liver oil no matter what anyone says to them. . . our bodies don't lie. -Anabela Bacchione

I have been using fermented cod liver oil for about eighteen months. I have been checking my vitamin D levels over the last four years and this year I went from 37 to 48, whereas the three years previous I went from 16 to 26 (ten points total, for the three years). During those years I was taking vitamin D in doses from 10,000 to 50,000 IU. The only thing I can attribute the increase to is the fermented cod liver oil. I also have a few customers who swear that the cod liver oil wards off depression, especially in the winter (Minnesota). -BS

We've been using high-vitamin cod liver oil and the butter oil for the Weston Price protocol for several years. The biggest changes reported have been improved muscle strength, stamina and immunity. I have also noted improved moods in my family—they are less irritable. I also feel the Weston Price protocol, including bone broths, raw goat milk kefir, etc., helped save my mother's life when she was stricken with severe sepsis several years ago. The frequent drops of cod liver oil and butter oil appeared to increase her strength and improve her ability to absorb and utilize her food. -LH

One of my patients, an active but hobbled sixty-five-year-old female, kept complaining of joint pain and stiffness for the past year. Our chiropractic work did wonders to keep her feeling quite well and able to maintain a busy schedule as well as go skiing in Colorado, but she would always return with the same old complaints. After two months on the high vitamin cod liver oil, her complaints of joint pain were gone! -Michael J. Kudlas, DC, MA, MEd

My son's acne completely cleared up and he is so happy on cod liver oil that it is the one thing he will consistently take. Also he noticed that his seasonal affective disorder was much better last winter taking the cod liver oil (for his skin) and his grades and general energy were markedly improved over previous winters when he didn't take it. -

Megan McCoy, MD

At eight months, my one-hundred-percent breast fed daughter had a bad case of eczema and an allergy to egg whites. We tried everything (different soaps, oils, creams etc.) to get rid of the eczema and nothing worked till our homeopathic pediatrician told us to give her 1-2 ml of high-vitamin cod liver oil along with high-vitamin butter oil every day, as well as a teaspoon of coconut oil. Today she is a happy healthy two-year-old who takes 1-2 ml cod liver oil almost every day. She has perfect skin and her allergy to egg whites is gone as well. Her amazing recovery from the eczema and egg allergy inspired me to go back to school and become certified as a nutritional therapy practitioner. Our whole family of five has been taking 1-2 ml of high-vitamin cod liver oil for the past two years. We are all healthy and happy. The children, ages two, four and six, have never had a cavity and are noticeably healthier than the majority of their friends. -Shelley Ballantyne, NTP

I am writing for myself and my family with all the changes which have taken place after the consumption of high-vitamin butter oil and cod liver oil and all good fats. First, I was deeply ill, with many local doctors diagnosing me with severe depression and anxiety. I was unable to sleep, digest or eliminate foods in a healthy way; I could not work or take care of myself at all. I was unable to do simple tasks like do the wash or button a shirt, for my coordination was impaired. I would trip often and could not finish a thought or sentence. I was severely paranoid of all things and people. With many medicines, my symptoms became even more severe and intense. I was scared to death, along with my family! I became very suicidal. I should explain that previously I was in the hair salon business and was quite successful, but using many chemicals all day long, five days a week. My diet was filled with wrong foods. I was taking care of a very sick family member daily. Thanks to Dr. Roy Ozanne I learned about good fats and fermented foods. With his help I eliminated all sugars, caffeine, alcohol, white flour, etc., but more importantly, I added cod liver oil and butter oil. Over the course of two years, my body healed itself. I am now able to communicate with all, I am motivated, and I am back to work (not in the hair business!). My children on this diet report that they are able to focus much better than they used to. -LMP

In our clinic we've used Premier Natural Cod liver oil for about five or six years with great success. Our babies born to patients of the clinic in many cases have facial structures Weston Price found in his travels of traditional cultures. They have broad jaws, ears with unattached, slightly enlongated lobes, and have great emotional dispositions. Many sleep through the night at a fairly early age, and developmentally are either early or right on target. Many parents have reported that their children do well academically and conditions such as allergies, behavioral disorders are markedly absent in these children. All our patients take two capsules pre-pregnancy and continue this during pregnancy and during lactation along with a diet that includes Chinese medical theories and Weston A. Price principles. In addition, half of those patients also take butter oil pre-pregnancy and during pregnancy and lactation. Adult patients with

anxiety or depressive disorders do extremely well with our treatments which, of course, include cod liver oil. -Dagmar Ehling , MAc, LAc, DOM(NM), Dipl OM, FABORM

I have had chronic fatigue syndrome for over seventeen years. At first, when I took the fermented cod liver oil, it gave me a headache so I stopped taking it. After I had the flu awhile back, I was left with a symptom where I could not lie down without feeling like I was smothering, even though I could breathe fine. This was accompanied by deep anxiety. The doctor suggested I had a classic symptom of congestive heart failure and suggested an angiogram, but that wasn't really an option for me because I have terrible reactions to drugs. Meanwhile, I found out I had low vitamin D levels (I live north of Seattle, WA) and learned that low vitamin D can cause heart problems. I started taking vitamin D3 and it helped a bit but I kept needing more to keep the awful smothering symptom away. I was up to 6,000 IU per day of D3 but kept feeling colder and colder and sleeping more fitfully. Finally, I got to the point where I didn't sleep all night and I knew it was the vitamin D keeping me awake. Fortunately, I had just bought some raw Jersey milk for my husband—not for myself because I thought milk didn't agree with me, but I tasted his and decided to have a glass of my own because it was so good. It calmed my nerves and I was able to sleep. Then I decided to try taking the fermented cod liver oil again because I knew I needed to get vitamin D somehow. The first dose did give me a headache for a short time, but I felt some well being afterwards. So for the past nine days I've been drinking three glasses of raw milk per day with no digestive upset and taking one to one and one-half teaspoons fermented cod liver oil daily. Pain and inflammation seem to be subsiding, my energy is improving, the constant feeling of heat and pressure in my head is gone, and I am so amazed and grateful that the awful smothering feeling is quickly becoming a bad memory. As an added bonus, I no longer feel bothered at all by the gray Pacific Northwest winter days. Given the improvement I have experienced in just a few days, I'm looking forward to seeing what happens as this winter progresses and I keep taking cod liver oil and drinking raw creamy milk! -JI

Finally my vitamin D test results are back, and my vitamin D level has risen from 39 to 46 after taking two bottles of the fermented cod liver oil. Previously I had taken the regular high-vitamin cod liver oil for a year and my vitamin D level stayed at 39 before and after. -SH

I come from a family that suffers from arthritis so was concerned when I developed stiff hands and knees in my mid forties. Several months after taking high-vitamin cod liver oil and high-vitamin butter oil, the stiffness disappeared, never to return. -SM

Since taking fermented cod liver oil, my libido has returned (after three years' absence), and my periods are not painful now. My hands no longer ache as they did and my skin is clearer. My daughter's fungal rash went away within a couple of weeks after she began taking it. -LM

Cod Liver Oil: Setting the Record Straight

Friday, May 01 2009 13:38
http://www.westonaprice.org/cod-liver-oil/...record-straight

Debate on the merits of cod liver oil has been ricocheting around the internet of late, sparked by a recent posting from Dr. Joseph Mercola, in which he withdrew his recommendation to take cod liver oil. Mercola's remarks dovetail with establishment bias against this old-fashioned superfood. Cod liver oil has come under attack as a "dangerous" source of vitamin A. And while vitamin A has fallen to the bottom of the Vitamin Hit Parade, vitamin D has risen to the top, with many voices calling for extensive supplementation and an increase in the RDA for the sunshine vitamin.

The establishment view is as follows: the animal form of vitamin A is toxic and also interferes with vitamin D metabolism, so we should avoid foods rich in vitamin A, like liver, organ meats and cod liver oil; we can get all the vitamin A we need from the conversion of carotenes in plants; it is impossible to obtain adequate vitamin D from food, so we need to take vitamin D supplements.

In recent articles, we have put these mistaken notions to rest by showing the extensive scientific literature on the benefits of cod liver oil and vitamin A, as well as on the synergistic-rather than antagonistic-relationship of vitamins A and D. To bolster our premise that vitamin A is not toxic and that vitamin D can be obtained from food sources, we have published many articles on traditional diets, showing the high levels of vitamins A and D in traditional foods. For example, the traditional Scottish diet, described in a recent article, was rich in fish liver oils, organ meats, shellfish and fats, thus corroborating the discoveries of Dr. Weston A. Price, who found that emphasis on foods rich in vitamins A and D was universal among primitive populations.

However, care must be taken in the choice of cod liver oil. Most brands contain

synthetic vitamins A and D and many have the wrong ratio of A to D. Please visit the following links for information on cod liver oil, the number one superfood:

Recent Studies on Cod Liver Oil

The following are references to recent articles published since 2000 in the scientific literature showing the myriad benefits of cod liver oil. Because modern diets are deficient in vitamins A and D, we recommend a daily dose of good quality cod liver oil for young and old.

Vitamin D Status: In Norway, three mølje meals (consisting of cod liver and fresh cod-liver oil) provided an amount of vitamin D equal to 54 times the recommended daily dose. Subjects with food consumption habits that included frequent mølje meals during the winter sustained satisfactory vitamin D levels in their blood, in spite of the long "vitamin D winter" (Public Health Nutr. 2004 Sep;7(6):783-9).

Vitamin D Status and Bone Loss: Inclusion of cod liver oil in the diet appears to attenuate the seasonal variation of vitamin D status in early postmenopausal women at northerly latitudes where quality of sunlight for production of vitamin D is diminished. Cod liver oil can thus protect against greater bone turnover, bone loss and obesity (Bone. 2008 May;42(5):996-1003).

Hip Fracture: Multivitamin or cod liver oil supplementation was associated with a significantly lower risk of any fracture. "We found no evidence to support any skeletal harm associated with increased serum indices of retinol exposure or modest retinol supplementation in this population" (J Bone Miner Res. 2005 Jun;20(6):913-20).

Multiple Sclerosis: In Arctic climates, supplemental cod-liver oil during childhood may be protective against multiple sclerosis later in life (J Neurol. 2007 Apr;254(4):471-7).

Breast Cancer: Reduced breast cancer risks were associated with increasing sun exposure and cod liver oil use from ages ten to nineteen. "We found strong evidence to support the hypothesis that vitamin D could help prevent breast cancer. However, our results suggest that exposure earlier in life, particularly during breast development, maybe most relevant" (Cancer Epidemiol Biomarkers Prev. 2007 Mar;16(3):422-9).

Depression: Regular use of cod liver oil is negatively associated with high levels of depressive symptoms in the general population (J Affect Disord. 2007 Aug;101(1-3):245-9).

Wound Healing: The combination of zinc oxide and cod liver oil was found to be superior to the formulations containing only one active ingredient. This combination was also found to be most efficient in accelerating wound healing when it is retarded by repeated dexamethasone treatment (Dtsch Tierarztl Wochenschr. 2006 Sep;113(9):331-4).

Arthritis and Joint Stiffness

Pain and Joint Stiffness: Cod liver oil application allows reduction of the dose of nonsteroidal anti-inflammatory drugs, and improves chief clinical symptoms, reducing pain and morning joint stiffness (Klin Med Mosk 2005;83(10):51-7).

Pain in Rheumatoid Arthritis: Cod liver oil supplements were better than controls in relieving pain and can be used as NSAID-sparing agents in rheumatoid arthritis patients (Rheumatology (Oxford). 2008 May;47(5):665-9).

Rheumatoid Arthritis: Use of cod liver oil decreased occurrence of morning stiffness, swollen joints and pain intensity in patients suffering from rheumatoid arthritis (Adv Ther. 2002 Mar-Apr;19(2):101-7).

Diabetes and Circulation

Diabetes: Use of cod liver oil in the first year of life was associated with a significantly lower risk of type 1 diabetes. Use of other vitamin D supplements during the first year of life and maternal use of cod liver oil or other vitamin D supplements during pregnancy were not associated with lower risk of type 1 diabete (Am J Clin Nutr. 2003 Dec;78 (6):1128-34).

Diabetes-Related Cardiovascular Disorders: Cod liver oil treatment in diabetic rats completely prevented endothelial deficiency and partly corrected several biochemical markers for cardiovascular disorders (J Pharm Pharmacol. 2007 Dec;59(12):1629-41).

Diabetic Nephropathy: Substitution of cod liver oil for soybean oil in mice reduced oxidative stress and nephropathy induced by daunomycin, an anti-cancer agent (Lipids. 2002 Apr;37(4):359-66).

Birth Weight, Breast Milk, and Children's Health

Higher Birth Weight: Women who used liquid cod liver oil in early pregnancy gave birth to heavier babies, even after adjusting for the length of gestation and other confounding factors. "Higher birth weight has been associated with a lower risk of diseases later in life and maternal cod liver oil intake might be one of the means for achieving higher birthweight" (BJOG. 2005 Apr;112(4):424-9).

Breast Milk: Women using cod liver oil had a significantly higher levels of docosahexaenoic acid (DHA) and eicosapentaenoic acid (EPA) in their breast milk. "As this may have an impact on the health and development of breast-fed infants in later life, regular maternal cod liver oil intake could be relevant for the infant as well as for the nutritional adequacy of the maternal diet" (Ann Nutr Metab. 2006;50(3):270-6).
Fat-Soluble Vitamins in Breast Milk: Maternal use of cod liver oil resulted in higher levels of fat-soluble vitamins in breast milk, especially vitamins E and A. (Ann Nutr Metab. 2001;45(6):265-72).
Intelligence in Children: Children who were born to mothers who had taken cod liver oil during pregnancy and lactation scored higher on intelligence tests at age four compared with children whose mothers had taken corn oil (Pediatrics. 2003 Jan;111(1):e39-44).
Ear Aches in Children: Children prone to ear aches (otitis media) receiving cod liver oil plus selenium needed lower amounts of antibiotics during supplementation compared to before supplementation (Ann Otol Rhinol Laryngol. 2002 Jul;111(7 Pt 1):642-52).
Upper Respiratory Tract Infections in Children: Children supplemented with cod liver oil had a decrease in upper respiratory tract infections and pediatric visits over time (Ann Otol Rhinol Laryngol. 2004 Nov;113(11):891-901).

The Yin and Yang of Cod Liver Oil

Written by Leslie McGee, RN, LAc
Wednesday, April 26 2006 16:10
http://www.westonaprice.org/cod-liver-oil/565-yin-yang-clo

No one believes me, but it just flies off the shelf. Cod liver oil, that is. Once my clients recover from their initial horror at my suggestion to take cod liver oil, and then try it for a month, they are always back for more.

My training is in Chinese medicine, and although cod liver oil has its roots in Scandinavia, we can look at any food or supplement through the prism of Chinese medicine theory. As I have learned more about the research on cod liver oil, its traditional uses, and my own clinical experience, I have come to believe that cod liver oil nourishes us at a very deep level.

Chinese medicine is a very old system with its own terminology and theories of health and disease. Yet, in spite of its ancient roots, this system can readily be applied to modern people and modern diseases. Chinese medicine includes its own logically consistent theories of physiology and pathophysiology. Illness, health, foods and medicine, including cod liver oil, can all be described within this framework.

From a Chinese medicine perspective cod liver oil supports the body in three

fundamental ways:
It supplements yin and yang
It fills the essence
It strengthens the kidneys
Yin and Yang

Supplementing the body in this way supports our very foundation. Understanding what this means adds to our appreciation of the value of cod liver oil. Let's examine the Chinese medicine theory behind these concepts: yin and yang, essence and the kidneys.

Most Westerners have heard of yin and yang. These are foundational concepts in Chinese medicine. Yin and yang represent opposite principles--a duality. All life and all creation are manifestations of the interplay between yin and yang. We can apply yin and yang to the body and all physiological processes. Yin is cool, dark, moist, female, still, quiet and substantial. Yang is hot, bright, dry, male, exuberant, energetic and insubstantial. Within our bodies we have yin and yang qualities and functions. For example, our yin aspect is our literal body form--our bones, muscles and substance. Our yang aspect includes our body's warmth, movement and energy. Yin represents anabolic metabolism (building form and structure). Yang represents catabolic metabolism (consuming form and creating energy). Adequate yin allows us to rest and sleep deeply. Adequate yang gives us energy, power and motivation. While opposite, yin and yang are inherently connected. We say yin and yang are mutually consumptive, yet also mutually supportive and mutually transforming. Health requires that our yin and yang be fairly balanced. Appropriate waking and sleeping is the result of the balance and interplay of yin and yang at different times of the day. Aging involves the gradual decline of yin and yang. Death implies the final separation of yin and yang.

As we age, it is not uncommon for yin or yang to decline and become deficient. Because yin and yang play such a fundamental role in our physiology, we find yin or yang deficiencies in a great variety of conditions. When we remember that yin equals coolness, moisture, stillness and substance, we can see that deficiency of yin would create heat, dryness, agitation (lack of stillness) and wasting of body mass (lack of substance). Western diseases or syndromes that may be due to yin deficiency include hot flashes, insomnia, anxiety, attention deficit disorder and osteoporosis.

Similarly, since yang equals heat, energy and activity, deficiency of yang may create cold, fatigue and sluggish metabolism. Western diseases and syndromes that may be due to yang deficiency include hypothyroidism, hypoadrenalism, weight gain, chronic fatigue, weak immunity and depression. It is not uncommon for people to be both yin and yang deficient at the same time. An example of this is a menopausal woman who has hot flashes, but when she's not having a hot flash, she tends to feel cold and fatigued.
Essence

Essence is another idea from Chinese medicine that relates to our fundamental capacities and strengths. Essence refers to one of the body's five vital substances. The other vital substances are qi (energy), blood, body fluids and shen or spirit. All five vital substances must be present and free flowing in a healthy person, but essence most relates to our very foundation. We inherit essence from our parents, and we also create essence by eating well and living a balanced life. Essence governs our growth and development. Essence gives us our reproductive capacity. As essence declines, our bodies age. Adequate essence is required for fertility and healthy pregnancy. Maintaining essence is a key strategy for promoting longevity.
Kidney Strength

The third concept applicable to the benefits of cod liver oil relates to the Chinese theory of internal organ function. Many organs are recognized in Chinese medicine, and organ functions are similar to the modern understanding of those organs. However, additional functions are assigned to most organs in the body. In this spirit we describe the kidneys as the home of our basic yin and yang energies, and the home of the essence. According to Chinese medicine, keeping the kidneys strong is an important way to protect and fortify yin, yang and essence. Thus, strengthening the kidneys is a basic strategy for promoting health and longevity.

My conclusion that cod liver oil supplements yin and yang, fills the essence, and strengthens the kidneys is based on my own observations as well as commentary from the Chinese medical literature. For centuries Chinese doctors have been describing foods and medicinal herbs in Chinese medicine terms. This process continues today as Chinese medicine practitioners notice how any ingested substance--food, herb or harmaceutical--affects the body. Although my English language sources did not reveal a Chinese medicine description of cod liver oil per se, they do provide very interesting descriptions of vitamins A and D, the two-fat soluble vitamins that make cod liver oil so valuable.
Vitamins A and D

According to Chinese medicine, vitamin A "supplements the blood and fills the essence; brightens the eye and clears heat from the blood." It also treats heat in the body due to a lack of yin.1 (Remember that yin represents coolness, so a lack of yin can create improper heat in the body.)

Vitamin D "supplements the kidneys and invigorates yang; strengthens sinew and bone, brightens the eye and quiets the fetus."1

It is well established in Chinese medicine that high quality fats and oils nourish the yin of the body.2 The fish oil of cod liver oil is such a yin supplement.

The technical language may be a little awkward to Westerners, but the message is

clear: vitamin A and fish oil nourish yin, and vitamin D supplements yang. Vitamin A and D arrive together, in nature, a perfect yin-yang pair. It may seem strange that a single food or supplement can nourish both yin and yang, since yin and yang are opposites, but, in fact, a few herbs and foods do just that. And by nourishing yin and yang together we protect ourselves from over-supplementing one or the other. When you only supplement yang, the body can be over-heated and over-stimulated. When you only nourish yin, the body becomes sluggish and prone to weight gain.

When we consider the Chinese medicine description of vitamins A and D, it makes sense that cod liver oil has such deep and global benefits for people. Cod liver oil is an excellent choice for many conditions where yin or yang, or both, are lacking. Yin or yang deficiencies are quite common and occur in a great variety of syndromes or illnesses, especially as we age.

Notice the other comments about vitamin D. Remember, when yin or yang is deficient, we also need to fortify the kidneys. Vitamin D does just that. It is also very interesting to note that vitamin D "quiets the fetus." This is a technical expression for the idea that some herbs and foods support and protect the fetus and are thus safe, or even required, during pregnancy. Only a handful of Chinese herbs quiet the fetus. We also see that vitamin D "strengthens sinew and bone" and indeed in modern medicine we understand that vitamin D plays a crucial role in bone formation.

In my clinical experience, cod liver oil is extremely helpful in a great variety of conditions, and these conditions can usually be linked to the person’s yin, yang or essence status. I have seen excellent results in clients with weak immune systems. Cod liver oil also has tremendous value in women’s health. It can help normalize the menstrual cycle and eliminates many premenstrual discomforts. Certainly "filling the essence" is critical for improving fertility. And it is interesting to speculate whether menopause would be less of a problem if women used cod liver oil throughout their lives. The description of vitamin A as "supplementing blood and clearing heat due to deficiency"1 is a perfect treatment principle for common menopausal symptoms.

I have seen depression respond very well to cod liver oil. I believe this is because in supplementing both yin and yang the brain and spirit receive both the stability and calmness of yin and the enlivenment of yang. Evidence is growing in modern science for the use of fish oils in many neurological and psychiatric problems.3,4

General inflammation also responds well to cod liver oil. Inflammation is now recognized as a key factor in many diseases, from colitis to arthritis to heart disease. The ability to "clear heat from the blood," as it is described in the Chinese medical language, may relate to this anti-inflammatory action. The modern research on cod liver oil supports these clinical indications.5

I also find it interesting that when vitamin A or D are given alone problems may ensue,

and this is why some modern nutritionists frown on supplementing with the fat soluble vitamins.6 Only in modern times are vitamins A and D delivered as isolated single components. In nature, vitamin A and D arrive together, a perfect yin-yang pair. Hopefully research will explore the idea that this pair of vitamins work best together in their natural state.

Wide Range of Help

How can cod liver oil help people with such a wide range of health issues? I believe it is because yin, yang, and essence support all bodily processes, everything from immunity to mental health to endocrine balance. In my practice it has been very gratifying to see the power of cod liver oil and fascinating to consider the Chinese medicine implications.

I live in Tucson, Arizona and my clients often wonder whether the vitamin D in cod liver oil presents a safety issue for those living in the southwestern US where sunlight is abundant. I tell them it all depends on your exposure to sunlight. If you deliver mail or work outdoors on a ranch or sunbathe routinely, then you would need to be aware of your vitamin D blood levels before taking cod liver oil routinely.7 However, I think most of us spend literally all day indoors, and use sunblock when outdoors, so even in my sunny hometown, a little cod liver oil is safe. I recommend one to two teaspoons per day. Less in the summer if you are outdoors a lot; a little more in the winter. Those who live farther from the equator or who have darker skin may take more. This is very significant for people with dark skin. It has been found that African-Americans are much more likely to be vitamin D deficient.8

It is important to remember that in Chinese medicine supplementing deficiencies is a gentle, gradual process. I ask my clients to try cod liver oil for at least a month, to give it a fair trial, but usually they are believers by then. Analyzing cod liver oil with Chinese medicine theory gives us additional insight into why it is so powerful. Filling the essence, fortifying the kidneys and supplementing yin and yang are excellent strategies for health.

Cod Liver Oil Basics and Recommendations

Written by Sally Fallon and Mary G. Enig, PhD
Sunday, February 08 2009 20:36
http://www.westonaprice.org/cod-liver-oil/238

JUMP TO: Brand Recommendations

Once a standard supplement in traditional European societies, cod liver oil provides fat-soluble vitamins A and D, which Dr. Price found present in the diet of primitives in amounts ten times higher than in modernized diets. Cod liver oil supplements are a must for women and their male partners, to be taken for several months before conception, and for women during pregnancy. Growing children will also benefit greatly from a small daily dose.

Cod liver oil is also rich in eicosapentaenoic acid (EPA) and docasahexaenoic acid (DHA). The body makes these fatty acids from omega-3 linolenic acid. EPA is as an important link in the chain of fatty acids that ultimately results in prostaglandins, localized tissue hormones while DHA is very important for the proper function of the brain and nervous system. Those individuals who have consumed large amounts of polyunsaturated oils, especially partially hydrogenated oils, who are suffering from certain nutrient deficiencies, or who have impaired pancreatic function, such as diabetics, may not be able to produce EPA and DHA and will, therefore, lack important prostaglandins and necessary fats for the brain unless they consume oily fish or take a cod liver oil supplement.

Buy cod liver oil in dark bottles and store in a cool, dark, dry place. Please read Vitamin A, Vitamin D, and Cod Liver Oil: Some Clarifications below for amounts to give to adults

and children and for recommended brands. Cod liver oil is easy to take when stirred into a small amount of water or fresh juice.

Dr. Price always gave cod liver oil along with high-vitamin butter oil, extracted by centrifuge from good quality spring or fall butter. He found that cod liver oil on its own was relatively ineffective but combined with high vitamin butter oil produced excellent results. The butter oil contains what he called Activator X, now considered to be vitamin K2, which works synergistically with vitamins A and D (see Chris Masterjohn's article "On the Trail of the Elusive X Factor: A Sixty-Year Old Mystery Finally Solved"). Your diet should include sources of vitamin K, such as good quality butter from grass-fed cows and/or high-vitamin butter oil, fat from grass-fed animals, cheeses from grass-fed animals and duck or goose liver, along with cod liver oil.
Vitamin A, Vitamin D & Cod Liver Oil: Some Clarifications

Several visitors to our website have noted inconsistencies in various statements about vitamin A, vitamin D and cod liver oil. These issues revolve around questions of dosage and safety.
Vitamin A Dosage

We have pointed out that concerns about vitamin A toxicity are exaggerated. While some forms of synthetic vitamin A found in supplements can be toxic at only moderately high doses, fat-soluble vitamin A naturally found in foods like cod liver oil, liver, and butterfat is safe at up to ten times the doses of water-soluble, solidified and emulsified vitamin A found in some supplements that produce toxicity.(1) Additionally, the vitamin D found in cod liver oil and butterfat from pasture-raised animals protects against vitamin A toxicity, and allows one to consume a much higher amount of vitamin A before it becomes toxic.(1-3) Liver from land mammals is high in vitamin A but low in vitamin D, and should therefore be consumed with other vitamin D-rich foods such as lard or bacon from pasture-raised pigs, egg yolks, and oily fish, or during months in which UV-B light is sufficient to provide one with adequate vitamin D.

As a general guideline, we recommend the following doses of vitamin A from cod liver oil, along with a nutrient-dense diet that contains other vitamin A-rich foods:
Children age 3 months to 12 years: A dose of cod liver oil that provides about 5000 IU vitamin A daily, obtained from about 1 teaspoon of regular cod liver oil or ½ teaspoon of high-vitamin cod liver oil.
Children over 12 years and adults: A maintenance dose of cod liver oil that provides about 10,000 IU vitamin A daily, obtained from 2 teaspoons of regular cod liver oil or 1 teaspoon of high-vitamin cod liver oil.
Pregnant and nursing women: A dose of cod liver oil that provides about 20,000 IU vitamin A daily, obtained from 4 teaspoons regular cod liver oil or 2 teaspoons high-vitamin cod liver oil.

Please note that these recommended doses are 2-5 times greater than the U.S. RDA

for children, 4 times greater than the U.S. RDA for adults and 8 times greater than the U. S. RDA for pregnant women. The RDA values are based on studies conducted in the general population, which is now recognized to be largely deficient in vitamin D. For a discussion of studies showing that vitamin A consumption up to 30,000 IU per day by pregnant women does not result in a greater risk of birth defects, see Vitamin A for fetal development. This article also describes the vital role played by vitamin A in the development of the fetus. Pregnant women may wish to consult their health practitioner about taking cod liver oil during pregnancy.

Individuals under stress or wishing to use cod liver oil to treat a disease condition may take much larger doses, even up to doses providing 90,000 IU vitamin A per day, for a period of several weeks.
Vitamin D Dosage

Our recommended brands of cod liver oil (see below) will provide with the above recommended dosages for cod liver oil about 500-1000 IU vitamin D for children, 1000-2000 IU vitamin D for adults, 2000-4000 IU vitamin D for pregnant and nursing women and up to 9000-18,000 IU for those taking large amounts of cod liver oil to deal with stress and disease.

In 1997, the Food and Nutrition Board of the US Institute of Medicine set the tolerable upper intake level (TUIL) for vitamin D at 2000 IU per day. However, the vitamin D content experts on the Upper Limits Panel objected to this limit, and several prominent vitamin D researchers have called for an upward revision of the limit. Experiments show that even during the winter with a low vitamin D intake, humans will exhaust stores of vitamin D at a rate of 3000-4000 IU per day, an amount that many people require to maintain optimal levels of the vitamin in the blood. Extensive exposure to summer sun at mid latitudes naturally produces levels of vitamin D in the blood equivalent to what is attained by supplementing with a continued daily dose of 10,000 IU, suggesting humans are designed to tolerate such large amounts of vitamin D.(4)

If you are a lifeguard or spend a lot of time in the sun, you do not need to take supplemental vitamin D; however you still need to consume adequate vitamin A. Animal studies show that even moderate amounts of vitamin D increase the body's need for vitamin A, whether the vitamin D is provided in the diet or by UV light (2,5). So, if you cut back or eliminate cod liver oil in the summer, be sure to consume plenty of oily fish, liver, butterfat and egg yolks from grass-fed hens to ensure adequate vitamin A.

For a discussion of Vitamin D Toxicity, see http://www.vitamindcouncil.org/vitaminDToxicity.shtml

This does not mean we do not recommend that some individuals have their vitamin D levels tested. Such testing can be very useful in determining vitamin D status and the effectiveness of cod liver oil or vitamin D supplements. Optimal serum vitamin D levels

should be in the range of 30-50 ng/mL (see discussion at [link "Potential Dangers of Vitamin D, page 24 of Spring 2009]).
Brand Recommendations

Most brands of cod liver oil go through a process that removes all of the natural vitamins. The resultant product contains very low levels of vitamin A and virtually no vitamin D. Some manufacturers add manufactured vitamins A and D to the purified cod liver oil and until recently, one manufacturer added the natural vitamins removed during processing back into the cod liver oil. Fortunately, we now have available in the U.S. a naturally produced, unheated, fermented high-vitamin cod liver oil that is made using a filtering process that retains the natural vitamins.

The high-vitamin fermented cod liver oil is sold as a food so does not contain vitamin levels on the label. However, after numerous tests, the approximate values of A and D have been ascertained at 1900 IU vitamin A per mL and 390 IU vitamin D per mL. Thus 1 teaspoon of high-vitamin fermented cod liver oil contains 9500 IU vitamin A and 1950 IU vitamin D, a ratio of about 5:1.

Based on these values, the dosage for the high-vitamin fermented cod liver oil is provided as follows:
Children age 3 months to 12 years: 1/2 teaspoon or 2.5 mL, providing 4650 IU vitamin A and 975 IU vitamin D.
Children over 12 years and adults: 1 teaspoon or 10 capsules, providing 9500 IU vitamin A and 1950 IU vitamin D.
Pregnant and nursing women: 2 teaspoon or 20 capsules, providing 19,000 IU vitamin A and 3900 IU vitamin D.

Please note that the fermented cod liver oil contains many co-factors that may enhance the body's uptake and usage of vitamins A and D; in fact, many have reported results equivalent to those obtained from high-vitamin cod liver oil with half the recommended dose, that is ¼ teaspoon or 1.25 mL for children age 3 months to 12 years; ½ teaspoon or 5 capsules for children over 12 years and adults; and 1 teaspoon or 10 capsules for pregnant and nursing women.

As of Spring, 2009, we recommend the following brands of cod liver oil. Sources of high-vitamin fermented cod liver oil and high-vitamin cod liver oil with natural vitamins added are in the BEST category; sources of processed cod liver oil with synthetic vitamins in the right proportions are in the GOOD category. We do not recommend brands of cod liver oil that have only low levels of vitamins A and D.

About the Author

Sally Fallon Morell is the author of Nourishing Traditions: The Cookbook that Challenges Politically Correct Nutrition and the Diet Dictocrats (with Mary G. Enig, PhD), a well-researched, thought-provoking guide to traditional foods with a startling message: Animal fats and cholesterol are not villains but vital factors in the diet, necessary for normal growth, proper function of the brain and nervous system, protection from disease and optimum energy levels. She joined forces with Enig again to write Eat Fat, Lose Fat, and has authored numerous articles on the subject of diet and health. The President of the Weston A. Price Foundation and founder of A Campaign for Real Milk, Sally is also a journalist, chef, nutrition researcher, homemaker, and community activist. Her four healthy children were raised on whole foods including butter, cream, eggs and meat.

Mary G. Enig, PhD is an expert of international renown in the field of lipid biochemistry. She has headed a number of studies on the content and effects of trans fatty acids in America and Israel, and has successfully challenged government assertions that dietary animal fat causes cancer and heart disease. Recent scientific and media attention on the possible adverse health effects of trans fatty acids has brought increased attention to her work. She is a licensed nutritionist, certified by the Certification Board for Nutrition Specialists, a qualified expert witness, nutrition consultant to individuals, industry and state and federal governments, contributing editor to a number of scientific publications, Fellow of the American College of Nutrition and President of the Maryland Nutritionists Association. She is the author of over 60 technical papers and presentations, as well as a popular lecturer. Dr. Enig is currently working on the exploratory development of an adjunct therapy for AIDS using complete medium chain saturated fatty acids from whole foods. She is Vice-President of the Weston A Price Foundation and Scientific Editor of Wise Traditions as well as the author of Know Your Fats: The Complete Primer for Understanding the Nutrition of Fats, Oils, and Cholesterol, Bethesda Press, May 2000. She is the mother of three healthy children brought up on whole foods including butter, cream, eggs and meat.

Cod Liver Oil: The Number One Superfood

Tuesday, February 07, 2006 by: Krispin Sullivan
http://www.naturalnews.com/017590.html

Doctor Price was right, as usual. Cod liver oil is very good for you, more than you ever knew. Research studies ranging from 1918-2001 give cod liver oil an A+ rating. This marvelous golden oil contains large amounts of elongated omega-3 fatty acids, preformed vitamin A and the sunlight vitamin D, essential nutrients that are hard to obtain in sufficient amounts in the modern diet. Samples may also naturally contain small amounts of the important bone- and blood-maintainer vitamin K.

There is hardly a disease in the books that does not respond well to treatment that includes cod liver oil, and not just infectious diseases but also chronic modern diseases like heart disease and cancer. Cod liver oil provides vitamin D that helps build strong bones in children and helps prevent osteoporosis in adults. The fatty acids in cod liver oil are also very important for the development of the brain and nervous system. "If you want to prevent learning disabilities in your children," said David Horrobin, distinguished medical and biochemical researcher, "feed them cod liver oil."

Cod liver oil contains more vitamin A and more vitamin D per unit weight than any other common food. One hundred grams of regular cod liver oil provides 100,000 IU of vitamin A, almost three times more than beef liver, the next richest source; and 10,000 IU vitamin D, almost four times more than lard, the next richest source. Of course, cod liver oil is only consumed in small amounts, but even a tablespoon (about 15 grams) provides well over the recommended daily allowance for both nutrients.

In addition, cod liver oil contains 7 percent each of the elongated omega-3 fatty acids EPA and DHA. EPA is the precursor of important prostaglandins, localized tissue hormones that help the body deal with inflammation; and DHA is extremely important for the development and function of the brain and nervous system. So it's no surprise that in numerous studies cod liver oil has proven to be a powerhouse in fighting disease.

GOOD FOR WHAT AILS YOU
Cod liver oil greatly improves heart function to prevent heart disease and to treat it even in advanced stages, after a heart attack and after heart surgery. Cod liver oil alters the linings of the arteries in such a way as to improve healing after damage. This is attributed to the omega-3 fatty acids but vitamin A, D and K all have important roles to play in facilitating mineral absorption, improving muscle function and supporting elasticity of the blood vessels. The inflammation-reducing prostaglandins made from EPA help mediate the inflammatory response in the arteries. In other studies the heart-protective effect was associated with changes in the muscle response to serotonin, increasing the heart's ability to "relax."1-15 In a study with rats, treatment with cod liver

oil actually caused artery-blocking atheromas to become smaller and blood vessel diameter to enlarge.55 Weston Price noted that heart attack deaths increased during periods when the vitamin A content of the diet was low. Cod liver oil can provide vitamin A on a continuous basis throughout the year.

Many of the conditions addressed by cod liver oil are considered related under the title Syndrome X. These include obesity, hypertension, insulin resistance, adult onset diabetes and stroke. Evidence is accumulating that these diseases of civilization are the result of high levels of omega-6 fatty acids and low levels of omega-3 fatty acids along with deficiencies of fat-soluble vitamins. We may be paying a very high price for our rejection of parental wisdom to take our cod liver oil.

In numerous studies, the elongated omega-3 fats found in cod liver oil have been shown to improve brain function, memory, stress response, immune response, allergies, asthma, learning and behavioral disorders, including bipolar syndrome and manic-depression.

Cod liver oil is most famous for contributing to bone health, preventing and reversing rickets in children and osteomalacia in adults.16, 17 Before the discovery of cod liver oil as a source of vitamin D, many children suffered greatly with deformed bones. Osteoporosis responds to vitamin D and to cod liver oil. Sufficient elongated omega-3 oils found in cod liver oil are one of the keys to keeping and rebuilding bone.18, 19 In women, higher levels of vitamin D from cod liver oil improve bone mineral density.20

Two of the symptoms of low levels of vitamin D are bone pain and muscle pain. This may manifest as pain in the legs, muscle weakness and difficulty climbing stairs. Numerous studies have shown improvement in muscle pain, muscle strength and bone pain scores with cod liver oil.40, 41

Cod liver oil is effective in treating arthritis as well. Researchers funded by Great Britain's Arthritis Research Campaign found that the elongated omega-3 fatty acids in cod liver oil reduce both pain and damage in inflamed joints.56

Pregnant women using cod liver oil have infants with a lower risk for juvenile type 1 diabetes.21 This effect was found only in mothers taking cod liver oil, not in mothers taking multivitamin supplements. Cod liver oil taken by nursing mothers improves the fatty acid profile in breast milk to promote optimal brain development and also increases levels of vitamin A to prevent infections. Interestingly, cod liver oil does not provide increased vitamin D in breast milk.23,24

Cod liver oil given to infants after birth and during the first year had no protective effect against type 1 diabetes but it nevertheless is an important source of nutrients for optimal infant health.22 In more than forty trials, vitamin A has been shown to reduce morbidity and mortality of children.25 Cod liver oil was the supplement of choice in

many of these trials. Books on feeding infants published in the 1930s and 1940s routinely recommended cod liver oil, starting with 1 teaspoon at the age of three weeks. It was Dr. Spock who threw this wisdom out the window by recommending vaccinations instead of the powerful nutritional support of cod liver oil. Few modern books on infant care mention the importance of the fat-soluble nutrients in this wonderful superfood.

As for treating diabetes in adults, cod liver oil has been used in a number of trials with both insulin-dependent and non-insulin-dependent diabetes. In both conditions cod liver oil improved glucose response and other markers of the disease.26-31 Vitamin A in cod liver oil helps promote healing and protects the retina, both problem areas in the diabetic patient.

Cod liver oil has lowered blood pressure induced by stress-elevated levels of cortisol.32-35 Cod liver oil given to rats reduced intraocular pressure suggesting a use in prevention and treatment of glaucoma.36 Vitamin D in cod liver oil promotes absorption of calcium and magnesium, thereby lowering blood pressure.

Colitis responds more effectively to the type of omega-3 fatty acids in cod liver oil than to medication.37-38 Cod liver oil should be the first protocol for this condition as well as irritable bowel syndrome and Crohn's disease.

Topically applied, cod liver oil contributes to faster wound healing and improvement in skin quality.39 An excellent treatment for diaper rash and other skin conditions is cod liver oil mixed with zinc oxide. And cod liver oil taken orally helps maintain soft skin and minimize wrinkles.

And what about cancer? All the nutrients in cod liver oil help prevent cancer. Vitamin A has been part of every successful alternative cancer therapy so far. In a study in China, use of cod liver oil was found to be protective against childhood leukemia.57 In a study of Norwegian men and women, consumption of cod liver oil was found to protect against lung cancer.58

PRACTICAL ASPECTS

Eating fish will not provide the levels of nutrients that are found in cod liver oil. Even in heavy fish-eating populations, the addition of cod liver oil improves health.42-43 And taking fish oils is not the same as taking cod liver liver oil. One tablespoon of regular cod liver oil and one-half tablespoon of high-vitamin cod liver oil provide the amount of elongated omega-3 fatty acids found in twelve 1,000 mg fish oil capsules.

As for vitamin D, body oils of fish can be good sources as long as you are willing to eat a lot of them. One-half pound of fatty herring or sardines gives a dose of vitamin D equal to that of about one tablespoon of cod liver oil. But salmon oil has one-fifth the potency of cod liver oil.

One concern about taking cod liver oil is the presence of contaminants—heavy metals (such as mercury, cadmium and lead), PCBs and so forth. Fortunately, consumers need not worry when it comes to cod liver oil. All cod liver oils in the US must be tested according to protocols of the Association of Analytical Communities (AOAC) and approved free of detectable levels of 32 contaminants before they can be imported into this country. Furthermore, mercury is water soluble. It may be present in the flesh of fish, but it is not present in the oil.

Another concern is rancidity. Cod liver oil can become rancid if improperly handled. In a 1988 study, peroxide values (indicating rancidity) ranged from a low of 2 to a high of 44.7. Nevertheless, properly handled cod liver oil is relatively stable. It contains 21 percent saturated fatty acids and 57 percent monounsaturated fatty acids, which provide stability. The fishy smell of cod liver oil is due to the presence of small amounts of fish protein and is not a sign of rancidity. To ensure that your cod liver oil is fresh, avoid buying the large economy size or the end-of-season sale item. Buy cod liver oil in small dark bottles and keep them in a cool dark place. Cod liver oil need not be refrigerated after opening if it is used up quickly—within two months.

Virtually all cod liver oil imported into the US comes from Norway, and while all of it is safe, there are different grades, depending on vitamin levels. The lighter oil from the "top of the barrel" has a lower molecular weight, goes rancid more quickly and has lower levels of vitamins, while the heavier oil, which sinks, is richer in vitamins. The heavier oil is what Dr. Price referred to as high-vitamin cod liver oil. It contains double the amounts of vitamin A and D as regular cod liver oil. Virtually all cod liver oil imported into the US is the lighter, "top of the barrel" variety. The Norwegians keep the best for themselves!

Whenever taking cod liver oil, remember the findings of Dr. Price. He noted that he did not get good results from cod liver oil unless he gave it concurrently with high-vitamin butter. Just why this is so is a matter of speculation, but we do know that the very unsaturated fatty acids found in cod liver oil cannot be effectively assimilated and stored in the tissues without the presence of adequate saturated fatty acids, the kind that would be provided by butter. This means that even regular butter would help support cod liver oil therapy; but Price found that the combination of cod liver oil with high-vitamin butter, from cows eating rapidly growing green grass, was nothing short of miraculous, reversing tooth decay and bringing patients back from the brink of death.

I do not find it hard to take Carlson's cod liver oil on a spoon, but for many, the big challenge is how to get this oily substance down. One technique is to add cod liver oil to a small amount of water or fresh juice, stir and then quickly send it down the hatch. If you can't bring yourself to take cod liver oil on a spoon or in water, then use the capsules. For babies and small children, use an eye dropper.

OLD RESEARCH BROUGHT TO LIGHT

In researching this article, I had the great fortune to stumble upon a book published in the 1930s—it is truly exciting to come upon material found and lost and found again. Ultraviolet Light and Vitamin D in Nutrition, by Katharine Blunt and Ruth Cowan, published by the University of Chicago, contains fascinating material, including a chapter on the research of Mrs. May Mellanby published in 1918 in The Lancet II, page 767.

The book describes the work of scientists E. M. Honeywell, A. F. Hess and C. E. Bills (after which the Bills's Scale for determining antirachitic value for vitamin D is named) who studied all aspects of fish oil potency, production and seasonal distribution. Early in their research they discovered that oil extracted from cod when the fish were fat in the summer contained much lower amounts of vitamin D. Summer oil scored 100 on the Bills scale but winter oil scored above 1,000 and some oils scored 20,000. Their conclusion: "For a fish of a given size, antirachitic potency varies inversely with the amount of fat or oil in the liver." In other words, the less oil in the fish, the more concentrated it was.

In one fascinating study, they found that fish kept in darkened aquariums and fed on trimmed raw veal muscle had the same amount of vitamin D as free-swimming fish exposed to sunlight. So how the fish obtain vitamin D remains a mystery. Perhaps they are able to extract it from microscopic plankton and algae.

It is important to note that the amount of vitamin A in cod liver oil does not have any consistent relation with the amount of vitamin D. In numerous samples, oils rich in vitamin A were poor in vitamin D, and oils rich in vitamin D were poor in vitamin A. According to the book, in 1922 the US imported about 1.8 million gallons of cod oil and cod liver oil. By 1927 this amount grew to almost 5 million gallons based on data from the Bureau of Foreign and Domestic Commerce of the United States Department of Commerce. Cod oil is rancid oil used in the tanning industry, not for human consumption. The figures don't distinguish the difference, but most of the increase was in the edible cod liver oil due to research showing its benefit in preventing rickets. According to the Commerce Yearbook of 1928, "Medicinal oil production has increased greatly, and the advance in its price has lessened the supply of common cod oil for tanning."

In 2000, America imported only about one tenth that amount (less than half a million gallons), indicating a huge decline in use.

In 1930, when the book was compiled, the technology was just being developed to determine vitamin D potency. The accepted value as of August 31, 1929 was " one rat unit of vitamin D," defined as "that amount of vitamin D which, when uniformly distributed into the standard vitamin D deficient diet-ration, will produce a narrow and continuous line of calcium deposits on the metaphyses of the distal end of the radii and ulnae of standard rachitic rats." "Potent cod liver oil" is defined as that containing one of

these rat units per 0.75 mg. The International Units started out as rat units!

Testing of 18 oils in use at that time showed great variations in potency. Luckily today we have methods of standardization and much better methods of transportation and storage to improve the amount of vitamin D and freshness of our cod liver oil.

EAT YOUR EGGS
In 1929, researchers tested a variety of foods for vitamin D content and found the second most potent source of vitamin D was egg yolk. The book describes studies in which Hess both cured and prevented rickets in rats by giving them egg yolks. He also gave prophylactic treatment to 12 infants to forestall development of rickets in the winter months, which his experience had taught him to expect in the great majority of bottle-fed infants. He gave them one egg yolk added to their regular formula starting in December. None of the 12 developed rickets in March as expected and, unlike prior years, blood phosphates remained stable at summer values.

About this same time, Johns Hopkins University investigators cured seven African-American children of rickets, in most cases severe, by adding one or two eggs daily to their diet of milk and cereal.

Like the vitamin D in cod liver oil, the amount of vitamin D in egg yolks also varies. Researchers in Kansas looked at four groups of hens: one group got sunlight in the yard plus 30 minutes under a quartz mercury vapor lamp producing UV-B light; another got sunlight through glass plus 30 minutes under the lamp; the third group got sunlight alone; and the fourth group got sunlight under glass alone. Eggs from hens under glass produced rickets in rats. Those with considerable UV-B prevented rickets completely and those with less (no lamp) caused the development of slight rickets. Only the sunlight plus lamp completely prevented rickets, showing that the natural UV-B in Kansas did not provide sufficient light for optimal vitamin D. Giving cod liver oil to the chickens had the same effect as exposure to UV-B light. Cod liver oil as two percent of the ration increased levels of vitamin D in the egg yolks fivefold.

The surprising conclusion is that chickens should either be given sunlamp treatment or cod liver oil. Poultrymen and consumers alike need to recognize that the axiom "an egg is an egg" is a mistaken one. Rather, "an inadequate ration may yield impoverished eggs as well as animals." The authors suggest that eggs be graded by vitamin content. What a concept! Too bad no one listened. What would they think of our so-called "organic" eggs from hens raised in barns, never exposed to light and given "all-vegetarian" feed?

MEET MRS. MELLANBY
The most fascinating part of this little book is the chapter describing the experiments done in England by a Mrs. May Mellanby. Her husband, Dr. E. Mellanby, was the author of over 400 studies and the first to control rickets with diet. Cod liver oil had been used

for centuries as a remedy but the specific application to rickets was first demonstrated by Dr. Mellanby. (Control of rickets using UV-B light was demonstrated almost simultaneously by investigators at Columbia and Johns Hopkins University in 1921.) In his research into rickets in dogs, he discovered the mineral-blocking effect of phytic acid in grains and legumes. Dr. Mellanby demonstrated that diets containing high levels of cereals, especially oatmeal, and lacking vitamin D, are the most effective producers of rickets. If vitamin D is inadequate there is poor tooth development, but Mrs. Mellanby then went on to prove that no matter how much cereal is fed, if vitamin D is adequate tooth formation is normal. Mrs. Mellanby believed that as cereals increase in the diet, vitamin D must also be increased to offset their anticalcifying effects—think of the implications of this research on today's baby-feeding habits, where infants are given cereals as their first food but denied egg yolks until they are one year old!

Mrs. Mellanby also determined that vitamin D must be present from conception in order for proper tooth formation to occur. If vitamin D is absent during the early gestational period, the enamel cannot form properly, and it cannot be repaired by giving vitamin D later.

In her initial studies Mrs. Mellanby used dogs as the source of data but she later examined more than one thousand "baby" teeth from children. She divided these teeth into four categories—normal, hypoplastic (slightly underdeveloped), moderately underdeveloped and grossly underdeveloped. Only 149, or about 14 percent, of the total 1,036 were sound. About one-quarter were slightly underdeveloped, but nearly two-thirds were moderately or grossly underdeveloped.

It is more difficult to examine teeth in place, but of 266 adult teeth examined by Mrs. Mellanby, not one was sound. The teeth were extracted only for purposes of straightening the teeth, which means that they were erupting in a jaw that was underdeveloped. Thus, children with narrow faces most likely have underdeveloped teeth. Tooth structure and later decay are directly related. Prevention of cavities must start in the womb.

CURING CAVITIES

A final plum from this most fruitful book regards secondary dentine. Secondary dentine, a less well-organized form of tubular dentine, is produced throughout life as a patching material where cavities have begun, where the overlying enamel has been worn away, and within the pulp chamber as part of the aging process. Sometimes when cavities occur, production of secondary dentine can "heal" the decayed spot or rebuild portions of the tooth that have worn away. If vitamin D is adequate, secondary dentine will be well calcified. If vitamin D is lacking, dentine will be of poor quality or not present at all.

There is some evidence that the mineralization of dentine may depend on calcium derived from saliva rather than blood; in other words, it is deposited from the exterior rather than the interior of the tooth. The book describes studies by Dr. C. L. Pattison

who, working with Mrs. Mellanby, determined that the calcium content of saliva doubled or even tripled when the diet contained adequate vitamin D from cod liver oil.

DOWNSIDE

Now that I have told you all this good news about cod liver oil, I need to comment on the research surrounding its possible toxicity. Over-elevated serum levels of vitamin D are a possibility if you combine summer or southern sun and cod liver oil. So if you are spending a lot of time out in the sun during the summer months, it's probably best to cut back on the dose. If you are unsure, you should test your blood levels of vitamin D.

Cod liver oil is no longer recommended in Great Britain and in the US pregnant women are advised to avoid most vitamin A and vitamin A-containing foods, including cod liver oil. Both countries have adopted this policy because of the recognized teratogenicity (may cause birth defects) of retinoic acid, a synthetic form of vitamin A. But low vitamin A also causes birth defects. In the developing countries, such as Brazil, Pakistan and India, vitamin A deficiency is widespread, afflicting millions. A 1992 survey of the US population determined that 50 percent of Americans consume 19 percent or less of the Recommended Daily Allowance (RDA) or 400 IU.

The original study showing birth defects associated with intake of mostly synthetic vitamin A exceeding 5,000 IU daily was published November 23, 1995 in the New England Journal of Medicine.46 Other studies showing an association of birth defects with vitamin A concerned topical creams containing vitamin A derivatives such as Accutane, or extremely high doses of A used in animal studies.47-52

A later study, less well publicized, from the National Institute of Child Health and Human Development (NICHD), found no association with birth defects in women who took up to 10,000 IU of vitamin A during pregnancy. Because few women took more than 10,000 IU, researchers could not determine whether higher doses were a problem. Later Mills and others continued their research and determined that after serum testing and determining safe serum levels, women taking 30,000 IU of preformed vitamin A from animal foods (not beta-carotene) daily had the same blood levels of A as healthy pregnant women in the first trimester who had healthy babies. The conclusion is that a dosage over 30,000 IU vitamin A daily may be teratogenic for a certain few, but anything up to that amount is safe.53-54

Thus if you are or may become pregnant, limit cod liver oil intake to not more than a total vitamin A value of 30,000 IU. If using my favorite brand, Carlson Labs cod liver oil, that would equal the amount of vitamin A found in 12 teaspoons or 4 tablespoons, more than anyone would ever take. If using high-vitamin cod liver oil, the limit would be 2 tablespoons. Two tablespoons of regular cod liver oil provide 15,000 IU vitamin A, 2600 IU vitamin D and 6 grams of mixed omega-3 fatty acids, safe for pregnancy and good for mom and baby.

There is one situation in which high levels of vitamin A are not recommended and that is the condition of certain types of liver disease in which there is altered vitamin A metabolism. This is frequently the case with alcoholism. Alcoholics should not take high doses (not more than 1-1.5 tablespoons of regular cod liver oil) and what they do take should be accompanied by zinc supplements. The enzymes needed for vitamin A metabolism in the liver are zinc dependent.

The most likely culprits for production of birth defects in humans are topical and oral vitamin A analogs, not cod liver oil. Researchers have criticized the original 1995 study, from which governmental policy has been derived, for overstating the negative effect. Only 1.4 percent took supplements exceeding 10,000 IU a day, not a large enough sample from which to draw conclusions. However, it is important to never combine cod liver oil or vitamin A from supplements with oral or topical medications for acne or other skin disorders treated with retinoic acid derivatives.

If you sunbathe regularly and have found that your vitamin D levels are within the normal range, do not use cod liver oil unless you are willing to test and retest to determine that your blood levels of vitamin D have not gone too high. We do not know enough to say whether or not sunbathing and cod liver oil work synergistically or antagonistically. If you decide to get lots of sun and also use cod liver oil, please send me your vitamin D tests for my continued research. Cod liver oil use is safe in most of the US and all of Canada in winter but it should not be combined with other sources of vitamin D without careful testing and monitoring.

PRICE WAS RIGHT
Dr. Price was right. . . we all need to take cod liver oil (and eat plenty of good butter). For growing children, and for almost every disease condition, cod liver oil is the number one superfood, the supplement of choice.

For Vitamin D testing and monitoring information, send for the Sunlight and Vitamin D protocol from www.sunlightandvitamind.com or send $38.50 to K. Sullivan, PO Box 961, Woodacre, CA 94973. You can wait until May 2002 for the publication of Naked at Noon —The Importance of Sunlight and Vitamin D, which will contain the sunlight and vitamin D protocols in greater detail. We are also working with DiagnosTechs laboratory to develop a saliva test for vitamin D, calcium and vitamin K. Since these are the factors regulating teeth and bone it will be an easy way to diagnose and to monitor treatment. Stay tuned.

Note: High-vitamin cod liver oil is available from Radiant Life (888) 593-8333, 4radiantlife.com.

SIDEBAR ARTICLES

WHAT IF WE RUN OUT OF COD LIVER OIL?

Cod liver oil is not the only rich source of vitamins A and D. In 1926 Hess and Weinstock determined that puffer fish liver oil was 15 times more potent than cod liver oil in vitamin D, or what was then called antirachitic factor. On the rating scale with cod liver oil as 100, puffer liver oil posted 1500. (Haddock liver oil posted a lowly 10.)

The best cod liver oil replacement for Americans is the burbot or Lota lota, a fish found extensively in most of the Great Lakes. The burbot was not typically consumed as a food in the US, but burbot liver oil was found to be eight times as active as cod liver oil, scoring 800 on the antirachitic Bills scale.

Commonly called "lawyers" in the Great Lakes region, the burbot is a mottled olive-green fish weighing 1-3 pounds and measuring 15-22 inches. These elongated, cylindrical, freshwater codfish inhabit most waters of Alaska, Canada and northern United States as well as corresponding latitudes of Eurasia. Despite the burbot's homely form, its meat is palatable and nutritious and considered a delicacy in Scandinavia.

Early Great Lakes fishermen derided the burbot as trash fish. In the middle of the 20th century, the Great Lakes burbot populations declined under the onslaught of the sea lamprey. Today, however, burbot are returning to the lakes in increasing numbers. Burbot spawn under the midwinter ice, usually in one to four feet of water, though sometimes deeper. By midsummer, they move out to the cool depths of the lake, where they roam the open waters with lake trout, lake whitefish and other deepwater fish.

Many knowledgeable fishermen savor burbot. When boiled and buttered, the sweet flavor of burbot has earned it the title of "poor man's lobster." Though they continue to have an undeserved reputation as "trash fish," the commercial harvest of burbot from Green Bay and northern Lake Michigan increased nearly fivefold during the early 1980s to a total of nearly 100,000 pounds annually. Perhaps it's time to look into the burbot as a commercial source of high-vitamin oil. Of course it will be important to test the oil for the presence of heavy metals and pesticides. Development of a domestic source of

high-vitamin fish liver oil provides additional incentive to clean up the Great Lakes!

DOSAGES AND DANGERS
If pregnant or pregnancy is possible, limit cod liver oil intake to not more than 30,000 IU A per day. Two tablespoons of regular cod liver oil, one tablespoon high-vitamin cod liver oil is a dose that is safe and adequate for pregnant women and, in fact, all adults. There is no indication that anyone needs a dose of cod liver oil exceeding two tablespoons except in certain special circumstances. More is not better.

Infants and growing children can tolerate higher-per-pound doses of vitamin D and cod liver oil. Recommended dosages are as follows: one teaspoon from birth to six months, two teaspoons from six months to three years, one tablespoon from 4-10 years and two tablespoons thereafter during winter months or when not sunning.

Never combine sources of vitamin A. Vitamin A and its derivatives are found in skin lotions and creams, oral medications and vitamin supplements. The 30,000 IU limit is from all sources.

If you sun regularly and spend winter months in the South, you need to find another way to get elongated fatty acids (such as organ meats). You really do not want too much vitamin D. High doses of cod liver oil are used to promote atherosclerosis in animal studies. Too much D is too much D.

When using a UV-B meter and sunning to raise vitamin D, you will need the Vitamin D and Sunlight protocol. Cod liver oil can be reduced or eliminated depending on your location and exposure times.

Cod liver oil mixed with zinc oxide is better for the skin than any of the prescription medications, and safer.

Interview with Corinna Benoit of Nordic Naturals on all-natural cod liver oil

Thursday, May 04, 2006
by Mike Adams

http://www.naturalnews.com/019369_cod_live...ens_health.html

Mike: We are here with Corinna Benoit of Nordic Naturals. That is NordicNaturals.com. Thank you, Corinna, for joining me today.

Benoit: Thank you, Mike. I'm glad to answer some questions for you.

Mike: You have a line of cod liver products and supplements for adults and children. Can you give us a brief description of your product line and what's unique about your products?

Benoit: Specific to the cod liver products, let me start with what our source is. Nordic Naturals is the manufacturer of the highest quality cod liver product on the market. What is really unique about the product is that we are the source, essentially. We have contracts with fishermen, we run the extraction on the cod liver oil, and we provide and produce the purest and the freshest available.

People are concerned with the liver of fish holding toxins, but the distillation technique and the raw materials [we use] ensure that people don't have to worry about these problems. Another concern people have is that cod liver typically has a high level of vitamin A and D. However, the vitamin D being there is half the reason it is as effective as it is, in regards to brain health and [other areas].

Mike: Heavy metals are not a concern with the distillation process you use?

Benoit: No. We use a molecular distillation process for our cod liver oil, but we keep the integrity of the oil and the naturally occurring levels of EPA -- which is the eicosapentaenoic acid that helps with inflammation -- and the DHA -- which is the docosahexaenoic acid that helps nervous system, brain health and synaptic firing. At their natural levels, they will be the most effective. However, molecular distillation does do something to the levels of vitamins A and D.

Basically, we lose about 50 percent of the vitamin D in the distillation process and about 5 percent of the vitamin A. That doesn't sound like much, but what you are assuring is the amount of vitamin A and D in our cod liver oil only occurs in the fish. We don't augment it with synthetic vitamins A or D. What you are getting in one teaspoon of our cod liver oil is the highest level you would see in any cod liver oil of DHA and EPA. It is 700 milligrams of DHA. It is 450 milligrams of EPA, and the vitamin D ranges anywhere from around 10 to 40 IU, which doesn't necessarily come up to your 100 percent level of intake, but it does affect brain health and mood. The vitamin A can range anywhere from about 990 IU to 1,950 IU. This comes close to 40 percent of a recommended daily allowance.

Mike: A couple of things are interesting with your product. You have unique single-dose

packaging.

Benoit: For the cod liver, yes. It is available in orange flavor, which is the first product we introduced that way. They come 30 to a box, so people can take a single one for the road and not have to worry about refrigeration. They don't have to worry about how long it has been opened and things like that. For an individual like myself, I travel 75 percent of the time. If you're doing that and taking a glass bottle on the plane with you or moving from hotel to hotel, it will go rancid if it is not refrigerated. One of the really unique things about our product is that it is nowhere near rancid. We surpass international standards for purity and freshness. That is why we won the contest for the best-tasting cod liver oil on the market for the past four years.

Mike: This leads me to my main question. People think that cod liver oil is going to taste terrible. I tasted this before. This is not at all objectionable and, in fact, with the flavorings you have in it, it is quite delicious.

Benoit: Well, we're starting with the freshest oil on the market because we have the contracts with the fishermen. We are extracting the liver from the fish within four to six hours of it coming in to dock. We can take that liver and put it in a centrifuge within hours of it being present at the dock in Norway. All of our cod is 100 percent arctic cod. Arctic cod stays in a very small area of the world. It is not sitting in a boat or storage area for days before it is extracted. After we take the liver out, the meat is sent away for meat processing. 100 percent of this fish is used. It is not an environmental waste.

Mike: I like this peach flavor. It almost tastes like sherbet.

Benoit: Some kids have actually been known to ask for it instead of their dessert, so you're not too far from the truth there. The other thing we do that is really unique is take that same cod liver oil and put it in a children's supplement called children's DHA. It is a chewable supplement and tastes like bubble gum to kids. Each capsule is the size of a pea. They actually ask for it and enjoy taking it.

Mike: This is so important for the health of children, especially when we're talking about nutrients for the nervous system. There are almost epidemic numbers of children today being diagnosed with ADHD, behavior disorders and aggressive behavior. I think a lot of this comes down to nervous system health and balance. Children are missing DHA, vitamin D and these fatty acids.

Benoit: Let's not forget the mother. The mother is pregnant, and she's being told, "No, don't eat fish. That tuna and swordfish is high in heavy metals and mercury, so stay away from it." She's in her third month, and she's only had fish once a month, and she is probably afraid to eat more.

Mike: So in terms of where people can find these products, are they in most health food

stores in this country? What other countries are they available in?

Benoit: We are in the United States, Canada and we have distribution in Singapore and Korea as well as Finland, Norway and we're working on Holland. We also have some distribution in the U.K. and Israel. We are working on a global scale to make sure that the highest quality fish oils are available everywhere. It has been a phenomenal journey. I know people who have taken fish supplements and have burped up a fishy taste and never wanted to touch it again. That doesn't happen with our product, largely because the oil is so fresh and secondly, because of our unique flavoring process, which allows us to flavor the capsule itself and the oil inside. So if someone does burp up anything, they do not taste fish. Typically, a reason why someone would burp is that they either don't have enough of the enzymes to break it down, or the product has gone rancid. Freshness really matters.

Mike: I've heard that complaint from readers before. They say, "You told me to take cod liver oil, and I get this aftertaste."

Benoit: I have a funny story. I won't say the name of the manufacturer, but somebody in this industry created a grape seed extract. They had it manufactured at a specific contract manufacturer, and, accidentally, fish fills made it into their entire lot. One of their customers said, "I'm taking this grape seed extract and I feel great, but I keep burping fish."

So, it's just funny. A lot of people experience that. It becomes something that continues to deter them from taking the fish oil. Omega-3s, DHA and EPA are so involved with every level of our health because they are used in every cell of our body. It's important to look at them and say, "I could add this and enjoy doing it."

Mike: I would like to add that fat can be delicious. It can be added to many recipes, such as a blended drink.

Benoit: Sure, blended drinks and protein shakes. My father made a salad dressing with it once. Protein shakes are a great way to add this. A friend of mine takes about a tablespoon, which is about three times more than the label suggests, and adds it to his chocolate protein shake. He said it makes it taste like one of those chocolate oranges. These are all-natural flavors. Liquid is probably the best way to supplement. This way the body can easily absorb the triglyceride fats through the mouth. That can serve to benefit someone sooner than taking a capsule. But if you do bite down on the capsule, you will get a pleasant peach, lemon and strawberry flavor, as opposed to the strong fish taste or smell that some of our competitors have.

Mike: Do you have a deodorizing process?

Benoit: We do have a process that utilizes steam. If you're talking about our fish oil

products, we are using cod and anchovies. These anchovies are saltier, which can lead to a fish odor, but we do use some processes that are unique. We filter the oil in a way that removes particulate matter, and we use a stripping steam process that is all-natural with no chemicals, to help eliminate odor. The only vitamins we're adding are the naturally-occurring vitamin E and in some cases ascorbic acid, vitamin C and rosemary extract, which is a natural stabilizer. This ensures our product a three-year shelf life.

Mike: I have one final question. If everybody in the country started buying this product, what would be the impact on the fish populations?

Benoit: That is a very good question, and I will answer it as concisely as I can. There are several factors that come into play. We have the contract with the fisherman in Norway, which means our cod liver oil is 100 percent cod liver oil. We don't use a blend of oils, which some of our competitors do. Under the Norwegian medicinal standards, you can use site fish or haddock body oils in the place of cod. That is why [some manufacturers] might add synthetic vitamin A and D to cod liver oil to make it look more like the standard.

In Arctic Norway, they have a very stringent fishing policy. This ensures that the waters will never be over-fished in regards to cod fishing. Fines can go upwards to a quarter of a million dollars for a fisherman who exceeds what is allowed. There are only a certain number of fishermen certified at one given time. The Norwegian Ocean Institute goes to check the health and tonnage of various species of fish. They make sure their waters are stable and not experiencing any drifting populations. Over-fishing really isn't an option in Norway.

Now to the second question about whether we meet the demand, I can say today that we don't have a problem, and we've never run into a back order before, even though we've grown tremendously. We've secured extra stock and contracts to ensure that over the next few years we won't experience any issues there, unless there is an unforeseen natural disaster. An interesting thing to think about is that one cod liver can be roughly the size of your head. The fish may not be all that big, but the size of the liver in some cases is a third of the size of the fish. It is a giant liver. If you see a picture of a cod, it is bulging out around the mid section. It resembles a salmon when it is carrying all of its eggs. I don't know if you've gone fishing, but personally I have had that experience, and you see it bulging out. One liver can yield as many as six bottles at eight ounces apiece. The refining technique is really where the cost is built in. You really have to refine the oil. We pay a premium to get that meat before processing, so it is as fresh as can be.

Mike: Wonderful. The product names are Children's DHA and Arctic Cod Liver Oil. Thank you for your time, Corinna.

View Full Version: The Updated Eye Cure Formula.

Title: The Updated Eye Cure Formula.

TheUnhivedMind - July 8, 2011 10:34 PM (GMT)

Updated Eye Cure Formula - even cures retinal detachment

27-Apr-2003 12:59:45

The Updated Eye Cure Formula.

1/4 to 1 part Cayenne. Up to 2, 3 or even 4 parts cayenne. Use 250,000 Heat Unit cayenne pepper.
1 part Eyebright herb and flowers
1 part Goldenseal root
1 part Fennel seed
1 part Red Raspberry leaf
1 Part Mullein flowers (if you can't mullein flower, use mullein leaf)
1 Part Rue (optional) If you cant get this, go ahead anyway.

If you want to use less cayenne, you can. You include the cayenne pepper when you make the formula. What I do is make the formula with a small amount of cayenne, then, when it is finished, I slowly add homemade cayenne tincture, until I get to the strength I need. For information on making cayenne tincture, see www.sambiser.com/cancer_f... las.1.html
This is a formula you can take internally, as well as externally in the eye. Internal dose could be anywhere from 1-6 dropperfuls per day.

IMPORTANT NOTE: WE DO NOT SELL HERBS, and we cannot consult with you regarding this formula, whether on the phone or by e-mail.

Some versions of this formula contain 1 part bayberry bark, which is optional and not essential.
Parts are volume, not weight. So, in other words, a part could be a teaspoon (of dried or fresh herbs), or a cup, or a barrelful.

I do not recommend boiling herbs to make this. This is not as strong as a tincture; also, eye teas can spoil and tinctures will not. Make into a tincture as recommended in my article on making cayenne formulas. If you do boil the herbs, which I do not recommend at all, you can use 1 tablespoon herbs to one cup water, unless you want it stronger.

Two readers over the years mentioned that they thought their eyes got worse on a commercial eyebright formula, and I suspect this is because those formulas contained herbs that were not organically produced, and contained pesticide residues. More on this later in the article.
You can get organic herbs from several places. One I use is Pacific Botanicals, 4350 Fish Hatchery Rd., Grants Pass, Oregon 97527.

Make this into a tincture the same way you would make any other tincture. (For more information on making tinctures, thoroughly read my article on making cayenne formulas, which gives basic instructions.)

Here is a summary: Put herbs in jug. Fill 2/3rds of the way up. Cover thoroughly with 80-100 proof vodka. Put lid on jar or cover somehow to prevent evaporation. Let sit for two weeks. Strain through cheesecloth.

Use 5 to 10 drops of the tincture in an eyecup. Fill with distilled water, and wash your eyes five or six times a day for severe eye problems. Also, use internally, 3-6 dropperfuls a day.
You cannot cure eye problems until you add lots of hot cayenne to the formula. It brings fresh blood to the eyeballs.

To update what I learned from master herbalist Dr. John Christopher, I turned to his student Richard Schulze. In the following discussion, you will learn why it is so important to increase the cayenne in the formula.

BISER: The biggest question I get from my readers is the use of cayenne in their eyes. Everyone wants to avoid cayenne, but I have found it is the only thing that helps.

SCHULZE: Everybody used herbs to wash the eyes. That goes back to the beginning of recorded history. I mean, Shakespeare talks about using fennel to wash the eyes to make them brighter. Every one talks about using herbs in the eyes.

But only Dr. Christopher put cayenne pepper with those herbs. He knew it would increase the blood flow to your eyes, so all those herbs would absorb better. And his formula did cure eye problems sometimes. Then I added three hundred times more cayenne than he did, and the formula starting healing eyes in minutes.

The best way to use it is make a tincture of these herbs, putting them in a blender and pouring in enough 80-100 proof vodka to cover them. Then turn on the blender and

make it into a mash, like apple sauce. Make it on the New Moon and let it sit until the Full Moon, making sure to shake or stir it everyday. On the Full Moon, press or strain off the liquid.

Use the tincture as an eye wash. Put five to ten drops into an eyecup, along with distilled water. Wash your eyes with it six times a day for severe cases and use internally, three to six dropperfuls a day.

Dr. Christopher put in one-eighth part cayenne, that was his high dosage of cayenne. I started adding four to eight times that for the average person. That becomes one-half to one full part of cayenne, and the cayenne I recommend is 250,000 heat units strong.

I have not seen any real effect with that formula without the cayenne. I have never met or run into anybody who said they only used eye bright and healed their eyes. It just didnt happen. But here in the clinic, I saw people get rid of their glasses and I saw lots of cataracts go away.

BISER: What happened to glaucoma?

SCHULZE: I had numerous patients with glaucoma and they were taking the glaucoma medication, but their condition was getting worse. Now, as everybody knows, glaucoma is like diabetes or any of the other ones, you just keep taking the medication and degenerating, and you dont get better.

Everyone has to be aware that the glaucoma medicine makes you go blind. The doctors even admit that. It only slows the disease down. But once you start taking it, youre a goner.

I had many patients with glaucoma, who, once they started using this formula, the circulation to their eyes got better, the clotting, the congestion stopped; and the next thing you knew their glaucoma was reversed and gone.

After doctors failed, this formula caused detached retinas to rejoin.
BISER: Have you seen retinal separation get better?
SCHULZLE: We had one guy who took a severe blow to his head to where his retina separated. He couldnt get the retina re-attached. They tried to do it medically and failed numerous times. But he got his retina to attach back using this formula.
BISER: But this is not like the formula sold in healthfood stores, is it?
SCHULZE: No, not at all. The only formula I ever saw contains commercial-grade herbs grown with pesticides. Why would you want to put that in your eye?

The only eye wash formula out there that contains cayenne at all is Dr. Christophers and it contains only one-eighth part of 40,000 heat unit cayenne. The formula I recommend your readers make contains one full part of 180,000 heat unit cayenne, which is 36 times the cayenne of Dr. Christophers original formula and that is our

starting point.

[Note from Sam: Do not use herbs that were cold-sterilized with a chemical called ethylene oxide. Almost everyone uses it, and the chemical is caustic to the eye. You need organically-grown herbs not touched by this chemical, and many organically-grown herbs are! This is very, very important! Ask your herb vendor to guarantee that no ethylene oxide has been used in any herb you are buying. Again, do not use herbs sterilized in this fashion in your eye.]
BISER: What is the upper range for cayenne in your formula?

SCHULZE: You can use two, three, four parts of cayenne compared to the other herbs in the formula. Remember, each time you go up one part, it is eight times what Dr. Christopher originally recommended, and remember, he was using the low-potency 40,000 unit cayenne. My students use 250,000 heat unit cayenne.

Dr. Christopher only recommended cayenne at one-eighth part. This is why I say to people, Ive used 200 to 300 times what Dr. Christopher used in the eye washand it just gets better.
You know, it started when I was doing an event and I was taking a bowl of cayenne out to put on a table. This was when I first came to California. I gathered some patients and we were doing a healing routine, and the wind blew, and blew all the cayenne pepper into my eyes, not tincture, not tea, but granulated pepper just filled both my eyes like a sand storm.

I sat down and washed out my eyes. I wondered if the skin would blister. Would it blister my cornea? But nothing detrimental happened, and I noticed an even bigger increase in the brightness of what I could see. After anyone rinses with the eye wash, one of the things you notice is that the world as you perceive it looks crisper and brighter. It is kind of like increasing the contrast on your TV. The picture gets punchier.

BISER: Even people with normal vision would see that?

SCHULZE: Even people with normal vision, because you get more blood in your eyes, so your eyes work better, and you focus better.

So after getting all that cayenne in my eyes, my eyes got better. Thats when I thought, Well, wait a minute, if I just did that, then we can obviously crank up the volume of the cayenne into the eyes without any damage, and so I started thinking, Lets go up further.

It was extreme for Dr. Christopher to add an eighth-part cayenne, and believe it or not, even today, there is still controversy in the herbal world over his use of cayenne. One of the things I look at with Dr. Christopher is that he broke new ground. But I took it even further, and my patients got results in a single hour that never occurred in months of using cayenne at the lower dosages.

[Note from Sam Biser: I add from one to two dropperfuls of cayenne tincture into every two-ounce bottle of eyewash tincture. But this would be frightfully too strong for many people. I just want you to know what I do. I worked up to this level real slowly.]

Try the eye wash even if you dont have eye problems. Youll love it. When you do it, youll be amazed. It is like someone wiped a fog off.

Everybody should wash their eyes once a weekif not once a day. Toss some eye wash in an eye cup, and just do it. Use two to ten drops of the tincture in an eye cup, and add room-temperature distilled water.

The first thing you do is put a cloth under one eye, because its going to run, and if you have a good shirt on, there is no sense in wrecking it. The eye tincture is going to run down your face. No eye cup ever makes a perfect seal in the orbit of your eye.

Then just splash your eye with it and let it go. Bring the cup back down, and you are going to go, Wow. And then, in a minute, it will feel better, because now your eye is used to the temperature of itbecause it is hard to get perfect room-temperature water.

Then put the eye cup with the tincture back on your eye, tip your head back, and while your eye is under the eyewash, hold the cup on tightly, and look to the upper right, lower left, upper left, lower right, do Xs, do circles to the left, do circles to the right, look up and down, go vertical, go horizontal, and exercise your eye while it is open under this solution.

Get the cayenne completely covering all the available surfaces of your eye. Then rinse out the cup, put two to ten drops in it again, add to it room temperature distilled water, and do the same thing in the other eye.

[Note from Sam Biser: Some readers make a dilute solution of eyewash tincture and carry it with them to freshen up their eyes when they need it yet when it is not feasible to treat themselves with the full-strength solution. Another note: Dr. Christopher told me that the fear of the eyewash causes more problems than the eyewash itself. I see this all the time with my readers.]

Questions from readers on cataracts, glaucoma and more, with answers from Dr. John R. Christopher:

QUESTION: I think that Dr. Christopher was not specific enough in his directions. When he says in severe cases you can use the wash five times a day, he did not specify whether that should be five minutes each time or 25 minutes total (divided between two eyes, or five minutes, or whatever, for each eye five times a day, or a total of 50 minutes per day).W.P., Florence, New Jersey

Christopher: If you have severe eye problems, you can use the eyewash five times a day, for five minutes each time in each eye. This is just a general recommendation. The longer your eye can take the wash, the quicker it will heal.

Many people I know have taken the wash up to seven and nine times a day, and they have gotten good results. I think this is one case where, within limits, the more you take, the better results you will get. I think this makes sense. If you take the wash for just a few minutes each day, you cannot expect to change a chronic long-term eye problem as quickly as when you use it more.

Using the same eyewash for each eye.

QUESTION: Is it all right to use the same wash for both eyes? I.K., Louis River, New Jersey

CHRISTOPHER: No, we prefer using a fresh wash for each eye. Wash out the cup after each wash.

QUESTION: I am 65 years old and I have one good eye and one bad eye. Should I use the eyewash in BOTH eyes? H.G., Billings, Montana

CHRISTOPHER: Yes, you must use the eyewash for both eyes. If you dont, you will have problems.

Eyewash causes red, sore eyes.

QUESTION: A few of our readers wrote us saying that the eyewash burned their eyes, causing redness and soreness., What can they do?

CHRISTOPHER: First, tell them to stop using the eyewash. Their eyes are too weak and too many toxins were coming out too quick. Have them use a formula of three teaspoons mullein and one teaspoon lobelia in a glass of hot distilled water, allow it to cool to lukewarm, and use this instead as an eyewash. This is a soothing wash and it will take the soreness away.
When the soreness does go away, then start using the regular eyewash again but only in a diluted form. As the eyes become stronger, they can increase the concentration of the eyewash.
[Note from Sam Biser: The eyewash can sting and burn the eye. This is common. If you think it is too strong, reduce the amount of the formula you use, or the amount of the cayenne in the formula. As I said, I use the eyewash every day. My eyes feel clearer after I use itespecially in the morning.]

Puffy eyelids from eyewash.

QUESTION: The only problem I have with the eyewash is that in the morning when I

arise, and for 2 to 3 hours (sometimes more), my upper eyelids are badly swollen and puffy. Is there anything I can do about this condition? I had it only to a minor degree in one eye, but now after taking the eyewash, it is severe in both eyes. M.C., Ph.D., Lewes, Delaware CHRISTOPHER: It will eventually go away when the eye is healed. In the meantime, you can use a fomentation of three parts mullein, three parts red raspberry leaf, and one part lobelia. This will draw the water out.

[Note from Sam Biser: Mullein flowers have been added to the updated eyewash formula given on page 3 of this article. You can also drink mullein tea.]
Pouches under eyes.

QUESTION: Pouches have appeared under both eyes since I started to use the herbal eyewash. I hope you can give me some answers on this. All the claims for the eyewash seem to be for special cases only. H.C., Birmingham, Alabama

CHRISTOPHER: Pouches are liquids or toxic poisons that have come out of the eye. They have accumulated beneath your eye, but they will go away.

You should use the same fomentation that I recommended for the person with puffy eyelids.
But dont stop using the eyewash. The people who get results are not special casesthey are just people who use it consistentlyboth day and nightand who continue using it and dont stop just because they run into problems.

Unfortunately, many people use the eyewash for a few weeks and then they give up for any one of a hundred different reasons. If you are persistent, you will get results. I have seen too many successful cases for me to believe otherwise.
Floater appeared while using eyewash.

QUESTION: A large floater appeared in my left eye while I was using the eyewash and has not left after several months. My doctor tells me that it probably will never leave and that he does not know what causes floaters. Mrs. W.D., San Diego, California

CHRISTOPHER: Floaters are usually caused by the transverse colon being plugged up. There are two drainage ducts from the eyes to the transverse colon. Whenever the transverse colon gets plugged up, it plugs these drainage canals.

Eyewash causes pus and burning in eyes.

QUESTION: I used the eyewash for 2 months, but I finally had to give up my eyes became so sore. I diluted the solution to one half, and it still just burned so badly I gave up. When I first started using it, the pus, in the morning especially, was quite heavy; and after about 2 weeks, it was less and less. D.F., Reno, Nevada

CHRISTOPHER: The eyewash is a cell proliferant. It causes the good cells to grow

rapidly, and this pushes off the bad cells. This is a common reaction. I would advise to just keep on with the eyewash. This is the only way you can get results. The eyewash may burn the eyes, and it may be temporarily very painful, but it will never harm the eyes.

If this person stops the eyewash, he will have that pus in his safety deposit box all his life.
Eyewash burns periodically.

QUESTION: My husband and I use the eyewash regularly three times a day. We are becoming more and more used to it, and we can keep it in the eye for longer periods of time. However, every once in a while, for no apparent reason, our eyes will burn so much we can hardly stand it at all. Then it will pass, and we will be able to use it the next time. Can you tell us why? J.M., Pittsburgh, Pennsylvania

CHRISTOPHER: I think you will find that the eyes will dump their poisons in cycles. They will accumulate for 6 days in the eye, and then on the 7th day they will come out. So keep on taking the eyewash. Youre doing just fine.

Increased ocular pressure from eyewash?

QUESTION: I went to my doctor after I started using the eyewash and the pressure had shot up to 39 in one eye and 32 in the other. They had been about 22, so I had to go back in a week. I quit the eyewash and they went back down to 22. My eye doctor didnt know what happened because I didnt tell him. I am afraid to use the eyewash again. L. D., Escondido, California

CHRISTOPHER: Theres no problem there because what were doing is stirring up toxic poisons so fast that it gets worse before it gets better again. With the large majority of people, they use the eyewash for a couple of weeks and go in and find the pressure is down. (Note from Sam BISER: If you feel safer with it, you can slow down your eyewash use temporarily and heal in more time.)

Sinus problems.

QUESTION: After each eye bath, my head seems to drain a lot. I blow and spit a while and everything is OK. Is this a normal reaction?J.H., San Francisco, California

CHRISTOPHER: Yes, because the eyewash goes in and starts cleaning the sinuses loose, as well as cleaning the mucus out of the eyes. Many people have told me that the eyewash will break loose mucus in the sinus area.

QUESTION: I have cataracts and have been using the herbal eyewash for the past 4-5 years. During that time, I have soaked my eyes with the eyewash 3 times per day for 5 minutes each time. I have done this faithfully, but have never had any results. Is there

any possibility it might still work?

BISER: I cannot tell if your eyewash formula is made from strong herbs and made by yourself, or what you are using, or if you are getting enough cayenne in the eye formula to regenerate your eyes. Also, for some people, cleansing the whole system as discussed elsewhere in my Save Your Life Course can make a big difference.
Eyesight gets worse after using eyewash.

QUESTION: After I used the herbal eyewash, I found that I was no longer able to read store labels or prices, or simply sign my name without putting on my glasses. My vision has definitely deteriorated, even in my good eye.

Sam Biser readers tell of eyewash cures from eye pressure, blind eyes, bulging eyes and staph infection in eye.

BISER: I cannot tell if your eyewash formula is made from strong herbs and made by yourself, or what you are using, or if you are getting enough cayenne in the eye formula to regenerate your eyes. Also, for some people, cleansing the bowels and the whole system as discussed elsewhere in my Save Your Life Course can make a big difference.
Eyesight gets worse after using eyewash.

QUESTION: After I used the herbal eyewash, I found that I was no longer able to read store labels or prices, or simply sign my name without putting on my glasses. My vision has definitely deteriorated, even in my good eye.

CHRISTOPHER: You should continue using the eyewash. The eyes have to get worse before they get better. In some people the eyes get a lot worse than others, but the eyes will always get better. NOBODY has ever lost their sight from the eyewash. When all the mucus and toxins come out, the sight will improve right away. I can assure you.

[Note from Sam BISER: Check with your eye doctor if you have any problems. Use common sense and personal intuition, regardless of what Dr. Christopher or anyone else says. I had a letter from one man in 26 years who claimed the eyewash damaged his retina, and I suspect the problem was caused by chemicals like Etheylene Oxide that commercial herbs can be sprayed with. That is why I recommend only organically-grown herbs, especially in your eyes.]
Testimonial by readers who used the eyewash:

Before I took the eyewash, I couldnt even see a block away. I was almost blind.

Im the happiest woman in the world, now that I am receiving my eyesight back. Mrs. Olivotti exclaims. I was nearly blind from the cataract on my left eye, which I had for about 6 years or longer. I also had one that started on the right eye about 2 years ago.I could hardly see anything. It was just like something had covered the eye.

Her doctor told this 67-year-old woman that she should wait a little longer, and then have the cataracts operated on. But she didnt want an operation, so she started using the eyewash.
I would wash my eyes about four or five times every day. A lot of pus came out of my eye. It was like hard granules. Plus, my eyes were almost stapled shut with mucus in the morning. And there is still some coming out of the left eye, she says. It is really amazing how much better you can see when that stuff comes out of your eye.

When she went to her eye doctor, he said that she had absolutely no cataract on her right eye and that the eye vision had improved. She figures that in a couple of months more the cataract in her left eye will be gone too. Then I can throw away my glasses. I can already read the newspapers now without glasses; I havent been able to do that since 1932.
Staph infection cured by eyewash.

I developed an ulcerit was a white doton each eye in the iris. It was very painful because every time I would blink my eye, the eyelid would go over a sore.

An opthalmologist looked into my eyes and knew immediately that the ulcer was caused by a staph infection. He told me he could get rid of the ulcer by the weekend. I said, OK, but how about getting rid of the staph infection? He shook his head, No and said, Im sorry, but youll have this infection for life. There is no known cure.

He said I would have to use eye medicine every day for the rest of my life. He explained that if I didnt, Id get more ulcers. Each time an ulcer appeared and healed, I would get scar tissue, and enough scar tissue causes blindness. He wrote out a prescription for Blephamide and told me to use it four times a day for a week and then once a day for life. He then added, But, I dont like the side effects of this drug. I said, What are they? He answered, Cataracts or glaucoma.
Great! I felt I was caught between the devil and the deep blue sea! The following June, a friend paid us a visit from Michigan. She told me about Dr. Christophers herbal eyewash. I started using it orally and as an eyewash about four or five times a day.

It burned when I used it, but not a much as the Blephamide, so I didnt mind. I couldnt believe the matter that came from my eye. In the morning, when I woke up, I sometimes had trouble opening my lids. They were glued shut.

I gambled! I shelved the Blephamide and relied solely on the eyewashreally hoping it would do the trick! With the two capsules of eyebright, I added one goldenseal.

I am happy to say my problem is gone, and I havent used the medicine since June. I still have the scars because I can look in the mirror and see them. But I dont have any more ulcers on my eyes now.

Im looking forward to the day I dont have to wear glasses. I dont always get my eyewash made daily because I leave so early for work, but I always take six capsules a day. The eyewash isnt a daily affair, Now I may go a few days without it, and then I will go a week with it.
When I went back to the doctor, he looked in my eyes with that big machine and said, Your eyes look greatthe cornea is just as clear as it can be. It looks just fine. He told me that the infection was completely gone.

When I told him about the eyebright, he said, Now Jerry, let me explain something to you. A lot of healing has to do with our mental attitude. If you had told me that Blephamide really did the trick, I would have been glad to write another prescription for you; or if the Vascon regular had done the trick, I would write another prescription. But, if you feel that these herbs are helping you, then Im sure they are. You know, any placebo will do.

If any placebo will do, why didnt Blephamide cure me? I gave it 6 months. And if I missed one day, by evening I had another ulcer. I was supposed to use one drop a day, but if I had an ulcer, I had to go to four drops a day. Then when it healed, then I was back to, one drop a day; and if I missed a day, I had another ulcer. Six months I tried that. Thats a fair chance.
In response to my argument, the doctor said, You know, its very possible that I misdiagnosed!Mrs. Jerry Shaver, Blountstown, Florida

Astigmatism improved by eyewash.

Four years ago, when I had an eye examination by my ophthalmologist, I needed slightly stronger glasses (because of astigmatism) for reading, explains this reader. She then began using the eye formula internally.

My recent examination caused the same ophthalmologist to comment: You dont need a change of glasses; in fact, your astigmatic eye seems better. He then put a lens in the test frame and said, This is the lens I would have expected you to need, but obviously you dont need any change at all.M.G., River Edge, New Jersey

Blurry eyes and calcium deposit disappear.

After just a little reading, my eyes would blur and Id see double. The blurring has bothered me for 15-20 years. After using the eyewash about a week, I could read all day, every day, without the blurring!

Also, another good part was that two calcium deposits washed out of my right eye. One came loose and came out without any trouble. The other was attached by a thin membrane, which had to be clipped by my ophthalmologist. He said that it was a calcium deposit that was covered by a soft coating formed by the body. I did not tell him

that this occurred after using the eyebright eyewash.W.D., San Diego, California

Woman blind in one eye can now see.

My sister-in-law in Florida is blind in one eye She is taking drops of equal parts eyebright herb, bayberry bark, red raspberry and Goldenseal with equal Habaeros peppers, ten drops to one ounce of water. She says she can see after five days six times per day. I also see better. Many thanks and God bless.Emery Miller, Latham, N.Y.

Eyewash eliminates fatty growth on eye.

For years, my husbands right eye had a large yellow fatty growth that was larger than the eraser on a pencil, and the past year it started to grow on the blue of his iris. He also began scratching, which caused a massive red on the whole eye, although it was not solid red.
On March 6,1979, he began using the eye formula twice daily. Each day his eye felt better, and in a week the scratching was gone. By November, there was only a very thin, clear massthe growth had almost completely diminished. Our daughter, who observed this, said, Well, I really have faith in that stuff now. We continue using the eyewash and are very grateful.Mrs. E. H., Edmore, Michigan

Blood spot disappears.

A large blood spot that had been in this readers left eye since childhood (in the white part of the eye) disappeared with the use of the eyewash. Also, the reader had: a sudden realization one night that I could see one moon instead of two or three; also, the clearing of the nasal passages which had been clogged for such a long time, particularly since my left eye had become weaker.
Eyewash eliminates cyst, lowers eye pressure.

I have been using the herbal eyewash for about 1 year. Prior to using the eyewash, I had a cyst in the inner corner of one eye. It was getting bigger and bigger. It looked like I had a lot of matter in my eye, like I should put my finger in my eye and clean it out.

My ophthalmologist told me I had the beginning of cataracts and glaucoma pressure of 24 in one eye and 23 in the other. One month after using the eyewash three times a day for 5 minutes in each eye, the cyst was dissolved. Later, my eye examination revealed that my eyeball pressure had been reduced to 20 and 21, respectively, and no indication of cataracts. My peripheral vision had improved considerably and the pain in my right eye, previously experienced when reading for a length of time, was completely eliminated.

I am still using the eyewash for 5 minutes in each eye once a day. To me the greatest thing was getting rid of that cyst. It was worth all the trouble I went through. It was very annoying and it embarrassed me too.J. K., Eustis, Florida

Eyewash reduces bulging eye for reader.

Pressure behind the retina in my left eye caused the eye to swell enough to touch my glasses. It was diagnosed as central serous retinopathy. After much treatment and money spent, the doctor told me the only thing left for them to do was to have a laser beam used; and if I decided to try this, I could lose the sight in that eye.

Instead, I started the eyewash, and after...

3 days, the swelling was much less. In 3 weeks, it was well. I have never had any swelling since. Now there are times when I will get sort of a burning sensationlike a pain in that eye. But I will just get my eyewash out and use it.Mrs. R. Howard, Fayetteville, North Carolina
Glaucoma pressure almost normal.

In 1971, doctors at N. Y. University Hospital said I had a glaucoma condition. They started me off on Pilocarpine drops, which made me half-blind because the eye lens would close. I even lost my sense of proportion. And once, walking to work, I stumbled over a very low curb and fell flat on my face.

The doctors tried to counteract the effects of the Pilocarpine with drops of Epitrate. Thats something thats supposed to keep the lens open. Everything was always half dark. I really dont know how I survived in my work. For me, it was worse than doing nothing.

Later, the doctor put me on Epinol and then on Timoptic, the newest of the drugs. Both of them succeeded in a measure, I guess, in controlling pressure, but it is only a control and they do nothing to the liquids to flush them out.

I thought I could do no harm from trying the eyewash. So I made up a batch and tried it. And all of a sudden what began to happen was that I began to flush. The flushing was first evidenced through excessive sinus drainage. I would blow and blow and blow my nose.

But it took a long time to bring the pressure down. For a while, I left off the drops and I did not bring down the pressure with just the eyewash. In fact, the pressure went up, and I got scolded by the eye doctor. He told me to use the drops faithfullyI hadnt told him about the eyewash. So for 2 weeks I used the drops and eyewash in combination and my pressure went down.

After a while, my eyes began to drain pus and that was when I began to get well. It wasnt just the nasal excretion, but it was the drainage of the pus right through the eyes. And when that happened, after a while, my sinus drainage quit. After that condition occurred in me, I went back to the eye doctor and he said, Your pressure is very normal.

He hasnt officially relieved me of the drops yet, so I am continuing with the drops morning and night, along with the eyewash morning and evening, and the combination seems to help me.
There is one thing I want to add. When I was diagnosed as having glaucoma, I was almost in a diabetic condition and my weight was high. Since then, I have changed my diet completely. My blood pressure and cholesterol have normalized, and I think the new diet has helped my eyes too. Mr. Brightman, New York, New York

Can now watch videos on his VCR.

I made myself some cayenne tincture, and was brewing the eye herbs. I decided to try the cayenne tincture I had already made for my eyes, so I added a couple of droppers full into about a half-glass of distilled water, as eye drops.

I put the drops in my eyes a couple of times a day, and now, about a week later, I can watch videos on my VCR and read the subtitles without my glasses, which I havent been able to do for years! Now this, mind you, was the tincture without the eyebright, etc. My vision is improving little by little, but its definitely noticeable and I cant thank you enough. This alone is worth more than the price of your book and tapes. James M.
Macular degeneration and the eyewash.
Many readers have asked me if the eyewash can help macular degeneration. I heard that it didbut have no proof. I believe it can, but what can I tell you until readers begin to use it. If anyone tries the eyewash for this condition, please let me know the results so I can share them with others.
I do have one brief letter from a woman writing about her Dads macular degeneration, and I will share it with you here.

My Dad has Macular Degeneration and he has been on the eyebright formula. His right eye is the worst; had a large black spot as my dad describes it (in the middle of the eye). He had no peripheral vision and the left eye was not as bad.

In fact, he could drive and read with it until it too went badthat was about October 1997. Anyway, he has improved with the eye formula, which I think is great for only five months use. My purpose in writing is to find out if there is anything additional that we should be doing, or is there something we should change, other than the way we are doing it now. His program at the time is the following:

Internally9 dropperfuls per day.
Eyewash4 times a day, each eye (1-1/2 minutes per eye).
Each timeleft eye 7 drops/ ounce of distilled water
right eye 17 drops/ounce of distilled water.

Macular degeneration follow-up: Reader Don Flowers started to tell us how he washed

both eyes morning and night with cayenne. On his next trip to the doctor, the doctor told Don how those eye drops of were really working. Ron didnt mention that he wasnt taking any eye medication after he began using cayenne.

I, (Sam Biser), am not quite sure if the eyebright formula can really help advanced macular degeneration, but if it could, you would have to be using it 5-6 times a day and in stronger doses. One person recently told me a woman's eyesight improved 35% by putting raw eggwhite in the eye.

A reader said that in South America, when cattle go blind, they throw cayenne in their eyes to bring vision back. Always start with tiny doses of cayenne.

(Comment from Sam: I want to point out again for all readers that I myself use 20 drops per eyecup of distilled water, and into each two ounce bottle of eye tincture, I add 35 drops of hot cayenne tincture. I dont expect anyone else to do this. If anyone did, I would think they might scream in pain. I am used to testing these things on myself and will tolerate what no other reader willin the interests of learning more.)

Tell me how the eyewash is curing your eyes.
If you have had your eyes saved by the herbal eyewash, please, let me hear from you. E-mail me at: customers@sambiser.co. Please note that I cannot diagnose, consult or discuss cases.
Important information on nutrition and eyes.

In many interviews I conducted with the late nutritionist Dr. Paul Eck, I learned things critical to saving your eyesight. This can get complicated, but you need to be aware of this if you are in danger of losing your sight.

First, people with a fast metabolism (sweaty palms, high rate of physical activity) are more prone to eye problems, and such people are prone to cataracts because they may be low on the mineral copper, which causes the calcium to leak out of their bones and be deposited in soft tissues, such as their eyes.

In many others, loss of vision may be triggered by zinc deficiency. Zinc is found in higher abundance in the eye than in any other organ of the body. Stress depletes zinc, and zinc is needed for the protein structuring of the eye. Vitamin A is synergistic with zinc, and vitamin A helps reduce adrenal overactivity, which contributes to zinc loss. Vitamin A simply does not work as well for curing eye disorders without zinc.

For some people, taking calcium and magnesium, along with zinc and vitamin A, would further reduce stress in the body and improve vision. Please note that if magnesium levels are severely depleted, then zinc alone may not produce satisfactory results. Ordinarily, giving magnesium along with zinc results in a double or triple-fold response.

Almost all detached retinas occur as a result of chronic stress and are triggered by a

major acute stress. The stress depletes the zinc in the eye. Sometimes it is necessary to take vitamin B-6 with the zinc, because zinc in some people can over-reduce adrenal activity.
Beware of foods that can rob your body of minerals it needs to save your eyes.

People with eye problems should be careful of eating too many whole grains in the forms of cereals or breads. Whole grainsexcept in sprouted formare rich in phytates, substances that can reduce tissue levels of minerals that protect the eyes. In some people, even a slice or two of whole grain bread is enough to cause problems.

Also, check your drinking water. Have it tested. If it is high in iron or copper, (or has a high ratio of iron to copper) over time, this is strong enough to distort mineral levels in your body and damage your eyesight. Mineral intake from water is something everyone overlooks as a cause of vision loss.

People with severe eye problems should also make sure they are not ingesting excessive amounts of the mineral copper. One generally unknown source of copper is soybean proteins. Another is chocolate, which is high in copper. Others include wheat germ, liver, brewers yeast, and torula yeast. Many readers get complete cures with the eyewash alone. For those who needed additional information, I have given you some important concepts to consider.

WHY A GREEN BREW COULD BE JUST YOUR CUP OF TEA

A cup of green tea regularly could have major health benefits

Friday July 8,2011
By Jo Willey
http://www.express.co.uk/posts/view/257413...your-cup-of-tea

DRINKING a cup of green tea regularly could have major health benefits, according to research.

It has been found to not only cut levels of “bad” cholesterol, but it leaves “good” cholesterol unchanged.

Experts now say drinking more green tea could have a significant impact on health. Cholesterol is a fatty substance known as a lipid, mostly made by the liver from the high-fat foods we eat. Although vital for the normal functioning of the body, excessive levels of bad LDL – low-density lipoprotein – in the blood can clog arteries and increase the risk of a heart attack or stroke.

But good HDL, or high-density lipoprotein, carries cholesterol away from the cells and back to the liver, where it is either broken down or passed from the body as waste. Now the researchers say their findings may explain why green tea has already been linked to a lower risk of heart disease.

Xin-Xin Zheng and colleagues from Peking Union Medical College in Beijing wrote in the American Journal of Clinical Nutrition that the analysis “showed the administration of green tea beverages or extracts resulted in significant reductions in serum total

cholesterol and LDL-cholesterol concentrations, but no effect on HDL cholesterol was observed".
Experts now say drinking more green tea could have a significant impact on health

The researchers analysed the results of 14 random trials in which participants drank green tea or took an extract of green tea for periods ranging from three weeks to three months, or were assigned to a placebo group.

On average, green tea was shown to reduce total cholesterol by 7.2 milligrams per decilitre compared with levels seen in those taking the placebo. LDL cholesterol fell by an average of 2.2 mg/dl, or slightly less than 2 per cent.

The cholesterol-lowering effects of green tea may be due to catechins, which decrease the absorption of cholesterol, the researchers said. But this reduction is fairly small, warned Nathan Wong, who runs the heart disease prevention programme at the University of California. He also said green tea "should not be recommended in place of well-proven cholesterol-lowering medicines".

There has been concern over possible side-effects from heavy consumption of green tea or green tea extracts following a few dozen reports of liver damage. But Mr Wong said smaller amounts "could be a useful component of a heart-healthy diet".

Victoria Taylor, a senior dietician at the British Heart Foundation, said: "This review of previous studies suggests green tea could have a positive effect on reducing our total cholesterol level, as well as the 'bad' LDL element. But we need to make sure there are no long-term side-effects on our overall health."

Title: HERBAL REMEDY'S NAGGING RELIEF TO THE HENPECKED

TheUnhivedMind - July 6, 2011 06:25 PM (GMT)

HERBAL REMEDY'S NAGGING RELIEF TO THE HENPECKED

The world's first anti-nagging medicine hit the shelves yesterday.

Wednesday July 6,2011
By Nathan Rao
http://www.express.co.uk/posts/view/257040...-the-henpecked-

BATTLING couples could have found the cure for their marital bust-ups – a herbal remedy which claims it can tame the nastiest of nags.

The world's first anti-nagging medicine hit the shelves yesterday.

And, although the makers claim it works for both sexes, they admit it is particularly effective in women.

They say Mindset Living Remedy can "restore a woman's hormonal balance", spelling relief to thousands of mercilessly henpecked men.

Even better, once peace and harmony have been restored, case studies show it can enhance a couple's sex life by increasing libido.

"It could transform the wildest and angriest of women or men into happy, relaxed individuals," said Michael Riley, spokesman for manufacturer Better by Nature.

He said the mix of aloe vera, Chinese and Western herbs calms the mind and reduces confrontation and irrational behaviour.

Sprayed under the tongue twice a day, it is said to bring results within eight weeks. That's good news for partners of the women quizzed in a new survey – 87 per cent admitted giving their partner a hard time.

It could transform the wildest and angriest of women or men into happy, relaxed individuals

Michael Riley, spokesman for manufacturer Better by Nature

They spend 7,920 minutes a year nagging their husband about household chores, drinking and their health, according to the survey by health campaign group Everyman. This is equivalent to a full five-and-a-half days' ear-bashing. The makers of Mindset Living Remedy claim their product could solve all that. But the price of peace is not cheap – it costs £49 a bottle.

Mr Riley said: "There are no guarantees in this world, but opportunities like this have to be worth a try."

Cinnamon may help prevent Alzheimer's

Published: June 27, 2011 at 10:18 PM
http://www.upi.com/Health_News/2011/06/27/.../#ixzz1QalgHrZe

TEL AVIV, Israel, June 27 (UPI) -- An extract found in cinnamon bark, called CEppt, may be key to Alzheimer's disease prevention, researchers at Tel Aviv University suggest.

Michael Ovadia says he was inspired to investigate the healing properties of cinnamon by a passage in the Bible. High priests used the spice in a holy ointment, presumably meant to protect them from infectious diseases and after discovering cinnamon extract had anti-viral properties.

Ovadia, Aviad Levin and colleagues isolated CEppt by grinding cinnamon and extracting the substance into an aqueous buffer solution. They fed the solution to genetically engineered mice and fruit flies.

The study, published in the journal PLoS ONE, found that after four months, the researchers determined the development of Alzheimer's disease slowed remarkably and the animals' activity levels and longevity were comparable to that of their healthy counterparts.

However, Ovadia advises not to rush to the kitchen cabinet for cinnamon, because it would take far more than a toxic level of the spice -- more than 10 grams of raw cinnamon a day -- to reap the therapeutic benefits.

"The medical catch-22 would be to extract the active substance from cinnamon, separating it from the toxic elements," Ovadia says. "The discovery is extremely exciting. While there are companies developing synthetic Alzheimer's disease inhibiting

substances, our extract would not be a drug with side effects, but a safe, natural substance that human beings have been consuming for millennia."

Far out: Magic mushrooms could have medical benefits, researchers say

By Zachary Roth
Wed Jun 15, 7:45 am ET
http://news.yahoo.com/s/yblog_thelookout/2...researchers-say

The hallucinogen in magic mushrooms may no longer just be for hippies seeking a trippy high.

Researchers at Johns Hopkins University School of Medicine have been studying the effects of psilocybin, a chemical found in some psychedelic mushrooms, that's credited with inducing transcendental states. Now, they say, they've zeroed in on the perfect dosage level to produce transformative mystical and spiritual experiences that offer long-lasting life-changing benefits, while carrying little risk of negative reactions.

The breakthrough could speed the day when doctors use psilocybin--long viewed skeptically for its association with 1960s countercultural thrill-seekers--for a range of valuable clinical functions, like easing the anxiety of terminally ill patients, treating depression and post-traumatic stress disorder, and helping smokers quit. Already, studies in which depressed cancer patients were given the drug have reported positive results. "I'm not afraid to die anymore" one participant told The Lookout.

The Johns Hopkins study--whose results will be published this week in the journal Psychopharmacology--involved giving healthy volunteers varying doses of psilocybin in a controlled and supportive setting, over four separate sessions. Looking back more than a year later, 94 percent of participants rated it as one of the top five most spiritually significant experiences of their lifetimes.

More important, 89 percent reported lasting, positive changes in their behavior--better

relationships with others, for instance, or increased care for their own mental and physical well-being. Those assessments were corroborated by family members and others.

"I think my heart is more open to all interactions with other people," one volunteer reported in a questionnaire given to participants 14-months after their session.

"I feel that I relate better in my marriage," wrote another. "There is more empathy -- a greater understanding of people, and understanding their difficulties, and less judgment."

Identifying the exact right dosage for hallucinogenic drugs is crucial, Roland Griffiths, a professor of psychiatry at Johns Hopkins who led the study, explained to The Lookout. That's because a "bad trip" can trigger hazardous, self-destructive behavior, but low doses don't produce the kind of transformative experiences that can offer long-term benefits. By trying a range of doses, Griffiths said, researchers were able to find the sweet spot, "where a high or intermediate dose can produce, fairly reliably, these mystical experiences, with very low probability of a significant fear reaction."

In the 1950s and '60s, scientists became interested in the potential effects of hallucinogens like psilocybin, mescaline, and lysergic acid diethylamide (LSD) on both healthy and terminally ill people. Mexican Indians had, since ancient times, used psychedelic mushrooms with similar chemical structures to achieve intense spiritual experiences. But by the mid '60s, counterculture gurus like Dr. Timothy Leary and Aldous Huxley were talking up mind-altering drugs as a way of expanding one's consciousness and rejecting mainstream society. Stories, perhaps apocryphal, circulated about people jumping out of windows while on LSD, and some heavy users were said to have suffered permanent psychological damage. By the early '70s, the US government had essentially banned all hallucinogenic drugs.

But recent years have seen the beginning of a revival of mainstream scientific interest in mind-altering drugs, and particularly in the possibility of using them in a clinical setting to alleviate depression and anxiety. A 2004 study by the government of Holland (pdf) found psilocybin to have no significant negative effects.

Here in the United States, too, the climate may be shifting. In a statement accompanying the announcement of the Johns Hopkins findings, Jerome Jaffe, a former White House drug czar now at the University of Maryland School of Medicine, said the results raise the question of whether psilocybin could prove useful "in dealing with the psychological distress experienced by some terminal patients?"

The hope is that the long-lasting spiritual and transcendental experiences associated with psilocybin could--if conducted in a controlled and supportive setting, and with appropriate dosage levels--help ease patients' fear and anxiety, allowing them to

approach death with a greater sense of calm. (You can see one terminally ill cancer patient speak movingly about the positive effects of psilocybin here.)

Griffiths thinks the drug may have the potential to alleviate the suffering of terminal patients. He's currently leading a separate Johns Hopkins psilocybin study, using volunteers who are depressed after being diagnosed with cancer. "So far we've had--anecdotally only--very positive results," comparable to the study with healthy volunteers, he said. A study from the University of California, Los Angeles last year reported similar positive results.

But Griffiths said his study, under way for three years, has only recruited 20 patients, in part because oncologists are more interested in curing cancer than helping patients cope with its effects, so they don't refer provide many referrals. "Most oncologists just don't get it," he said. "It's not the focus of their research, and they're busy people."

But the experience of one volunteer in Griffiths's study offers a glimpse of the potential benefits. Lauri Reamer, 47, told The Lookout that she participated in two Johns Hopkins psilocybin sessions last September, not long after ending intensive chemotherapy and radiation to treat a rare form of leukemia that, several times in the preceding few years, had almost taken her life.

Reamer, an anesthesiologist from Ruxton, Md., with three young daughters, said that although her disease was in remission by that time, she was still suffering psychologically from the trauma of the illness and the treatment. She had walled herself off emotionally, she said, and was unable to show empathy for others or even for herself.

The psilocybin had an immediate impact. "At the end of the session, I was just in this joyous, happy, relaxed state," she said. "The drug was gone--what was left was just this peaceful calm."

That calm had lasting benefits. Reamer said the experience--what she called "an epiphany"--gave her the impetus to get out of a failing marriage. Since doing so, she said, both she and her daughters have been much happier.

"I don't think it was the drug that did it," she said. "It was the drug that helped me find the clarity."

That's not the only improvement. "My sleeping has gotten better. My relationships have gotten better with people," she said. "The fog has lifted."

"The best thing it did for me was heal me psychologically and emotionally and allow me to be back in my kids' lives, be back to being a mother," Reamer concluded.Â As she spoke, she was taking her daughters--two 15-year old twins, and a 6-year-old--on a trip to Hershey Park.

And although doctors tell her that, thanks to the effect of the illness and the treatment, she likely has only 10 or 15 years to live, she's able to approach that challenge with equanimity.

"My fear of death kind of disappeared," she said. "I'm not afraid to die anymore."

Griffiths, of Johns Hopkins, said Reamer's experience isn't an outlier among the volunteers, both sick and healthy, who have tried psilocybin. "People feel uplifted, and very often have a sense that everything is O.K. at one level," he said. "That there's sense to be made out of the chaos."

"When you see people undergoing that kind of transformation," he added, "it's really quite moving."

Title: Dr. Mark Sircus: Magnesium and Radiation Protectio

TheUnhivedMind - June 1, 2011 03:17 AM (GMT)

Dr. Mark Sircus: Magnesium and Radiation Protection

It is in a list of medicinals that prevent and treat

cancer that we find helpful substances that treat
and strengthen us against radiation contamination.

By Dr. Mark Sircus – Contributing Writer
May 30th, 2011
http://theintelhub.com/2011/05/30/magnesiu...ion-protection/

"In the years leading up to Chernobyl, some dairy farmers in Austria were using remineralization as a part of their operations. They added rock dust to liquid manure as well as combining it with compost, thereby removing odors and greatly increasing soil biota.

As a result, cows had twice the normal lifespan and produced much more milk. Amazingly enough, after Chernobyl, the cheeses that were remineralized (as well as biodynamic cheeses) measured no radioactivity whatsoever. Austrians would stand in long lines in order to buy these safe, remineralized products," writes Joanna Campe.

Iodine is obviously not the only substance that we should run to in the face of increasing radiation threats. Magnesium is a vital mineral whose lack leaves us open to not only radioactive damages but also those from heavy metals and thousands of chemicals, which we are commonly exposed to.

ThyroidKi.com – 10% Off(Ad)

Mercury and now a long list of radioactive particles are floating in the environment like invisible clouds that have spread out everywhere. They are raining down on us, damaging and damning our future. We can no longer be passive about building our defenses against the toxic onslaught.

Without sufficient magnesium, the body
accumulates toxins and acid residues,
degenerates rapidly, and ages prematurely.

Just about everyone who is writing protocols for radiation toxicity is forgetting about the importance of magnesium salts. Worse still are governments and the entire institution of medicine that are purposely ignorant about magnesium, so they cannot possibly be trusted for valuable health and medical information that will help us in our time of dire need.

The need was dire before Fukushima but they did not want to admit that; they let the public get obsessed with CO2 emissions and said nothing about the mercury. Now with radioactive nuclides steadily building up in the background, we are in trouble than any of us care to admit. Today the situation has gone nuclear and there has never before been a need so great for detoxification and chelation.

Magnesium is a crucial factor in the natural self-cleansing and detoxification responses of the body.

Magnesium is also necessary for effective chelation. It stimulates the sodium potassium pump on the cell wall and this initiates the cleansing process in part because the sodium-potassium-ATPase pump regulates intracellular and extracellular potassium levels. The healthy cell wall favors intake of nutrients and elimination of waste products.

The involvement of free radicals in tissue injury induced by magnesium deficiency[1] causes an accumulation of oxidative products in heart, liver, kidney, skeletal muscle tissues and in red blood cells, [2] leaving them more vulnerable to oxidative stress caused by radiation exposure.

Both radiation exposure and heavy metals produce oxidative stress through the creation of increased levels of reactive oxygen species (ROS—oxygen free radicals, peroxides, and singlet oxygen). It is known that these increased levels of intracellular ROS are sufficient to trigger apoptosis (cell death).

Glutathione is Magnesium-Dependent

Glutathione protects the cells from oxidative-stress-induced apoptosis and glutathione levels are magnesium dependent! “Glutathione is a very important detoxifying agent, enabling the body to get rid of undesirable toxins and pollutants.

It forms a soluble compound with the toxin that can then be excreted through the urine or the gut. The liver and kidneys contain high levels of glutathione as they have the greatest exposure to toxins. The lungs are also rich in glutathione partly for the same reason. Many cancer-producing chemicals, heavy metals, drug metabolites etc. are disposed of in this way,” says Dr. Patricia Kongshavn, former professor, department of medicine at McGill University.

Glutathione (gl?’t?-th?‘?n’) is a polypeptide, C10H17N3O6S, of glycine, cysteine, and glutamic acid.

Glutathione synthetase requires ?-glutamyl cysteine, glycine, ATP, and magnesium

ions to form glutathione.[3] In magnesium deficiency, the ss y-glutamyltranspeptidase is lowered.[4] There is a direct relationship between cellular magnesium, GSH/GSSG ratios, and tissue glucose metabolism.[5]

Magnesium deficiency causes glutathione loss and this is unwelcome as the clouds of radiation are touching down across the northern hemisphere. Magnesium deficiency causes glutathione loss, which is not at all healthy because glutathione helps to defend the body against damage from cigarette smoking, exposure to radiation, cancer chemotherapy, and toxins such as alcohol and just about everything else.

According to Dr. Russell Blaylock, low magnesium is associated with dramatic increases in free radical generation as well as glutathione depletion and this is vital since glutathione is one of the few antioxidant molecules known to neutralize mercury.[6]

“For every molecule of pesticide that your body detoxifies, you throw away or use up forever a molecule of glutathione, magnesium and more,” says Dr. Sherry Rogers who goes on to say that, “Your body uses nutrients to make this glutathione and it uses up energy as well. Every time we detoxify a chemical, we use up, lose, throw away forever, a certain amount of nutrients.”

Mineral Deficiencies

Deficiencies in basic minerals like magnesium and selenium can make all the difference between health and disease, between being able to withstand chemical, heavy metal and radiation exposure. Dr. Rogers has indicated that there is as much as a 500-fold difference in the ability of individuals to detoxify the same chemicals and much of that will be true for radiation as well.

A key marker of this difference is each individual’s magnesium level. Deficiencies in magnesium will wreak havoc with our body’s ability to detoxify and chelate heavy radioactive particles and explains much of the difference between one person withstanding radiation exposures and another person falling to radiation sickness.

Dr. Leslie Fisher has treated in excess of 35,000 patients where mineral therapy was prescribed as the sole form of medication. He has conducted research within his own clinics and the Department of Psychiatry, Austin Hospital, Melbourne. Mineral therapy is the foundation upon which chelation[7] treatments and protocols are built.

Magnesium does protect cells from aluminum, mercury, lead, cadmium, beryllium and nickel, which explains why re-mineralization is so essential for heavy metal detoxification and chelation as well as radiation protection. Magnesium is essential for the survival of our cells but takes on further importance now where our bodies are being bombarded on a daily basis with heavy metals and radiation.

Radiation and Diabetes

No one is going to convince the public that the increasing radiation will have a general effect on our health that can be easily traced back to the source. Even before we get cancer from radiation we have a general down-spiraling of body functions because of all the oxidative stress. In my book, New Paradigms in Diabetes, I write extensively about the direct relationship between magnesium deficiency and the onset of diabetes.

Pancreatic beta cells are sensitive to reactive oxygen species (ROS) [8] attack when they are exposed to oxidative stress,[9] because of the relatively low expression of antioxidant enzymes such as catalase and glutathione peroxidase.[10]

Diabetes is typically accompanied by increased production of free radicals and/or impaired antioxidant defense capabilities, indicating a central contribution of reactive oxygen species. It is also a fact that ROS is one of the major factors that induce oxidative modification of DNA and gene mutation.[11]

The Chernobyl incident was a major disaster of humanity, which has resulted in a plethora of health problems that are still far from being fully recognized.

Most studies analyzing the medical consequences of this catastrophe have so far focused on diseases such as thyroid cancer, leukemia, immune and autoimmune pathology[12],[13] even though an increase in the incidence of type 1 diabetes mellitus, a disorder involving the immune system, was observed within the residential population of Hiroshima among survivors of the atom bomb detonation.[14] Studies have also shown that thymectomy and a sub-lethal dose of gamma radiation induces type 1 diabetes in rats.[15]

Researchers at the Pediatric Hospital A. Meyer, Florence, Italy studied this question by assessing the incidence of the disease in children in Gomel, Belarus in the years subsequent to the Chernobyl disaster. The results of the study seem to confirm the hypothesis that environmental pollution such as that subsequent to the Chernobyl accident can cause diabetes.[16]

Mass screening for diabetes mellitus has been conducted on 64,000-113,000 atomic bomb survivors residing in Hiroshima City since 1961. From 1971 to 1992 a 2.7-fold increase in the prevalence of diabetes mellitus was observed in males and a 3.2-fold increase in females.[17]

We have a significant and documented increase in the incidence of type 1 diabetes in children and adolescents after Chernobyl in the radioactively contaminated area of Gomel compared to Minsk.
Heinrich Heine University

When beginning to build a protocol against the radiation and heavy metal onslaught, we

need to stick with the basics and they are magnesium, iodine, sodium bicarbonate, vitamin C, selenium, clay, THC (cannabis), as well as a natural chelator and superfoods. Properly filtered water also is essential. There is always more we can do but even affording these basics is a challenge to many.

Special Note: One of my readers wrote saying, “Thank you for the labor of love you’ve given to the inhabitants of the world. All the information about magnesium, iodine, baking soda, etc. is priceless and very much appreciated.

I know we can’t thank you enough for your generosity with the knowledge you’ve accumulated from all of your research. I know you’ve had your detractors–ignore them!” These basic medicines are not only the mainstay of emergency rooms and intensive care wards but are the backbone of a my new form of medicine called Natural Allopathic Medicine, which makes sense in the age of toxicity that we all have live in.

[1] Magnesium deficiency (MgD) has been associated with production of reactive oxygen species, cytokines, and eicosanoids, as well as vascular compromise in vivo. Although MgD-induced inflammatory change occurs during “chronic” MgD in vivo, acute MgD may also affect the vasculature and consequently, predispose endothelial cells (EC) to perturbations associated with chronic MgD. As oxyradical production is a significant component of chronic MgD, we examined the effect of acute MgD on EC oxidant production in vitro. In addition we determined EC; pH, mitochondrial function, lysosomal integrity and general cellular antioxidant capacity. Decreasing Mg2+ (< or = 250microM) significantly increased EC oxidant production relative to control Mg2+ (1000 microM). MgD-induced oxidant production, occurring within 30 min, was attenuated by EC treatment with oxyradical scavengers and inhibitors of eicosanoid biosynthesis. Coincident with increased oxidant production were reductions in intracellular glutathione (GSH) and corresponding EC alkalinization. These data suggest that acute MgD is sufficient for induction of EC oxidant production, the extent of which may determine, at least in part, the extent of EC dysfunction/injury associated with chronic MgD. Effect of acute magnesium deficiency (MgD) on aortic endothelial cell (EC) oxidant production. Wiles ME, Wagner TL, Weglicki WB.The George Washington University Medical Center, Division of Experimental Medicine, Washington, D.C., USA. mwiles@nexstar.com Life Sci. 1997;60(3):221-36.

Nutr. 133:2505-2511, August 2003.

[3] Virginia Minnich, M. B. Smith, M. J. Brauner, and Philip W. Majerus.Glutathione biosynthesis in human erythrocytes. Department of Internal Medicine, Washington University School of Medicine, J Clin Invest. 1971 March; 50(3): 507–513. Abstract: The

two enzymes required for de novo glutathione synthesis, glutamyl cysteine synthetase and glutathione synthetase, have been demonstrated in hemolysates of human erythrocytes. Glutamyl cysteine synthetase requires glutamic acid, cysteine, adenosine triphosphate (ATP), and magnesium ions to form ?-glutamyl cysteine. The activity of this enzyme in hemolysates from 25 normal subjects was 0.43±0.04 ?moleglutamyl cysteine formed per g hemoglobin per min. Glutathione synthetase requires ?-glutamyl cysteine, glycine, ATP, and magnesium ions to form glutathione. The activity of this enzyme in hemolysates from 25 normal subjects was 0.19±0.03 ?mole glutathione formed per g hemoglobin per min. Glutathione synthetase also catalyzes an exchange reaction between glycine and glutathione, but this reaction is not significant under the conditions used for assay of hemolysates. The capacity for erythrocytes to synthesize glutathione exceeds the rate of glutathione turnover by 150-fold, indicating that there is considerable reserve capacity for glutathione synthesis. A patient with erythrocyte glutathione synthetase deficiency has been described. The inability of patients' extracts to synthesize glutathione is corrected by the addition of pure glutathione synthetase, indicating that there is no inhibitor in the patients' erythrocytes.

[7] Chelation is a recognized treatment for heavy metal poisoning (such as lead and mercury)

[8] ROS (Reactive Oxygen Species) are natural byproducts of oxygen metabolism in the body. Free radicals and other byproducts are formed as a result of this metabolism, and at lower levels can be very beneficial, but when too many of these byproducts are formed the situation of oxidative stress occurs. Reactive oxygen species (ROS) include oxygen ions, free radicals and peroxides both inorganic and organic. They are generally very small molecules and are highly reactive due to the presence of unpaired valence shell electrons. Oxidative stress is a medical term for damage to animal or plant cells (and thereby the organs and tissues composed of those cells) caused by excesses of these reactive oxygen species, which include (but are not limited to) superoxide, singlet oxygen, peroxynitrite or hydrogen peroxide. Superoxide is produced deleteriously by 1-electron transfers in the mitochondrial electron transfer chain. It is defined as an imbalance between pro-oxidants and anti-oxidants, with the former prevailing. The causes of these excesses are many, and include environmental influences of every type. Enzyme activities are sometimes affected negatively, leading to greater production of excess ROS, and heavy metals such as chromium, vanadium, and others

are said to be involved, now this new evidence that methylmercury definitely plays a significant role in the pancreas. Cells are normally able to defend themselves against ROS damage through the use of enzymes such as superoxide dismutases and catalases. Small molecule antioxidants such as Ascorbic acid (vitamin-C), uric acid, and glutathione also play important roles as cellular antioxidants. Similarly, Polyphenol antioxidants assist in preventing ROS damage by scavenging free radicals. Studies are conflicting on some antioxidants such as Vit. E. The resulting inflammatory processes are believed to be the result of these ROS excesses and include cardiovascular disease, ALS, neurodegenerative diseases, and many others.

Title: lymes disease
Description: *alternative healthy treatment*

wades77 - May 28, 2011 04:56 PM (GMT)

A person I know at church has lymes disease, and has been in hospital for months. He's young fit and healthy, at least (he was) before the hospital started taking care of him. He's still not well, has good days/bad days.
A while ago a found a link (which i think no longer exists) of a Christian who was in hospital and then decided enough was enough, and he got off the dreaded antibiotics and started down a determined route of natural healing. He was successful, and the bits i remember were he took really hot baths to get his temperature up as high as possible, when the bouts came. cayenne pepper garlic stuff like that. Any good additional info appreciated, some people use mms.

Wolveshater - May 28, 2011 05:20 PM (GMT)

I AM DYING FOLKS THAT IS THE BIG SECRET 9 MONTHS TO 9 YRS MAX ITS OVER F0R ME SORRY

Wolveshater - May 28, 2011 05:21 PM (GMT)

I tried to tell him run from those Murderous Quacks, he don't listen so good.

TheUnhivedMind - May 28, 2011 06:16 PM (GMT)

I would suggest he uses tries using a Ultimate Zapper by Ken Presner along with an herbal intake of Astragalus and Hoelen to aid the Spleen and herbs like Greater Celandine, Dandelion and Milk Thistle for the Liver. Both these areas need protection and boosting as this problem attacks these regions. He needs a lot of work but the addition of Olive leaf extract should also be of much use in starting his healing off. Garlic is the king at killing bacteria but just don't stay on it for too long as its so heating and will need

buffering. Everyday he should have a good intake of Nettle or Hemp and some Ginseng with flower pollen. A high mineral diet so look for food rich in natural minerals. The use of unpasteurized Kombucha tea, fermented Cod Liver Oil, Brazil nuts and unrefined Wheatgerm oil or Avacados for natural rich vitamin E. If they really have to resort to outright antibiotics then Colloidal Silver would be far better than dangerous drugs. I prefer Ozone rather than MMS.

TheUnhivedMind - May 28, 2011 06:26 PM (GMT)

> **QUOTE** (Wolveshater @ May 28 2011, 05:21 PM)
>
> I tried to tell him run from those Murderous Quacks, he don't listen so good.

He's simply given up showing he's weak and truly has no fight in him when it comes to it. I see this all the damn time and its because people have no strength and will power anymore. They want everything done for them and won't do anything for themselves. At the same time they're programmed to believe everything they're told. Notice how the Zeus quacks give me 9 months to 9 years, oh my God what a great prediction that is huh? Covering their arses or what? Pathetic! Its all brainwashing and so many fall for it.

Alexandra - May 30, 2011 04:23 AM (GMT)

My dad became ill in 1971, finally died in 2000. And every single year, it seemed, he was given "until September" or "until October" to live. Dad always said he was too ornery to go and paid them no mind. It got so every time we heard that prediction we'd just blow it off and laugh.

He died July 23, 2000.

TheUnhivedMind - May 21, 2011 11:14 PM (GMT)

Herbal Remedies Offer Hope as the New Antibiotics

http://www.sciencedaily.com/releases/2011/...10519202716.htm

ScienceDaily (May 19, 2011) — Cancer treatments often have the side effect of impairing the patient's immune system. This can result in life-threatening secondary infections from bacteria and fungi, especially since bacteria, like Staphylococcus aureus, are becoming multi-drug resistant (MRSA). New research published by BioMed Central's open access journal Annals of Clinical Microbiology and Antimicrobials investigates the potency of Indian wild plants against bacterial and fungal infections in the mouths of oral cancer patients.

Researchers from Rohtak, India, tested extracts from several plants used in traditional or folk medicine against microbials found in the mouths of oral cancer patients. Of the 40 patients involved in the study, 35 had compromised immune systems with severely reduced neutrophil counts. Eight of the plants tested were able to significantly affect the growth of organisms collected by oral swab, and pure cultures of bacteria and fungi grown in the lab. This included wild asparagus, desert date, false daisy, curry tree, caster oil plant and fenugreek.

Dr Jaya Parkash Yadav said, "Natural medicines are increasingly important in treating disease and traditional knowledge provides a starting point in the search for plant-based medicines. Importantly we found that the extraction process had a huge effect on both the specificity and efficacy of the plant extracts against microbes. Nevertheless several of the plants tested were broad spectrum antibiotics able to combat bacteria including E. coli, S. aureus and the fungi Candida and Aspergillus. Both desert date and caster oil plant were especially able to target bacteria, such as Pseudomonas aeruginosa, which are known to be difficult to treat with conventional antibiotics."

Dr Yadav continued, "Although the plants tested had a lower potency than conventional antibiotics they offer hope against resistant species. These results are a starting point

for further testing in the lab and clinic."

View Full Version: Fears that EU rules on herbal medicines may put

Title: Fears that EU rules on herbal medicines may put
Description: *patients in danger [WHOLE IDEA OF IT!]*

TheUnhivedMind - May 15, 2011 03:37 AM (GMT)

Fears that EU rules on herbal medicines may put patients in danger

by Madeleine Brindley, Western Mail
May 9 2011
http://www.walesonline.co.uk/news/wales-ne.../#ixzz1MFTl0PCi

The people of Wales have been using traditional and herbal remedies for centuries. But this could be threatened by a new EU directive which has come into force in the UK. Health Editor Madeleine Brindley examines the implicationsof the new rules

NEW rules on herbal medicines could compromise patient safety by forcing people to turn to the internet to buy their supplies.

Herbalists and nutritionists have spoken of their fears that the new European Union rules, which have been introduced under the banner of patient safety, will do more harm than good.

The EU directive on herbal medicines, which came into force in the UK at the start of May, could see common and popular remedies removed from shop shelves.

Under the rules, over-the-counter herbal medicine products must be licensed – in the UK they require either a Traditional Herbal Medicines Registration (THR) or a full marketing authorisation. To be eligible for a licence products must have been on the market for 30 years, including 15 within the EU.

To date 100 herbal products have been registered under the THR scheme, which is run by the Medicines and Healthcare Products Regulatory Agency (MHRA).

Richard Woodfield, the MHRA's head of herbal medicine policy, said: "The growth of the THR scheme means that consumers will have access to a wide choice of over-the-counter herbal medicines made to assured standards.

"The current signs are that the market will be lively and competitive. The key difference for consumers is that in future they will be in the driving seat and able to make an informed choice when they wish to use these medicines."

Paul Gimson, director of the Royal Pharmaceutical Society in Wales, said the full implementation of the directive was a "positive step".

But he added: "Whereas ibuprofen, for example, has to prove it cures pain, herbal remedies do not have to prove they work – only that they've been used as a traditional remedy.

"This could be confusing for patients when buying something – making claims based on tradition is not the same as claims made by medicines based on clinical trials."

Support for the new EU rules is by no means universal – an online petition by campaign group Avaaz, which calls on the European Commission to overturn the "ban" on herbal medicines, has already been signed by more than 750,000 people.

Dr Nicola Gale, academic lead for the Complementary and Alternative Medicine Birmingham Research Alliance, said: "The rationale behind the EU directive is persuasive – there are some safety risks with herbs because of their strong action or potential interaction with conventional pharmaceutical drugs.

"However, herbs are the 'traditional' medicine of the West – they are part of our heritage and have been used for many centuries to manage everything from minor health complaints to serious illness.

"The idea that people would have to consult their doctor to get access to these herbs or that there would be a dramatic restriction on the herbs available has caused widespread outcry across Europe with accusations of promoting a nanny state, restricting individual choice and playing into the hands of pharmaceutical companies seeking profits from patenting herbal treatments."

Vicky Perks, a clinical nutritionist for The Health Diva and the Beanfreaks chain of health food stores, said: "No matter what anyone says, this is not about safety – safety is already in place for consumers.

"If you buy anything from a shop it's governed by consumer law; everything in that product must be safe for human consumption.

"There's a reprieve for anyone who goes to a licensed medical herbalist but Chinese

medicines are not covered – do we really know what's in those jars of medicines?

"I'd appreciate tighter legislation on certain areas but this legislation is so poorly thought out."

She added: "It would have been a better idea if they said the companies making these products had to be licensed rather than the product themselves.

"Licensing is just a way of generating extra money for the government. It costs £50,000 to license one product – that level of cost is all right for the pharmaceutical industry, which sells billions of a product as it equates to something like an extra penny on a medicine.

"But things aren't the same in this industry as many of the companies that make products are small and have small turnovers. Many will say they simply can't afford to do this."

The British Herbal Medicine Association believes at least 50 herbs, including horny goat weed (so-called natural Viagra), hawthorn berry, which is used to treat angina pain and wild yam, will no longer be stocked in health food shops.

Some familiar preparations may also disappear to be replace by alternative licensed formulas, which contains different ingredients – Ms Perks said she is unwilling to stock some products containing artificial colourings.

Liz Sanders, a herbalist based in Trecastle, near Brecon, said: "These new rules take away personal choice and freedom of choice and because many products will no longer be available in health food shops people will turn to the internet – I wouldn't buy anything medical over the internet because you simply don't know what you are getting."

The MHRA has issued guidance to people about buying unlicensed herbal remedies online, saying: "The best advice for consumers when it comes to buying herbal medicines over the internet is to be alert and cautious.

"There is an international trade in poor-quality, unregulated and unlicensed herbal products. Some of these have been found to contain banned pharmaceutical ingredients or heavy metals which are poisonous.

"Products may also contain harmful herbs that are not permitted in the UK, and you should be aware that unlicensed herbal medicines manufactured outside the UK may not be subject to any form of effective regulation."

Ms Sanders added: "These new regulations will really impact on those people who want to use herbal medicines but cannot afford the consultation fees to see a herbalist – this is particularly sad because herbal medicine has traditionally been a poor man's

medicine.

“If people don’t have the money to see a proper herbalist then they will try and do it themselves.

“While there are some pros for this approach, the overall effect is that this type of medicine is being pushed away from people when it should be on a par with orthodox medicine.”

View Full Version: WHY I PREFER FRESH PLANT TINCTURES – FOUR REASONS

Title: WHY I PREFER FRESH PLANT TINCTURES – FOUR REASONS

TheUnhivedMind - April 30, 2011 06:26 PM (GMT)

WHY I PREFER FRESH PLANT TINCTURES – FOUR REASONS by Christopher Hedley AHG April 2011

REASON – they work better.

Last year I was forcibly reminded of the benefits of making fresh plant preparations. I was treating a patient with acute bronchitis resistant to all my medicines. My bronchitis medicines are based on Coltsfoot syrup (Tussilago farfara) and I hadn't picked any Coltsfoot for a couple of years. I brought good quality dried leaves and made the syrup, with no result. Non reminded me that we always used to use fresh leaves. So I went looking for the fresh plant. Coltsfoot likes heavy soil and is happy in London clay, where the top soil has been removed. I used to pick it along the Regent's canal but the park authorities planted native vegetation over my favourite patch (some irony there!). I went for a long walk looking in likely places and found enough to make a couple of litres of syrup. The colour was better, the scent was stronger and the medicine worked!
I have always been drawn to fresh plant preparations. It seems to me the best way to capture the innate vitality of the herb – and vitalistic medicine is what I was taught to practice. Simple organoleptic testing (tasting, smelling, feeling) quickly and easily tells us that fresh plant extracts contain a wider range of constituents than do dried extracts. and it has seemed to me, over years of such testing, that those constituents are presented in a more accessible form. I had no way of proving this, except by observation in practice, but now Paul Chenery at Rutland Biodynamics has demonstrated that this is indeed the case and provided the beginnings of a biophysical basis for explaining vitality in herbal extracts – check out, 'are fresh extracts really better?', on the Rutland website and follow the link to Paul's research paper.

REASON – they taste better
By far the best way to take herbs is to simply pop out into your garden and nibble them.

They taste so much better than any preparation, just as home grown vegetables taste better. Freshness is the key. This method is not always practical and the nearest equivalent is a fresh plant extract made within minutes of picking. Bitter herbs such as Vervain (Verbena officinalis) are much more palatable either eaten fresh or made up into a fresh plant extract presumably because of the wider range of constituents extracted.
Delicate tasting herbs such as Lemon Balm (Melissa officinalis) taste better presumably because the method captures elusive constituents, such as the volatile oil.

REASON – respect for the earth
Herbs used in making fresh plant preparations must be grown by the medicine maker, or at least in a place close by. This means that they must care for the land. This is especially the case with biodynamic growers since care for the land is their key element. I like to see where my herbs are grown, so I can see that care for myself. Respect for and care of the earth we live on, that the plants grow on and in, is crucial to making strong, vital medicines. Herbs and medicines made from them carry the feelings of the place they are grown in and of the people who pick and process them. Terry Pratchet puts it well, “she told the land how to be and the land told her who she was.

REASON – they keep their edge
Dried plant tinctures will usually do the basic job of relieving symptoms BUT they miss that extra edge provided by fresh plant tinctures. People ask herbalists for help for many reasons but often they are trying to reach healing at a deeper level than can be reached by using the herbs in a symptomatic (or reductionist) way. People, of course, heal themselves but herbs can guide them. Fresh plant preparations carry the wisdom and knowledge of the whole plant and make for better guides, reaching places that surprises the herbalist and their patient.
It is my observation that fresh plant preparations keep their edge for longer. Greater Celandine (Chelidonium majus) doesn’t keep well as a dry plant tincture. Rudolph Weiss says that it looses its efficacy after 6 months. I am inclined to agree with him and prefer even fresh plant tinctures less than 6 months old. Fortunately Greater Celandine gives us two harvests a year and I take that as my clue, but I make a fresh plant glycerite every year which keeps very well, at least for topical use.
There is very little research on the keeping power of tinctures. One plant that has been researched is Skullcap (Scutellaria spp.) The flavonoids have been shown to be quite unstable in alcohol but I do get good results with fresh plant Skullcap tincture, especially in treating anxiety in psychotic people. Dried plant tinctures don’t even come close. Is this because the flavonoids are more stable in the fresh plant preparation? Perhaps Paul would like to do his next piece of research on this subject.

View Full Version: ANH-Intl responds to THMPD disinformation in UK

Title: ANH-Intl responds to THMPD disinformation in UK
Description: *newpaper [NOT WORTH TOILET PAPER!]*

TheUnhivedMind - April 30, 2011 06:22 PM (GMT)

ANH-Intl responds to THMPD disinformation in UK newspaper

Adam Smith
Science & Communications Officer, ANH-Intl
http://www.anh-europe.org/news/anh-intl-re...in-uk-newspaper

KEY POINTS
A recent article in the UK tabloid newspaper, the Daily Express, was highly biased and inaccurate
ANH-Intl posted comments below the article, correcting the worst mistakes in the piece
Our comments are repeated here with corresponding text from the original article

The 'shifting sands' of European Union (EU) legislation affecting herbal products sold within the EU is, we admit, a complex area. Full implementation of the Traditional Herbal Medicinal Products Directive (THMPD), and the simultaneous narrowing of national food supplement regimes, now threatens the very existence and practice of non-European traditions of medicine, such as Ayurveda and traditional Chinese medicine (TCM), in the EU. This is despite their use by millions of people in the EU's 27 Member States. The THMPD and its implementation intersect with several other aspects of EU legislation, such as the Novel Foods Regulation, the Nutrition and Health Claims Regulation and the Food Supplements Directive. Add to that a collection of vested interests loudly proclaiming the THMPD as the best thing since sliced bread, arrayed against opposing voices in the natural healthcare industry that include consumers, practitioners, retailers, manufacturers and campaigners – not to mention the rogue opinions of professional skeptics – and it's no wonder that the media often struggle to get the true picture across.
The struggle to Express the truth

Sometimes, though, they really don't struggle hard enough. A story in a UK tabloid

newspaper, the Daily Express, published on Tuesday 12th April was so biased and inaccurate that we felt compelled to respond. You can read the article and our comment here, and below are some extracts from the story next to our corresponding points. What is truly surprising about the article is not simply the inaccuracy and lazy journalism involved – that's almost par for the course with UK newspapers these days – but the fact that the Express is simultaneously running a noisy campaign to get the UK out of the EU. It seems to us that a story about a piece of legislation so fundamentally broken as the THMPD would be a gift to the Daily Express' anti-EU campaign. But as you will see below, the paper really missed the boat on this one.
ANH-Intl response to the Daily Express THMPD story

Daily Express: "Richard Woodfield of the MHRA [Medicines and Healthcare products Regulatory Agency] says: "We are aware of the criticism that this is giving credibility to products that may not have proof of efficacy." However he adds: "There are lots of herbal medicines with only partial evidence of efficacy. The consumer is perfectly able to decide for themselves whether or not they wish to take them."

ANH-Intl comment: Richard Woodfield is being rather disingenuous here. He has clearly felt the sting of the professional skeptic campaigners like Professor David Colquhoun, pharmacologist at University College London. But, let's face it, a similar gripe could be made about conventional medical treatments: only around 11% are currently known to be of benefit. But Mr Woodfield fails to tell readers that the choice to take herbal medicines is being limited dramatically, as a result of policies he is responsible for implementing – these policies having their origins in Brussels. Literally hundreds of herbal products that were previously exempted from medicinal licensing in the UK will now be lost, because they are not eligible for a traditional herbal registration (THR) under the THMPD's 'simplified' medicinal licensing scheme. Others, that have been sold as food supplements, will also be caught because these products are viewed as medicinal by Mr Woodfield and his colleagues at the MHRA. When this happens, products effectively 'fall between two stools' of legislation. Without a regulatory scheme to be sold under, the products effectively become illegal and will disappear from shelves, possibly forever.

Daily Express: "To get [a THR], the manufacturer has to prove the herb has been used for the condition for at least 30 years and for at least 15 years in the EU, that it is made to strict standards and contains a consistent and clearly marked dose… Unlike licensed medicines, manufacturers of herbal medicines do not have to prove their products work…Nine out of 10 people will read 'traditional use' as 'it works' [says Professor David Colquhoun]".

ANH-Intl comment: The article takes issue with the replacement of formal efficacy standards with the traditional use requirement. This should actually be a good thing: as Professor Elizabeth Williamson, director of practice at the School of Pharmacy at Reading University, later points out, the smaller and medium-sized companies making

herbal medicines cannot afford full clinical trials. Also, there are hundreds – even thousands – of years of clinical experience with these herbs and various, often complex, combinations of them, that attest to their effectiveness. But even if a product has been used for hundreds of years worldwide, if it hasn't been used for 15 years in the EU, it is ineligible for THR as a matter of law! New combinations of herbs that may have been used for centuries or even millennia also fall foul of this aspect of the THMPD.

The article has numerous comments from Mr Woodfield and Professor Colquhoun, the quintessential professional skeptic of natural medicine and avid promoter of pharmaceutical medicine. But in the Express' piece, balancing voices from, say, an herbalist or someone involved in the natural healthcare sector, are conspicuously absent. Professor Williams' seeming defence of herbal medicines, "They are not totally untested. Some herbs do have clinical evidence to support them", merely furthers the myth of 'evidence-based medicine' that randomised, controlled clinical trials (RCTs) are the only reliable tool by which effectiveness of treatments can be measured. If this were the case, let's stop eating fruit and vegetables, and reducing our salt intake, because the health benefits of both these dietary approaches have never been demonstrated by RCTs…isn't it odd that both are incorporated into government dietary advice issued by virtually every health authority around the world?

The safety and quality control requirements of the THMPD have themselves been derived from the world of pharmaceutical drugs. The vast majority of drugs are based on highly purified, synthetic, new-to-nature chemical structures. They usually contain only one or very limited numbers of active molecules, plus a number of excipients or carriers, which may include synthetic polymers, preservatives, artificial colours and the like. Herbal products, especially those from long-standing, non-European traditions, that are comprised of whole-plant materials are complex mixtures of hundreds of chemicals working together synergistically. Square peg – round hole. Worse, such ill-fitting standards do not guarantee public safety, especially since people wishing to buy their now-illegal herbal products will inevitably resort to the Internet, which is unregulated and will continue to be exploited by less-than-scrupulous operators.

The products that have been approved under the THMPD are, for the most part, not even what many of us would regard as 'true' herbal products. They are alcohol or acetone (nail-polish remover) extracts, stabilised in a pharmaceutical base that can include artificial polymers and many other additives. Very few contain whole-herb material and most herbalists would not regard these products as authentic to long-standing traditions of herbalism. They are effectively spin-offs from the comparatively new, 20th-century, phytopharmaceutical industry that has its roots in Germany, alongside the conventional pharmaceutical industry. It comes as no surprise, then, that many retailers are refusing to stock the THR-approved products. They see the products as being of insufficient quality, both from the standpoint of effectiveness and because of the artificial ingredients they contain. These retailers anticipate that many of their

customers would not want to spend their hard-earned money on such products.

Daily Express: “So far around 100 registrations have been approved and there will be no shortage of popular herbs such as echinacea, St John’s Wort and milk thistle… [approved herbs] include valerian, devil’s claw, saw palmetto, pelargonium, sage, black cohosh, agnus castus, feverfew, rhodiola, passiflora and arnica…Campaigners from the Alliance for Natural Health argue the new rules could effectively steam-roller ancient medicine cultures such as Ayurveda out of existence.”

ANH-Intl comment: The article gives the strong impression that plenty of herbal medicines are being registered, and that very few will disappear from 1st May. Yes, over 100 registrations have been issued by the MHRA; but this only represents 37 plant species, almost entirely plants associated with European (especially German) traditions. Not only that, but around 30% of the registered products are different formulations of just two herbs, valerian and Echinacea, and the vast majority are single herbs not combinations, with 90% not including any whole plant material! Ayurveda and TCM use, between them, over 1500 plant species, so the number of UK registrations is a drop in the ocean. But even worse, no registrations at all have been granted for authentic TCM or Ayurvedic products, or indeed any products from any other non-European traditional system of medicine. Ancient medicinal cultures are indeed in danger of being “steam-rollered out of existence”, and sell-through of herbal products held in stock and purchased by retailers before 30th April 2011 will only delay the pain. Cynically, it seems quite a clever way of avoiding a consumer revolution on 1st May.

Daily Express: “Aren’t [herbal medicines] safer than prescription drugs? No and that’s one of the reasons the changes were made. If a medicine works, there is also the potential for side effects and drug interactions.”

ANH-Intl comment: To say without any supporting evidence that herbs are no safer than prescription drugs defies belief. Year after year, the annual report of the American Association of Poison Control Centers reveals no deaths from herbal medicines, while the FDA’s own Adverse Event Reporting System shows nearly 64,000 deaths attributed to orthodox medicines in 2009 alone. This hanging comment by the Express is simply absurd.
An odd way to run a campaign

It’s very strange that a paper so loudly anti-EU as the Daily Express should fail to mention that the THMPD was born in the EU and is being foisted on the UK by Brussels. Not only that, but it being eagerly being accepted by the UK medicines regulators at the MHRA, who have a reputation as some of the keenest and most accurate enforcers of European laws. In fact, the article does not at any point even give the Directive its full name! It is also a shame that the paper failed to find space to mention that ANH-Intl and the European Benefyt Foundation are preparing to initiate judicial review proceedings with a view toward protecting availability of herbal products

in the EU.

Why no comments from the author about the hundreds of small- to medium-sized UK companies that will be hit hard by the changing regulatory status for herbal products, some to the extent of going out of business? All of this coming at a time when businesses need all the help they can get to survive. Why no outrage over the EU's decision to deprive consumers of their fundamental rights to choose how to manage their own health? These are vital issues that the Daily Express could and should be covering, but they get nary a mention in this piece. It seems the paper could do with some joined-up thinking, not to mention some guidance on how to write a fair and balanced article on an issue of critical importance to millions of people in the UK and beyond.

View Full Version: VOTE NOW TO SAVE YOUR HERBAL MEDICINE NO TIME TO

Title: VOTE NOW TO SAVE YOUR HERBAL MEDICINE NO TIME TO
Description: *LOSS 1 DAY LEFT*

TheUnhivedMind - April 30, 2011 06:08 PM (GMT)

http://www.avaaz.org/en/eu_herbal_medicine...a93176e50209578

TheUnhivedMind - April 30, 2011 06:18 PM (GMT)

Thank you for signing the petition calling for the European Commission to revoke the ban on herbal medicines. Your name has now been added.

The ban is set to begin on May 1st, we don't have a moment to spare. The more people that voice their outrage, the more powerful our call to the Commission will be. Please help spread the word -- forward this link to friends and family, and post it on Facebook:

http://www.avaaz.org/en/eu_herbal_medicine...a3ab14e0fa6fbfc

With hope and determination,

Ricken and the entire Avaaz team

Below is the original email you can forward about this campaign:

Dear friends,

In 1 day, the EU will ban much of herbal medicine, pressing more of us to take pharmaceutical drugs that drive the profits of big Pharma.

The EU Directive erects high barriers to any herbal remedy that hasn't been on the

market for 30 years -- including virtually all Chinese, Ayurvedic, and African traditional medicine. It's a draconian move that helps drug companies and ignores thousands of years of medical knowledge.

We need a massive outcry against this. Together, our voices can press the EU Commission to fix the directiv e, push our national governments to refuse to implement it, and give legitimacy to a legal case before the courts. Sign below, forward this email to everyone, and let's get to 1 million voices to save herbal medicine:

http://www.avaaz.org/en/eu_herbal_medicine...a3ab14e0fa6fbfc

It's hard to believe, but if a child is sick, and there is a safe and natural herbal remedy for that illness, it may be impossible to find that remedy.

On May 1st the Directive will create major barriers to manufactured herbal remedies, requiring enormous costs, years of effort, and endless expert processes to get each and every product approved. Pharmaceutical companies have the resources to jump through these hoops but hundreds of small- and medium-sized herbal medicine businesses, across Europe and worldwide, will go bust.

We can stop this. The directive has been passed in the shadows of the bureaucracy, and it cannot stand under the light of democratic scrutiny. The EU Commission can withdraw or amend it, and a court case is currently challenging it to do so. If European citizens everywhere come together now, it will give legitimacy to the legal case, and add to growing pressure on the Commission. Sign below, and forward this email to everyone:

http://www.avaaz.org/en/eu_herbal_medicine...a3ab14e0fa6fbfc

There are arguments for better regulation of natural medicine, but this draconian directive harms the ability of Europeans to make safe and healthy choices. Let's stand up for our health, and our right to choose safe herbal medicine.

With hope and determination,

Ricken, Iain, Giulia, Benjamin, Alex, Alice, Pascal, Lu is and the rest of the Avaaz team.

View Full Version: The Man and His Mission Sebastian Kneipp

Title: The Man and His Mission Sebastian Kneipp

TheUnhivedMind - April 29, 2011 10:01 PM (GMT)

The Man and His Mission, Part I

By Nancy Griffin
June, 2003, Vol. 03, Issue 06
http://www.massagetoday.com/archives/2003/06/17.html

Editor's note: This is part one of a two-part series on Sebastian Kneipp and Kneipp therapy, based on information from the Sebastian-Kneipp-Schule in Bad Wšrishofen, Germany.

I would like to know which illnesses cannot invade someone with a weak lifestyle; illnesses which physically and mentally well balanced people make nothing of. A soft life opens the doors wide to many illnesses. -Sebastian Kneipp (1821-1897)

Perhaps you have run across the name Sebastian Kneipp (pronounced "knipe") in your career; you may be familiar with the Kneipp line of colorful bath products in spas across the country.

Few, however, understand the philosophy behind Kneipp and the influence this German healer has had on the spa industry and integrative medicine in the United States.

Born in 1821, the son of a poor weaver in the Bavarian region of Germany, Kneipp fell ill with pulmonary tuberculosis while studying for the priesthood. Inspired by German physician Johann Hahn, who wrote about the power and effect of fresh water on human health nearly a decade prior, Kneipp cured himself from his potentially fatal disease by taking full-immersion dips in the icy waters of the Danube and literally "shocking" his system back to health.

Using the healing system he developed through experimentation and observation,

Kneipp helped cure a number of gravely ill patients (to whom he had actually been summoned to administer last rites). His unorthodox methods earned him the resentment of doctors and pharmacists; he was even arraigned before the court to answer charges of "quackery." His ecclesiastical superiors had him relocated to a small Dominican monastery at Wšrishofen, located in the foothills of the Bavarian Alps. His 1886 book, My Water Cure, became a bestseller, taking Germany by storm; after it was translated, it spread throughout the world. In 1889, Kneipp published The Way You Should Live, which explained his belief in a natural, healthy lifestyle and the importance of education. He died in 1897 at the age of 75, leaving a legacy in his wake: "I want all mankind to share my knowledge."

The Five Pillars of Kneipp Therapy

Naturopathy is rooted in Kneipp's healing system. One of the most important characteristics of Kneipp therapy is to gently stimulate the body "to give nature a gentle hand," thereby strengthening the immune system and raising the body's tolerance for stress. Kneipp was a strong believer in physical exercise, simple food and a "regular style of life for body, mind and soul."

Kneipp therapy consists of:

Hydrotherapy: Water functions as a natural stimulus to the body. It increases energy and disease resistance, and improves body-awareness. The therapeutic qualities of water also have positive effects on the psyche and the nervous and hormone systems. Kneipp hydrotherapy treatments are finely adjusted to suit the individual and situation.

Herbs/Phytotherapy: Kneipp had documented, scientific research that herbs and phytotherapy have prophylactic, or healing, effects on the body. Kneipp herbal treatments can be prepared in various forms, including teas; ointments; oils; baths and herbal wraps.

Exercise/Kinesiotherapy: Sensible physical exercise stimulates important functions of the body, including the musculoskeletal; cardiovascular and nervous systems; and the digestive tract. Massage is an indispensable supplementary treatment to exercise.

Nutrition/Dietetics: Kneipp believed that nutritional diseases are avoided or cured by a well-balanced, low-fat diet consisting of fresh food prepared in such a way that its vitamins remain intact.

Lifestyle/Regulative Therapy: Lifestyle and health education are the most important part of Kneipp's doctrine. Kneipp believed it is as important to live in harmony with one's social and natural environments as it is to lead a balanced life.

The specifics of Kneipp hydrotherapy treatments will be addressed in Part II.

TheUnhivedMind - April 29, 2011 10:01 PM (GMT)

Editor's note: This is the second part of a two-part series on the life and work of Sebastian Kneipp. The information in this series is based on research from the Sebastian-Kneipp-Schule in Bad Wšrishofen, Germany.

Part one of this article appeared in the June issue (www.massagetoday.com/archives/2003/06/17.html).

http://www.massagetoday.com/mpacms/mt/article.php?id=10773

Sebastian Kneipp, believed to be the "father" of modern hydrotherapy, is famous the world over. Known as the "Waterdoctor from Wšrishofen," Kneipp developed over 100 different hydrotherapy treatments using three forms of water: solid, liquid and vapor, with treatments that included washing/ablutions; wraps; packs; compresses; poultices; affusions; steam; and baths.

Washings: Washings are the simplest and mildest treatment. The body is covered with a film of water using a washcloth. Additives, such as herbs, are often added to the water to create a balance between the sympathetic and parasympathetic nervous systems. When the body is covered with cold water, there is a brief vasoconstriction of the peripheral blood vessels, and a stimulation of the sympathetic nervous system. The rapid reaction that follows is the increase of heat production, or vasodilatation through activation of the parasympathetic nervous system.

Wraps: A Kneipp wrap envelops a body part with wet and dry cloths that are either hot or cold. Effects are achieved through temperature, length of application and additives. Increased circulation promotes the removal of metabolic wastes and increases the oxygen supply.

Affusions: Affusions precisely regulate the direction of the water stream on the body. A "flar" affusion uses a stream of water without pressure, flowing in a fan-shaped form to coat the body or body part. A high-pressure affusion (such as a Scotch Hose) delivers a strong mechanical stimulus. The treatment is used with cold, tempered or warm water and can be delivered to the knee; thigh; leg; back; face or full body.

Baths: Kneipp baths, whether partial or full, are usually combined with herbal additives. A brush bath is a combination of a full-body brushing and a warm bath, which intensifies the treatment the general warming of the body and through the effects of the hydrostatic pressure. Additives to the bath can be stimulating or calming.

Some of Kneipp's more esoteric treatments include:

Dew Walking - Walking barefoot on dew-moistened grass to promote circulation and strengthen the immune system.

Water Treading - "Stork"-walking in a body of water filled below the knee, such as large basin; bathtub; fountain; lake; or ocean to strengthen veins, induce sleep and stimulate metabolism.

Snow Walking - Walking barefoot in snow from a few seconds up to three minutes to stimulate the system and promote circulation.

Effects of Kneipp Hydrotherapy

The effects of Kneipp hydrotherapeutic treatments are vast, and have been documented through decades of scientific research at the Sebastian-Kneipp-Schule. Some of the effects include:

Local Reaction - Similar to reactions caused by cold compresses used for acute trauma or inflammation, or hot packs/hay sacks used for local muscular hypertension.

Segmental Response - Internal organs can be influenced by an automatic reflex from the skin, called the "cuti-visceral reflex."

Consensual Response - Parts of the body not treated directly can react in the same way as the part being treated. Automatic Response.

General Condition - Influence on the automatic nervous system; improves general state of well-being.

Immune System Response - Alternating treatments and strengthening exercises "toughen up" and train the body's immune system.

Psychological Response - Temperature and aroma stimuli have a direct influence on the central nervous system and can change the mental state.

Benefits of Kneipp hydrotherapy include: relaxation and general sense of well-being; muscle relaxation; increased excretion through the skin; stimulation of metabolism; stabilization of body warmth; regulation of blood pressure; activation of the immune system; and ameliorated circulation of the skin.

Education and Home Treatment

Lifestyle and health education are the most important part of Kneipp's doctrine. He believed in self-responsibility as a cornerstone of health. Many Kneipp hydrotherapy treatments can and should be repeated at home. Kneipp hydrotherapy treatments use ordinary water, which is transformed into "healing" water through the appropriate

knowledge.

View Full Version: Manuka honey 'could help fight superbugs'

Title: Manuka honey 'could help fight superbugs'

TheUnhivedMind - April 18, 2011 05:23 PM (GMT)

Manuka honey 'could help fight superbugs'

By Michelle Roberts
13 April 2011 Last updated at 00:10
http://www.bbc.co.uk/news/health-13047332

Manuka honey could be used to combat some of the most hard-to-treat infections that are resistant to powerful antibiotics, scientists say.

Lab experiments show it can clear bacteria found in festering wounds and contaminated hospital surfaces.

It works by breaking down the defences bacteria use against antibiotics, making it useful in treating superbug infections such as MRSA.

The results were presented at a Society for General Microbiology meeting.

Professor Rose Cooper from the University of Wales Institute Cardiff found a variety of honey from bees foraging on manuka trees in New Zealand proved effective.
Fighting resistance

A specially filtered version of this honey, with impurities removed, is already used in modern licensed wound-care products around the world.

Indeed, people have known for centuries about honey's antiseptic powers.

The researchers wanted to gain a better understanding of this honey's bacteria-fighting properties and to see if it might help tackle some of the most stubborn infections encountered in our hospitals.

Professor Cooper's work with two common types of bacteria - streptococci and

pseudomonads - revealed that manuka honey can deter the attachment of bacteria to tissue, which is an essential step in the initiation of acute infections.

Stopping attachment also blocks the formation of biofilms, which can protect bacteria from antibiotics and allow them to cause persistent infections.
Medical grade honey

The latest lab work showed that the honey can make MRSA more sensitive to antibiotics such as oxacillin - effectively reversing antibiotic resistance.

Professor Cooper said: "This indicates that existing antibiotics may be more effective against drug-resistant infections if used in combination with manuka honey.

"What we need to do now is look at more combinations with antibiotics and do some clinical work in patients.

"It could be applied topically to wounds and used in combination with antibiotics to treat resistant infections."

But she warned people not to try the same at home with honey bought from the supermarket. "Not only is it messy, it wouldn't be advisable. We have been using medical grade honey, not the stuff you buy in shops."

Description: *May Protect Cells From Radiation Damage*

TheUnhivedMind - April 16, 2011 01:43 AM (GMT)

Herbal Tonic For Radiotherapy? Gingko Biloba Tree May Protect Cells From Radiation Damage

http://www.sciencedaily.com/releases/2009/...91019122956.htm

ScienceDaily (Oct. 26, 2009) — Antioxidant extracts of the leaves of the Gingko biloba tree may protect cells from radiation damage, according to a study published in the International Journal of Low Radiation. The discovery may one day be used to help reduce side effects in cancer patients undergoing radiotherapy.

Chang-Mo Kang of the Korea Institute of Radiological and Medical Sciences in Taegu and colleagues are interested in the protective effects of well-known herbal remedies of which Gingko biloba is one. G. biloba is a unique tree species with no close living relatives and extracts of its leaves contain antioxidant compounds including glycosides and terpenoids known as ginkgolides and bilobalides.

These compounds are thought to protect cells from damage by free radicals and other reactive oxidizing species found in the body. These are generated continuously by the body's normal metabolism, and in excess in some diseases or after exposure to pollution or radiation. They damage proteins, DNA and other biomolecules and left unchecked can kill cells.

As such, extracts of certain plants that contain antioxidants, including G. biloba, have attracted interest for their pharmacological activity. G. biloba is currently sold as a herbal supplement and there are numerous claims for health benefits, including the possibility of preventing the onset of dementia or Alzheimer's disease.

Kang and colleagues have now collected human white blood cells, lymphocytes, from healthy donors aged 18 to 50 years. They treated half of these cells with commercially

available G. biloba extract in the laboratory and doused the other half with salt solution as an experimental control. They then compared the effects of gamma radiation from radioactive cesium on the white blood cells compared to the untreated control samples.

The team uses a light microscope to look for lymphocytes undergoing programmed cell death, or apoptosis, as a result of radiation exposure. They found that there was a significant increase in apoptosis in the untreated cells compared with those treated with G. biloba extract. Almost a third of the untreated cells underwent apoptosis compared with approximately one in twenty of the treated cells. Parallel studies with laboratory mice also demonstrated a similar protective effect against radiation poisoning.

The results suggest that the extracts can neutralize the free-radicals and oxidizing agents produced in the cells by the radiation and so prevent them from undergoing apoptosis.

View Full Version: Could a pill made from olive leaves help beat

Title: Could a pill made from olive leaves help beat
Description: *heart disease [STICK WITH OLIVE LEAF]*

TheUnhivedMind - April 15, 2011 11:51 PM (GMT)

Could a pill made from olive leaves help beat heart disease?

By Pat Hagan
Last updated at 11:47 PM on 15th April 2011
http://www.dailymail.co.uk/health/article-...rt-disease.html

A pill made from the leaves of the olive tree could be a powerful weapon in the fight against heart disease, scientists say.

According to research, the olive pill is as effective as some prescription medicines at reducing high blood pressure.

And it also appears to lower levels of harmful blood fats, called triglycerides, known to raise the risk of heart attacks and strokes.

In a study, patients who took the olive leaf pill for eight weeks saw a significant decline in blood pressure readings and triglyceride levels.

If further studies confirm the powerful effects of olive leaf tablets, they could be used to help patients who struggle to take blood pressure drugs because of their side-effects.

Heart disease is Britain's biggest killer. High blood pressure is thought to be responsible for 50 per cent of all heart attacks and strokes.

In recent years, studies have shown olive oil can protect the heart by reducing the build-up of fatty deposits inside the coronary arteries.

Olives have also been credited with helping to lower the risk of breast cancer, ulcerative colitis and even depression. And it seems the trees' thin, flat leaves may also be able to

ward off illness, as they have high levels of compounds called polyphenols.

These plant chemicals have been shown to help slash the risk of major diseases by helping to protect against the harmful effects of free radicals.

Researchers at the University of Indonesia, in Jakarta, investigated olive leaf extract by recruiting 180 patients with high blood pressure – and splitting them into two groups.

One received olive leaf pills for eight weeks. The rest were given an anti-hypertension drug called captopril, which can cause dizziness.

According to the research published in the journal Phytomedicine, systolic blood pressure – the higher reading – dropped an average of 11.5 points in the olive leaf group and 13.7 in the captopril patients. Diastolic blood pressure – the lower reading – fell 4.8 points in the olive leaf volunteers and 6.4 points in those on the prescription medicine.

Those on the olive treatment also saw ‘a significant reduction’ in levels of triglycerides. In a report on the study, sponsored by a Swiss manufacturer of olive leaf extract and PT Dexa Medica, which makes captopril, researcher Professor Endang Susalit said: ‘The leaves of the olive tree have been used since ancient times to combat high blood pressure, atherosclerosis [blocked arteries] and diabetes.

‘The anti-hypertensive activity of the extract was comparable to captopril, and its beneficial effects in reducing triglyceride levels were strongly indicated.’

Doctors said the findings need to be replicated in larger studies before olive pills can be used more widely.

The British Heart Foundation urged those on blood pressure medication not to stop taking their drugs without consulting their GP.

TheUnhivedMind - March 22, 2011 04:36 PM (GMT)

TEA TIME? MORE GO FOR HERBAL

Around 1.3 billion cups of herbal or fruit tea have been consumed in the last year

Tuesday March 22,2011
By Daily Express Reporter
http://express.co.uk/posts/view/235939/Tea...e-go-for-herbal

SHOPPERS are turning over a new-leaf when it comes to tea, opting for more colourful cuppas.

The growth in sales of “alternative” brews such as fruit, herbal and green teas has massively outstripped traditional teabags since 2008.

Market researcher Kantar Worldpanel said while sales of regular tea has remained static, demand for other types has risen almost 40 per cent in three years.

Around 1.3 billion cups of herbal or fruit tea have been consumed in the last year.

“Tea is so much more than a ‘builder’s brew’ these days,” said Mark Sumner of the UK Tea Appreciation Society. “Though we do love our traditional cup of Rosie Lee, there’s always room for variety!”

View Full Version: Combating radiation via natural herbs

Title: Combating radiation via natural herbs

TheUnhivedMind - March 12, 2011 03:37 PM (GMT)

Reduces Effects of Radiation for the Children of Chernobyl

Years after the Chernobyl disaster, four million people in Ukraine and Belarus live in dangerously radioactive areas. The water, soil and food over an 11,000 square mile area is contaminated. Over 160,000 children are victims of radiation poisoning, with birth defects, leukemia, cancer, thyroid disease, anemia, loss of vision and appetite and depressed immune system, now called "Chernobyl AIDS."

Doctors reported spirulina's health benefits for child victims of Chernobyl radiation. Spirulina reduced urine radioactivity levels by 50% in only 20 days. This result was achieved by giving 5 grams a day to children at the Minsk, Belarus Institute of Radiation Medicine. The Institute program treated 100 children every 20 days.

An unpublished 1993 report confirmed 1990-91 research, concluding "spirulina decreases radiation dose load received from food contaminated with radionucleides, Cesium-137 and Strontium-90. It is favorable for normalizing the adaptive potential of children's bodies in conditions of long-lived low dose radiation."71

Based on testing in 1990, the Belarus Ministry of Health concluded spirulina promotes the evacuation of radionucleides from the human body. No side effects were registered. The Ministry considered this food was advisable for the treatment of people subject to radiation effects, and requested additional donations from the Earthrise Com-pany of California and Dainippon Ink & Chemicals of Japan.

4.6. Nurse and child radiation victim, at medical clinic in Belarus.

Previous research in China in 1989 demonstrated a natural polysaccharide extract of spirulina had a protective effect against gamma radiation in mice.74

Subsequent research showed phycocyanin and polysaccharides enhanced the reproduction of bone marrow and cellular immunity.26

In a 1991 study of 49 kindergarten children aged 3 to 7 years old in Beryozova, spirulina was given to 49 children for 45 days. Doctors found T-cell suppressors and beneficial hormones rose, and in 83% of the children, radioactivity of the urine decreased.73

A Russian patent was awarded in 1994 for the use of spirulina as a medical food to reduce allergic reactions from radiation sickness. The patent was based on a study of 270 children living in highly radioactive areas. They had chronic radiation sickness and elevated levels of Immunoglobulin (IgE), a marker for high allergy sensitivity. Thirty five were prescribed 20 tablets per day (about 5 grams) for 45 days. Consuming spirulina lowered the levels of IgE in the blood, which in turn, normalized allergic sensitivities in the body.75

Research continuing through 1999 in Belarus showed immune building, normalization of peroxide lipid oxidation and detoxifying effects of spirulina supplements in children and teenagers. Scientists theorized spirulina may form non-absorbable complexes of radionucleides through analogues such as calcium or potassium and promotes their excretion.76

TheUnhivedMind - February 20, 2011 05:59 PM (GMT)

My Comments:

The quacks at the AMA like to keep people in wishful land such as this 45 years study in• Equador. Theres many treatments which will rid you of Cancer whether its the simple treatment using the Bob Beck Protocol (where you have to keep it up) or a complete whole program of cleansing, herbs, hydrotherapy, acupuncture and vegan diet. Don't give to false cancer charities such as Cancer Research U.K.• who avoid treatments which work and laugh at dogs sniffing out cancer as a diagnosis..

If you want to increase your Vitamin C then you want it in the form of Camu Camu, Goji Berry and Rosehip. Make sure you eat Goji berries which work very well for helping your eyesight as they aid the Liver and the Kidneys along with the Heart. The eyes are controlled from the Liver so you want good Kidneys and Lungs as the Kidneys power the Liver and the Lungs balance the Liver. • Eat lots of green and sour tasting foods, bitter foods work also but those are mostly for the Heart.

The reason the World Government know these statistics on sight is the same for how they know• Cancer and COPD statistics. The AMA is creating the situation based on what the Cray computers tell them to do to create situations they desire to happen. So with the eyes they know the problems that their Aspartame program is causing and how it damages the retina. Zinc should come from foods like blackstrap Molasses not supplements. The best food for the eye is Eyebright herb topically in the eye.

You should note that Fluoride• damages the Kidneys so now with what I told you its obvious why it affects the mind. So remember if you're child is eating aspartame ridden processed foods and drinking fluoride water then of course their minds will be low.

Please remember the best brain food is foods which aid the Kidneys such as black and• salty foods. A good example is black Sesame seed or black Rice or the herb Rehmannia. The Kidneys and Spleen need to be fed in order to keep Thyroid function working. The later is sweet and yellow foods mainly.

Acid Reflux Disease comes from the Spleen being down in energetics which hinders the function of the Pancreas. The Pancreas cannot produce the correct bicarbonate levels in order to counter the acidity of the stomach contents about to enter the intestines. If it didn't do this you'd die as you intestines would be burnt out. So it tries to send the acid out through the mouth instead. A basic• treatment would be sodium bicarbonate but you must address the problem properly via diet and Splenic work.

If you have digestion problems this is stemming from the root cause which will be your Spleen• being dysfunctional and the Spleen is directly affected by emotional problems but especially worry. You need to feed the Spleen with sweet and mostly yellow foods. I suggest you eat Chinese Red Dates or the herb Astragalus etc.

If you're getting localised constipations these are• usually made up of excess mucus and/or rock minerals from tap/natural water along with supplements. The body cannot utilise/assimilate these so they clog the system like the limescale on your kettle element. Distilled water only removes inorganic rock minerals so this is another treatment used to remove localised constipations.

If circulation is blocked to the eye then this will be localised constipation at the area in question which can come from as said a congested bowel also Lungs. In this case you may need to increase blood flow to the area as the localised constipation is removed gradually. To remove constipations you can utilise hot and cold hydrotherapy treatments or electo-therapy such as the vintage Nikola• Tesla Violet Ray system. Of course this should all be done with a cleansing mucusless diet.

If you have weight issues this shows you have a problem with your Spleen function whether its too sluggish and creating weight or whether its hypering• and you're loosing too much weight. The later is especially aided by Artichoke root as its usually due to the Liver not balancing the organ. The weight is a sign the Spleen isn't dealing with your food and water correctly creating water retention.

You should only be eating food between 7am and 7pm which is a 12 hour period. Your largest meal should be taken between 9am and 11 am ideally at 9am. This 9-11am period is when you have the most digestive energy. after this time it goes down and after 7pm its almost useless and you then rely on• Liver energy which damages the Liver function eventually damaging the Heart and Spleen function. Do not take Ginger is you have diabetes and you're using insulin as it has the potential to kill you.

If you want to understand how to help combat heartburn and acid reflux disease you will find some of the work of Dr Fereydoon Batmanghelidj and his water cure. I would recommend his book 'Water and Salt: Your Healers from within'. You should also make sure you drink a glass of water thirty minutes prior to• eating food especially large meals and the same 2.5 hours after the meal. Manuka Honey also can aid with this problem.

Milk was created for babies and not for children or adults. We certainly shouldn't be drinking milk from another animal. The closest animal milk to human milk is the milk of a• Goat but never ever take cows milk its total quackery.

Cayenne Pepper is the King of Herbs

Tuesday, August 18, 2009 by: Tony Isaacs
http://www.naturalnews.com/026869_cayenne_...per_health.html

Cayenne pepper has been called "the king of herbs" with good reason, as it has been prized for thousands of years for its healing powers. Folklore from around the world has recounted amazing results in its simple healing of baffling health problems.

The famed herbal healer Dr. Shulze said, "If you master only one herb in your life, master cayenne pepper. It is more powerful than any other."

In particular cayenne pepper is good for the heart and circulatory system and can be a lifesaver in the event of a heart attack - if you have concerns over heart attacks, never leave home without it!

From the healing text of Dr. Christopher:

"In 35 years of practice, and working with the people and teaching, I have never on house calls lost one heart attack patient and the reason is, whenever I go in--if they are still breathing--I pour down them a cup of cayenne tea (a teaspoon of cayenne in a cup of hot water, and within minutes they are up and around)."

Some of the other medicinal or health benefits of the Cayenne pepper include:

Cayenne pepper added diet helps avoid stomach aches, gas and cramps. Ayurvedic and Chinese medicine recommends cayenne for proper digestion as it stimulates the flow of stomach secretions and saliva.

Cayenne pepper improves the effectiveness of other herbs.

Topical application of cayenne pepper causes irritation in the applied area; thus, it helps distract the nerves from joint pains due to arthritis.

Cayenne added water can be used to gargle with, to cure sore throats.

The capsaicin in cayenne pepper stimulates secretions, which helps to clear the mucus from nose and lungs by clearing the sinuses and causing sweating. Cayenne pepper added tea is good for colds and flu.

When any body part is sick, the blood flow to that area is usually affected. Cayenne helps to remove that blockage and stimulates the blood flow so that the vitamins are properly delivered to all areas of the body and waste is removed.

In addition to it`s ability to stop heart attacks, cayenne helps to reduce cholesterol levels in the blood. Cayenne also helps to dissolve fibrin which causes formation of blood clots and it reduces triglyceride levels.

Smelling cayenne helps cure headaches. Topical application of capsaicin also helps to relieve them.

Cayenne pepper is a source of beta-carotene which is helpful in reducing symptoms of asthma.

Vitamin A, or beta-carotene, in cayenne pepper, gives protection against invading pathogens by helping the development of healthy mucus membranes in the nasal passage, lungs and urinary tracts, thereby giving immunity to infections.

When added to food, cayenne helps weight loss due to aiding proper digestion. It also reduces excess appetite due to mal-absorption.

Cayenne pepper contains capsaicin that has the ability to prevent ulcers.

Beta-carotene contained in cayenne pepper works as a good antioxidant that prevents or repairs the damages caused by free radicals, helping prevent atherosclerosis and colon cancer.

Cayenne is also very effective in relieving diabetic complications like nerve damage and heart disease. It gives temporary relief of pain from psoriasis, herpes zoster, neuralgia, and toothache.

Capsaicin could stop a heart attack in progress, scientists find

Wednesday, October 14, 2009 by: S. L. Baker
http://www.naturalnews.com/027238_capsaici...ck_cayenne.html

The late, famed herbalist Dr. John Christopher was nicknamed "Dr. Cayenne" because he was constantly recommending the healing powers of cayenne, the substance found in chili peppers that produces a sensation of heat. He especially advocated using it for cardiovascular health and even made the claim that doses of cayenne could stop heart attacks in progress (http://www.naturalnews.com/026869_c...). Now science has come up with proof cayenne does have a remarkable ability to help the heart. University of Cincinnati (UC) scientists have found that capsaicin, the main component of cayenne, may literally stop a heart attack in its tracks when applied topically.

New research just published in the journal Circulation concludes that a common, over-the-counter pain salve containing capsaicin rubbed on the skin during a heart attack could serve as a cardiac-protectant -- reducing or even preventing damage to the heart. The researchers found an amazing 85 percent reduction in cardiac cell death when capsaicin was used. This is the most powerful cardioprotective effect ever recorded, according to Keith Jones, PhD, a researcher in the UC department of pharmacology and cell biophysics.

Dr. Jones and his research team applied capsaicin to specific skin locations in mice that caused reactions in the nervous system. Specifically, sensory nerves in the skin were triggered to activate what the scientists call cellular "pro-survival" pathways in the heart. The result? The heart muscle was protected from injury.

The researchers also found that a tiny incision made in the abdomen of the lab rodents triggered an 81 percent reduction in the death of heart cells. "Both this and the capsaicin effect are shown to work through similar neurological mechanisms," Dr. Jones explained. "This is a form of remote cardioprotection, using a skin stimulus that activates cardioprotection long before the blocked coronary artery is opened."

Dr. Jones is currently working in collaboration with cardiologist Neal Weintraub, MD, director of UC's cardiovascular diseases division, and other clinicians to test capsaicin's heart protective abilities in people. "Topical capsaicin has no known serious adverse effects and could be easily applied in an ambulance or emergency room setting well in advance of coronary tissue death," Dr. Jones said in a media statement. "If proven effective in humans, this therapy has the potential to reduce injury and/or death in the event of a coronary blockage, thereby reducing the extent and consequences of heart attack."

The researchers think that by activating sensors in the nervous system through skin, a response to preserve and protect the heart is triggered. "This may be similar to the way

certain acupuncture treatments work; there may be a neurological basis. In a broad sense, this work may provide a 'Rosetta stone' for translating alternative medicine techniques -- like acupuncture -- to Western medicine. Perhaps we can understand the biological mechanisms of how alternative treatments may be successful for patients," Dr. Jones stated.

Editor's note: NaturalNews is opposed to the use of animals in medical experiments that expose them to harm. We present these findings in protest of the way in which they were acquired.

For Circulation And Heart Health Cayenne Pepper Is Tops

Crusador Staff
January 22, 2010
http://www.healthtruthrevealed.com/article...1222101/article

Circulatory disorders are a serious and growing problem in the U.S. Lack of exercise is a culprit in some of these disorders, but so is diabetes and heart disease. You've probably heard about the life force being in the blood? That's true! However, that life force is only activated through healthy circulation. Is your bloodstream a flowing river of life to all of your body's cells or is it a stagnant swamp of disease and death? All of the right nutrition in the world won't help you if you have stagnant blood circulation and that nutrition cannot reach all of your body's cells.

Not nearly enough research has focused on proper circulation except as it relates to drugging the symptoms of poor circulation. Almost all diseases treated in Western Medicine with drugs could be positively helped by adding cayenne pepper to the diet regularly to assist in circulation and blood flow.

High blood pressure affects approximately 50 million Americans and if not treated in time and properly, it can increase your chances of having a heart attack or stroke. It can also cause problems with your kidneys. High blood pressure is not caused by a pharmaceutical drug deficiency. It is caused by poor circulation due to years of improper eating habits. If you don't want to rely on meds for the rest of your life cayenne pepper is an absolute must. It is one of the most inexpensive yet effective spices that can eliminate all kinds of health problems caused by poor circulation in no time.

In the excellent and informative book "School of Natural Healing" by Dr. John R. Christopher, he notes the following about cayenne pepper:

"Cayenne is the purest and most certain stimulant, used medicinally and also as a condiment. This herb is great food for the circulatory system. It feeds elements that may

be lacking into the cell structure of the arteries, veins and capillaries to give them the elasticity of youth again, as the blood pressure adjusts itself to normal. When the venous structure becomes loaded with sticky mucus, the blood has a harder time circulating; therefore, higher pressure forces the liquid through. Cayenne regulates the flow of blood from the head to the feet so that it is equalized. Cayenne (as a stimulant) is an activator, carrier, and accentuator.
Cayenne influences the heart immediately, then gradually extends its effects to the arteries, capillaries, and nerves. The frequency of the pulse is not increased, but it is given more power. In equalizing the blood circulation, cayenne produces natural warmth, and in stimulating the peristaltic motion of the intestines, it aids in assimilation and elimination. It rebuilds the tissue in the stomach. It also heals stomach and intestinal ulcers."

There are a number of ways to obtain cayenne pepper. As a spice used with food it may be hard to tolerate for some. If you want to add cayenne pepper to your diet but don't want the high heat in your mouth you can find capsules or liquid versions that be added to juice that will bypass this for you. Cayenne pepper should be used on a daily basis if you have any circulatory related health challenge or if you want to virtually guarantee never becoming a victim of high blood pressure or heart disease. People with diabetic related health problems that don't want vital limbs amputated from their body should also use cayenne pepper regularly.

There are various brands of cayenne pepper on the market. If you are looking for a great certified organic version of cayenne pepper 7 Lights offers a 1 Oz. tincture version that can be added to 2-4 ounces of juice and drunk down regularly to supply your body with this fantastic spice/herb.

golden_oil - January 23, 2010 01:21 PM (GMT)

To show what a wonderful heart food cayenne is, a few doctors on the east coast put some live heart tissue into a sterile beaker filled with distilled water, and fed it nothing but cayenne pepper, cleaning off sediments periodically and adding nothing but additional distilled water, since it needed to be replaced periodically due to evaporation. During the time they were feeding the heart tissue, they would have to trim it every few days because it would grow so rapidly. Having no control glands such as pituitary and pineal glands, the tissue kept growing. The doctors and associates kept this tissue alive for over 15 years, before they decided to destroy it so they could do further research on it. This shows the high food value that cayenne gives specifically to the heart muscle.

Cayenne: Ten Reasons Why this Spicy Herb Should be Used as a Daily Tonic

Wednesday, June 09, 2010 by: Paul Fassa
http://www.naturalnews.com/028954_cayenne_tonic_herbs.html

There's a vastly underrated herb that is commonly used as a spice for hot foods. Its powder is derived from ground up dried shells of chili peppers. Famed herbalist Dr. John Christopher was so involved with this herb that he was nicknamed Dr. Cayenne. And Dr. Richard Shultze recommends putting cayenne at the top of the ten most important herbs to have in a home "... because it will make the other nine work better".

Cayenne powder is an instant blood flow stimulant, enabling it to promote blood circulation and carry other nutrients to cells more efficiently. But additionally, cayenne has its own set of virtues, especially when it comes to cardiovascular health.

Ten Reasons To Use Cayenne

1. Strengthens the heart, even stops heart attacks in progress
2. Increases blood flow and cleans arterial wall plaque while rebuilding red blood cells
3. Aids digestion, even helps eliminate ulcers (surprise!)
4. Stimulates the liver and helps heal the gall bladder
5. Kills prostate cancer cells and shrinks tumors
6. Anti inflammatory eases arthritis
7. Shrinks hemorrhoids
8. Topical application on open wounds stops bleeding
9. Emulsifies triglycerides
10. Anti fungal, promotes waste elimination

All inexpensive and without side effects, cayenne is unlike Big Pharma heart meds that run up a large monthly bill with side effects that demand other meds, unless death becomes the first side effect!

Choosing and Using the Right Cayenne

These days, commercial chili peppers are getting irradiated more and more. So it's best to get organic cayenne powder from a reliable source. Cayenne powders are rated according to their heat potential with Scofield Heat Units (SCUs), usually at 40,000, 60,000, and 90,000 SCUs. If you're new to this, start at 40,000 SCUs. For maximum effectiveness, less than 40,000 SCUs should be avoided.

The SCU level determines the level of capsaicin, which is the essential ingredient of cayenne. There are even capsaicin capsules, which are not considered as effective as taking the powder in solution. The solution's heat kicks the nervous system into high gear through the nerve endings of the mouth and throat. Most users prefer mixing a

teaspoonful of cayenne pepper with a glass of lemon and water.

Start with a quarter or half teaspoonful to get used to it while building up to a full teaspoonful up to three times daily.

But this author, who is not a fan of hot, spicy foods, uses it differently. One teaspoonful of cayenne powder can be mixed into a small amount of plain water in a lidded jar, enabling you to shake it for optimum mixing. Use just enough water to take it all into the mouth with one big gulp. Then hold it in the mouth very briefly before swallowing it completely.

Follow up by sipping a glass of cold beverage, especially one that also is also good for the cardiovascular system, such as Jamaica (huh-my-ka) or hibiscus tea, or maybe even some cold Hawthorne tea. These help cool down your mouth and throat while adding to the heart health benefits.

Dr. Schulze explains: "Cayenne pepper contains many wonderful phytochemicals, vitamins [extremely bioavailable C & E], and minerals [including magnesium]. It cleans the blood allowing hormonal signals to make their way unimpeded through your system, thus the enhanced immune response." (Phrases in brackets from Dr. Christopher).

As stated earlier, start small and build up to a full teaspoonful two to three times a day each day. It does get easier, and it doesn't get any cheaper or safer for maintaining or creating cardiovascular health as well as adding all the other health benefits mentioned above. Bottoms up!

TheUnhivedMind - February 19, 2011 02:29 AM (GMT)

World's hottest chilli grown in Grantham

The Infinity chilli measures 1.17 million on the Scoville Scale - an official measure of spicy heat.…

Posted By The Telegraph, Friday, 18 February 2011 11:20 GMT
By: Martin Evans
http://uk.lifestyle.yahoo.com/food-drink/w...-telegraph.html

Its previous claim to fame was as the birthplace of former Prime Minister Margaret Thatcher.

But now the market town of Grantham in Lincolnshire has produced an even fierier export after a local producer grew the world’s hottest chilli.

Measuring 1.17 million on the Scoville Scale - an official measure of spicy heat - the

Infinity chilli is so hot that it carries a health warning.

Grown by Nick Woods, 39, the chilli - which was grown in a greenhouse - made it to the Guinness Book of Records after out-spicing the previous title holder, the Bhut Jolokia, from India.

Mr Woods, who runs his own business Fire Foods from his home in Grantham, said he grew the record breaking chilli by accident.

He explained: "I didn't set out to grow it, it's really easy for chillies to crossbreed in a greenhouse, one day I just saw this new chilli plant growing.

“When I tried it tasted nice at first, like an odd fruity taste, the effect is delayed. Then it hit me. All of a sudden I felt it burning in the back of my throat, so hot that I couldn't speak.

“I began to shake uncontrollably, I had to sit down, I felt physically sick. I really wouldn't recommend anybody eat it raw like that.”

Former RAF worker Mr Woods started his chilli business five years ago after being given a plant by a friend.

He said: “We do feel quite honoured to get it because everyone in the world has heard of the Guinness Book of World Records.

“Even if someone else comes along and beats it, they can never take it away from us that we once held the world record.”

Spice drug fights stroke damage

Tumeric is widely used spice

10 February 2011 Last updated at 09:50
http://www.bbc.co.uk/news/health-12409700

A drug derived from the curry spice turmeric may be able to help the body repair some of the damage caused in the immediate aftermath of a stroke.

Researchers at Cedars-Sinai Medical Center in Los Angeles are preparing to embark on human trials after promising results in rabbits.

Their drug reached brain cells and reduced muscle and movement problems.

The Stroke Association said it was the "first significant research" suggesting that the compound could aid stroke patients.

Turmeric has been used for centuries as part of traditional Indian Ayurvedic medicine, and many laboratory studies suggest one of its components, curcumin, might have various beneficial properties.

However, curcumin cannot pass the "blood brain barrier" which protects the brain from potentially toxic molecules.

The US researchers, who reported their results to a stroke conference, modified curcumin to come up with a new version, CNB-001, which could pass the blood brain barrier.

The laboratory tests on rabbits suggested it might be effective up to three hours after a stroke in humans - about the same time window available for current "clot-busting"

drugs.

Chain reaction

Dr Paul Lapchak, who led the study, said that the drug appeared to have an effect on "several critical mechanisms" which might keep brain cells alive after a stroke.

Although strokes kill brain cells by depriving them of oxygenated blood, this triggers a chain reaction which can widen the damaged area - and increase the level of disability suffered by the patient.

Dr Lapchak said that CNB-001 appeared to repair four "signalling pathways" which are known to help fuel the runaway destruction of brain cells.

However, even though human trials are being planned, any new treatment could still be some time away.

Dr Sharlin Ahmed, from The Stroke Association, said that turmeric was known to have health benefits.

She said: "There is a great need for new treatments which can protect brain cells after a stroke and improve recovery."

"This is the first significant research to show that turmeric could be beneficial to stroke patients by encouraging new cells to grow and preventing cell death after a stroke.

"The results look promising, however it is still very early days and human trials need to be undertaken."

Ken Ardel - February 10, 2011 07:51 PM (GMT)

"A drug derived from the curry "

tumeric is one of three(or more) spices in curry, not the other way around.

TheUnhivedMind - February 9, 2011 11:07 PM (GMT)

HERBAL TEA SALES SOAR 60 PER CENT

Sales of herbal tea rose 60 per cent last year

Wednesday February 9,2011
By Dana Gloger, Consumer Affairs Editor
http://express.co.uk/posts/view/227967/Her...oar-60-per-cent

BRITAIN is a nation of tea drinkers – and more of us are turning to herbal infusions, it was revealed yesterday.

Sales of herbal tea rose 60 per cent last year, with blends of echinacea and rooibos – made from a South African bush – fast rising in popularity.

Retailers Whittard of Chelsea believe the trend is driven by celebrity fans, a new corporate culture, and customers trying to cut down on alcohol.

Whittard spokesman Fiona Robinson said: “Last year’s health tea sales were dominated by fruit and berry flavours, but a growing percentage of sales are now from infusions with health-promoting, medicinal qualities.

“This shift can be attributed to the perennial personal detox but also to a changing attitude in the workplace.

“Our shops have seen more offices shopping with us, as board meetings have added health teas as a third option to regular tea and coffee.”

Customers were also lowering their alcohol consumption and “reaching for a cup of green or jasmine tea instead of a G&T”, she said. “With an 83 per cent increase in sales year-on-year, the best-selling of our health teas in January was lemon, ginger and

echinacea. Made popular by Jennifer Aniston and Geri Halliwell, echinacea is renowned for boosting the immune system."

Roberto Salicio, manager of The Promenade, where tea is served at The Dorchester in London, said customers were becoming more "daring" with vanilla and dragon pearl jasmine the most popular choices last month.

Whittard's sales of rooibos, which is said to be calming and relaxing, rose 67 per cent year-on-year, with peppermint tea up 62 per cent.

View Full Version: Health Benefits of Dandelions

Title: Health Benefits of Dandelions

TheUnhivedMind - January 24, 2011 01:17 AM (GMT)

Health Benefits of Dandelions

2011 01 17
By Peter Gail
http://www.leaflady.org/health_benefits_of_dandelions.htm

Suppose your doctor tells you, on your next visit, that he has just discovered a miracle drug which, when eaten as a part of your daily diet or taken as a beverage, could, depending on the peculiarities of your body chemistry: prevent or cure liver diseases, such as hepatitis or jaundice; act as a tonic and gentle diuretic to purify your blood, cleanse your system, dissolve kidney stones, and otherwise improve gastro-intestinal health; assist in weight reduction; cleanse your skin and eliminate acne; improve your bowel function, working equally well to relieve both constipation and diarrhea; prevent or lower high blood pressure; prevent or cure anemia; lower your serum cholesterol by as much as half; eliminate or drastically reduce acid indigestion and gas buildup by cutting the heaviness of fatty foods; prevent or cure various forms of cancer; prevent or control diabetes mellitus; and, at the same time, have no negative side effects and selectively act on only what ails you. If he gave you a prescription for this miracle medicine, would you use it religiously at first to solve whatever the problem is and then consistently for preventative body maintenance?

All the above curative functions, and more, have been attributed to one plant known to everyone, Taraxacum officinale, which means the "Official Remedy for Disorders." We call it the common dandelion. It is so well respected, in fact, that it appears in the U.S. National Formulatory, and in the Pharmacopeias of Hungary, Poland, Switzerland, and the Soviet Union. It is one of the top 6 herbs in the Chinese herbal medicine chest.

According to the USDA Bulletin #8, "Composition of Foods" (Haytowitz and Matthews 1984), dandelions rank in the top 4 green vegetables in overall nutritional value. Minnich, in "Gardening for Better Nutrition" ranks them, out of all vegetables, including

grains, seeds and greens, as tied for 9th best. According to these data, dandelions are nature's richest green vegetable source of beta-carotene, from which Vitamin A is created, and the third richest source of Vitamin A of all foods, after cod-liver oil and beef liver! They also are particularly rich in fiber, potassium, iron, calcium, magnesium, phosphorus and the B vitamins, thiamine and riboflavin, and are a good source of protein.

These figures represent only those published by the USDA. Studies in Russia and Eastern Europe by Gerasimova, Racz, Vogel, and Marei (Hobbs 1985) indicate that dandelion is also rich in micronutrients such as copper, cobalt, zinc, boron, and molybdenum, as well as Vitamin D.

Much of what dandelions purportedly do in promoting good health could result from nutritional richness alone. Vogel considers the sodium in dandelions important in reducing inflammations of the liver. Gerasimova, the Russian chemist who analyzed the dandelion for, among other things, trace minerals, stated that "dandelion [is] an example of a harmonious combination of trace elements, vitamins and other biologically active substances in ratios optimal for a human organism" (Hobbs 1985).

Recent research, reported in the Natural Healing and Nutritional Annual, 1989 (Bricklin and Ferguson 1989) on the value of vitamins and minerals indicates that:

* Vitamin A is important in fighting cancers of epithelial tissue, including mouth and lung;

* Potassium rich foods, in adequate quantities, and particularly in balance with magnesium, helps keep blood pressure down and reduces risks of strokes;

* Fiber fights diabetes, lowers cholesterol, reduces cancer and heart disease

risks, and assists in weight loss. High fiber vegetables take up lots of room, are low in calories, and slow down digestion so the food stays in the stomach longer and you feel full longer;

* Calcium in high concentrations can build strong bones and can lower blood pressure;

* B vitamins help reduce stress.

Throughout history, dandelions have had a reputation as being effective in promoting weight loss and laboratory research indicates that there is some support for this reputation. Controlled tests on laboratory mice and rats by the same Romanians indicated that a loss of up to 30% of body weight in 30 days was possible when the animals were fed dandelion extract with their food. Those on grass extract lost much less. The control group on plain water actually gained weight.

Beyond nutritional richness, however, are the active chemical constituents contained in

dandelions which may have specific therapeutic effects on the body. These include, as reported by Hobbs (1985):

* Inulin, which converts to fructose in the presence of cold or hydrochloric acid in the stomach. Fructose forms glycogen in the liver without requiring insulin, resulting in a slower blood sugar rise, which makes it good for diabetics and hypoglycemics;

* Tof-CFr, a glucose polymer similar to lentinan, which Japanese researchers have found to act against cancer cells in laboratory mice; Lentinan is a yeast glucan (glucose polymer) that increases resistance against protozoal and viral infections.;

* Pectin, which is anti-diarrheal and also forms ionic complexes with metal ions, which probably contributes to dandelion's reputation as a blood and gastrointestinal detoxifying herb. Pectin is prescribed regularly in Russia to remove heavy metals and radioactive elements from body tissues. Pectin can also lower cholesterol and, combined with Vitamin C, can lower it even more. Dandelion is a good source of both Pectin and Vitamin C;

* Coumestrol, an estrogen mimic which possibly is responsible, at least in part, for stimulating milk flow and altering hormones;

* Apigenin and Luteolin, two flavonoid glycosides which have been demonstrated to have diuretic, anti-spasmodic, anti-oxidant and liver protecting actions and properties, and also to strengthen the heart and blood vessels. They also have anti-bacterial and anti-hypoglycemic properties, and, as estrogen mimics, may also stimulate milk production and alter hormones;

* Gallic Acid, which is anti-diarrheal and anti-bacterial;

* Linoleic and Linolenic Acid, which are essential fatty acids required by the body to produce prostaglandin which regulate blood pressure and such body processes as immune responses which suppress inflammation. These fatty acids can lower chronic inflammation, such as proliferative arthritis, regulate blood pressure and the menstrual cycle, and prevent platelet aggregation;

* Choline, which has been shown to help improve memory;

*Several Sesquiterpene compounds which are what make dandelions bitter. These may partly account for dandelions tonic effects on digestion, liver, spleen and gall bladder, and are highly anti-fungal;

* Several Triterpenes, which may contribute to bile or liver stimulation;

* Taraxasterol, which may contribute to liver and gall bladder health or to hormone altering.

These chemicals, individually, are not unique to dandelions, but the combination of them all in one plant, along with high levels of vitamins, minerals, carbohydrates, proteins and fiber account for the many claims made regarding the plant.

These claims include the following results of clinical and laboratory research, again as reported in Hobbs (1985):

* A doubling of bile output with leaf extracts, and a quadrupling of bile output with root extract. Bile assists with the emulsification, digestion and absorption of fats, in alkalinizing the intestines and in the prevention of putrefaction. This could explain the effectiveness of dandelion in reducing the effects of fatty foods (heartburn and acid indigestion);

* A reduction in serum cholesterol and urine bilirubin levels by as much as half in humans with severe liver imbalances has been demonstrated by Italian researchers;

* Diuretic effects with a strength approaching that of the potent diuretics Furosemide and Lasix, used for congestive heart failure and cirrhosis of the liver, with none of the serious side effects, were found by Romanian scientists. They found that water extract of dandelion leaves, administered orally, because of its high potassium content, replaced serum potassium electrolytes lost in the urine, eliminating such side effects common with the synthetics as severe potassium depletion, hepatic coma in liver patients, circulatory collapse, and transmission through mothers' milk;

* In 1979 a Japanese patent was filed for a freeze-dried warm water extract of dandelion root for anti-tumor use. It was found that administration of the extract markedly inhibited growth of particular carcinoma cells within one week after treatment;

* Dental researchers at Indiana University in 1982 used dandelion extracts in antiplaque preparations;

* In studies from 1941 to 1952, the French scientist Henri Leclerc demonstrated the effectiveness of dandelion on chronic liver problems related to bile stones. He found that roots gathered in late summer to fall, when they are rich in bitter, white milky latex, should be used for all liver treatments;

* In 1956, Chauvin demonstrated the antibacterial effects of dandelion pollen, which may validate the centuries old use of dandelion flowers in Korean folk medicine to prevent furuncles (boils, skin infections), tuberculosis, and edema and promote blood circulation.

Also, Witt (1983) recommends dandelion tea to alleviate the water buildup in PMS (pre-menstrual syndrome).

There are many testimonials from those who have benefited from the use of dandelions in the treatment of what ailed them.

Robert Stickle, an internationally famous architect, was diagnosed as having a malignant melanoma 21 years ago, and was given, after radical surgery had not halted its spread, less than 2 years to live. He said, in a letter to Jeff Zullo, president of the Society for the Promotion of Dandelions, (June 23, 1986):

" I went on a search for the answer to my mortal problem, and [discovered] that perhaps it was a nutritional dilemma.... To me, cancer is primarily a liver failure manifestation. {Italians are very concerned about problems of the 'fegato']. [I discovered that] the cancer rate in native Italians is very low among the farming population (paesanos). When they get affluent and move to the city, its the same as the rest of civilized man. Paesanos eat dandelions, make brew from the roots, and are healthy, often living to over 100 years."

He states that he began eating dandelion salad every day, and his improvement confounded the doctors. When he wrote the letter in 1986, 18 years had passed and there had been no recurrence of the melanoma.

A benefit which comes from writing articles for national media is that you hear from people who have interesting stories to tell. I recently received a call from Peter Gruchawka, a 70 year old gentleman from Manorville, NY, who reported that he had been diagnosed with diabetes melitis 3 months before and was put on 5 grams of Micronase. At the time, he had a 5+ sugar spillover in his urine. He took Micronase for about a month before he learned, from his wife who is a nurse, that Micronase can do damage to the liver. He had read in "Herbal Medicine" by Diane Buchanan and "Back to Eden" by Jethro Kloss about the effectiveness of dandelions in controlling diabetes. Without saying anything to his doctors, he stopped taking Micronase and began drinking dandelion coffee each day. During the first week, his urinary sugar, measured night and morning, was erratic and unstable, but after a week, his sugar stabilized and when he called, he had been getting negative urine sugar readings for over a month. The doctors are amazed and can't explain it. An interesting side benefit to replacing Micronase with dandelion coffee is that, while Micronase damages the liver as a side effect, dandelions are particularly known for strengthening the liver.

According to Mr. Gruchawka, he changed nothing but the medication. He had cut out pastries and other sugars when he was diagnosed and started on Micronase, and has continued to do without those things while taking dandelion coffee.

In reporting these claims, however, I must add three qualifiers:

1. First, unfortunately, neither herbs nor synthetic remedies work for everyone in the same way. Different bodies respond differently to medicines, and what works incredibly

well for one person may not work at all, or work less well, for someone else.

2. Second, good health results from a combination of healthy diet and enough exercise to keep the body toned. Bob Stickle, for all his insistence that dandelions cured him, changed, according to a mutual friend, his entire lifestyle. He didn't just add dandelion salad to what he was already doing.

3. People with health problems need to seek the advice and care of a competent physician, with whom this information can be shared. It is important to reemphasize that it is presented as information only. I am not a medical doctor, and neither advocate nor prescribe dandelions or dandelion products for use by anyone or for any ailment. Only your doctor can do that.

Because there are so many variables, it is hard to attribute Mr. Stickle's cure to any one of them directly. Likewise, Italian farmers live a lifestyle which combines a healthy diet, lots of work and clean air. They heat and cook with wood, which they have to cut and split. They haul water for household use. When they move to the city, diet, exercise, and environmental conditions change. Stress and sedentary habits increase.

And there is the importance of faith in the healing process, whether it be faith in God or faith in the curative properties of the herb being taken.

While dandelions, given all these variables, may never be proved to cure any specific ill, they are an extremely healthy green which cannot in any way hurt you. Research on how much you would have to eat to cause harm indicates that eating grass is more dangerous than eating dandelions (Hobbs 1985). Therefore, with everything going for dandelions, it is highly probable that everyone can derive at least some nutritional benefit from them by eating or drinking them regularly.

The medical and pharmacological establishment is generally critical of claims regarding the use of herbs on disease, and their concerns need to be put in perspective.

Herbal medicines have been used very effectively far longer than synthetics, and many current pharmaceutical products have been derived from research on plants used as medicine by many cultures. The problem with plants, however, is that they are available to anyone. It is impossible to patent a plant, and thereby gain proprietary rights to it. As a consequence, pharmaceutical companies attempt to isolate the active properties from medicinal plants and synthesize them so that they can patent them. Many of the synthetics have serious side-effects which were not present in the natural plant product, often because other chemicals in the plant offset them (i.e. the large quantities of potassium in dandelions which allows for potassium replenishment when dandelion is used as a diuretic).

USDA botanist Dr. James Duke (1989) suggests that a proper and appropriate "herbal

soup", filled with "vitamins, minerals, fibers and a whole host of bioactive compounds," from which the body can selectively strain the compounds it needs to restore itself to health, will be more effective than synthetic medicines containing a "very select and specialized compound or two plus filler, usually non-nutritive." This is especially true if the "herbal soup", in the form of a potent potherb like dandelion, is a regular part of the diet so that the appropriate bioactive substances are present in the right amounts when the body needs them.

The book that this reprint was taken from "The Dandelion Celebration-The Guide to Unexpected Cuisine" is recommended to anyone who would like to know more about this remarkable plant. It covers everything you could want to know about dandelions and more, including recipes, planting, picking and preparing, along with the wonderful history of this "Official Remedy for Disorders", Taraxacum officinale, the common dandelion.

This is an excerpt from the book by Peter A. Gail, Ph.D., titled "The Dandelion Celebration-The Guide to Unexpected Cuisine."

Alexandra - January 28, 2011 03:26 PM (GMT)

I've actually eaten a dandelion...when I was 12.

In the spring of 1985 I went to sixth-grade camp, and one thing they did was teach us some survival skills. They showed us edible plants.

I wonder what they teach nowadays...?

View Full Version: Fish Oil

Title: Fish Oil

Alexandra - December 30, 2010 12:38 PM (GMT)

So...my son's teacher once again suggested medication because he can get to be a bit unruly. Naturally, I said "no way."

I hopped on the net and started searching, found out that lots of times children can misbehave because of a deficiency in essential fatty acids. I ordered high-grade fish oil for my son, and within a few days of giving this to him, his behavior changed.

http://www.thefreelibrary.com/Fish+oil+sup...ws)-a0139540207

My son said "medicine?" and I said, "NO, this is from fish, this will help you to think better. You don't take medicine to help you think better."

Keith - December 30, 2010 02:22 PM (GMT)

i started taking omega 3 fish oil(Nordic Naturals i believe is brand) about a month ago. i'd say it's helped me out, but i've also had some other things going for me, so i don't wanna say it's all the fish oil that's done wonders. but yes, i believe it is good for your brain. i plan to continue to take the fish oil... maybe i'll look into krill oil too. keep in mind you can get OMEGA3's from WALNUTS. glad to hear about the behaviour change in your son. i can only wish i had nutruition and superfoods given to me as a child

Alexandra - December 31, 2010 02:04 PM (GMT)

I get him Carlson for Kids.

Keith - January 21, 2011 03:18 PM (GMT)

I've seen some talk that krill oil is superior and cleaner than fish oil. I wonder if this is true?

Alexandra - January 21, 2011 07:20 PM (GMT)

I get the high-grade kind, supposed to be free of contaminants.

View Full Version: Green tea could protect the brain from Alzheimer's

Title: Green tea could protect the brain from Alzheimer's

TheUnhivedMind - January 7, 2011 02:06 AM (GMT)

Green tea could protect the brain from Alzheimer's

6 Jan 2011
http://www.thisislondon.co.uk/standard/art...m-alzheimers.do

Regularly drinking green tea could protect the brain against Alzheimer's and other forms of dementia, scientists said today.

The ancient Chinese remedy could also play a vital role in protecting the body against cancer, a Newcastle University study, published today in academic journal Phytomedicine, suggested.

Led by Ed Okello, the research team wanted to know if the protective properties of green tea - previously shown to be present in the undigested, freshly-brewed form of the drink - are still active once the tea has been digested.

Dr Okello, from the university's School of Agriculture, Food and Rural Development, said: "What was really exciting about this study was that we found when green tea is digested by enzymes in the gut, the resulting chemicals are actually more effective against key triggers of Alzheimer's development than the undigested form of the tea.

"In addition to this, we also found the digested compounds had anti-cancer properties, significantly slowing down the growth of the tumour cells which we were using in our experiments."

Digestion is a vital process which provides our bodies with the nutrients we need to survive.

But vital nutrients are not necessarily absorbed into the body once food is digested.

"It's one of the reasons why we have to be so careful when we make claims about the health benefits of various foods and supplements," Dr Okello said.

"There are certain chemicals we know to be beneficial and we can identify foods which are rich in them but what happens during the digestion process is crucial to whether these foods are actually doing us any good."

As part of the research, the Newcastle team worked in collaboration with Dr Gordon McDougall of the Plant Products and Food Quality Group at the Scottish Crop Research Institute in Dundee, who developed technology which simulates the human digestive system.

It is this which made it possible for the team to analyse the protective properties of the products of digestion.

Two compounds are known to play a significant role in the development of Alzheimer's disease - hydrogen peroxide and a protein known as beta-amyloid.

Previous studies have shown that compounds known as polyphenols, present in black and green tea, possess neuroprotective properties, binding with the toxic compounds and protecting the brain cells.

When ingested, the polyphenols are broken down to produce a mix of compounds and it was these the Newcastle team tested in their latest research.

Carrying out the experiments in the lab using a tumour cell model, they exposed the cells to varying concentrations of the different toxins and the digested green tea compounds.

Dr Okello explained: "The digested chemicals protected the cells, preventing the toxins from destroying the cells.

"We also saw them affecting the cancer cells, significantly slowing down their growth.

"Green tea has been used in traditional Chinese medicine for centuries and what we have here provides the scientific evidence why it may be effective against some of the key diseases we face today."

The next step is to discover whether the beneficial compounds are produced during digestion after healthy human volunteers consume tea polyphenols.

The team has already received funding from the Biotechnology and Biological Sciences Research Council (BBSRC) to take this forward.

Dr Okello said: "There are obviously many factors which together have an influence on

diseases such as cancer and dementia - a good diet, plenty of exercise and a healthy lifestyle are all important.

"But I think it's fair to say that at least one cup of green tea every day may be good for you and I would certainly recommend it."

Rebecca Wood, chief executive of the charity Alzheimer's Research Trust, said: "These results are at a very early stage, so we can't make the leap of assuming that green tea can protect people from dementia.

"Diet and lifestyle almost certainly plays a part in every person's Alzheimer's risk. These factors remain a magnet for research because they could offer relatively inexpensive ways to fight a disease that ruins countless lives.

"We know that the best way to help reduce our risk of developing dementia is to take regular exercise and eat a healthy diet, especially in mid-life. 820,000 people in the UK have dementia, a number forecast to rise as our population ages. Much more research is needed to develop new treatments."

Color Me ‘Buddha-ful’

The unique energy of color.

Published: June 26, 2010
By Elaine Wilkes
http://www.healyourlife.com/author-elaine-...r-me-buddha-ful

How colors paint a healthy YOU!

Each chakra (energy centers in the body) is associated with a color and a corresponding sound, and every color is a different wavelength of light, which gives it a unique energy. Therefore, since each color has a different tone, eating a variety of colorful foods is like a symphony playing in your body. If you want to be in harmony, give your body a healthy balance of colorful foods. On the other hand, eating the same things every day is like playing “Chopsticks” over and over and won’t do much for your body.

Test Your Nature IQ

Try answering these colorful questions:
What’s the best color plate to use if you’re on a diet?
What color indicates that a plant or food may contain sunscreening benefits?
According to Chinese medicine, what do yellow foods help in the body?
Name the color that Leonardo da Vinci is referring to in this quote: “The power of meditation can be ten times greater under _____ light falling through a stained glass window of a quiet church.”

Answers
Blue

Red
The liver and digestion
Violet

Like food, color isn’t a one-size-fits-all affair. As in life, there are exceptions to the rules, but here are general clues of food colors that can help you:

Red. Primitive cultures believed that red food helped the blood, since it mirrors its appearance. We know that beets have a plentiful supply of iron, which nourishes the blood, along with fiber, which helps reduce serum cholesterol. Betacyanin, the red pigment of beets, can increase the blood’s oxygen-carrying ability by being absorbed into the blood’s corpuscles. The powerful antioxidant lycopene, found in red foods like tomatoes (which even have four chambers like the heart), reduces cholesterol. Anthocyanins, reddish pigments found in many red fruits, also protect against heart disease.

In addition, red flower essences are reportedly good for the heart, blood circulation, energy, and vitality. In herbalism, red plants are used to treat fever. And pink and red are associated with the endocrine system.

Orange. Orange flower remedies are used to increase sociability, which is a characteristic of the second chakra.

Yellow. Yellow foods are associated with digestion (“yellow belly”), the solar plexus, the lymph system, cells, intestines, and the liver. In Chinese medicine, this color is associated with the stomach and spleen, and in Western herbalism, an olive (yellow green) color is associated with bile, which is a crucial part of the digestive system.

To get your energy moving first thing in the morning, drink some warm lemon water and tap on your kidneys, which are located near the spine at the small of the back. You can also add a little cayenne pepper as a wake-up call.

Look at how Nature’s yellows are related to the stomach area. Ginger relieves upset stomachs and encourages bile flow. The bromelain in pineapple helps with digestion. Chamomile helps inflammation in the gastrointestinal tract.

Yellow-flower remedies are often used for liver and self-esteem issues. Dark yellow flowers stimulate life force and the liver, while light yellow flowers help with internal cleansing.

Green. Green plants store the energy they receive from the sun, and that energy becomes a part of the food you eat. Dark green plants are generally high in minerals and help the circulatory system. Cucumbers and fresh green juices are great for alkalizing your body, contributing to optimum health. (You’ll get great results juicing fresh greens for a few days. You’ll actually feel more energy; develop clearer, more

vibrant skin; and gain new perspectives easier.)

Blue. According to author and berry researcher Paul Gross, Ph.D., dark blue, purple, or black fruits that easily stain your fingers during picking are great sources of anthocyanins, plant pigments that have numerous health benefits. Among other benefits, anthocyanins help eyesight and the nervous system, and they fight atherosclerosis.1

And interestingly, using small-sized sky blue plates may help you eat more slowly, because this light color has a calming effect on the brain. Dark blue fends off a large appetite.

Purple. Generally, purple flowers calm and relax you. This is no surprise because purple, the color of the seventh chakra, is known to be soothing and is related to spirituality in many cultures. Even Leonardo da Vinci believed that the power of meditating was up to ten times greater under a stained-glass window’s violet light in a church.2

Black. According to Chinese medicine, black herbs and foods (such as nori, black rice, black cherries, black mushrooms, and black beans) help improve kidney function.

View Full Version: Medicinal plant 'fights' Aids

Title: Medicinal plant 'fights' Aids

TheUnhivedMind - November 23, 2010 12:40 AM (GMT)

Medicinal plant 'fights' Aids

Not just a pretty plant

By Carolyn Dempster in Johannesburg
Friday, 30 November, 2001, 08:49 GMT
http://news.bbc.co.uk/1/hi/world/africa/1683259.stm

A South African indigenous medicinal plant may hold the key to the treatment of millions of poor people living with HIV and Aids, helping them relieve the symptoms of Aids.

For the first time in South Africa's medical history, the plant, Sutherlandia Frutescens, sub-species Microphylla, is to undergo clinical trials to assess its immune-boosting properties.

We are certainly not making the absurd claim that Sutherlandia is a cure-all or a cure for Aids

Dr Nigel Gericke
Phyto Nova

The Medical Research Council will conduct the trials early next year and results are expected within three to six months.

Anecdotal evidence is already mounting, suggesting that this plant can improve the quality of life of thousands of people both with HIV and full-blown Aids.

Sutherlandia Frutescens grows wild in the Western Cape and in the hills of Zululand.

Cancer bush

A particular variety of the plant has been used for centuries as a potent medicine by South Africa's indigenous San people who call it "Insisa" - the one that dispels darkness. They used it as an energy booster and a powerful anti-depressant.

Traditional healers have been using it for decades

Zulu sangomas or traditional healers know it as "Unwele", the great medicine that was used to ward off the effects of the devastating 1918 influenza pandemic which claimed 20 million lives worldwide.

The Tswana people know it as "Mukakana" for its power in treating gonorrhoea and syphilis, while the Afrikaners call it the "Kankerbossie" or cancer bush, because of its properties in treating people suffering with internal cancers and wasting.

Molecular combination

A local company specialising in the development of indigenous plant medicines, Phyto Nova, first started researching the bio-chemical properties of Sutherlandia about three years ago.

Phyto Nova planted acres of the plant

A multi-disciplinary team headed by Dr Nigel Gericke, a botanist, medical doctor and indigenous plant specialist, found that Sutherlandia contained a powerful combination of molecules which have been identified and used in the treatment of patients with cancer tuberculosis, diabetes, schizophrenia and clinical depression and as an antiretroviral agent.

Phyto Nova were so convinced that Sutherlandia could be used as a tonic for people infected with HIV and Aids, that they contracted farmers to plant acres of the bush, to prevent wild supplies being over-harvested. They have been manufacturing high quality Sutherlandia tablets, gel and powder.

Having determined that the product was safe when administered with a balanced food diet, the company distributed Sutherlandia to Aids patients.

Quality of life

"Anecdotally we are accumulating evidence that wasted patients with Aids, TB and cancer pick up weight, regain energy and appetite," says Dr Gericke.

"The claim we are making on the basis of this, is that we can significantly and dramatically improve the quality of life of many ill Aids patients... We are certainly not

making the absurd claim that Sutherlandia is a cure-all or a cure for Aids."

Sutherlandia does not work properly just on a diet of porridge - you have to have vegetables

Virginia Rathele
Nurse and sangoma

Whatever comes of the clinical trial, word of the plant's properties is already spreading among South Africa's traditional healers.

At the same time as Phyto Nova was conducting its research, one of the country's most venerated traditional healers, Dr Credo Mutwa, 80, was using Sutherlandia to treat Aids patients.

"My aunt Minah, who is 103 years old, told me that we should use the great medicine against Aids," said Dr Mutwa. "I said to her: 'But aunt, the white people tell us there is no cure for this disease'.

"And my aunt said: 'For every disease there is a treatment. Try this medicine'. And I tried it."

'Near-miraculous'

"I have treated people who were told by the doctors at the hospital to 'go home and die' and they are still alive today, three years after they should have died. This plant is near-miraculous, I can say that with certainty," he says.

Tablets, powder and gel are already on sale

Testimony to the efficacy of the plant continues to mount.

Anne Hutchings, an ethno-botanist and lecturer at the University of Zululand has been using Sutherlandia, together with a range of other indigenous plant medicines, to treat Aids patients who attend the weekly Aids clinic at Ngwelezane Hospital.

She has 176 patients who all testify that Sutherlandia has helped them to live a fuller, healthier and more productive life.

No response

In the Northern Cape town of Kuruman, nurse and sangoma, Virginia Rathele is using Sutherlandia at her clinic to treat more than 300 Aids patients.

She says an integral part of the treatment is to tell patients to eat healthily.

"Sutherlandia does not work properly just on a diet of porridge. You have to have vegetables," she said.

Rathele says that Sutherlandia only works with a balanced diet

One client, who weighed 26kg and was close to death in April this year, now weighs 45kg and is helping Ms Rathele run the clinic.

Patents cannot be taken out on plants which have well-documented folk use, which means that Sutherlandia should remain accessible to anyone.

At present, one month's supply of Phyto Nova tablets costs a little under $2.50 and two months' supply of the powder form of the medication can be bought for under 50 cents.

Phyto Nova has approached the South African Government in a bid to persuade them to grow the plant on a massive scale for use in public health treatment.

So far they have had no response.

View Full Version: Michael Morris looks at the German corporate media

Title: Michael Morris looks at the German corporate media
Description: *misinformation about the ban on herbal m*

TheUnhivedMind - November 19, 2010 02:39 AM (GMT)

Michael Morris looks at the German corporate media's misinformation about the ban on herbal medicines

By Michael Morris
http://birdflu666.wordpress.com/2010/11/18...ines/#more-3517

In terms of the directive and the petition was much confusion, the last day, primarily from the media but also such reassurances by the Association of medical practitioners.

Something ugly, the reaction of the professional association was here: http://www.heilpraktiker.org/ftp_pdf/meldu...HEGILTNICHT.pdf where the rapid dissemination of information in today's Internet age is criticized. The following statement applies also to analyze it:

"There are currently no banned medicinal plants in Germany and one in Therapy, the plant, which does not exist as a finished product, continue to prescribe in a recipe."

1. The statement is false, as many well-known medicinal plants have been and are still prohibited, at least in Germany, such as Cannabis, Kava, Salvia divinorum, or drugs such as Ukrain from the celandine

2. That something is not forbidden NEWS leaves, already hints and conclude that from April 2011 but could be very different

On the first point is mentioned in addition that many medical practitioners colleagues will be very well affected because it will make many preparations on TCM or Ayurveda base that can precisely establish their 15-year medical-reference in the EU and therefore from next year may no longer be sold . That the Therapy Association, this is

completely ignored me quite a mystery.

The second point is more or less directly, the following items to taz: http://www.taz.de/1/zukunft/konsum/artikel...r-heilkraeuter/ where it is in a passage:

"Poetsch suggested that some shy away from small companies to work for a new license. "The costs are regularly in the six-figure euro range." Therefore, they could take some drugs from the market. "

This is expressed, but discreet ... but thanks for the confession. As wrong, the petition as well as established organizations such as the ANH: http://www.anh-europe.org/news/anh-press-r...nge-eu-herb-law are by no means. The latter is even legal action against this directive. Just for the heck? Hardly.

Next in the taz article: "No plant is prohibited." Largely because the new eligibility rules are always ready to relate drug products, which means that would usually produced by industry. "

This is only partly true and in fact this statement is misleading.

1. Farmers are selling restrictions in it since 2005 as Brandenburg, as one can read the following article very well taz:

http://blogs.taz.de/drogerie/2010/11/13/pe...dubiose_aktion/ that organic farmers have long been a whole list of herbs and Kräuertees no longer allowed to sell!

2. Since spring this year, the mint for herbal medicines was misdeclared: http://www.gaia-health.com/articles301/000...able-herb.shtml - here the original text of the law:

http://eur-lex.europa.eu/LexUriServ/LexUri...052:0054:en:PDF - piece by piece is so difficult of access to herbs and restricted.

3. The directive prohibits any plants (middle) literally per se, but it includes prohibitions but by no means. Rather, it sets the same admission standards as for conventional medicines. The result? That small to medium sized businesses can not afford a new authorization and thus their products disappear from the market. After all, the cost for admission in the 6-digit range per slide.

Continuing to use the directive formulations that give you very broad scope and access to herbs, medium, made from plants and even plants can limit yourself. (And possibly even) The fact that only and exclusively have "done medicinal product" is affected, so nowhere in the directive.

has defined the term as used in the directive for traditional herbal medicinal product "is

a very elastic term (which can always be extended at will) they even like this:

(30) Herbal Medicines All medicines, as the active ingredient (s) only one or more herbal substances or one or more herbal preparations, or one or more such herbal substances in combination with one or more such herbal preparations.

(31) Vegetable materials All mainly whole, fragmented or cut plants, plant parts, algae, fungi, lichen in an unprocessed, usually dried form but sometimes fresh. Certain exudates that have not been subjected to special treatment are also considered to be herbal substances. Herbal substances are by the plant part used and the botanical name according to the binomial system (genus, species, variety and author).

(32) Herbal preparations preparations produced by subjecting herbal substances to treatments such as extraction, distillation, fractionation, purification, concentration or fermentation subjected. These include comminuted or powdered herbal substances, tinctures, extracts, essential oils, expressed juices and processed exudates. "

When I look at these definitions look at, then that automatically supplements closes just as with a (algae in powder or pressed, Maca, Noni, Acai, Boswellia, Aloe Vera etc. pp.) As it also include teas, oils and juices with can and everything that could somehow have a medical / healing effects. This would, therefore, by definition in the directive to be completely restructured to medical products, are then applicable Zulassungskritieren the same as for medicinal products. Since it does not help when it is said in the directive:

(12) This Directive allows herbal products are not medicines, and satisfy the criteria of food law, fall within the Community under food law.

when the spectrum or the definition of a "medicinal product" is extended to all sorts of plants and herbs.

The so-called "simplified registration procedure (Article 16 in the Directive) relates only to funds that require no medical diagnosis or prescription. For this we have added precaution under this clause 16, paragraph 1:

B) You have to be administered only in a specified strength and dosage.

after which the dose limits are set arbitrarily and to the extent where they are to have no medical / healing effects. Germany in particular is known to keep the dosages in dietary supplements so low that the required health effects can be achieved only with difficulty, if at all. Leading medical practitioners in the world recommend as taking at least 10,000 I.E. (= International units) of vitamin D daily. What you can do on the Internet, where, unfortunately, spread information quickly and truths nachrecherchieren today. If you look at the preparations that may be sold in Germany, a Virt Amin D capsule / tablet is usually only 200 IU (Equivalent to 5 mcg) This means you should take 50 tablets a day

to the recommended daily intake of 10,000 IU to come. Not just a question of cost to the consumer. From 500 I.E. Vitamin D per tablet, it is even as a drug in Germany and is therefore available on prescription. By the way, the EU directive, the 200 I.E. per day for vitamin D as a "100% recommended daily intake" determined. A complete joke! Absolute stupidity of the people. The body needs a lot more per day to stay healthy. This fixing of boundaries shows clearly who these (and other) EU directives are actually too good, namely the pharmaceutical industry, the herbal and vitamin supplements has long been a thorn in the side. Human health is also the death of drugs and the demise of the pharmaceutical. This is so simple and obvious equation, which can each see (s) quickly and understand.

By what right can any restricting never elected by the citizens, such a Commission arbitrarily health of 500 million EU citizens? How the hell we could ever have come so far?

Again, a direct prohibition in the directive is of course no mention literally (and thus naturally offers easy ammunition for counter-propaganda), and thus it is difficult to address arguments against it, but not impossible. I guess quite strong, the directives in some cases deliberately be formulated complex. But the article cited above 30-32 are really clear.

Read the passages quoted above from the directive once more. That difficult access and severe restrictions were not yet in this 7-year transition period, or only partially implemented, does not mean automatically that the end of April 2011, the above But points are then converted rows and notably extended, and that uniformly in every EU country. The mere possibility that a large reduction may be made by this directive on our health at any time, should not accept a responsible citizen of this world!

The directive in the original, you are welcome to read here: http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=CELEX% 3A32004L0024% 3A% 3ANOT

The petition to the Bundestag content was certainly not well formulated and had the odd mistake. (It does not stop EU Verkausverbot and the date is is 30 and not April 1) At the core, but has had quite a privilege and necessity. Of the nearly 122 000 signatories are probably at least 3% of the statutory text and read similar conclusions as I and others have pulled in front of me. The high number of signatories but says something very special, especially of: Namely that people in Germany, the EU and its government is becoming dt EXACTLY trust, which threatens the directive. People's confidence in their "representatives" is melting day by day as ice in the sun.

As previously mentioned, it is so that each EU country must implement the EU directives, without Ausnhame. A petition at the national level is certainly advisable and necessary to set a signal effect, but it will not bring much, because the parliament itself is not more than 100,000 votes committed to the petition to be heard. (When only 50

000 votes to be achieved within the first 3 weeks) This should show any citizen in Germany, how much value the voice of the people is at all.

It is more reasonable, in another step to address the complaint directly to the EU, like this: http://www.gopetition.com/petition/39757.html - here but 1 million signatures are needed from across the EU, however. Also an outrageously high number that you want to undermine the very democratic aspirations of the people from the outset. On Facebook there is also an EU-wide call in English: http://www.facebook.com/event.php?eid=165377843492654 (you must be logged in) and by the nature of this social network, it is easier to get a viral effect to achieve. People must be informed masses!

Even if we reach one million signatures, but this guarantees nothing. The EU Commission will hear the matter only. It is currently the only way for EU citizens to express their protest and to demand changes. Whether the end is somewhat changed, the first we can not and it can not really be trusted. The next logical step for the people in each EU country will be to accelerate the country's leaders to withdraw from the EU and Monetary Union and a say in the form of referendums (after the Swiss model) claim. Until that happens, the EU construct is very quickly turning into a dictatorship. With the Lisbon Treaty is a way to already ....

Best regards

Michael Morris

P.S. Just a few days earlier recommended the petition even taz: http://blogs.taz.de/drogerie/2010/11/04/ph...n_heilpflanzen/ - all the more surprising then the article few days later, the 120,000 people accused of stupidity.

View Full Version: GARLIC -THE SUPER POWERHOUSE-

Title: GARLIC -THE SUPER POWERHOUSE-

craig-oxley - March 26, 2009 03:56 AM (GMT)

"Last year I received a letter from an elderly woman who was dying from a viral lung infection. She'd had the condition for over a year and all the doctors and drugs had not helped her. The doctors gave her only weeks left to live. She read an article I wrote on Garlic and immediately consumed 47 cloves of raw garlic a day for three days. Shortly thereafter, her so-called incurable viral respiratory infection was gone. By the way, she was 83 years old" -Dr Richard Schulze

craig-oxley - March 26, 2009 03:56 AM (GMT)

The the real powerhouse is with the addition of Cayenne, Hawthorn and Ginger. We than of course look at herbs like Motherwort etc. -Craig

GARLIC BETTER THAN STATIN DRUGS FOR PREVENTING HEART ATTACKS

by Alan Tillotson, Ph.D., AHG
http://www.planetherbs.com/showcase/docs/g...tatin_drugs.htm

Recent TV ads from major cholesterol-lowering drugs like Lipitor flash language stating that the medicines do not prevent heart attacks or heart disease. In comparison, the below scientific reports deal with the much more important purpose of lowering cholesterol - to prevent vessel clogging, how garlic effects can be made stronger with fish oils, and finally estimates on the core issue of garlic's effectiveness in preventing real heart attacks.
The antiatherosclerotic effect of Allium sativum.Koscielny J, Klussendorf D, Latza R, Schmitt R, Radtke H, Siegel G,
Kiesewetter H. Atherosclerosis 1999 May;144(1):237-49

In a randomized, double-blind, placebo-controlled clinical trial, the plaque volumes in

both carotid and femoral arteries of 152 probationers were determined by B-mode ultrasound. Continuous intake of high-dose garlic powder dragees reduced significantly the increase in arteriosclerotic plaque volume by 5-18% or even effected a slight regression within the observational period of 48 months. Also the age-dependent representation of the plaque volume shows an increase between 50 and 80 years that is diminished under garlic treatment by 6-13% related to 4 years. It seems even more important that with garlic application the plaque volume in the whole collective remained practically constant within the age-span of 50-80 years. These results substantiated that not only a preventive but possibly also a curative role in arteriosclerosis therapy (plaque regression) may be ascribed to garlic remedies.

J Natl Med Assoc 1997 Oct;89(10):673-8
Modulation of lipid profile by fish oil and garlic combination. Morcos NC. Division of Cardiology, University of California, Irvine 92717, USA. Fish consumption has been shown to influence epidemiology of heart disease, and garlic has been shown to influence triglyceride levels. This study was undertaken to evaluate the effect of fish oil and garlic combinations as a dietary supplement on the lipid subfractions. Forty consecutive subjects with lipid profile abnormalities were enrolled in a single-blind, placebo-controlled crossover study. Each subject received placebo for 1 month and fish oil (1800 mg of eicosapentanoic acid [EPA] + 1200 mg of docosahexanoic acid) with garlic powder (1200 mg) capsules daily for 1 month.

Lipid fractionation was performed prior to study initiation, after the placebo period, and after the intervention period. Subjects all had cholesterol levels > 200. Subjects were instructed to maintain their usual diets. Supplementation for 1 month resulted in an 11% decrease in cholesterol, a 34% decrease in triglyceride, and a 10% decrease in low-density lipoprotein (LDL) levels, as well as a 19% decrease in cholesterol/high-density lipoprotein (HDL) risk. Although not significant, there was a trend toward increase in HDL. There was no significant placebo effect. These results suggest that in addition to the known anticoagulant and antioxidant properties of both fish oil and garlic, the combination causes favorable shifts in the lipid subfractions within 1 month. Triglycerides are affected to the largest extent. The cholesterol lowering and improvement in lipid/HDL risk ratios suggests that these combinations may have antiatherosclerotic properties and may protect against the development of coronary artery disease.

Wien Med Wochenschr 1999;149(8-10):217-24 [Pleiotropic effects of garlic] [Article in German] Siegel G, Walter A, Engel S, Walper A, Michel F. Institut fur Physiologie,

Universitatsklinikums Benjamin Franklin, Freien Universitat Berlin, Deutschland. siegel@mail.grumed.fu-berlin.de Garlic as a herbal remedy reduces a multitude of risk factors which play a decisive role in the genesis and progression of arteriosclerosis: decrease in total and LDL-cholesterol, increase in HDL-cholesterol, reduction of serum triglyceride and fibrinogen concentration, lowering of arterial blood pressure and promotion of organ perfusion, and, finally, enhancement in fibrinolysis, inhibition of platelet aggregation, and diminution of plasma viscosity. In a prospective, 4-year clinical trial with primary endpoint 'arteriosclerotic plaque volume' it was proven not only a 9 to 18% reduction and 3% regression in plaque volume of the total collective under the influence of standardized garlic powder dragees (900 mg/die LI 111), but also of some facets of the phytopharmacologic pleiotropy of this herb: decrease in LDL level by 4%, increase in HDL concentration by 8%, and lowering in blood pressure by 7%. The reduction of arterial blood pressure is due to an additional opening of K(Ca) ion channels in the membrane of vascular smooth muscle cells that effects its hyperpolarization. This membrane hyperpolarization closes about 20% of the L-type Ca2 + channels, consequence of which is vasodilatation. In human coronary arteries, the increase in vascular diameter by 4% is closely associated with an improvement of coronary perfusion by 18%. These pleiotropic effects of garlic result in a reduction of relative cardiovascular risk for infarction and stroke by more than 50%. Publication Types: * Review

A daily dose of garlic can save your life by cutting blood pressure, say researchers

By Daily Mail Reporter
Last updated at 8:56 AM on 01st August 2008
http://www.dailymail.co.uk/health/article-...esearchers.html

Garlic may lower blood pressure just as effectively as drugs, according to researchers.

Scientists looked at 11 international studies in which patients were given a daily garlic supplement in powdered form for between three and five months.

They found significant blood pressure falls among participants - with the greatest drops

among those who had higher blood pressure readings to begin with.

In some cases, the effects were similar to those achieved with common anti-blood pressure drugs, such as beta blockers and ACE inhibitors, said Dr Karin Ried, of Adelaide University in South Australia.

More than 16million Britons have high blood pressure and many more are thought to suffer from it without knowing. If the condition is not treated, it can lead to heart attacks and strokes. Doctors recommend that sufferers lower their blood pressure by cutting their intake of salt, losing weight and getting fit.

Now the Australian research suggests that extra help is at hand in readily available over the counter garlic supplements.

Dr Ried and her team, writing for the scientific journal BMC Cardiovascular Disorders, said the 600mg to 900mg dosage used in the studies was equivalent to 3.6mg to 5.4mg of garlic's active ingredient, allicin.

A fresh clove of garlic contains 5mg to 9mg of allicin.

More research was needed to determine whether garlic supplements might have a long-term effect on heart disease risk, the researchers added.

HISTORY OF GARLIC

by Gwen M. Porritt

The common garlic, a member of the same group of plants as the onion, is of such antiquity as a cultivated plant, that it is difficult with any certainty to trace the country of its origin. De Candolle, in his treatise on the “Origin of Cultivated Plants,” considered that is was apparently indigenous to the southwest of Siberia, whence it spread to southern Europe, where it has become naturalized, and cultivated in the Latin countries bordering on the Mediterranean. 1

According to Jethro Kloss’ tome “Back to Eden,” for nearly as long as there has been a written record of history, garlic has been mentioned as a food. It probably originated in central Asia, but now is cultivated in many countries and grows wild in Italy and southern Europe.

During the time of the Pharaohs, when Egypt was at the peak of its power, garlic was given to the laborers and slaves who were building the great pyramids in order to increase their stamina and strength as well as to protect them from disease. In the fifth century, A.D., the Greek historian Herodotus wrote that on an Egyptian pyramid there

are inscriptions in Egyptian characters describing the amount of garlic, onions and radishes consumed by the workers and slaves who were building the great pyramid of King Khufu (Cheops).

The Ebers Papyrus, an Egyptian medical papyrus dated sometime around 1500 B.C., mentions garlic 22 times as a remedy for a variety of diseases. Hippocrates, Aristotle and Aristophanes all mentioned the importance of the use of garlic. The Bible clearly states that for 400 years, (probably around 1730 to 1330 B.C.) while the Israelites were slaves in Egypt and no doubt being forced to help build some of the pyramids, garlic as well as some of the other herbs in the same family, was part of their diet.

Garlic is mentioned in the literature of all of the great ancient world kingdoms; Babylon, Medo-Persia, Greece and Rome. The great Roman naturalist Pliny the Elder recommended garlic in his “Histoia Naturatis.” Garlic was probably introduced into Japan from Korea along with Buddhism in about 30 B.C. Discordies, the chief medical officer in the Roman army in the first century A.D., used garlic to treat intestinal worms. 2

Today, garlic is grown literally all over the world and though primarily used as a food source, garlic is making a strong comeback as a potent, natural, herbal remedy.

Garlic was placed by the ancient Greeks (Theophrastus relates) on the piles of stones at Crossroads as a supper for Hecate, and according to Pliny, garlic and onion were invocated as deities by the Egyptians at the taking of oaths.

It was largely consumed by the ancient Greeks and Romans, as we may read in Virgil’s “Eclogues.” Orace, however, records his detestation of garlic, the smell of which, even in his days (as much later in Shakespeare’s time), was accounted a sign of vulgarity. He calls it “more poisonous that hemlock,” and relates how he was made ill by eating it at the table of Maecenas. Among the ancient Greeks, persons who partook of it were not allowed to enter the temples of Cybele. Homer, however, tells us that it was to the virtues of the “Yellow Garlic” that Ulysses owed his escape from being changed by Circe into a pig, like each of his companions.

Homer also makes garlic part of the entertainment, which Nestor served up to his guest Machaon. There is a Mohommedan legend that “when Satan stepped out from the Garden of Eden after the fall of man, Garlic sprang up from the spot where he placed his left foot, and Onion from that where his right foot touched.”

There is a curious superstition in some parts of Europe that if a morsel of bulb be chewed by a man running a race, it will prevent his competitors from getting ahead of him, and Hungarian jockeys will sometimes fasten a clove of garlic to the bits of their horses in the belief that any other racers running close to those thus baited, will fall back the instant they smell the offensive odor.

Many of the old writers praise garlic as a medicine, though others, including Gerard, are skeptical as to its powers. Pliny gives an exceedingly long list of complaints, in which it was considered beneficial, and Galen eulogizes it as the rustic's "Theriag" or Heal All. One of its older popular names in this country was "Poor Man's Treacle," meaning theriac, in which sense we find it in Chaucer and many old writers.

The name garlic is of Anglo-Saxon origin, being derived from gar (a spear) and lac, (a plant), in reference to the shape of its leaves. 3

Growth Characteristics

It is a native of central Asia, cultivated in southern Europe, and America. It grows best in rich, sandy and moderately moist soil with ample sunlight; propagated by seed or bulb division; cloves are planted in the fall about two inches deep and six inches apart in drills or rows like onions; keep free from weeds and hoe up soil around the plants.

Collection

The bulbs are dug in the late summer after the leaves die down.

Drying and Preservation

The bulbs should be free of foreign matter, then placed in the netted bags, and hung in a cool, dry place where there is ample circulation of air. 4

Sister Plants

Onion (Allium cepa; Lilliaceae)
Leek (Allium porrum; Lilliaceae)

The leaves are long, narrow and flat like grass. The bulb (the only part that is eaten) is of a compound nature, consisting of numerous bulbets, known technically as "cloves." They are grouped together between the membraneous scales and enclosed within a whitish, papery skin, which holds them as in a sac.

The flowers are placed at the end of a stalk rising direct from the bulb and are whitish, grouped together in a globular head, or umbel, with an enclosing kind of leaf or spathae, and among them are small bulbils. 5

CHEMICAL CONSTITUENTS OF GARLIC

The active properties of garlic depend on a pungent, volatile, essential oil, which may readily be obtained by distillation with water. It is a sulphide of the radical allyl, present in all of the onion family. This oil is rich in sulphur, but contains no oxygen. The peculiar

penetrating odor of garlic is due to this intensely smelling sulphuret of allyl, and is so diffusive that even when the bulb is applied to the soles of the feet, its' odor is exhaled by the lungs. 6

Garlic contains vitamins A, C and B, as well as the minerals copper, iron, zinc, tin calcium, potassium, aluminum, sulphur, selenium, and germanium. There are about 67 mg. of sulphur in every 100 grams of garlic.

During the 1940's, Dr. Arthur Stoll, a chemist working in Switzerland, was able to extract an oil from garlic that he named alliin. He also discovered an enzyme in the garlic, to which he gave the name of aminase. Aminase was found to change the alliin to allicin when the garlic was cut or crushed. It is the allicin that is responsible for the garlic odor as well as for the antibacterial properties used during both world wars.

Dr. Christopher, in his book, "School of Natural Healing," lists garlic as an alterative, stimulant, diaphoretic, sudorific, diuretic, expectorant, antiseptic, antispasmodic, disinfectant, tonic, nervine, cathartic, emmenagogue, carminative, anthelmintic, (vermicide), rubefacient, vulnerary, antivenomous, antisyphilitic, condiment, anti-catarrhal and a digestant. 7

MEDICINAL QUALITIES OF GARLIC

Garlic's medicinal value is largely in its highly volatile essential oil, so be careful in its preparation. Anciently, it was used in both healing and nutrition, as it was known to build physical strength and energy. It is a valuable nervine tonic and is especially useful in lowering hypertension; laboratory tests have proven this. It equalizes blood circulation, and it is a useful expectorant for all respiratory affections and infections. Garlic has a special affinity for the respiratory tract, beneficially influencing bronchial secretions, though it rapidly diffuses throughout the whole system.

Garlic stimulates the gastric juices and has active carminative properties to correct any fermentative and gaseous conditions in the stomach. It arrests intestinal putrefaction and infection, while stimulating the healthful growth of the friendly bacterial such as acidophilus, bifido bacterium, etc. The garlic oil is reportedly so popular in Russian medicine that it is referred to as Russian penicillin, and the hospitals and clinics have used the volatile garlic extracts almost exclusively in the form of vapors and inhalants.

The use of garlic as an antiseptic and vulnerary during World War I was sensational; wherever there is pus, it is a safe and certain remedy. Its' antithelmintic properties and action is deadly to round-and-pin-worms. It also appears to be a powerful agent against tumor formation. 8

Several retrospective and prospective epidemiological studies have shown that individuals whose diet includes relatively large amounts of garlic, tend to develop

cancer less frequently. Although the interpretation of epidemiological results is complex and always open to dispute, the cumulative evidence is significant.

In one of the best epidemiological studies, the Iowa Women's Study, participants whose diet included significant quantities of garlic were about 30 percent less likely to develop colon cancer. This process is called chemoprevention.

The book goes onto explain garlic's use as an insect repellant. Oral garlic is a popular folk remedy for insect bite prevention. A double blind, placebo-controlled crossover trial followed 80 Swedish soldiers and measured the number of tick bites received over each phase of the trial. The results show a modest but statistically significant reduction in tick bites attributable to daily consumption of 1200 mg. of garlic daily (type not stated).

As an antimicrobial, raw garlic extracts can kill a wide variety of microorganisms, invitro, including fungi, bacteria, viruses, and protozoa. Thus is appears quite likely that topical application of garlic produces a local antibiotic effect. Topical effects could theoretically make it useful for intestinal infections, as well as Helicobator pylori. However, in vivo studies of garlic for Helicobactor pylori have not been promising.

Dr. Christopher's extensive list of medicinal uses are as follows: effective against Tuberculosis, asthma, bronchitis, skin diseases, stomach ulcers, leg ulcers, athlete's foot, boils, abscess, epilepsy, worms, high blood pressure, low blood pressure, pimples, carbuncles, tumors, kidney diseases, poisonous bites and stings, indigestion, catarrh, pneumonia, earache, infantile convulsions, leprosy, psoriasis, smallpox, intestinal disorders (chronic colitis), respiratory affections and infection, dropsy, sounds, aging, insect repellant, fevers, nervous and spasmodic coughs, hoarseness, whooping cough, typhus, cholera, hypertension, headaches, backache, dizziness, vomiting, nausea, diarrhea, dysentery dyspepsia, heart palpitation, chills, loss of weight, restlessness, diphtheria, colds, colic, pleurisy, intercostal neuralgia, dyspnea, pharyngitis, cramps, heartburn, sore throat, rhinitis, (clogged and running nose), nicotine poisoning, lip and mouth diseases (ulcers, fissures, etc.), diabetes, ague, pulmonary phthisis, sciatica, hysteria, ringworm, scrofulous sores, rheumatism, inflamed eyes, eye catarrh, chapped and chafed hands, flatulence, paralysis, neuralgia pains, retention of urine (bladder weakness), heart weakness, eczema, pityriasis, cancers, swollen glands, tubercular joints and necrosis.

Garlic has definite antithrombotic effects. In a four week, double-blind, controlled trial, 64 individuals with consistently increased spontaneous platelet aggregation were treated with either placebo or 900 mg. of standardized garlic powder daily. A significant decrease in spontaneous platelet aggregation was seen in the treated group. Similar effects were seen in a smaller trial using aged garlic at a dose of 7.2 grams daily. 8

Garlic is also useful in the treatment of hyperlipidemia. In vitro and exvivo experiments, on animal hepatocytes have found that allicin and (to a lesser extent) ajoene, s-

allylcystein, and related chemical reduce cholesterol biosynthesis by inhibiting HMG-CoA reductase as well as 14-alpha-demthylase. Garlic concentrates selenium in a readily absorbable form, which may practically explain its antioxidant and apparent chemopreventive properties. In addition, the sulphuric components of garlic may also directly bind and inactive reactive genotoxic metabolites. 9

CONTRA-INDICATIONS OF GARLIC

Garlic is on the FDA's GRAS list. However, garlic is usually cooked when taken as food. During the heating process much of the chemical constituents of garlic such as alliin are destroyed. Typical standardized garlic products contact substances (such as alliin) not found the food garlic, making them more similar to raw garlic. Raw garlic taken in excessive doses can reportedly cause numerous symptoms, such as stomach upset, heartburn, nausea, vomiting, diarrhea, flatulence, facial flushing, rapid pulse, and insomnia. Topical garlic can cause skin irritation, blistering, and even third degree burns.

Rats fed up to 2000 mg/kg of aged garlic extract for six months, showed no significant toxicity. Genotoxicity and mutagenicity studies have been negative for aged and fresh garlic. In a chronic toxicity study in rats, long-term treatment (12 months) with standardized garlic powder at a dose equivalent to three times the usual dose, produced no toxic effects in rats. (Fish oil was administered simultaneously.)

In studies, garlic powder has not been associated with serious side effects. For example, an observational study followed 1,997 patients given 300 mg. of garlic powder three times daily over a 16 week period, and found a six percent incidence of nausea, a 1.3 percent incidence of orthostasis, and a 1.1 percent incidence of allergic reactions attributable to garlic. There were also a few reports of bloating, headache, sweating and dizziness.

The most common problem with garlic is the odor. The use of so-called odorless products can alleviate, though not entirely eliminate, this problem. One study suggests that therapeutic levels of odorless garlic produces an offensive garlic smell in 50 percent of patients, perhaps because allicin formed in the digestive tract. This reduces some patient compliance.

For theoretical reasons, garlic is not recommended for patients with brittle diabetes garlic might possess a hypolgycemic effect), semphigus (activated by sulphus-containing compounds), organ transplants (possible activation of immune rejection), or acute rhumatoid arthritis (possible increase in autoimmunity).

At least one case report associated garlic supplement use with a spontaneous spinal epidural hematoma. Based on reports of increased bleeding following surgery, the European Scientific Cooperation on Phytotherapy recommends against using garlic before, during or immediately after surgical procedures. Maximum safe dosages in

individuals with severe hepatic or renal disease are not known.

Cooked garlic is presumed to be safe in pregnancy and lactation based on its extensive food use. However, maximums safe dosage of standardized garlic extracts in these groups, as well as in young children and individuals with severe live or renal disease, has not been established. There have not been any studies on teratogenicity or embryo toxicity of any form of garlic.

Given the report of increased bleeding following a surgical procedure mentioned above, it might also be wise to avoid garlic supplementation during the period before and after labor and delivery.

Because garlic appears to possess antithrombotic activity, it should be used with caution in patients on anticoagulants. One report has indicated an increase in bleeding time in two patients taking both warfarin and garlic supplements. It is also conceivable that garlic could interact with other natural substances with anticoagulant effects, such as gingko, policosanol (also used for hypolipidemia), and high-dose vitamin E.

Garlic has been found to reduce plasma concentrations of saquinavir. In addition, two individuals with HIV experienced severe gastrointestinal toxicity from ritonavir after taking garlic supplements. 10

KNOWN HERBAL FORMULAS OF GARLIC

Oil of Garlic

Eight ounces of garlic, peeled and minced
Sufficient warm olive oil

Preparation:

Place the garlic in a large jar and use sufficient olive oil to completely cover the garlic; shake and allow to stand in a moderately warm place for two to three days; strain through unbleached muslin or cotton; bottle and keep in a cool place

Tincture - syrup of garlic

1 poundGarlic cloves, peeled and minced
Equal partsApple cider vinegar and distilled water (sufficient to cover the Minced garlic)
1 pintGlycerin
3 poundsPure honey

Preparation:

Place the garlic into a wide mouth jar, cover with the vinegar and water; close, shake

well together; allow to stand in a cool place for four days, macerating (shaking thoroughly) one to two times daily; add the glycerin, shake and allow to stand another day; strain with pressure and filter through muslin or tin linen cloth; add the honey and stir until thoroughly mixed; seal the jar tightly and keep in a cool place

Aromatic vinegar

3 ouncesCaraway or kummell seed, powdered (Carum carvi)
3 ouncesFennel seed (Foeniculum vulgare)
1 quartApple cider vinegar
1 pintGlycerin

Preparation:

Simmer the two herbs slowly in the apple cider vinegar; covered, for 15 minutes; strain and allow to cool; add the glycerin and mix in well

Dropsy, heart disease

8 ouncesParsley seeds, powdered (Petroselinum crispum)
2 ouncesLily-of-the-Valley root, cut or granulated (Convallaria majalis)
8 ouncesGarlic, expressed juice
8 ouncesYellow D or brown cane sugar
1 pintGlycerin

Preparation:

Boil the first two herbs slowly for 20 minutes in three pints of distilled or D-cell water; strain, return to the clean pot and reduce by simmering to one pint; set aside to cool and when warm but not hot, add the remaining ingredients and stir in well; when cool, bottle and keep in a cool place

Eczema, Pityriasis, psoriasis, ulcers, cancers, swollen glands, tubercular joints, necrosis, etc.

8 ouncesGarlic, expressed juice
8 ouncesGlycerin
1 pintBurdock seeds, strong decoction Arctium lappa

Preparation:

Mix the ingredients thoroughly together

Famous Four Thieves Vinegar

During the Dark Ages in Europe when plagues were rampant, those who ate garlic daily were not infected. The Famous Four Thieves garlic preparation was credited with saving many lives when a plague struck the city of Marseilles in 1722. This preparation is supposed to have originated with four thieves who plundered the dead bodies of plague victims while being protected the liberal use of aromatic garlic vinegar during the plague.

Recent research corroborates this protection.

Congenial Combinations

Aromatics:

Garlic odor and taste can be covered effectively by adding a few drops of oil of anise (Oleum anise - Pimpinella anisum; Illicium Verum), oil of caraway (Oleum cari - Careem carvi), oil of cinnamon (Leylanicum; Cinnamomum lourerii), or any other aromatic oil. 12

There are literally hundreds of garlic formulas, only a few of which are mentioned here. Garlic enjoys a long history of human use both medicinally and as a culinary ingredient

DOSAGES AND APPLICATIONS OF GARLIC

The formula, Oil of Garlic, is used to treat any ailment. Garlic is purported to treat - internally and externally.

Dosage: A few drops to two teaspoonfuls three to found times daily.

Tincture - syrup of Garlic

Also used to treat any ailment. Garlic is purported to treat this one, thus the reason for the sweetening with the sugar.

Dosage: One tablespoon, three to four times daily

Children: One teaspoonful or more according to age.

Tincture - syrup (glycerite) of garlic

Primarily the same formula mentioned above but sweetened with glycerin and honey instead

Dosage: One teaspoonful to one tablespoonful, three to four times daily between meals.

Uses:

Asthma, bronchitis, catarrhal conditions, phthisis, tuberculosis, coughs, dyspnea, heart

weakness, internal ulcerations, etc.

Aromatic vinegar is used to cover the pungent odor and taste of garlic and as an aid to flatulence.

Uses:

This should be used in place of the vinegar, water and glycerin. It is much more acceptable to those who cannot stand the taste and smell of garlic.

Dropsy heart disease formula is useful in the treatment of just what it's name indicates.

Dosage:

One to two teaspoonfuls in water as required; give the larger dosage to bring about diuresis, and to slow the heart's action and increase the tone of its' contraction, then give the smaller dosage, three to four times daily.

Eczema, pityriasis, psoriasis, ulcers, cancers, swollen glands, tubercular joints, necrosis, etc.

This formula is self-explanatory.

Administration:

Saturate lint or cotton and apply over the area; cover with plastic or wax paper, and secure with adhesive tape; change two to three times daily

Dosage:

Internal; one teaspoon three to four times daily, until the affections disappear

Nasal/Rhinitis (clogged and running nose)

Apply the garlic into the nostrils and take the garlic internally

Tuberculosis, whooping cough

Inhale the vapors of the freshly expressed juice that has been diluted with quantities of water

Oral

Nervous and spasmodic cough, hoarseness, etc.:

Take the freshly expressed juice mixed with syrup, honey or other appropriate vehicle

Stomach Chronic colitis, ulcerated, etc.:

Take the garlic oil internally over a period of time, two teaspoons, three to four times daily

Worms:

Give 10 to 30 drops of the fresh juice or one teaspoon of garlic syrup

Colds:

At the onset, place a clove of garlic on each side of the mouth between the teeth and cheek. The cold will disappear within a few hours or a day.

Chronic diseases of the upper respiratory tract (inflamed tonsils, salivary glands, neighboring lymph glands, pharyngitis, laryngitis, bronchitis, etc.:

Keep garlic in the mouth constantly during waking hours, renewing morning and evening after the cloves have absorbed the poisons; or use another appropriate garlic preparation such as a mixture of fresh minced garlic, cayenne pepper and honey.

Asthma, whooping cough, cough, pneumonia, smallpox, bronchitis, dyspnea, etc.:

When there is a spasm, give one teaspoonful of the syrup with or without water every 15 minutes until the spasm is controlled; then give one teaspoonful of the syrup three to four times daily. Use the foot poultice. Mix the freshly expressed juice with leaf lard and rub on chest, throat and between the shoulder blades.

Skin

Rheumatic Pains:

Rub the affected areas with cut garlic; or massage in garlic oil

Chapped and chafed hands or other parts:

Massage garlic oil well into the affected parts.

Earache, inflammation of the middle ear, ear disease:

Pack a small clove of garlic in gauze and place into the external ear passage; or drop four to five drops of oil into the ear channel, put over this a piece of cotton and keep warm. You may add a few drops of B & B Tincture also.

Pimples:

Rub several times a day with garlic; the visible eruptions will disappear without leaving a scar, but this does not remove the cause. Purify the skin by cleansing the blood

Wounds:

Garlic placed on the lip of unclean wounds will cleanse them in four to five days; grated garlic placed near the most virulent bacteria will kill them in five minutes.

Skin diseases, septic wounds:

Apply the garlic tincture on gauze and cover

Lip and mouth diseases (ulcers, fissures, etc.):

Apply a paste of garlic (made by rubbing garlic in a mortar) to the affected part on a sterile gauze and retain eight to twelve hours

Indolent tumors, ulcerated surfaces, wounds:

Apply the freshly expressed juice

Scrofulus sores, ringworm:

Apply a poultice of freshly grated garlic

Sciatica, paralysis, neuralgia pains:

Massage garlic over the affected area

Retention of urine (due to bladder weakness):

Apply a poultice on the abdominal and pubic regions

Athlete’s foot:

Wash the parts in hot, soapy water; rinse and dry well; massage in the garlic oil two to three times daily. Apply once a week to prevent recurrence.

Foot poultice:

Remove the outer membranes of the cloves of garlic; chop it up finely and mix one part garlic to one part petroleum jelly, enough to cover the bottom of each foot; with a thickness of about one fourth inch (for children use one part garlic to three part petroleum jelly). Apply olive oil to the feet first then spread on the preparation; bandage

each foot with soft cloth, place in plastic bags, then cover the feet with old socks to prevent the poultice from being kicked off during the night.

Remove the poultice in the morning, or retain it longer if desired. Always apply olive oil to the skin first to act as a barrier between the skin and the garlic. Do not use where the skin is irritated or extremely delicate, as it can cause blistering. This poultice is used to heal the entire body. 13

According to “Mosby’s Handbook of Herbs and Supplements and their Therapeutic Uses,” in most studies evaluating the effects of garlic, researchers used a dried, powdered form that contains 1.3 percent alliin, taken at a dose of 900 mg. daily. This supplies a daily dose of about 10 mg. of alliin, or a total “Allicin potential,” of four to five mg. 14

Significant technical difficulties arise in producing garlic of this type. The process of powdering and drying garlic, releases allinase, which converts alliin to allicin, which in turn spontaneously degrades.

Therefore, ordinary garlic powder contains negligible levels of alliin and allicin by the time it reaches the consumer. In light of this, dietary supplement manufacturers have devised a number of proprietary methods to produce garlic products with stabilized allinase or allicin content.

However, not all manufacturers agree that allicin or alliin are at all relevant to garlic’s activity. The widely available deodorized form of garlic called Kyolic lacks allicin and many other constituents of garlic. Nonetheless, such products have provided positive results in studies and appear to have fewer gastric side effects.

Garlic is also sold as an oil extract. Such products contain no allicin or alliin but high levels of ajoene, dithiins, and other breakdown products.

MY PERSONAL EXPERIENCE WITH GARLIC

The reason I chose to do my thesis on garlic is because I have had so much experience with this wonderful plant.

My father is an avid gardener who lives in the beautiful Upper Peninsula of Michigan. He has grown garlic for as long as I can remember. My mother, an excellent cook, would use his garlic in several of her recipes. She would put it in her spaghetti sauce, barbecued chicken, gravies and any number of delectable dishes she would make.

One of the types of garlic he grows that I like the most, simply for the sheer size of it, is the elephant garlic. The bulbs and cloves of this plant are huge. Also, I have a friend who makes garlic braids that she hangs and uses in her kitchen. They make a beautiful addition to her home. That is my culinary experience with garlic. My medicinal

experiences with the wonderful herb goes back a ways, as well. I was born with the auto-immune disorder Glomerulonephritis.

In order to calm my raging immune system, the allopathic doctors used high doses of corticosteroids on me which presented their own host of symptoms and illness. One of the many iatrogenic infections I've had to deal with is frequent infections of the fungi Candida albicans. Garlic works wonders on this insipid infection. I have used garlic both orally and topically. Whenever I feel an ear infection coming on, I always reach for the garlic and mullein ear oil sold at my favorite health food store, Dale's Natural Foods of Flint, Michigan.

This oil combination works very well and I know when I place three to four drops of oil into the affected ear, it will feel much better the next day. I have also recommended this to my niece and her children who have also suffered from chronic ear infections with excellent results.

I also use a garlic supplement from the company Enzymatic Therapy called Garlinase. I have tried others but this one seems to work best for me. When I first started taking this supplement, I did notice some gastric symptoms. They have all since disappeared though, with continued treatment.

When my aforementioned niece was diagnosed with a vaginal yeast infection while pregnant with her third child, she was concerned about the possible side affects of the prescribed medication. She remembered her success with the garlic ear oil, and asked me if oral garlic supplementation would help with this problem too. I told her it couldn't hurt, so she decided to try it with great success.

In conclusion, I feel that the humble little herb some have called the stink lily, is a very useful and valuable plant that every living animal can benefit from in some capacity.

HISTORY OF GARLIC

by Tammy D. Motteshard

Nutritionally speaking, we are living in the most exciting era, in the history of the world because we live in a era nutritional awareness. For centuries, orthodox medicine, has kept us in the dark by the outdated Pasteurian concept, that germs are vicious invaders. In the illuminating light of modern research we now know that our lifestyle and habits, especially our nutrition play key roles in our health.

Throughout medical history, the philosophies and concepts of disease and the approved methods of healing have changed with almost every generation. At one time, doctors believed that disease was caused by demons. Later generations of doctors used blood letting as a cure-all, since “bad blood” was considered to be the cause of all disease. Now teachers of natural healing techniques know that “bad blood” is just part of outdated Pasteiroan concept of disease. Although accepted philosophies of disease have varied with nearly every generation somehow orthodox medicine has never seriously considered Hippocrates’ philosophy of health and disease: that most ills are of man’s own making and are the result of his violation of elementary rules of health. Hippocrates the “Father of Medicine” perhaps the greatest healer that ever lived, wrote 2500 years ago “Let your food be you medicine, let your medicine be your food.” Garlic, more than any other food fits into Hippocrates’ description of an ideal food, that which is both a super-nutritious food and a miracle medicine.

Garlic has been known has one of the oldest known horticultural crops in the Old World. Egyptian and Indian cultures referred to garlic 5000 years ago and there is clear historical evidence for its use by the Babylonians 4500 years ago and by the Chinese

2000 years ago. Some writings suggest that garlic was grown in China as far back as 4000 years ago.

Not only during the time of the Babylonians and the Chinese but during the time of the Pharaohs, when Egypt was at the peak of its power, garlic was given to the laborers and slaves who were building the great pyramids in order to increase their stamina and strength as well as to protect them from disease. Herodotus a Greek historian back in the fifth century A.D., wrote about Egyptian pyramids having inscriptions of Egyptian characters describing the amount of garlic consumed by the workers and slaves who were building the great pyramid of King Khufu (Cheops). Not only did workers and slaves consume garlic, but also it has been written that even the Egyptian soldiers would consume garlic to increase their courage during battle.

Likewise, Egyptian unfaithful husbands relied on garlic's unique "scented" properties. According to Charmidas, they would chew a clove or two on their way home from visiting their mistresses so that their whole body was impregnated with the odor, ensuring that a jealous wife would be unable to detect any stranger's perfume.

At the same time the Egyptians were using garlic, it was estimated the Persians used 25 kg of garlic each day.

Later, Bible clearly stated that for 400 years the Israelites were slaves in Egypt sometime around 1730 to 1330 B.C. While and no doubt being forced to help build pyramids, garlic was a part of their diet. Shortly after they had been delivered from slavery by Moses, and were traveling through the desert country of the Sinai Peninsula, they began to miss some of the food they had been eating while in slavery, one of the food missed was that of garlic.

"We remember the fish which we did eat in Egypt for Nought, the cucumbers, and the melons, and the leeks, and the onions, and the garlick." (Numbers 11:5) “According to Helen Noyes Webster, who interpreted the above quotation in her book, Herbs, How to Grow Them and How to Use Them, the Israelites traveling with Moses obviously missed the garlic when they went toward the Promised Land. If Moses had carried garlic, the Israelites may have been able to avoid intestinal putrefaction from eating the desert's available lizards and snakes.”

Besides the Israelites, the Greeks at the time of Homer used garlic a lot. Homer mentions garlic in his famous Odyssey. The deity Mercury, or Hermes, gave garlic to Odysseus as a protection against the goddess Circe's evil sorcery in which she turned men to swine. The athletes of the original Olympic games in ancient Greece traditionally chewed a clove of garlic before participating in the games. Garlic was placed by the ancient Greeks on the piles of stones at crossroads as a supper for Hecate. According to Pliny The Elder, a Roman senator, historin, and the Commander of the Emperial Fleet at the naval base of Misenum, garlic and onion were invocated as deities by the

Egyptians at the taking of oaths. The Egyptians may have seen garlic as food for their gods, but the Greeks, prohibited garlic.

Greeks were not the only ones who prohibited garlic. Garlic has been known universally as "the stinking rose", the term reportedly going back to Greek and Roman times. At that time garlic was sold in large Greek towns and in Roman cities by peddlers. Garlic was a symbol of the common people since no noble would debase himself by smelling of garlic! Furthermore, every Greek who wished to enter the temple of Cybele, mother of the gods, had to pass a strict breath test aimed at detecting garlic. Horace explained that garlic could be absorbed by the iron stomachs of the working class but made those used to more refine cooking feel unwell. In the year 1300, "You reek of garlic! Get out!" was the irrevocable judgment that befell any knight who dared appear at the court of King Alfonso de Castille with garlic on his breath. He was banned from court and not permitted to speak to other courtiers for an entire week.

In addition to the Egyptains, the Vikings also valued garlic. The Vikings and Phoenicians took healthy supplies of garlic with them on every voyage. Crusaders returning to Europe after far away battles are generally credited with bringing garlic back with them to Europe. By 1000 A.D. garlic was grown in virtually the entire known world, and was universally recognized as a valuable plant. Many cultures elevated garlic beyond a dietary staple, and suggested that it had medicinal and even spiritual purposes.

Just like the Vikings who praised garlic for it’s medicinal and spiritual purposes, garlic was equally important to the Romans. Praised by Virgil and the poets of antiquity, garlic was progressively introduced into various parts of Europe during the Romans' campaigns. Henri IV of France was so fond of garlic that, according to a Jurancon legend, the good king must have been baptized with a clove of garlic. Despite his royal station, the king was not above lending a hand in the kitchen: he became famous for his stewed chicken… studded with garlic, of course.

For a variety of reasons, garlic's popularity began to wane in the beginning of the 20th century, and World War II primarily found garlic only in restaurants and gourmet shops. Recently, garlic has rebounded in stature and reputation, and though not as valuable as it was throughout early human history, it is a valuable cash crop with a multitude of uses.

Likewise garlic was not only valued in agent times, but the modern countries of Germany and Czechoslovakia, have an old Proverb and in their folklore that says “ A bite from a watch dog is much more cutting and painful if the dog has eaten garlic at the New year.” “Garlic is as good as ten mothers.”

Modern representations of the vampire legend always seem to show braids of garlic hanging from the beams of kitchens in which poor peasants tremble with fear. The

belief that garlic could combat evil dates back to the medieval era when children would play or work in the fields with cloves of garlic hung around their necks to protect them from the evil spells of the local witch… because everybody knows that witches love children!

By the 19th century this custom gradually changed, and cloves of garlic adorned only the necks of cows and heifers.

Can a clove of garlic a day keep the doctor away? Garlic has been an important part of life for centuries, across cultures and millennia. In fact, no other single food has had as many applications as this pungent plant. Garlic has been used to spice food, protect against vampires and witches, prepare soldiers for war, cure colds, heal infections, and treat ailments ranging from heart disease to cancer and even the plague.

Consumption of garlic in the USA has more than tripled during the 1990s because of its growing popularity in foods and as a dietary supplement or herbal remedy. Americans consumed 3.1 pounds of garlic per person in 1999, compared with 1 pound in 1989, the Agriculture Department's Economic Research Service reports. To meet that demand, acreage devoted to domestic production of garlic rose during the decade from 16,000 acres to 41,000 acres.

In the United States, in addition to its use in dietary supplements and herbal remedy, garlic is used in cooking and food preparation. Garlic is now second in sales only to Echinacea as a best selling herbal supplement. As it grows in popularity, mixed reports and controversy continue to surround claims of its medicinal properties. It has been, in fact, probably the most studied herbal product, with about 1,200 medical and pharmacological reports, and an additional 700 or so chemical studies, now published. With that much scientific attention, one would think that we would be able to clearly sort out fact from myth!

Today, after close to 6000 years of folklore, scientific research shows that garlic is an amazing resource of phytochemicals (botanicals) whose wide range of actions can benefit health. Studies show that garlic protects against infection and inflammation, lowers the risk of heart disease, and has anticancer and antiaging effects.

To sum up garlic was prized for its antimicrobial effects long before microbes were even discovered. French priests of the Middle Ages used garlic to protect themselves against bubonic plague. During World War I, European soldiers prevented infection by putting garlic directly on their wounds. Nearly every culture has used garlic for general health and longevity, from ancient Egyptians, Israelites, Greeks, Babylonians, Romans, and Chinese down to the colonial Americans. Today, garlic is one of the best selling preventive medicines in Europe, where it is accepted as safe and effective by both medical authorities and government officials

LOCATION OF GARLIC

Garlic is a handy herb that will grow right in your own yard, taking very little space, these single buttons or cloves, make up the bulb, and are planted in the fall. By going through the winter garlic will come up the following year in the form of a bulb, with a number of cloves or buttons. When planted in the spring, they will generally be just a larger button by fall and not become a bulb. Some people will put the garlic buttons into the refrigerator (not freezer) and keep cold for a few weeks, bring them out into room temperature for several weeks, and repeat this process several times. Thus, the garlic now believes it has gone through several winters and it matures enough to develop from a clove into a bulb. Rather sneaky we would say, but if it works, fine!

Besides planting garlic in your yard you can plant around rose bushes and other aphid infested plants and the aphids will disappear. Gardeners have reported that they plant garlic between the rows of cauliflower, tomatoes, etc., and the garlic will discourage plant-destroying bugs, cut worms, etc. Here "you can have your cake and eat it too" for you can get the value of garden-assistance from this herb during the growing season, and then thin them out in the fall to use as a food and a healing herb during the winter.

In addition to growing garlic in your gardens and around your yard, garlic is known to grow in the woods and has a very acrid taste and smell, but it also has very small bulbs, which would hardly render it of practical use. Ramsons, one species of garlic is also very generally known as 'Broad-leaved Garlic' or the wild wood garlic, if it wasn’t for its evil smell would rank among the most beautiful of our British plants. Its broad leaves are very similar to those of the Lily-of-the-Valley, and its star-like flowers are a dazzling white, but its odor is too strong to admit of it being picked for its beauty, and many woods, especially in the Cotswold Hills, are spots to be avoided when it is in flower, being so closely carpeted with the plants that every step taken brings out the offensive odor.

Like the Ramsons, Crow Garlic also has very small bulbs and the labor of digging them up would be great. Widely distributed and fairly common in many districts, pastures and communicates if eaten by cows it is said to rank the taste of milk and butter.

Garlic grows wild only in Central Asia (centered in Kyrgyzstan, Tajikistan, Turkmenistan, and Uzbekistan) today. Earlier in history garlic grew wild over a much larger region and, in fact, wild garlic may have occurred in an area from China to India to Egypt to the Ukraine. This region where garlic has grown in the wild is referred to as its "center of origin" since this is the geographic region where the crop originated and the only place where it flourished in the wild. In fact, although we sometimes hear about "wild garlic" elsewhere in the world, this is the only region where true garlic routinely grows in the wild without the assistance of human propagation. There are other plants locally referred to as "wild garlic", but these are invariably other species of the garlic genus (Allium), not garlic itself (Allium sativum). For example, Allium vineale is a wild

relative of garlic that occurs in North America and is commonly called "wild garlic”.

Garlic has been cultivated for more than 5000 years. Garlic will do best in full sun but can be grown with satisfactory results in partial shade. Garlic can tolerate periods without rain, but best results come from plants that receive regular watering. Garlic is grown as an annual, started from cloves broken out of the bulb. In mild climates garlic will grow all winter; in cold climates areas, it will go dormant in the winter, and should be mulched.

Allium longicuspis is said to be the wild ancestor of garlic; and according to Vvdensky it is native to central Asia where it extends from mountainous Turkmenia North-Eastwards in the Pamir-Alai and Tien Shan regions. DeCandolle says that "The only country where garlic has been found in a wild state, with the certainty of its really being so, is the desert of the Kirghis of Sungari," in the central Asian steppes. On the other hand, he says "Garlic has long been cultivated in China under the name of suan. It is written in Chinese by a single sign, which usually indicates a long known and even a wild species. The floras of Japan do not mention, it whence I gather that the species was not wild in Eastern Siberia and Dahuria, but that the Mongols brought it into China."
The first mention of garlic in America is by Peter Martyr, who states that Cortez fed on it in Mexico. In Peru, Acosta says 'the Indians esteem garlic above all the roots of Europe.' It was cultivated by the Choctaw Indians in gardens before 1775 and is mentioned among garden esculents by American writers on gardening in 1806 and since.

Gilroy is centrally located within a short driving distance of Monterey Bay, Santa Cruz, the San Joaquin Valley, and the San Francisco Bay Area. Best- known as the "Garlic Capital of the World," it is home of the annual Garlic Festival in July.

Besides Gilroy California being the “Garlic Capital of the World”, California’s two major commercial varieties are the California Early and the California Late. With such names, it comes as no surprise that California is the primary producer of garlic. In fact, only four other states harvest more than 100 acres of garlic: Nevada, Oregon, Washington and New York.

California Late Garlic is considered California’s most valuable commercial garlic variety. The late garlic is good storage garlic, the one you're most likely to be seeing well into winter, with a strong flavor, high solid content, and firm smooth bulbs.

However the California Early Garlic matures about one month earlier than California Late, and has greater yield than the Late, but doesn't store as well because of its higher moisture content.
Creole Garlic being heat tolerant is one of California's main varieties and has become the mainstay in the states warmer regions. It matures about one month earlier than California Early. This variety is rather inconsistent in its flower production. Sometimes it

sends up a seed stem that grows as high as three feet and develops a glorious flower at the top. The Creole is the variety that is filled with bulbs of various sizes, all rather randomly arranged, with some cloves on the small side and ganged up in the sheathing material with one or more other cloves.

Although the Hard-neck Garlic (Allium sativum subsp. ophioscorodon) is by far the choice of small-scale growers, it grows well in northern and central states. Also Soft-neck garlic (Allium sativum subsp. sativum), usually found in supermarkets, thrives in warmer climates, including the South, the Southwest, and southern California.

To sum up garlic is an adaptable species, and can be grown in most mild climate states. There are some varieties of garlic that have been selected to grow in cold climates, often with better garlic flavor than the varieties grown in mild climates.

CHEMICAL CONSTITUENTS OF GARLIC

Garlic contains 0.1-0.36% of a volatile oil these volatile compounds are generally considered to be responsible for most of the pharmacological properties of garlic. Garlic contains at least 33 sulfur compounds like aliin, allicin, ajoene, allylpropl, diallyl, trisulfide, sallylcysteine, vinyldithiines, S-allylmercaptocystein, and others. Besides sulfure compounds garlic contains 17 amino acids and their glycosides, arginine and others. Minerals such as selenium and enzymes like allinase, peroxidases, myrosinase, and others. Garlic contains a higher concentration of sulfur compounds than any other Allium species. The sulfur compounds are responsible both for garlic's pungent odor and many of its medicinal effects. The odor is formed by the action of the enzyme allinase on the sulfur compound alliin. This enzyme is inactivated by heat, which accounts for the fact that cooked garlic produces neither as strong an odor as raw garlic nor nearly as powerful physiological effects.

However one of the most biologically active compounds, allicin (diallyl thiousulfinate or diallyl disulfide) does not exist in garlic until it is crushed or cut; injury to the garlic bulb activates the enzyme allinase, which metabolizes alliin to allicin. In addition allicin is further metabolized to vinyldithiines. This breakdown occurs within hours at room temperature and within minutes during cooking. Allilcin, which was first chemically isolated in the 1940's, has antimicorobial effects against many viruses, bacteria, fungi and parasites.

Like allicin, ajoene, is another chemical constituent thought to be most important to health. Ajoene is a garlic-derived compound produced most efficiently from pure allicin and has the advantage of a greater chemical stability than allicin. Several clinical trials and in vitro studies of ajoene have demonstrated its best-known anti-thrombosis, anti-microbial and cholesterol lowering activities. Recently, topic application of ajoene has produced significant clinical response in patients with skin basal cell carcinoma. Ajoene was shown to inhibit proliferation and induce apoptosis of several human leukaemia

CD34-negative cells including HL-60, U937, HEL and OCIM-1.

Besides it’s anti-thrombosis, anti-microbial and cholesterol lowering activities, ajoenes and dithiins are among the most active compounds formed from fresh garlic. Ajoenes have been shown to: possess antithrombotic (anticlotting) activity in human platelet suspensions; possess antitumor activity; display significant antifungal activity, inhibiting the growth of Aspergillus niger , Candida albicans , Paracoccidioides-Brasiliensis , and Fusarium species; inactivate human gastric lipase, a sulfhydryl enzyme involved in the digestion and adsorption of dietary fats; function as antioxidants by inhibiting the interactions of leukocytes which mediate release of superoxide anion.

George Barany, chemist at the University of Minnesota, reports that ajoene is as potent as aspirin in preventing sticky red blood platelets from clumping together. Related factors lengthen clotting time, while others actually dissolve clots. All three effects can impact on heart attack and stroke prevention.

Besides George Barany, National Cancer Institute nutritionist Elaine Lanza states "There is still a big interest in the area of fat and fiber, but right now, there is more emphasis on the idea of trace compounds, non-nutrients in vegetables and fruits that work against tumor formation." "Garlic tops the list as a source of these trace elements or micronutrients."

The two major compounds in aged garlic, S-allylcysteine and S-allylmercapto-L-cysteine, had the highest radical scavenging activity. In addition, some organosulfur compounds derived from garlic, including S-allylcysteine, have been found to retard the growth of chemically induced and transplantable tumors.

As I have said garlic has a wide range of powerful physiological effects. I believe that Dr. Herbert Pierson, a toxicologist who (until recently) headed the National Cancer Institute's "designer foods" program: said it best "Garlic is a veritable pharmacopoeia. That's why garlic has been found in every medical book of every culture ever. For thousands of years, garlic has been used for the treatment and prevention of disease. So there has to be something there." "A huge data base exists documenting health benefits ranging from cardiovascular effects to cancer inhibition, from the slowing down of aging to the detoxification of heavy metals and other poisonous chemical substances."

MEDICINAL QUALITIES OF GARLIC

Garlic is well known and has been one of the most important medicines in the East and West for over 5,000 years. Known for it’s medicinal action and uses as an diaphoretic, diuretic, expectorant, stimulant, antibacterial, antifungal, alterative, antispasmodic, cholagogue, vulnerary, and vermifuge. Wonderful effects and healing powers have been ascribed to garlic. It possesses stimulant and stomachic properties in addition to

its other virtues. Garlic an natural penicillin has only 1% of the impact of sinthitic penicillin but it is more effective with gram negative bacteria than penicillin. Modern science has done extensive research and explored the chemistry and pharmacology of garlic and with this research proves that garlic is a valuable aid to keep the heart and blood vessels healthy.

In addition to keeping the heart and blood vessels healthy research has proved that garlic lowers you blood pressure, lowers your cholesterol, fends off respiratory infections, infections of the urinary tract and digestive tract. Bacteria shown to be susceptible to garlic in the test tube include species from Staphylococcus, Escherichia, Proteus, Salmonella, Providencia, Citrobacter, Klebsiella, Hafnia, Aeromonas, Vibrio and Bacillus genera. Fungi demonstrated also to be susceptible to garlic in lab tests include the genera Microsporum, Epidermophyton, Trichophyton, Rhodotorula, Torulopsis, Trichosporon, Cryptococcus neoformans, and Candida, including Candida albicans. It is reported that garlic is more effective against pathogenic yeasts than nystatin, especially Candida albicans.

Besides what I have listed above, in Paavo Airola, Ph.D. book The Miracle of Garlic he states the following. “In the controlled and reliable clinical studies animal as well as human, reported in major medical journals world wide in the last couple of decades, garlic has been shown to have almost miraculous preventive and or therapeutic properties in the treatment of variety of diseases.” Here is a partial list of ailments that have been successfully treated by raw garlic or garlic extracts: high blood pressure, atherosclerosis, tuberculosis, diabetes, arthritis, cancer, hypoglycemia, bronchitis, asthma, whooping, pneumonia, common cold, allergies, intestinal worms, intestinal putrefaction and gas, parasitic diarrhea, dysentery and insomnia.

In addition to the above list of ailments, in my research I found that garlic also shows miraculous properties in treating heavy metal poisoning. Dr. Paavo Airola book The Miracle of Garlic he relates the following regarding heavy metal poisoning and the use of garlic. “ The threat to our health from environmental poisons, and specifically heavy metals, is increasing every day. Lead, mercury, cadmium, arsenic, and copper poisoning are becoming epidemic. Lead and mercury come mostly from polluted air plus industrial and medical uses, such as lead containing paint and mercury containing amalgam dental fillings. Contaminated fish are also a common source of mercury poisoning. Copper enters our bodies usually from copper water pipes, commonly used in plumbing.”

Not only is heavy metal poisoning a threat to our health it is also difficult to treat. Chelation treatment is the only known medical treatment that is effective in detoxifying the body of heavy metals. Until now, the Japanese study conducted by Drs. Ikezoe and Kitahara, shows that Kyolic a raw garlic extract developed in Japan is effective in protecting the body from the toxic effects of the heavy metal poisoning. Dr. Kitahara and his co-workers, Ikezoe and Yamada, conducted controlled studies on animals and

humans. The method of study was observation of release of potassium and hemoglobin by heavy metals from erythrocytes, and destruction of erythrocyte membrane. The conclusion of the study was that garlic preparation prevented the poisoning effects arising form heavy metals and protected the erythrocyte membrane for destruction.

Equally important garlic has been known for its anticancer and tumor properties. Propyline sulfide, a garlic and onion extract found to be mildly effective against tumors, acts on the enzyme liposaminase, related to cancer development if not properly controlled. Dr Benjamin H.S. Lau of the Loma Linda University School of Medicine suggested in 1992 that garlic is a “biological response modifier”; it increases the body’s defenses against cancer. Lau’s research found that garlic’s sulfur compounds boost the activity of macrophages and T-lymphocytes, immune system components that are summoned to destroy tumors.

In addition to garlic’s sulfur compounds that boost the immune system, garlic contains a series of natural antioxidants that may help to explain its strong anticancer and antitumor activity. Antioxidants disarm reactive body chemicals that can trigger the onset of cancer. By inhibiting the harmful action of oxygen (impacting on free radical activity), garlic possibly limits cell membrane damage, which is one mechanism in the aging process.

In a like manner to the research done by Loma Linda and the Synergies in the Life of Science the American Cancer Society states the following on how garlic is effective against cancer. “Garlic is promoted for use as a preventive measure against the formation of cancer. Although several compounds in garlic may have anti-cancer properties, the allyl sulfur compounds are said to play a major role. These compounds are reported to prevent cancer by decreasing the activation of carcinogens within the body, reducing the production of carcinogens, and increasing the body's ability to repair damaged DNA”.

Besides the American Cancer Society, The National Cancer Institute central files show that the incidence of cancer is extremely low in France where garlic consumption is the greatest and that garlic eaters in Bulgaria do not have cancer. It is reported in a textbook on pharmacognosy that a physician in British Columbia has successfully treated malignant situations by prescribing the eating of garlic.

There is an old folk tale that states: “Eat onions in March and garlic in May, Then the rest of the year, your doctor can play”. Garlic has been used for centuries as an effective preventive treatment for colds and flu. Medical science considered the old folk tale a superstition and an “old wives tale” of ignorant peasants. Finally, Dr J. Klosa, M. D. scientifically tested the effectiveness of garlic as a cold remedy, and reported in the Medical Monthly in March 1950. The report stated: “cold symptoms like grippe, sore throats, runny nose, fever, cough, and rhinitis were cut short in every case”. All Patients showed a distinct lessening of the period of the disease as well as of convalescence

required. Both raw garlic and garlic preparations are effective.

Likewise, raw garlic studies reported that garlic juice diluted 30-40 times stops the growth of certain types of bacteria in a nutrient media--garlic has strong germicidal properties, which are not found in other plants. When aneurinase bacteria grow in the body, the majority of the internally produced vitamin B1 is spoiled by this bacteria--garlic shows antipyretic effects when it, diluted with water, is applied externally to a person's body at times of high fever.

Beside garlic being effective for colds and flu, new research shows that taking garlic during pregnancy can cut the risk of pre-eclampsia (raised blood pressure and protein retained in the urine). Studies reveal that garlic may help to boost the birth-weight of babies destined to be too small. The research was carried out by Dr D Sooranna, Ms J Hirani and Dr I Das in the Academic Department of Obstertrics & Gynaecology at the Chelsea & Westminster Hospital in London UK. They concluded that although pre-eclampsia and growth retardation are complex multifactoral conditions, taking standardised garlic tablets (for further details please contact us) throughout pregnancy might decrease the chances of these types of complictions at birth. They focused on growth retarded babies and pre-eclampsia, a potentially dangerous condition for mother and baby which occurs in about one in ten pregnancies. Experiments by the research team showed that adding extracts of garlic to cells from the placenta of women likely to suffer from these conditions was able to quickly stimulate growth. Furthermore, the activities of key enzymes that are reduced in the abnormal pregnancies were significantly increased when garlic was added.

In Dr Christopher’s newsletter on garlic he states the following on garlic’s antibacterial properties: “Many marvelous effects and healing powers have been claimed for garlic. It is probable that none of them were exaggerated. I, myself, have seen it cure tuberculosis, asthma, bronchitis, several skin diseases, stomach ulcers, leg ulcers, athletes foot, furunculosis, abscesses, epilepsy, and special affinity for the respiratory tract, lungs, bronchi, and so forth, though it diffuses itself through the whole system and wherever there is pus, it is a certain and safe remedy. The use of garlic in the World War as an antiseptic was most sensational. In 1916, the British government asked for tons of the bulbs offering one shilling a pound for as much as could be produced. A great quantity of it was used for the control of suppuration in wounds. The raw juice was expressed, diluted with water, and put on swabs of sterilized sphagnum moss, which was applied to the wounds. Where this treatment was given, it has been proved that there has never been one single case of sepsis of septic results”.

One component of garlic, allicin attacks more than 23 kinds of bacteria, including staph and salmonella, as well as 60 types of fungi and yeasts, is effective against all of 17 most dangerous fungi (Candida albicans included) expels tapeworms, and restores sensation in areas affected by leprosy. Dr. Byron Murray, Professor of microbiology at Brigham Young University has seen allicin immobilize 90 percent of a virus in a

laboratory dish within 30 minutes. Allicin is known to destroy viruses that cause herpes and upper respiratory infection.

Beside garlic destroying viruses types of bacteria The U.S. Dept. of Agriculture's Human Nutrition Center in Beltsville, MD, has demonstrated that the herb can reduce not only levels of blood fat, but blood sugar, too at the same time increasing the level of insulin in the blood. Which means better diabetes control.

On the other hand hypoglycemia means low blood sugar the opposite of diabetes. Garlic seems to have the same affect on hypoglycemia has it does on diabetes. Demonstrating several of the common sulfur containing compounds a special sugar metabolism regulating factors which help normalize both high and low blood sugar levels. Garlic is an excellent detoxifier, it improves the general metabolism and has a stimulating effect on the liver. It is medically known that the liver plays a key role in diabetes and hypoglycemia.

In conclusion the empirical and scientific evidence presented in this thesis shows that garlic is indeed a tremendous nutritious health food and a miraculous healing plant. I believe that garlic can truthfully be called “ the king of the vegetable kingdom”. Garlic in its natural form incorporated with a healthy diet is beneficial to your health, prevents disease and will help prolong life

CONTRA-INDICATIONS OF GARLIC

Garlic has been used, not only as a medicinal herb but also a culinary herb. In my research I found that there are no general contraindications for garlic. But, some people may find that they are sensitive to it, or find that for some reason it does not suit them. Raw garlic and garlic oil may irritate the digestive system and therefore should be taken with meals.

Equally important to some people who may not only be sensitive to garlic, but patients with bleeding disorders or who are taking anti-coagulants (warfarin, coumadin, pentoxifylline) or even aspirin, should consult with a doctor before using a garlic supplement. If you are scheduled to have surgery, it is a good idea to discontinue garlic supplementation two weeks before hand. At a minimum, tell your surgeon what herbs you are taking. Garlic and Ginkgo biloba together may predispose to bleeding in susceptible individuals.

In short women who are pregnant or lactating can use garlic safely. Supplements should be discontinued several weeks before delivery to prevent excessive bleeding. Garlic can be found in breast milk, this may cause stomach upset in sensitive infants

KNOWN HERBAL FORMULAS OF GARLIC

One formula listed here among the many formulas should be Dr. Christopher anti-

plague formula. This formula has been used with great success when flu epidemics have broken out in various communities. The combination of herbs is effective in boosting the immune system to work against viruses and bacteria.

Step one in making the anti-plague formula is to make an extraction of garlic juice and vinegar. Using 8 parts apple cider vinegar and 2 parts garlic juice, determine how much herb to use by deciding how much formula you want to make, such as a gallon, 128 ounces or 4 liters, and divide this by the total of parts in the formula. The anti-plague formula has 22 parts. This means you will need 32 ounces of apple cider vinegar, 8 ounces of garlic juice and 4 ounces of the individual herbs. Make a coarse blend of garlic in apple cider vinegar (This is the good apple cider vinegar, the kind with the mother still in it.) and store it in a dark, cool place for four days. Filter the blend in cotton, muslin cloth, and squeeze out as much garlic juice as possible. Ultimately, you will use 8 parts apple cider vinegar and 2 parts fresh garlic juice, so use enough garlic to obtain your proportion and record the amount of vinegar used as part of its proportion and calculate the amount of garlic juice expressed. (2 to 3 pounds of garlic is a good range to use for one gallon of Anti-Plague) It takes approximately one pound of garlic to extract 8 oz of juice.

Step two you will need to make each of the follow preparation to the seventh power, distilled decoction of each of the below herbs. Each herb needs to be prepared separately. Do not use aluminum, Teflon, or cracked porcelain. You can use glass corning ware, stainless steel or whole porcelain to keep unwanted additives out of your preparations. Soak each herb, 4 ounces or 113 grams, if you are making a gallon, for four plus hours in enough distilled water to cover it completely. After soaking, add enough distilled water to bring the amount of solution to 16 ounces, 2 cups or ½ liter. Simmer the herbal solution over very low heat in a covered pan for thirty minutes. Strain the liquid into a clean pan and reduce the amount of liquid to ¼ by simmering over very low heat uncovered. Set each aside till all are prepared. Refrigerate if not completed on the same day. Herbs uses for this formula are: comfrey root, wormwood, lobelia, marshmallow, white oak, black walnut, mullein, skullcap, uva-ursi.

In step three you will warm the below ingredients to a liquid state, and the remainder of the vinegar and then add all your decoctions, mix well, let cool and store in dark bottles. Place in the refrigerator if you plan to store for a long term. The Anti-plague formula is built around garlic, which is well known as a natural antibiotic. This formula because of the garlic will destroy the unnecessary and harmful bacteria throughout the body.

In addition to the anti-plague formula the formula for colds and infections is another combination to assist in relieving colds. This formula is made up of garlic, parsley, and watercress. (Taken from Dr. Christopher School of Natural Healing book) Sometimes along with a cold or flu you will have a build up of mucus the following cough syrup will aid in cutting the extra mucus and help eliminate coughs. For this formula you will need one cup of honey, five to ten cloves of garlic, juice from one lemon, one tablespoon of

sage leaf and one tablespoon of lemon peel, fresh or dried. Pour honey into a blender and the garlic cloves, lemon juice, sage leaf, and lemon peel. Blend on high speed until smooth. Let the blend steep for several days away from heat. Squeeze out the liquid, filter and bottle it for use up to one week. If you want to store it longer refrigerate.

Equally important to the cough formula is the earache oil a classic formula and a must for every family medicine chest and first-aid kit. It combines the bacteriostatic properties of mullein flowers with the antibacterial action of garlic to prevent and ease earaches, was buildup and irritation. You will need one tablespoon of fresh garlic clove, two tablespoons fresh or dried mullein flower, and half cup olive or almond oil to cover. Crush the garlic well and break up mullein flower; place herbs into blender jar. Cover with oil and blend well. Pour the mixture into a clean, clear jar and store away from heat and light. Shake the jar daily to prevent spoilage and keep the herb submerged in oil at all times. After two weeks, strain the herb for the oil and discord. Store oil in the refrigerator.

Another great formula that can be used for colds or a great tasting salad dressing is Professor Cayenne's Super Tonic. For this formula you will need one part fresh chopped white onions or the hottest onions available. One-part fresh chopped garlic cloves, one part fresh grated ginger root, one part fresh grated horseradish root and one part fresh chopped cayenne peppers the hottest peppers available. Fill a glass jar ¾ of the way full with equal parts of the above chopped and grated herbs. Then fill to the top with raw organic unfiltered, unbleached, non-distilled apple cider vinegar. Close and shake vigorously and then top off with more vinegar if necessary. Begin this formula on the new moon and strain and bottle on the full moon. Shake bottle everyday until the full moon. Filter the mixture through a clean piece of cotton, bottle and label.

Equally important to the formula's listed above are the following formulas from Dr. John R. Christopher: Asthma Formula, Extracts of Comfrey leaf, Mullein, Garlic and glycerin, Garlic Oil, Garlic Oil in a base of Olive Oil and Tea Tree Oil as a preservative, Respiratory Relief Syrup, Onion Juice, Garlic Juice, Fennel, Nettle, Mullein and Chickweed, Cold sore relief, Fresh Golden Seal Root, Garlic and Skullcap, Blood Circulation Formula, Cayenne, Ginger, Golden Seal, Ginseng, Parsley and Garlic, Breathing Aid Formula, Brigham Tea, Horseradish, Marshmallow, Cayenne, Garlic, Rosehips, Watercress, and Feverfew, Bowel Formula, Aloe, Senna, Cascara Sagrada, Gentian Root, Ginger Root, Garlic, Cayenne, Turkey Rhubarb, and Flax Seed, and X-Ceptic, Oak Bark, Golden Seal Root, Myrrh, Garlic and Capsicum.

To sum up these wonderful formulas listed above let's not forget that Garlic combined with Cayenne can have powerful effects on the body. While they have the natural ability to enhance circulation and thwart bacteria, they can exhibit those common odors we all know. By adding Parsley which contains magnesium to garlic and cayenne you not only help maintain blood levels of calcium and nourish the nerves, it also has the natural ability to neutralize the malodorous effects of plants like garlic.

DOSAGES AND APPLICATIONS OF GARLIC

Garlic is best used fresh and uncooked. It can also be purchased as a supplement, including so-called deodorized capsules, although their efficacy is doubtful. Take 1-2 cloves of raw garlic chopped per day, 4-6 for intensive use, and 2-3 capsules of dried powdered garlic per day or what your doctor proscribes. Best if taken with a meal to avoid upsetting the stomach and the digestive system.

In a like manner has fresh garlic the following formulas from Dr Christopher dosages are as followed: Anti-Plague formula, this formula is the best remedy for colds, flu, or any communicable disease. This formula strengthens and stimulates your immune system and should be used as a tonic and preventative at the dosage of one tablespoon of syrup per day. If infected, the dosage changes to one tablespoon every hour. To stimulate organs and other areas of the body through the feet use an application of garlic paste on the bottom of the soles of the feet. This is done by massaging olive oil on the person's feet and around the ankles. The paste is made of petroleum jelly and fresh garlic. Apply the paste to the soles of the feet and wrap feet with cotton strip and cover with plastic wrap and apply a gauze bandage.

If taking the Respiratory Relief Syrup, use a teaspoon or more, as required, as often as needed. X-Ceptic for external applications for wounds with the chance of infection. Bowel Formula, take two capsules three times a day or thirty drops of extract with your meal or 20 minutes before your meal or what is recommended by your doctor. Breathing Aid Formula take two capsules three times a day or what your doctor recommends. Circulation Formula, take two capsules three times a day to stimulant the circulatory system or what your doctor recommends. Garlic Oil, apply four to six drops of garlic oil to ear and plug ears with cotton overnight repeat step for six night and on the seventh day flush ears out with warm apple cider vinegar.

In addition, Asthma Formula take two capsules three times a day or ten to twenty drops of extract along with a cup of comfrey tea. And finally the formula for colds and flu, take from one to six cups of tea, or two to four capsules, three to six times a day.

Likewise with Dr. Christopher's garlic ear oil, Christopher Hobbs Earache oil use two or three drops of oil into the ear tilt the head so the oil flows easily down the ear canal. Massage the back of the ear several times to aid in dispersing the oil throughout the ear canal. With his Garlic Cough Syrup take one teaspoon to one tablespoon at a time for coughs, cold and mucus congestions.

To sum up with Richards Schulze super tonic use as a salad dressing one to two tablespoons over fresh greens and vegetables. One to two tablespoons 3 times a day for the common cold.

PERSONAL EXPERIENCE

My quality of heath coming into this world was very poor. Born with asthma and allergic to just about everything on earth, I've had to work really hard at improving my health. Besides a healthy diet of whole grains, vegetables, fruit, nuts, and seeds I have added garlic to my diet. Although diet has improved my health a great deal, I have found out that by adding garlic has helped to control the yeast build up I experience in my body from time to time. Besides taking fresh garlic everyday, I also keep in my refrigerator Dr. Christopher's anti-plague formula. This formula has turned out to be one of my families "can't live with out formulas". We have used this formula for colds, flu and infections. My 13 year old son who's diet is that of the average teenager in spite of his mothers advice, will take this formula on his own when he feels a cold or some other ailment coming on. Within 2 days whatever was invading his body is gone.

On the other hand my 5-year-old son's diet is far better then that of his brothers. But there has been a time or two when he to has taken the anti-plague and has felt the benefits of the healing powers that are within the formula. I begin taking it myself when everyone else begins receiving flu shots and I haven't been sick. In my eyes and the eyes of my family this is one of the most wonderful herbal formulas there is to help bring the body back to wellness during the times of elements.

In addition to the anti-plague formula, my family has also used honey, garlic and cayenne for sore throats. This is a wonderful combination to help heal infection in the throat within 3-4 days.

In conclusion my experience with garlic has been that of health improving and wellness. I'm not without garlic in my home I have seen the benefits garlic has to offer and I along with my family have experienced them. I would like to reecho the words of Hippocrates "Let your food be you medicine, and your medicine be your food" Garlic fits into this quote, it has been my choice of medicine for the past several years and will continue to be my choice of medicine for me and my family.

http://www.planetbotanic.ca/fact_sheets/garlic_fs.htm

Scientific Name: **Allium sativum**
Part used: Tuber

In a word: Respiratory disinfectant and heart helper

Uses: If you can smell garlic on your breath, garlic oil is killing bugs in the respiratory tract. Use it to prevent respiratory infections and to boost heart health

Perhaps the most universally accepted panacea known to man, garlic is one home remedy that has been proven effective. And Egyptian medical papyrus dating from around 1500 B.C. lists 22 garlic prescriptions for such complaints as headaches and throat disorders, and the slaves who built the Great Pyramids at Giza, for whom being sick was not an option, are said to have eaten piles of garlic for strength. And I do mean piles. In World War I, garlic was used to fight typhus and dysentery; in World War II, British physicians treating battle wounds with garlic reported total success in warding off septic poisoning and gangrene when garlic was applied to wounds.

Garlic was once known as poor man's treacle, or heal-all, as it cured just about whatever ailed you – that seems to have been, and still to be, the case. The Arabs, who believe that garlic grew from the footprint of Satan as he stepped out of the Garden of Eden, have so many uses for the plant that it's hard to enumerate them. Ditto the Chinese and Indians. Garlic's medicinal value is not subject to debate, it is a reality. Garlic could save your life on a number of scores. You should eat it, and you should eat it on a regular basis. And that's about all there is to it.

The garlic grows wild in the Near East, although no one knows exactly where it originated. The ancient Israelites were familiar with 67 kinds of onions and garlic and well used the healing substance. The Crusaders ran into the plant in their effort to take back the Holy Land and brought it back with them on the return to their European homelands.

In Europe it found numerous uses, perhaps the most curious being as a safeguard for grave robbers. It seems that when people died of the plague, they were buried with their jewels on. Even the greediest of relatives was unwilling to remove baubles from an infected body. The thieves of the day found this custom a bit too tempting, and a sect developed that ravaged the mass graves of plague victims. They did this with not a care in the world. Why? Because they washed themselves, their clothes, and the jewellery with garlic vinegar. Garlic's scientifically proven germ-killing qualities did the trick on the rings and bracelets – great insurance for a high-risk, high-return profession – and the thieves made a bundle.

Throughout history, garlic has been used internationally to treat lung problems from pneumonia to bronchitis. The fact that it does contain chemicals which kill bacteria may partially explain its effective use in this vein. Somehow though, its powers go beyond the logical, and the plant, whether eaten hot or made into cough syrup, definitely speeds the healing process of a cold, which is something we'd all like to do.

The Shaker's were garlic's biggest fans in the lung department. In the late 1800s, their communities used the smelly plant to treat all related conditions most effectively. These folks made healing a way of life and a profession. They did not offer things for sale that did not work.

For those with a taste for alcohol, the traditional West Virginia cure for asthma and other lung ailments is garlic soaked in gin. The juniper berries used to flavor the gin would also shore up the ailing, as you will see in the section on that plant, but what the flavor would be like, I cannot attest.

Apparently when a disease swept through the neighborhood, as it was apt to do in that moist, swampy region, the custom was for neighbors to go from house to house, offering their friends and relations garlic to keep them safe from pestilence. A piece of garlic wrapped in cotton and inserted into the ear was thought to cure earaches. As garlic does contain a natural bacteria killer, placing some in an infected ear would, in fact, kill the bacteria causing the pain. Garlic ground with animal fat was the leading antiseptic ointment for cuts.

My great-grandmother, adhering to the Israelite tradition of garlic as a Jewish cure-all, always kept a pot of garlic boiling in her backyard to treat her high blood pressure. This country belief was seconded by an informant in Utah. It seems that Brigham Young, when traveling west, made sure he and his packed a lot of garlic, and some of his followers are still using it to this day. Boiled garlic is eaten hot to kick out a cold that won't go away, and eating raw garlic is believed to make your blood unappealing to mosquitoes.

The National Library of Medicine, in Bethesda, Maryland, a marvelous and prestigious collection of medical literature, contains about 125 scientific papers on garlic published since 1983. Studies of garlic reveal potent compounds that appear to retard heart disease, stroke, cancer, and a wide range of respiratory infections. Let's take a gander at what has panned out about garlic.

For one thing, garlic indeed kills bacteria. A chemical contained in the bulb, allicin, is said to be even stronger than penicillin and tetracycline. Allicin's claim to fame is that it is a broad-spectrum bug killer - and specifically as an agent that cleans up respiratory infections - is well founded. Garlic acts as a strong expectorant and decongestant for the lungs as well. People suffering from chronic bronchitis are greatly helped by adding this plant to their diets.

On the heart front, Garlic also lowers blood cholesterol, thins the blood. This makes it helpful for those with heart disease in the family and for those with heart disease on their person!

Practitioners Advice

The two most defensible uses of garlic is in respiratory tract infections and heart disease prevention. Let's start with the respiratory tract.

Most respiratory drama's start with a viral infection, a cough, a cold, or a flu. Garlic is helpful in these viral conditions because the oil it contains thins mucous and makes expectoration easier. It acts as a decongestant. Beyond this, it can be used to prevent the secondary infections some suffer when they get a cough or a cold. A cold turning into bronchitis or a cough turning into sinusitis being two examples. The mucous of a viral infection makes you a sitting duck for a bacterial infection; bacteria love to grow in mucous. Garlic contains a microbe killer that is excreted into the mucous which makes it a less hospitable place for bacteria. For those that are vulnerable to secondary infections, the elderly, the infirmed, and asthmatics, garlic is an ideal tonic to avoid secondary infections following on from a cough or a cold. It will help move the mucous out of the respiratory tract and reduce the chances of a person becoming sicker! It should be taken at the first sign of a cold and used continuously for a month!

On the cardiac front, garlic undermines many of the problems that lead to heart disease or perpetuate heart disease, high blood pressure, high cholesterol, and plaque formation included. It does not have the immediate effects of a quadruple by-pass. It slowly and gradually reduces the factors that cause heart disease in the first place. It can be used by people with heart disease in the family to avoid the fate experienced by their relatives or by people who have already had a run in with heart disease. It is a gentle cardio-tonic with a wide application. It must be used on a daily basis for years on end. This is a lifetime proposition. Don't bother if you are not going to make a committed effort!

In both respiratory infections and heart disease, garlic is probably best used in tablet form. Eating enough garlic to achieve an effective dose throws most modern people around the bend. This is especially true if they are using it on a daily basis for heart health. The tablets are relatively cheap and insure a person will actually stick with the regimen of daily use!

QUICK REVIEW

History: Long used to treat coughs and colds

Science: Oil acts as respiratory tract disinfectant

Practitioners opinion: Excellent for older people inclined to respiratory infections

Directions: Tablets: 2-200mg tablets 3 times daily

craig-oxley - March 26, 2009 03:59 AM (GMT)

Garlic: Man's Best Friend in a Toxic World

by Dr. John R. Christopher

Garlic has been known for centuries to function as a natural antibiotic. It destroys the unnecessary and harmful bacteria throughout the human system. It emulsifies cholesterol and loosens it from arterial walls. It is effective in arresting intestinal putrefaction; it is used against contagious diseases, high blood pressure, fevers, parasites, worms, nicotine poisoning, colic, and yeast infections. (Concern, April 1977, p. 7)

The brilliant Dr. Edward Shook, herbalist, pharmacist and one of our illustrious teachers, began his lectures on garlic with the phrase of the Gentle Shepherd, "Consider the Lilies. . . " Garlic is a member of the Liliaceae family which also includes the onion. This is Dr. Shook's botanical description of garlic:

Allium Sativum. Natural order. Liliaceae.

Common Names Garlic, poor man's treacle.

Part used. Bulb.

Description. The leaves are long, narrow, and much like grass.

The bulb (the only part used) is compound, consisting of numerous bulblets, commonly called "cloves," grouped together between the membrane scales, and enclosed within a whitish skin which holds them as in a sac. The whitish flowers are located at the end of stalks growing directly out of the bulb. They are grouped together in globular umbels with spathes surrounding them.

It will pay us handsomely to consider this lily because it is one of nature's great masterpieces as a safe and certain remedy for many of man's serious and devastating diseases.

This wonderful herb has been used from very ancient times both as food and medicine.

Theophrastus, the Greek philosopher (born 372 BC) relates that garlic was placed by the ancient Greeks on piles of stone at the crossroads as a feast for Hecate (literally a feast for the gods.)

Virgil, the Roman poet (70 BC) in his eclogues states that garlic was part of the entertainment served by Nestor to his guest Machaon. He also tells us that it was owing to the virtues of garlic that Ulysses owed his escape from being changed by Circe into a pig like each of his companions.

Galen speaks very highly of it, eulogizing it as the "theriac" or "heal all."
Chaucer calls it "theriac" as do several old English botanists and herbalists.

Pliny gives an exceedingly long list of complaints in which it was considered beneficial.

The name garlic is of very ancient Anglo-Saxon origin being derived from gar (a spear) and lac (a plant) in reference to the shape of its leaves. It is one of the oldest medicinal remedies known to man, which has been cultivated and used from time immemorial in the treatment of many diseases. Both its romantic history and its very remarkable curative virtues are vastly interesting and educational to all earnest and honest physicians, and it is notable that it stands out today as one of our greatest and most important therapeutic agents.

It is alterative, diaphoretic, diuretic, expectorant, antispasmodic, antiasthmatic, stimulant, antiseptic, disinfectant, tonic, nervine, antiphthisic, germicide, and vermicide. Chemical Constituents: Volatile oil (25 percent), mucilage (35 percent), albumen, sugar, starch, fibrin, and 50 percent water. The oil is a rather complex substance, of a strong, intensely penetrating odor and consists of allyl compounds of sulfur. It will be seen that this remarkable herb is heavily laden with organic sulfur, but no oxygen is found in the oil. Yet, it is the action of oxygen when the skin is taken off the cloves that releases the sulfur by combining with an allyl group to form allyloxide, which is also a pungent liquid having a sulfur odor.

Many marvelous effects and healing powers have been claimed for garlic. It is probable that none of them were exaggerated. I, myself, have seen it cure tuberculosis, asthma, bronchitis, several skin diseases, stomach ulcers, leg ulcers, athletes foot, furunculosis, abscesses, epilepsy, and special affinity for the respiratory tract, lungs, bronchi, and so forth, though it diffuses itself through the whole system and wherever there is pus, it is a certain and safe remedy. The use of garlic in the World War as an antiseptic was most sensational. In 1916, the British government asked for tons of the bulbs offering one shilling a pound for as much as could be produced. A great quantity of it was used for the control of suppuration in wounds. The raw juice was expressed, diluted with water, and put on swabs of sterilized sphagnum moss which was applied to the wounds. Where this treatment was given, it has been proved that there has never been one single case of sepsis of septic results. Consequently, the lives of tens of thousands have been saved by this one miraculous herb. That was nearly many years ago, and still we do not find garlic as an official remedy in the United States Pharmacopeia. This is one of the most disgraceful facts connected with the so-called regular practice of medicine, and proves beyond all doubt that their practice is neither ethical, moral, or even humane; otherwise, such a miracle of healing power would never have been discarded as it was.

In olden days, garlic was employed as a specific for leprosy, psoriasis and several forms of exanthematous skin diseases. It was also believed to have most beneficial results in smallpox applied to the soles of the feet in a linen cloth renewed daily.

Those unacquainted with garlic might think this was merely superstition; but, as a

matter of fact, it is quite true. If chopped or minced fresh garlic is placed on the soles of the feet and allowed to remain there for some time, it will not be long before the odor of garlic can be detected on the breath; and cases of purulent disease in different parts of the body have been reported completely cured by simply keeping an application of garlic to the soles of the feet, and renewing it once or twice a day.

We positively know that organic sulfur is a universal antiseptic, whether taken internally or applied outwardly to any part of the body. It has been authoritatively reported that tuberculosis has been successfully treated by inhalation of the freshly expressed juice of garlic, diluted with equal quantities of water.

Garlic was the principal ingredient in the famous Four Thieves Vinegar which was adapted so successfully at Marseilles for protection against the plague when it prevailed there in 1772. This originated, it is said, with four thieves who confessed that, while protected by the liberal use of aromatic garlic vinegar during the plague, they plundered the dead bodies of the victims with complete safety. It is stated that during an outbreak of infectious fever in certain poor quarters of London early in the last century, the French priests who constantly used garlic in all their dishes visited the very worst cases with impunity, while the English clergy caught the infection, and in many instances, fell victims to the disease. Another instance of the remarkable penetrating power of garlic is the fact that the expressed juice of fresh garlic mixed with olive oil and rubbed on the chest, throat, and between the shoulder blades gives great relief in whooping cough, asthma, bronchitis and dyspnea, according to an English physician who has used it with success for many years. It also has a reputation for safely reducing high blood pressure, and in this relation we have an exceedingly valuable formula.

Boiling garlic reduces its active virtues considerably. Vinegar and water both extract its curative principles, though vinegar alone seems to be more effective for that purpose. Expressed fresh juice of garlic contains all of its many virtues. The following priceless formulas will cover its therapeutic applications completely for asthma, bronchitis, catarrhal conditions of the mucous membranes, phthisis, tuberculosis, coughs, dyspnea, heart weakness, internal ulcerations, and so forth.

Garlic Syrup

Peel 1 pound of fresh garlic, then chop or mince. Put into a wide mouthed jar and add equal parts of vinegar and distilled water to just cover the garlic. Close tightly, shake well, then let stand in a cool place for four days, thoroughly shaking once or twice a day. Now, add one pint of glycerine, shake well, and let stand another day. Strain with pressure, then filter liquid through a muslin or linen cloth. Add three pounds of pure honey, and stir till thoroughly blended. Put into jars, seal tightly, and store in a cool place.

In order to cover the pungent odor of the garlic, in case it is objectionable, do the

following:

In place of macerating the garlic in equal parts of vinegar and distilled water, as directed above, use 1 quart of vinegar in which 3 ounces of powdered caraway seed and 3 ounces of sweet fennel seed have been slowly boiled for 15 minutes, while closely covered. Strain and when cold, add 1 pint of glycerine. Use this in the above formula instead of the vinegar and distilled water mixture.

This is much more acceptable to those who have an antipathy to the smell and taste of garlic. Of course, the 3 pounds of honey are also added after the filtering process. The deviation in no way affects the curative properties of the garlic, while it helps materially to disperse gas and flatus. We use aromatic vinegar in our own preparation of this formula, which is one of the most meritorious and useful remedies to have on hand. It is harmless, and very effective in the above mentioned cases, and will please and astonish both you and the patient.

Dose: For asthma and coughs: 1 teaspoonful with or without water every 15 minutes until spasm is controlled; then 1 teaspoonful every 2 or 3 hours for the rest of the day. After that, 1 teaspoonful 3 or 4 times a day is usually sufficient.

For tuberculosis, cardiac asthma and dyspnea: 1 dessertspoonful to a tablespoonful 3 or 4 times a day between meals.

Children: (8 to 15 years) one half of the above dose; (5 to 8 years) one quarter dose; (1 to 4 years) one eighth in a little water or honey

Garlic has also been used successfully in dropsy. The above formula may be used with benefit, but the following will be found to be much more prompt and effective, especially where the heart is much involved.

Dropsy with Heart Involvement.

Boil 8 ounces lily of the valley root (cut) (Convallaria majalis) in 3 pints of distilled water for 20 minutes. Strain then boil slowly till reduced to 1 pint. Set aside to cool, and while still warm, add 8 ounces of expressed garlic juice, 8 ounces of brown cane sugar, and 1 pint of glycerine. When cold, bottle and keep in a coot place.
This is one of the most potent remedies for dropsy and heart disease ever devised.

Dose: 1 teaspoonful to a dessertspoonful in water, as required. The dose should be regulated and given every 3 hours to bring about diuresis. Also, a slowing of the heart action, and an increase in the tone of its contraction. After this effect has been produced, administer 1 teaspoonful in water 3 or 4 times a day.
Garlic for outward application: For eczema, pityriasis, psoriasis, ulcers, cancers, swollen glands, tubercular joints, necrosis and all purulent conditions that are accessible, we recommend the following formula:

These garlic formulas we have given you are priceless. It will pay you to study them, and utilize them with confidence whenever occasion arises."
--(Shook, 1978; reprint. pp. 69-73)

Dioscorides, a second century physician and herbalist who traveled with the army of Alexander the Great, has the following to say on the subject of garlic. Dioscorides was translated into middle English by a scholar of the middle ages:

SKORODON Allium Sativum
LEUKOSKORODON Allium Ampeloprasum
OPHIOSKORODON Allium Scorodoprasum
ELAPHOSKORODON Allium subhirsutum

Garlic

Garluk (some call it Geboscome againe Elaphoboscum, the Latins Allium) some of it is Satiue & growes in gardens & this in Egypt, being only but of one head as the teeke, sweet, inclining to a purple colour. But elsewhere, it is compacted of many white cloues, the cloues that therein (the Greeks) call Aglithai. But there is another wilde kinde, called Ophioscorodon. (that is Serpent's Garlick). It hath a sharp, warning biting quanitie, expelling of flatulencies, and disturbing of the belly, and drying of the stomach causing of thirst & puffing vp, breeding of boyies in ye outsyde of the body, dulling the sight of the eyes. And the same thinges don also, (as we should say, Hart's garlick). Being eaten, it driues out the broade wormes, and drawes away the vrine. It is good, as none other thing, for such as are bitten of vipers, or of the Haemorrhous, who being taken presently after, or else that being beaten small in wine & soe dranek. It is applyed also by ye way of Cataplasme both for the same purposes profitably, as also layd on upon such as are bitten of mad dogge. Being eaten, it is good against the chaunge of waters (fauces expediende, easdeings asperas leniendo.) It doth cleare the arteries & being eaten either raw or sod, it doth assuage old coughes. Being dranck with decoction of Origanum, it cloth kill lice and nitts. But being burnt, and tempered with bony it cloth cure the sugillationes oculorum, and Alopeciae being anointed on, but for the Alopeciae (it must be applyed) with vnguentum Nardinum. And with salt & oyle it cloth heale ye eruptiones papularum. It doth take away also the Vitiligines, & the Lichenes, & the Lentigenes, and the running ulcers of the head, and the Furfures & ye Lepras, with hony. Being sod with Taeda and Franckincense, & kept in the mouth it doth assuage the paine of ye teeth. And with figge leaues & Cummin it is a Cataplasme for such as are bitten of the Mygale. But the leafes decoction is an insession that brings downe the Menstrua & the Secondas. It is also taken by way of suffumigation for ye same purpose. But the stamping that is made of it and ye black olive together, called Myrton, cloth moue the vrine & open ye mouths of ye veins & it is good also for the Hydropicall."

(Dioscorides, Book 11, pp. 188-91, under the heading of "Sharp Herbs.")

Let's go into some interesting historical facts on garlic, a most revered patriarchal herb:

"Garlic, a cousin of the lily originated in Central Asia or India, where the early peoples enjoyed eating raw garlic as an enhancement to their meals. They also enjoyed longevity, and the lowest incidence of cancer on the planet." (Messegue, 1979, p. 132)

The builders of the pyramids of Egypt were paid in the coin of the realm; onions and garlic, a valuable commodity.

These builders of the pyramids of Cheops, a Fourth Dynasty Pharaoh, consumed great quantities of garlic. It was during these times that garlic was elevated to the rank of a deity.

The Ebers Papyrus, 1500 BC, one of the earliest herbal pharmacological documents we know, mentions garlic used in external applications for wounds.

Here is a quotation from the Bible:

"We remember the fish which we did eat in Egypt for Nought, the cucumbers, and the melons, and the leeks, and the onions, and the garlic." (Numbers 11:5)

According to Helen Noyes Webster, who interpreted the above quotation in her book, Herbs, How to Grow Them and How to Use Them, the Israelites traveling with Moses obviously missed the garlic when they went toward the Promised Land. If Moses had carried garlic, the Israelites may have been able to avoid intestinal putrefaction from eating the desert's available lizards and snakes.

Homer mentions garlic in his famous Odyssey. The deity Mercury, or Hermes, gave garlic to Odysseus as a protection against the goddess Circe's evil sorcery in which she turned men to swine. The athletes of the original Olympic games in ancient Greece traditionally chewed a clove of garlic before participating in the games. Galen, an early Greek doctor, spoke of garlic as the panacea of the common man. Hippocrates prescribed the eating of garlic for uterine tumors. The Vikings and the Phoenicians always carried garlic on their ocean voyages.
The crusaders brought garlic back to France. (In those days, it was a common law that two men's lives could be sacrificed in order to save a 100 lb. sack of peppercorns.)

A French herbalist, Messegue, born in Gascony, France, states that all the children born in that province are baptized with a clove of garlic on the lips. The emperor Charlemagne recommended that his subjects cultivate garlic. King Henry IV of France was baptized with a clove of garlic on his lips, and although he was said to have chewed a clove of raw garlic every morning upon arising, he was still very popular with the ladies.

The National Cancer Institute central files show that the incidence of cancer is extremely low in France where garlic consumption is the greatest and that garlic eaters in Bulgaria do not have cancer. It is reported in a textbook on pharmacognosy that a physician in British Columbia has successfully treated malignant situations by prescribing the eating of garlic.

The prophet Mohammed recommend that garlic be applied externally on the sting of the scorpion or the bite of the viper in the 7th century.

"The herb becomes the teacher. Men stray after false goals while the herb he treads (or in these days, stomps upon) knows much much more."

The above quote was written by Henry Vaughn, the early 17th century poet and mystic, as well as Hermetic philosopher during the days when the Doctrine of Signatures was popular. The Doctrine of Signatures was the method by which the ancients recognized the usage of a plant. According to Nicholas Culpeper, the 17th century English Physician and Herbalist, "and by the icon or image of every herb, man first found out their virtues. Modern writers laugh at them for it, but I wonder in my heart how the virtues of herbs first came to be known, if not by their signatures. The moderns have then from the writings of the ancients--the ancients had no writings to have them from."

The 17th century "moderns" felt that garlic, with its hollow stalk, helps afflictions of the windpipe. We know this to be a truth; that garlic is an antihistamine, and has been successfully used in bronchial and pulmonary disorders. As we examine some of the virtues of garlic, we find that the claims of the old Doctrine of Signatures will be far surpassed.

The National Dispensatory of 1887 gives us a fine description of the constituents of garlic at a period in our medical history when Syrupus Alli was an official U.S. preparation.

Constituents.--Besides the cellular tissue, garlic contains between 50 and 60 percent of water, 35 percent of mucilage some albumen, sugar, starch, and about 1 percent of volatile oil, to which its odor and taste are due. In its crude state, oil of garlic is of a dark brown-yellow color, heavier than water, of a very interesting taste, and consists of oxide and sulphides of allyl. The rectified oil consists mainly of the sulphide, (C3H5) 2S, is colorless, lighter than water and may be obtained artificially by treating an alcoholic solution of potassium sulphide with allyl iodide. It dissolves easily in alcohol and ether, and sparingly in water ... Garlic, macerated in water or vinegar, yields its virtues to these liquids.--(p. 154)

They also describe its physiological action and medicinal uses:

Physiological action and Medical Uses--Garlic as well as leek and onion, is a stimulant

to the part to which it is directly applied and to be the whole system. Its odorous element may be perceived on the breath and its taste in the mouth when the bruised bulb has been applied to the skin. When eaten raw, its odor "hales from many parts of the body, and, given to nursing women, it taints their milk, so that their infants refuse the breast. It reddens the skin, and may even vesicate it. Internally, it stimulates the digestive organs, and is everywhere used, but principally in southern countries, as a condiment for various kinds of food. The odor or garlic is popularly employed to revive persons from a swoon or from hysterical insensibility. It is a vermifuge not to be neglected in the treatment of lumbricoid worms when given by the mouth, and for destroying ascarides when administered by the rectum. Many cases of dropsy, particularly of anasarea produced by cold, have been cured by a diet of bread and raw onions. This regimen will sometimes produce copious diuresis. Onions boiled in milk have been used successfully for a like purpose. Bruised cloves of garlic and poultices of boiled onion are admirable remedies for chronic bronchitis in children. They should be applied over the whole front of the chest. Internally, garlic is a very useful agent in the same affection. It is also a domestic remedy for whooping cough. Onion poultices are particularly applicable to abscesses; the core of a roasted onion relieves earache when introduced into the auditory canal. Onion and garlic cataplasms applied to the perineum relieve strangury. The dose of bruised or chopped garlic or of the expressed juice is about 30 grains (Gm 2). (p.154-155)

Frances Ward published this summary of garlic in her post-World War II book, British Herbs:

"GARLIC Allium Sativum, Amaryllidaceae

Anyone who travels in Italian buses might be forgiven for deciding never to grow this unpleasant smelling plant, and one can quite appreciate the decision of the old Greeks that people who ate Garlic should not be allowed in the temples of Cybele.
But from early times it has been considered a very useful medicine, and in the Middle Ages in Britain it was believed to be, either by itself by itself, as a 'simple', or mixed with other herbs, one of the cures for leprosy. Lepers were often called 'pilgarlics', as they were made to peel their own garlic, certainly a mark of identity and a means of segregation!

Throughout the ages it was held to have antiseptic properties, and during the 1914-18 War, sterilized Sphagnum Moss soaked in Garlic juice was used for suppurating wounds, a reminder of the old method of treating leprous sores. From time to time, even in modern days, Garlic has been claimed to have marvelous properties; now, in addition to its stimulating powers, it is held to be beneficial in digestive complaints and for coughs, colds and asthma.

Cultivation of Garlic is a fairly easy matter, though it needs a finely sifted soil similar to that of an onion-bed. The cloves should be set about 2 in. in the ground about February

or March, and lightly covered with soil. The bulbs may usually be lifted during August. There is generally a demand for Garlic from druggists, and good prices have been paid for it." (Ward, 1949, p. 159).

It in the medical literature we find several references to garlic as a therapeutic agent.

Phytocides of garlic suppress the proteinases (cathepsin) in malignant tumors of humans (postoperative material) and of experimental animals. These phytocides also inhibit cathepsin in the liver of cancerous animals, the activity of which increases during malignant growth. This action was detected by adding garlic extract to inoculated Ehrlich carcinoma. The results may be useful in further studies on garlic in the diet of cancer patients." (p. 140)

Joseph A. Di Paolo and Christopher Carruthers of the Roswell Park Memorial Institute of Buffalo, New York, wrote an article in Cancer Research, 1960. The title is, "The effect of Allicin From Garlic on Tumor Growth." By the way, Allicin is responsible for the odor in garlic, so the new odorless garlic isn't quite as effective as regular garlic. For those fortunate souls who can ingest raw garlic; the garlic breath can be obliterated by chewing on a raw clove (not a garlic clove, but the spice clove), or putting a drop of peppermint of spearmint oil on the tongue.
Chester J. Cavallito and John Hays Bailey writing in the Journal of the Chemical Society, Volume 66, November, 1944, discuss the antibacterial principle of garlic, allicin. They isolated allicin, a colorless oil, from garlic cloves and found it to be effective against the following bacteria strains both gram positive and gram negative:

Organism
STAPHYLOCOCCUS AUREUS
STREPTOCOCCUS HEMOLYTICUS
STREPTOCOCCUS VIRIDANS
B. SUBTILIS
B. TYPHOSUS
B. PARATHYPHOSUS A
B. PARATHYPHOSUS B
B. PARATYPHOSUS KUNZENDORF
B. MORGANI
B. ENTERIDITIS
B. TYPHI-MURIUM
B. DYSENTERIAE SHIGA
B. DYSENTERIAE FLEXNER
B. DYSENTERIAE SONNE
V. CHOLERAE
(P. 1951)

H. Dold and A. Knapp, German Researchers writing in Chemotherapy section of

Biological Abstracts in the 1950's discovered that garlic was effective against Streptococci, Escherichia coli, Bacillius prdigiosis, B. proteus, B. Subtilis, Shigelia paradysenteriae Flexner, Eberthelia typhosa, Salmonella enteritidis and Vibrio cholerae. It was more effective when crushed than sliced. It in addition, garlic exhibited some bacterial action even through the air. Bacteria could not be made resistant to the garlic either. The antibacterial action of garlic juice became somewhat weaker after having been stored in the ice box for 8 days and after boiling for 10 minutes. Remember, too, that when garlic is cooked above 130 degrees F., the enzymes in it are destroyed, and the organic sulphur in the garlic now becomes a harmful form of inorganic sulphur.

A most unique article appeared in the Chinese Medical Journal in May of 1977;

"GARLIC SLICE IT IN REPAIRING EARDRUM PERFORATION"

by Hsu Wei-cheng

Teaching Research Group of Ear, Nose and Throat Department, Inner Mongolia Medical College, Huhehot

"Clinical use of fresh garlic was satisfactory in repairing eardrum perforations in 18 cases (1 having perforation in both ears) except 1 with irreversible chronic otitis media. The time required for healing by this method was 16 days in 12 cases with perforations smaller than half of the eardrum pars tensa and 28 days in 6 cases with perforations larger than half of it. 10-19 db hearing was gained after treatment.
Of the 18 cases, 6 had increased exudate in the middle ear during the latter part of the garlic treatment. Exudation stopped quickly after treatment was discontinued and anti-inflammatory measures were taken. It in 4 of these, healing took place soon after exudation was checked and in 2 it was necessary to repeat garlic application before the wound healed completely...

This method is indicated in adult's traumatic eardrum perforations within 3 weeks of injury provided there is no infection, perforation is not larger than half of the pars tensa and there is sufficient eardrum left around the perforation edges. It in cases where the duration of perforation is over one month and its edges have already become cicatrized, repairing with fresh garlic slice can only be started after 50% trichloro-acetic-acid has been used to cauterize the edge (repeat the cauterization every few days, if necessary), until the formation of whitish ring (0.1-0.2 mm width) and reddish granulation.

Prepare a fresh clove of garlic carefully, peel it but leave the transparent epithelium-layer tightly attached. The external auditory canal is sterilized routinely. Slice off a very thin piece of the garlic clove (about 0.2 mm thick) shaping it just large enough to cover the perforation. Keep the epithelium-layer attached to the garlic slice and insert it into the ear canal and carefully push it against the eardrum so that its cut surface hugs the peroration while the epithelial layer covered surface faces the external auditory meatus.

Pack the external auditory meatus with an alcohol moistened cotton ball. Forceful blowing of the nose is prohibited and water should not be allowed into the ear canal in order to prevent infection. Usually the garlic slice should be replaced once or twice a week until healing is complete. Stop treatment when the middle ear becomes inflamed with excessive exudate and start anti-inflammatory treatment.

Garlic is a strong stimulant which hastens growth of new granulation, contains allin ($C_6H_{11}O_3NS$) which rapidly breaks down to yield the antibiotic allicin ($C_6H_{10}OS_2$) in the presence of enzyme allinase and water." (Chinese Med. Journal, 3 (3); pp. 204-205).

"With garlic, the patient himself is doctor, pharmacologist, nurse, and pharmaceutical manufacturer all in one."
--Yoshio Kato

Yoshio Kato of the Oyama Garlic Laboratory in Japan has written a very comprehensive booklet entitled, Garlic, The Unknown Miracle Worker. It in it he describes a unique process of garlic juice therapy known as FLOW-LEBEN. in his own words:

"FLOW-LEBEN is a total therapy system of medical application, particularly the external application of garlic. Application for the patents has been made in ten countries. Already the patents have been granted in four countries. (The Republic of China, Italy, France, Germany and the United Kingdom.)

It is very well known that garlic contains all the elements except Vitamin D. It is also known that garlic essence warms the body and promotes better circulation of the blood .... Aillin, an oily substance contained in garlic, diluted as much as 200 times can kill typhoid germs.

Another study reported that garlic juice diluted 30-40 times stops the growth of certain types of bacteria in a nutrient media--garlic has strong germicidal properties which are not found in other plants. When aneurinase bacteria grow in the body, the majority of the internally produced vitamin B1 is spoiled by this bacteria--garlic shows antipyretic effects when it, diluted with water, is applied externally to a person's body at times of high fever.

FLOW-LEBEN is the only system in the world by which we can obtain the maximum effects from garlic. The first unit was completed in 1970. It in this clinic, various concentrations of garlic-water solution are sprayed on the bodies of patients by means of atmospheric pressure compressed air (2 to 7 lbs.) shot through atomizing nozzles. Hydraulic pressure is employed in the newer models. This process stimulates the body's metabolism and removes cholesterol from the blood. Various functional disorders are eliminated and skin diseases are also cured by the germicidal effect of garlic."(Kato, 1973, pp. 173-175)

The unique and very deluxe treatment has been effective in treatment of ringworm, skin cancer, frostbite, and other skin disorders using a 100% solution of garlic juice.

Richard Lucas in Nature's Medicines, published in 1966, presents the history of the Four Thieves Vinegar:

"It in Marseilles, a garlic-vinegar preparation known as the Four Thieves was credited with protecting many of the people when a plague struck that city (1722). Some say that the preparation originated with four thieves who confessed that they used it with complete protection against the plague while they robbed the bodies of the dead. Others claim that a man named Richard Forthave developed and sold the preparation, and that the "medicine" was originally referred to as Forthave's. However, with the passing of time, his surname became corrupted to Four Thieves." (Lucas, 1966, p. 38)

We now have the modern version of the formula. It is known as the Super Garlic Immune formula. It consists of fresh garlic, apple cider vinegar, pure vegetable glycerine, U.S.P., honey, garlic juice, fresh comfrey root, wormwood, lobelia, marshmallow root, oak bark, black walnut bark, mullein, skullcap, and uva-ursi. We recommend that you have several gallons of the preparation on hand in storage and hope that you will not need it. But, at the time of writing this article, a radio broadcast informed us of a case of Bubonic Plague with ensuing death in Lake Tahoe, U.S.A. The medical authorities were trying to locate all of the persons with whom the late subject came in contact in hopes of isolating the infection so the general public would not become exposed to this disease. The plague, related to the Black Plague in Europe during the 1300's, left people dead in their tracks and hanging out of windows waving goodbye to their friends. According to Herman Hesse, a German Writer, Goldmund was a young man who left a 14th century monastery and became a vagabond. He enjoyed the merriment of the wanderer as he traveled through Europe tasting the pleasures of love and life. All this was to change as Hesse describes the character's feeling of powerlessness and horror as he wanders throughout plague-stricken towns, cities, and rural areas observing the Hand of Death had reached everywhere; striking people regardless of their social standing or age. He describes a grotesque scene in a farm cottage where an entire family lay frozen after the throes of death.

Super Garlic Immune Formula

The best insurance in the world against the "predicted coming plagues" and "killing diseases" is to have the body in a good healthy condition. Disease germs are merely scavengers and can only live on toxins, mucus and residue from junk foods. They cannot and will not be damage healthy cell structure. Therein lies the key! Have a healthy, clean body and disease germs will by-pass you--wanting nothing to do with your body, because it would be "obnoxiously clean" (in their language) and no filth for them to live on.

If the plague, or some other epidemic hits before you are in a good healthy condition, it is good to have an aid for a fast cleaning.

While lecturing in Snowflake, Arizona one night, one of the group asked if we had an Super Garlic Immune formula, and I was prompted to give them a "certain combination" of herbs to use.

The people there were very impressed to go right to work and prepare this liquid, having it read for use. We had told them that plagues come at unexpected times and it could be tomorrow or maybe even years away, but expect the unexpected and be ready now. If the formula was still unused, from "no need" years later, we could all be happy but "TIS BETTER SAFE THAN SORRY".

These good people made it up in gallon lots and had it on hand. Months later while speaking in Tucson, Arizona, someone asked for the "Super Garlic Immune remedy." I was surprised and asked where they had heard of it, as we had only given it out once. We were informed that a plague-like condition or flu had hit the Snowflake area and when other aids failed, this combination of herbs in liquid form performed its job with amazing speed.

At our next series of lectures in Snowflake, some time later, we heard one testimony after another about the many different types of ailments that were given quick relief by using this formula. The formula has now spread in many areas from coast to coast and is being used with good results. A man picked us up at an airport on the west coast a short time ago, and on the floor of his car was a bottle with liquid in it. When asked what it was he said, "oh, that's your Super Garlic Immune remedy, we never travel without it as it works good on about any sickness that comes up while we are traveling. We are also never without a bottle of it at home."

Super Garlic Immune Formula is available in The Cold Sheet Treatment book.

Because of the wonders we have told you about in this article of the greatness of garlic, it is easy to see how it fits in this formula. Drop a culture of almost any known disease germ into "apple juice" or "apple cider vinegar" an it will die immediately. The ingredients found in "black walnut" are one of the few-known herbal-destroyers of fungus. Marshmallow is the enemy of gangrene and peritonitis. It is a "softening emollient" that will aid in removal of the inorganic deposits broken up by the "solvent" gravel root. Wormwood relieves pain and kills pin-worms and other unwanted parasites, etc. Oak bark tones and firms up the cells in the muscles, cartilage, and flesh. It is also an aid in rebuilding the circulatory system and feeding it. Scullcap is one of the finest nerve repairing and rebuilding aids. It works especially well on the spinal cord--the trunkline for health to the entire body. Comfrey is the cell-proliferant that causes the good cells to multiply rapidly and push out the waste and dead-cell structure, being supplied with the wonderful allantoin. Lobelia is the Lord's great catalyst to combine the

herbal entities to a "smoothly-operating whole."

Garlic is a handy herb that will grow right in your own yard, taking very little space, but which should be in everybody's yard. Any time of the year it is needed, one can go out and dig up the bulb. This can be done in spring, summer, or fall, in an emergency, but the best harvest time is autumn, when the leaves have died down. After shaking off the dirt, the bulbs can be put into a mesh bag and hung in the shade where the cool air can circulate through the bulbs.

The single buttons or cloves, that make up the bulb, can be planted in the fall and by going through the winter will come up the following year in the form of a bulb, with a number of cloves or buttons. When planted in the spring, they will generally be just a larger button by fall and not become a bulb. Some people will put the garlic buttons into the refrigerator (not freezer) and keep cold for a few weeks, bring them out into room temperature for several weeks, and repeat this process several times. Thus, the garlic now believes it has gone through several winters and it mature enough to develop from a clove into a bulb. Rather sneaky we would say, but if it works, fine!

Garlic can be planted around rose bushes and other aphid infested plants and the aphids will disappear. Gardeners have reported to us that they plant garlic between the rows of cauliflower, tomatoes, etc., and the garlic will discourage plant-destroying bugs, cut worms, etc. Here "you can have your cake and eat it too" for you can get the value of garden-assistance from this herb during the growing season, and then thin them out in the fall to use as a food and a healing herb during the winter.

The reason for garlic's miraculous type of healing is in its creation, and this will be explained in more detail further along in this article. Briefly now, this is what happens: The garlic clove contains a very high amount of sulphur; sulphur is one of the best minerals to be used as an oxygen carrier. Oxygen is the breath of life and sulphur will carry the oxygen in the body directly to the infected area. Germs cannot live in a good supply of oxygen, therefore, the infection is cleared quickly. This is an organic wonder, so garlic may be termed 'a wonder herb'.

Medical science discovered that sulphur caused this rapid healing, so in World War II, flowers of sulphur (an inorganic mined-mineral) was substituted for the garlic. The army used sulfa for practically every ailment from "falling hair to fallen arches."

Wonderful results were reported to us and we were told to use it in ever increasing amounts.

The difference in the healings of the garlic and the inorganic, manmade remedies is that garlic does its job and the excess of the organic materials not being used in healing the infection is easily passed as harmless vegetable fiber from the body. No harm and certainly nothing but good could result from using this powerful, yet harmless, herb. But,

with the man-made sulfa drug we used, (this 'wonder drug' healing or the infection), the inorganic flowers of sulphur remained in the body. This inorganic mineral eventually combined with the urine and formed a substance that cut up the urinary tract, causing bed wetters. Many soldiers and other servicemen were given medical discharges, because of "bed wetting". This habit was acquired while in the service after the use of sulfa drugs. It is a well-known fact that too much sulfa drug has also caused other problems. The sulphur in the garlic will assist in healing the urinary tract after its infection-clearing job, instead of damaging it.

Following are various other uses of garlic. Many people have been helped in ridding the body of worms by inserting a peeled button of garlic as high as possible into the rectum. Do this just before retiring at night and it will come out with the first bowel movement in the morning. (This is also a fine aid in adjusting high blood pressure and low blood pressure). Many mothers find it easier to insert the peeled button of garlic (into the child's rectum) after the child is asleep at night.

Here is a very successful routine for removal of these unwanted growths called moles, or warts. Take a button of garlic, slice or cut in two, and placed the cup area over a wart of mole. Tape it on, and as it dries out put a fresh piece. Many users have reported good results.

Massage painful joints and areas with Oil of Garlic, massage it thoroughly. Massage in thoroughly oil of garlic a number of times a day for rough hands.

To make oil of garlic place chopped or grated garlic in a bottle, glass servicing dish or baking dish, (an inch or more of the garlic), and cover with olive oil so that the oil is a half inch or so above the garlic. Keep in a warm place or in the sun two to three days. Strain with muslin or any good cotton material (no synthetics) and bottle the oil. Keep in a cool place.

I remember one time we were called out to a house in the wee hours of the morning. This call was to see a little boy, under the age of two years, that had double pneumonia. The physician on the case had informed the parents that nothing more could be done and he would come back in the morning to sign the child's death certificate. Seeing as it was well under forty degrees below zero and nearly fifty miles from ambulance service, the parents were told that the boy, if taken by car to a hospital, would surely die. These parents tried to get other doctors, but at that time of night, and in such a remote area, no one would offer help. A friend told them about us, then living in Evanston, Wyoming, and to try to call us. Having been told of the boy's condition we went expecting to give him the cold-sheet treatment. Upon arriving there we found that the plumbing was frozen and there was not running water in the house. We found enough in the toilet tank above the bowl to give the little chap an enema. We were not able to give the cold sheet treatment (no water) so only the garlic paste was made up and applied. This was done after a complete massage of the body and the feet. After oiling the feet up to the

ankles, thoroughly, and massaging the olive oil in well, a half-inch thickness of the garlic paste was applied to the soles of his feet. (This is put on only the soles and not up onto the sides). Then gauze was placed over to cover the paste, bandages to hold it into place, and a loose white cotton sock was pulled over the bandages to hold them securely.

Garlic paste is made by taking freshly peeled buttons of garlic and garlic about half and half with Vaseline. This amount can vary, according to the toughness of the feet, more Vaseline for tender feet, less for thicker skin. Many of the health minded readers will be shocked by our using a low-vibration ointment like Vaseline instead of using anhydrous lanolin or some lighter more organic type. The reasoning for this is that the lighter type ointments will penetrate more quickly into the skin, but the Vaseline will hold the garlic on the ointment form. This will also keep the garlic from blistering as easily. (A garlic blister looks bad, but does not hurt and heals back quickly.) The little boy was running an extremely high fever and was delirious when he was covered and put back into bed. (This was well after 2:00 a.m.). We assured the parents the child would be all right and would get well. A few days later we were called again by these parents. They told us that the doctor came back to sign the death certificate that next morning, but the little boy was sitting in his high chair, drinking some juice and breathing normally as if nothing had happened the night before. The doctor became so angry and demanded to know the name of the other doctor who had taken over the case before it had been released by him. He wanted a hearing by "the board" to have the other doctor thrown out of practice for going "against procedure" by taking over a case without written release. The parents asked if his "release" was the death of their child? He probably changed his mind because we were not brought before a hearing.
I had forgotten this case until nearly twenty years had passed. One evening, after a lecture in another state, a fine-looking young fellow in his early twenties came up to the podium and shook my hand vigorously, saying he had always wanted to meet me. His mother had told him of our long trip in sub-zero weather at night to their house, of using the natural methods on, and saving his life. He stated that he enjoyed living so much he had been looking forward to meeting me.

That paid off for a cold night out on a house call by far more than the small fee that was charged.

GARLIC OIL

Therapeutic Action: GARLIC is Anti-Bacterial, Anti-Viral and Anti-Fungal and Olive Oil is an Emollient.

Formula: Garlic Oil is made by the following Method:
1. Start to make the Oil, if possible, on a NEW Moon.
2. Fill a shallow Bowl or Soup Dish with finely chopped Garlic Cloves.
3. Pour enough RAW ORGANIC EXTRA VIRGIN Olive Oil to COVER the Garlic.
4. Cover the Bowel/Dish with Cheesecloth to KEEP the Dust OUT.
5. PRESS and STRAIN OFF the Oil Mixture through Cheesecloth or Cotton Muslin Cloth on the following FULL Moon.
6. BOTTLE it.

NOTE: Whenever taking ANY Plant Oil, such as Olive Oil, internally or using it externally, please be SURE to obtain it from an UNOPENED container, if it has NOT been REFRIGERATED! And once the container has been OPENED, then please be SURE to REFRIGERATE any Plant Oil, thus ensuring that this Oil does NOT become RANCID, doing MORE HARM, than BENEFIT for the Body!!

Herbal Treatment for Preventing Colds and Flu

by Dr. Richard Schulze
http://www.alternativesmagazine.com/08/schulze1.html

Will you get a Cold or Flu this Winter? The odds are YES! The Average American Gets 2.8 colds a year. Don't just sit there sneezing and sniffling. Do something about it!

Are antibiotics the answer? Medical Alert! Last September, the Journal of the American Medical Association stated that Antibiotics have little or no benefit for Colds, Upper Respiratory Tract Infections or Bronchitis. JAMA went on to say the high rate of antibiotic prescribing has even backfired, causing an increase of new harmful drug resistant strains of bacteria.

Doctors continue to write over 12 million prescriptions per year for these drugs, knowing that they are not effective. Some doctors claim that "patient expectations" are the cause of this drug prescription abuse. It seems that doctors are handing out ineffective and dangerous drugs instead of educating the patient.

Prevention
The only real way to prevent colds and flu and fight off infection is to have a strong immune system. Curing diseases with drugs often results in a recurrence of the same problem later, because the real cause of the disease wasn't addressed. Worse, because drugs can cause disease organisms to concentrate and mutate (creating resistant strains of pathogens), the disease or infection often recurs with a vengeance.

This proves the old saying,

“It’s not nice to fool Mother Nature.”

The only true cure for anything is the one your body creates when you live a healthy lifestyle and prevent disease before it starts. We need a strong, healthy and protecting immune system.

The Herbal Dynamic Duo: Echinacea and Garlic
I spent 20 years in the clinic working with thousands of patients who had a cold or influenza. I witnessed firsthand the effectiveness of Echinacea on a daily basis.

Echinacea (pronounced ek-eh-na-see-a) is both the common name and the botanical Latin name for the plant. There are eight known species which are indigenous only to the United States, although it is now cultivated all over the world. The most common species of Echinacea used today are Echinacea angustifolia, Echinacea purpurea and Echinacea pallida. Although the root is typically the part of the plant that is used, the entire plant including the seeds, leaves, flower head and stalk are medicinally competent. It is in the same family as the sunflower and looks like a purple petaled smaller cousin. It grows wild in many areas of the Midwest and southern United States. The Echinacea purpurea species can easily be grown in a sunny spot in your backyard.

What makes a plant medicinally effective for treating disease? It’s the chemicals in the plant, referred to as phytochemicals (phyto from the Greek word meaning plant). Echinacea contains many phytochemicals such as Polysaccharides, Isobutyl amides, Polyacetylenes, Cichoric Acid, Echinacoside, Cynarin, etc. These chemicals are known to cause the following preventive and disease fighting physiological responses.

Hyaluronidase inhibition—this protects your cells by stopping bacteria, viruses and other disease causing organisms from being able to penetrate the cell wall.

Stimulates and increases the number of leukocytes (white blood cells)—These cells (T-cells, B-cells, Granulocytes, Macrophages, etc.) are some of the main components of your immune system. They fight off invaders in many ways.

Increases phagocytosis—the ability of the above mentioned leukocytes to destroy and dispose of bacteria, viruses, fungus and other disease causing microbes.

Increases production of gamma globulins—these are the chemicals that coat the B-cells and are used to make antibodies. Antibodies are chemicals that kill specific bacteria, virus and other pathogens that make you sick.

There are hundreds of other known healing and protecting abilities of Echinacea besides colds, flu, sore throats and upper respiratory infections. A partial list includes inhibiting tumor growth, killing strep and staph bacteria, halting urinary tract infections,

healing infected wounds, relieving hives and allergic reactions, stopping allergies, neutralizing toxic and poisonous insect and animal bites and stings, etc.

Garlic is the common name for the Latin botanical name Allium sativum. The medicinal usage of Garlic has been documented, if not worshipped, since the beginning of recorded history. From the Egyptians and Greeks to the Romans, Garlic was used as both food and strong medicine to strengthen and heal the body.

Why Garlic instead of Goldenseal root? The answer is, there really is no contest. Goldenseal is a much milder antibacterial bitter herb. Goldenseal contains phytochemical alkaloids that are moderately antibacterial. I'm a big fan of Goldenseal. It is wonderful for use on bacterial infections of the eyes, and mucous membranes of the sinus and throat. It is still a main component in my herbal eyewash, herbal sinus snuff and gargle. It is a wonderful herbal antibacterial that you can use on sensitive areas of the body. But compared to Garlic? GET REAL!

Garlic is one of the strongest medicinal plants on Earth. It can be diluted down to one part in 125,000 and still be effective. In fact, just the odor has proven to be highly antibacterial. It is an extremely effective and a powerful broad-spectrum antibiotic, killing all types of bacteria on contact. Garlic is so esteemed in Russia it has been nicknamed "Russian penicillin."

Garlic, as an anti-bacterial, has been proven to destroy many types of bacteria including Streptococcus, Staphylococcus, Typhoid, Diphtheria, Cholera, E. coli, Bacterial Dysentery, Tuberculosis, Tetanus, Rheumatic bacteria, and others.

Pharmaceutical antibiotics are non-selective in their destruction of bacteria— they just destroy it all. This creates many problems because our body has many so-called friendly bacteria that we need for proper metabolic functions. This is why many people, after a course of antibiotics, have digestive problems, constipation, and yeast and fungal overgrowth infections. Our bodies also become immune to these antibiotics over time and sometimes dangerous resistant strains of bacteria are actually created in our body. None of these problems exist when using Garlic because of its natural selective bacterial destruction. In fact, the use of Garlic over time has been proven to enhance the intestinal micro flora.

Garlic has also been proven in the laboratory to be a very powerful anti-viral agent. Many doctors feel it's the cure for the common cold. It destroys various viruses that cause upper respiratory infections and influenza. Garlic destroys on contact such viral infections as Measles, Mumps, Mononucleosis, Chicken pox, Herpes simplex #1 and #2, Herpes zoster, Viral Hepatitis, Scarlet fever, Rabies and others. So while some say that the reason you don't catch colds when you eat Garlic is because no one will come near you, remember, Garlic is also a powerful anti-viral agent.

Garlic's potent anti-fungal ability is second to none. In the laboratory it has proven to be more potent than most any known anti-fungal drug. Garlic will regulate the overgrowth of Candida albicans.

Garlic thins both red and white blood cells. It is a known fact that most viruses, including the common cold, grow faster and spread from cell to cell more easily when your white blood is thick. Garlic inhibits white blood cells from aggregating which, in turn, stops the advance of a cold or flu.

Echinacea and Garlic: A One - Two Punch for the Common Cold
O.K., so what do we know now? Echinacea will enhance, stimulate and strengthen your immune system to protect you from any attack. If you do get attacked, Garlic will destroy the invader on sight.

So, you may ask, why are almost all the Echinacea products in the health food stores mixed with Goldenseal? Why does the herbal world seem to prefer Goldenseal? All I can say is that there is a difference between what is popular in the herbal product sales world and what is effective in the clinic. A few years ago there were a couple of herbal tonics that mixed Echinacea with Goldenseal that got a lot of attention/hype and therefore a lot of popularity. When this happens, almost all of the other herbal product companies follow suit immediately, even if they know better, to catch the sales wave, like what is recently happening with St. John's Wort.

In the clinic, fighting real disease in real patients is very different from the reality of marketing herbal products. Working in the clinical trenches for 20 years taught me to never lose sight of my primary focus: To Help My Patients Get Well. I used what worked and threw out the herbal theories, hypotheses and fads that didn't.

There is one more reason to move over to Garlic: Goldenseal is in very short supply. It is on many endangered species lists. Most conscious herbalists have agreed not to use it until it is organically cultivated and available. That will be in a few more years.

Echinacea and Garlic: How to Use Them
The Raw Herb: Echinacea root and Garlic bulb, fresh or dried, can be chewed and eaten raw.

Chew a one inch piece of Echinacea root every waking hour or two. This will make your mouth tingle a lot and take you awhile to pulverize it enough to swallow.

Herbal capsules made from dried and powdered herbs are considered by most clinical herbalists, myself included, to be the least effective way to treat patients. In fact, they often don't work at all.

With Garlic, I don't know if there is a limit. The only sign of overdose is gastric upset and maybe a loss of all your friends.

Don't be a wimp! Last year I received a letter from an elderly woman who was dying from a viral lung infection. She'd had the condition for over a year and all the doctors and drugs had not helped her. The doctors gave her only weeks left to live. She read an article I wrote on Garlic and immediately consumed 47 cloves of raw garlic a day for three days. Shortly thereafter, her so-called incurable viral respiratory infection was gone. By the way, she was 83 years old.

Herbal Tea: Simmer a heaping tablespoon of fresh Echinacea root and a level teaspoon of fresh Garlic bulb in 20 ounces of distilled water. Cool and drink this amount three times daily.

Tinctures: These preparations are very popular amongst clinical herbalists and are, without exception, the strongest, most concentrated, fastest acting way to use herbs. Echinacea tincture is one of the easiest ways to treat a cold and flu. If you want to make your own tincture, just call the toll free number at the end of this article and I will send you free instructions. Be careful when purchasing tinctures: most on the market are of poor quality and will be of little benefit to you.

The tincture dosages I recommend are double what most armchair herbalists suggest, but these are the dosages that created successful healings in my clinic year after year. Echinacea must be taken steadily over a period of about one week for maximum immune protection. You must have a certain amount of the phytochemicals in your bloodstream every day to get maximum results and to supercharge your immune system.

For preventive immune boosting with no current health problems—Use two dropperfuls, about 60 drops, five times daily until you have consumed two fluid ounces or 60 milliliters. This will take about seven days. Do this at the beginning of each month for the best prevention.
You have that "uh-oh" feeling, "no specific symptoms but I think I'm coming down with something."—Use four dropperfuls, about 120 drops, five times daily until you have consumed two fluid ounces or 60 milliliters. This will take three to four days. Start immediately.
Onset of Fever, Chills or any of the symptoms of a Cold or Flu—Use four dropperfuls, about 120 drops, eight times daily (or every other waking hour) until you have consumed two fluid ounces or 60 milliliters. This will take about two days. You may continue this dosage for a week and then reduce it.
High Fever, Sore Throat, Yellow Mucous, Coughing, Sneezing—Use four dropperfuls, about 120 drops, every hour you are awake (about 16 times a day) until you have consumed two fluid ounces or 60 milliliters. This will take about one day. You may do this for two to three days before you lower your dose.
Note: There are no toxic side effects with Echinacea and no known over dosage. Although health circle rumors abound that if you take too much Echinacea or for too

long a period of time you could burn out your immune system, I don't believe them. Over the years in my clinic I had many an Echinacea junkie and never saw one case of a depressed immunity because of their habit—but I did see patients not getting well from not taking enough.

On the other hand, Echinacea is a strong medicinal herb. All medicinal herbs are best used for a period of time and then stopped for a week or two. When a person needs to use an herb indefinitely because the symptoms persist, this is often a sign that the patient is hoping the herb will be a natural "magic bullet." The person may not be correcting the underlying causes of their disease by changing their lifestyle, their food program, doing frequent elimination and detoxifying programs, engaging in movement programs and emotional healing. Remember, herbs are but one healing tool in a full spectrum healthy lifestyle.

Dr. Schulze is one of the foremost authorities on Alternative Healing and Herbal Medicine in the world today. He operated an Alternative Medical Clinic for 20 years. During the last decade of his practice, he worked almost exclusively with patients who had life threatening and so-called "incurable" diseases. To order audiotapes, videotapes and books from Dr. Schulze, call Toll Free (877) Teach Me - (877) 832-2463. Mention this article to receive a Free Patient Handbook.

Chi - March 26, 2009 04:36 PM (GMT)

This is awesome, thanks for posting this stuff up.

Peace

golden_oil - March 27, 2009 08:54 AM (GMT)

In the early stages of a cold, scratchy throad, etc., put a piece of raw garlic on

your mouth, suck on it for about half an hour, and voila! Symptoms are gone.

Have done this for years and nine times out of ten, it works.

craig-oxley - June 5, 2009 06:24 AM (GMT)

Garlic: It's not just for vampires anymore!

http://www.learningherbs.com/garlic_remedy.html

Well, I have no personal experience with garlic being effective on vampires, but I did see it once in a movie. However, I do have A LOT of experience with garlic warding off illness.

"No other herb comes close to the multiple system actions of garlic, its antibiotic activity, and its immune-potentiating power."

- Stephen Buhner in Herbal Antibiotics.

Not only is it antibiotic, it is also directly effective against viruses. It is also anti-fungal and anti-parasitic as well among many other things. It's important for colds AND flus.

How do I use garlic?

Well, the most obvious garlic remedy is to cook with it. I give ideas about using garlic in the immune soup recipe as well as in my special-tea. Eating garlic regularly is extremely healthful. It also helps lower blood pressure and cholesterol counts. It's absolutely amazing.

It's most potent to use garlic raw. Cooking with it regularly is good for your health, but when you need it in an acute situation, use it raw.

Juicing it and adding it to other juice is a great way to take raw.

There are many good raw garlic recipes that are garlic remedies, such as humous. This is a traditional middle eastern dish/spread. You can find it at supermarkets or you can make your own.

These recipes are a great example of "eating your medicine." Eating healthful meals with antiviral and antibiotic properties built into them is optimal. However, if you are already sick, then cooking garlic into your soup is one of your best options.

What about the odor?

If the odor is an issue or you aren't quite ready to integrate garlic into your diet more, you could try garlic tablets. Understand that tablets are never going to be as good as the real thing, but they do work.

A naturopathic doctor I know recommends this brand. They are odorless, and are well known as one of if not the best garlic tablets out there. The store I send you to on this link sell at wholesale prices. Believe me, you won't find them cheaper ANYWHERE else. The price here matches the wholesale price in my local natural foods wholesale catalog. I researched it so you don't have to.

Garlic remedy on my feet?!?!?

Two ways I use garlic when I'm sick (other than teas and soups)
Garlic vinegar. I infuse garlic in vinegar, and it's a great way to get the raw qualities of garlic. I eat the vinegar straight when I'm ill. But day-to-day, I use it in salad dressings or recipes that call for vinegar.

Garlic on my feet. Yes, you read right. Here's what I do: I crush a few garlic cloves, put them in a little jar or bowl, and cover it just so in olive oil.

In about a half hour, I rub the oil on my feet. I do this on my kids as well when they have a bad cough or they have a chest cold. For me, I also put the garlic pieces between my toes (but not for kids).

Then, I put socks on for the night and go to sleep. When I wake up, I have garlic breath, so I know it works! No kidding! Garlic enters your system and heads straight for the lungs.

Garlic is amazing for the lungs. This is a great way to fight bacterial infections. It also enhances your immune system and fights viruses at the same time! I love this garlic remedy.

Garlic

"Allium Sativum"

Amy Bigus, Deanna Massengill, and Christy Walker

Common Names
Garlic – Anglo Saxon origin
(gar – a spear, lac – a plant, referring to shape of leaves)
"Poor Man's Treacle" – meaning Theriac or "heal all"
Allium sativum – Celtic origin (all – meaning pungent)

General description
Member of lily family
Same group of plants as the onion
Long narrow leaves that are flat like grass
Bulb is used as medicinal spice or herb – consists of numerous "bulblets" or individual cloves grouped together and enclosed in a thin white skin
Whitish flowers are found in groups at the end of the stalk that rises directly from the bulb
Cultivated throughout the world – planted in Feb/March, harvested in Aug/Sept
Native to Mediterranean regions of Europe & Africa, Origin in central Asia (?), Used extensively in Italian & Greek dishes

Chemical Composition
Steamed distillation of crushed fresh bulbs yields 0.1-3.6% of a volatile oil
Some sulfur-containing compounds that make up this oil are thought to be responsible for most of garlic's pharmacological properties:

Allicin
Diallyl disulfide
Diallyl trisulfide
Others

Allicin
Natural antibiotic - fights bacteria
Mainly responsible for pungent odor
When garlic cells are "injured," (i.e.cut, crushed, etc.) the enzyme alliinase converts alliin contained in raw garlic to allicin – the garlic produces allicin to protect itself from bacteria & other disease-causing organisms.
Extremely unstable & decomposes rapidly at room temperature (half-life only slightly more than a few hours)

Allicinase
Inactivated by heat – cooked garlic does not have as strong an odor as raw garlic (nor nearly as powerful physiological effects)

Ajoene
Decreases blood cell clumping – (s chances of stroke
Released when garlic is ground, chewed or cooked

Selenium
Antioxidant contained in high quantities in garlic
Antioxidants fight oxidation & free radicals inside the body that wear out the body & may lead to cancer

Saponins
Lowers blood pressure, decreasing chance of stroke

Fructans
May stimulate the immune system

History
Use predates written history
Sanskrit documents its use ~5000 years ago
Chinese using it for more than 3000 years
Egyptian Medical Papyrus: The "Codex Ebers" ~1550 BC
Ward off evil spirits/Vampires (?!)
History (cont'd)
Great (Bubonic) Plague of 1665 in England
Plague of 1721 – Marseilles, France "Four Thieves Vinegar"
1800s – treat influenza in Russia

Louis Pasteur – 1858 – noted garlic's antibiotic properties

Folk Use
Hypertension
Diarrhea
Headache
Dysentery
Snake bites
Diphtheria
Worms (parasites)
Vaginitis
Tumors
Asthma/Difficulty Breathing
Nasal congestion
Antiseptic
Coughs
Typhus
Toothache
Cholera
Earache
Whooping cough
Dandruff
Rheumatism
Atherosclerosis
Tubercular consumption
Epilepsy
Hysteria

Pharmacology

Antimicrobial Activity (broad spectrum activity against many bacteria, viruses, worms & fungi)
Antibacterial Activity
Inhibits growth of Staphylococcus, Streptococcus, Bacillus, Brucella & Vibro species, as well as E. coli, Proteus vulgaris, Salmonella enteritidis, Klebsiella pneumonia and Mycobacteria
Antifungal Activity
Inhibition of Candida albicans and cryptococcus neoformans; Garlic has been shown to be more potent than nystatin, gentian, violet & 6 other reputable anti-fungals.

Anthelminitic Effects
Activity against common intestinal worms including Ascaris lumbricoides (roundworm)

and hookworm

Anti-viral effects
Herpes simplex type 1 and 2
Parainfluenza virus type 3
Human rhinovirus type 2

Immune enhancing effects
Mobilizes body's own immune system
Stimulates the ability of natural killer cells to destroy tumor cells, virus-infected cells & foreign invaders
Increases macrophage activity
Increasing importance in AIDS research

Anti-cancer effects
Inhibiting tumor growth
Blocking carcinogens (reduce potential damage from oxidation, free radicals & nuclear radiation)
Enhancing immunity

Cardiovascular effects
Protection from heart disease & strokes via effects of atherosclerosis (lower cholesterol & blood pressure)

Others
Anti-inflammatory effects – inhibition of formation of inflammatory compounds
Hypoglycemic action – due to increased hepatic metabolism, a raise in release of insulin and/or insulin-sparing effect

Miscellaneous Effects:
Diuretic
Diaphoretic
Emmenagogue
Expectorant
Carminative
Anti-spasmodic
Digestant

Clinical Applications

Cholesterol-Lowering

A number of double-blind placebo controlled studies in pts with initial cholesterol >200 – supplemented with commercial preparations of at least 10 mg alliin/day or total allicin potential of 4000 mcg/day:

decreased total serum cholesterol ~10-12%
decreased LDL ~15%
increased HDL ~15%
decreased triglyceride ~15%

Prevention of heart disease & stroke

Hypertension
decreased systolic (~11 mmHg) & diastolic (~5 mmHg) BPs
decreased risk stroke ~30-40%
decreased risk heart attack ~20-25%

Inhibit Platelet Aggregation
Decreased atherosclerosis, heart disease & stroke by decreasing plasma viscosity, decreasing DBP, and decreasing fasting blood glucose

Fibrinolytic
increases serum fibrinolytic activity – promote fibrinolysis & therefor offer benefit in prevention of heart attacks, strokes & various thromboembolic events

Prevent LDL-Oxidation
New evidence that LDL ox has a role in atherosclerosis development – no studies yet on this

Available Products/Forms:
raw or cooked cloves
dehydrated powder
(powder, capsules, tablets)
oil
(Kyolic) Aged Garlic Extract
syrup
juice or milk
tincture

Dosage
Standardization for alliin content
"Allicin Potential"
At least (4000 mg fresh garlic equivalent to 1-to-2 cloves, at least 10 mg alliin or a total allicin potential of 4000 (g

Toxicity
Generally regarded as safe.
Minor Side Effects:
GI burning/irritation, bleeding

indigestion
loss of appetite
diarrhea
Rare Side Effects:
anemia
oxidation of essential body components

Summary

"Garlic then have power to save from death

Bear with it though it maketh unsavory breath,

And scorn not garlic like some that think

It only maketh men wink and drink and stink."

Sir John Harrington (1609)

craig-oxley - July 5, 2009 03:07 AM (GMT)

http://flash.lymenet.org/ubb/Forum1/HTML/025705.html

At a recent 3-day seminar on ART I, at the end my doctor hung on a little talk about various remedies he uses most frequently such as garlic, cilantro, chlorella, etc. Here is what he said about garlic. It came with some nice overhead statistics and research, which I cannot give you here because I can't show you the video of the seminar.
Here it goes - in rough:

"A little bit about Garlic....

The issue came up – many of you have heard me speak on garlic. First of all, here is the study on garlic --- on h. pylori – it is extremely effective to give freeze-dried garlic, or in this case garlic oil for h. pylori, which is one of the major infections that we are dealing with these days.

Here is a German study – a comparison between Bear Garlic and garlic. Bear garlic is wild garlic, which is the plant that grows in Central Europe and is absolutely great. That's what the old Germanic tribes used to do – they attacked Rome and brought the Roman Empire down in April, of whatever year that was, because in March, when the bear garlic comes out and they cut and are eating the leaves of the bear garlic and they are getting so much energy from it, they don't know what to do with it. Their hormone levels go up, all their infections go away, and ….
(laughingly) the Germanic Tribes they were doing this thing every March, beginning of April they would eat bear garlic and cleared out all the parasites, all the infections, and then went and conquered Rome and did all these other things….. All of it is long forgotten, but it has an effect on you and one of the reasons I always go in April to Germany is – my friend overthere grows a hugh plantation of bear garlic among the trees in the woods and makes me this bear garlic pesto. I do four weeks of bear garlic pesto and can tell you that it is for me incredible…..

A little bit about Allicin. Garlic is associated with this compound Allicin, which has been shown to be the most potent natural antibiotic. (showing an exhibit of MIT)
It is extremely effective for Staph aureus, and some of the physicians among you know that there is no antibiotic left that's effective. Well, there is plenty of research that shows that freeze-dried garlic is absolutely 100% effective for it, and it puzzles me that science ignores that. This is from peer-reviewed journals, not small stuff. Candida – may be important for you – that freeze-dried garlic is an absolute for treating Candida.

Let me talk about Allicin. Garlic contains Alliin, which is the chemical precursor to Allicin, and they get converted to
Allicin through an enzyme called Alliinase. That happens when you chew garlic; when you break up the cell membrane of the plant cells, the enzyme that is in the cell wall gets released and combines with alliin and then allicin is created within 20 seconds.

Allicin has a half life of 10 days. Any of the garlic products that you buy – garlic oil, kyotic garlic, etc. – there is no allicin left in it. So any prior experience you have had with any garlic products, other than fresh garlic, forget that. Erase that out of your mind "tried garlic once and it didn't work" – put that on the side.
The only garlic products that have their full allicin-releasing potential left is fresh garlic and freeze-dried garlic.

When you swallow garlic, when you chew it for a few seconds and wait for 20 seconds before the conversion after you chew it, and it hits the stomach acid, the enzyme is immediately neutralized and the conversion doesn't happen. So if you take raw garlic and eat it, it doesn't happen either.

If you eat it on a full stomach (on a full stomach the Ph comes up from 1.5 to 4.5); you can eat it at the end of a meal and the conversion happens. You chew the garlic, the enzyme is activated, you swallow it, it doesn't get killed by the stomach acid, and you get the full allicin release from it.

Chewing garlic has the disadvantage has that you smell like…….. (laughter)

When you eat garlic, you smell. When you take freeze-dried garlic in capsules, there is no body odor. There is a mild body odor that you can detect if you go close to the skin of the person who is taking it.

Garlic is also very effective for treatment of amoebas and giardia, most species of worms; in Lyme Disease – Dr. Zhang in New York published papers on the effectiveness that allicin also penetrates the blood-brain barrier and goes to the CSF and can clean up things there.

It is really a fantastic agent for our time. The way to take it is 2-3 capsules at the end of each meal – needs to be taken at least three times a day, better four times a day, just like penicillin. Remember, penicillin you have to take every six hours, you have to take it four times a day to make it work, and the same with freeze-dried garlic.

It is great for general health.

Question: Do you chew up these capsules?

Answer: Freeze-dried garlic – you swallow it at the end of a meal when the Ph has come up; then the juices in the gut mix with the garlic, put it in solution, activate the conversion and you get the whole shebang (sp?) of the allicin release.

I want you to try to remember that any time that any prior experience, when people talk about garlic "yeh, tried it and worked a little bit" or so, they didn't do it right, I promise you. If you follow these rules, it becomes the most powerful medicine that we have.

It is also for …… clostridium, there is a study there - some of the modern infections that we have no solutions for in medicine, try garlic.

Question: either the fresh or the freeze-dried – you want to take following the meal?

Answer: Yes, there is no point – if you cook garlic, you destroy the enzyme. Also if you put it on your salad – most people eat their salad before the meal, forget it – it doesn't work.

Question: You want it to be activated after it hits your stomach?

Answer: yes. If you can't take the capsule, put it in water, stir it, wait 20 seconds until the conversion happens, then drink it. Then it won't be destroyed by the stomach acid.

The best solution for topical problems – use garlic tincture on the skin, by far the best garlic tincture is from Morin Labs. (describes the technical aspects of manufacture). Even though the garlic is broken up in small particles where there are still some cells intact, the moment you put it on the skin, from the drying-effect the cells rupture, the allicin is released and it is a great antimicrobial. So for fungal infections (feet and everywhere) use garlic tincture – major for staph infections on the skin (freeze dried garlic inside – tincture outside).

Tincture is also great to use orally. Great for gum disease. Do it at night – slush it around in your mouth, go to bed, don't swallow it – just sort of leave it there, and it kills all the microorganisms. If you have a partner, if you both do it (there is this habituation to the garlic taste and smell), if your partner also does it, in the morning either one of you can smell each other and will not be offended by it.

It is a powerful tool of the past and of the future."

It's a must for Lyme, viral infections (fish oil too for virals). From my experience.

craig-oxley - August 10, 2009 03:51 PM (GMT)

A small Turkish study found a reduction in PSA (a protein produced by the prostate gland, a high level of which can indicate cancer) in nine patients with prostate cancer after they had taken a liquid garlic extract for one month.

The average PSA level of the men fell from 8.9ng/ml to 3.6ng/ml and the fall was accompanied by an improvement in symptoms.

A study in Shanghai investigated the effect of intake of allium vegetables, including garlic, spring onions, onions, chives and leeks, on the risk of prostate cancer in 238 men with confirmed prostate cancer and 471 healthy men for comparison.

The men who ate more than 10g of allium vegetables a day were 49 per cent less likely to develop prostate cancer than those who ate less than 2.2g a day.

When vegetables were considered individually, men who ate more than 2.1g of garlic or scallions a day reduced their risk of developing the disease by 53 per cent (garlic) and 70 per cent (spring onions) compared to those who did not eat any at all.

Discover the Powerful Benefits of Garlic

Wednesday, August 19, 2009 by: Henri Junttila
http://www.naturalnews.com/026879_garlic_health_cancer.html

Eating a clove of garlic might not be the tastiest snack in the world, but it will give you some powerful health benefits. Benefits include managing high cholesterol levels and decreasing the risk of various cancers. Garlic has been used for ages as a folk remedy for several diseases. Science is just now discovering how effective it really is in helping us become and stay healthy.

Supports Cardiovascular System
Over 250 publications have proven that garlic helps our cardiovascular system. It can lower cholesterol and triglyceride levels in your blood. Garlic can also inhibit platelet stickiness and increase fibrinolysis, which results in a decreased rate of blood coagulation.

Anti-Microbial Properties
Garlic may work against intestinal parasites because it has antibacterial, anti-fungal and antiviral properties. Garlic is said to have around 1 percent of the power of penicillin against certain bacteria. For example: Candida or yeast infections are successfully inhibited with garlic.

Cancer Fighting
In the October 2000 issue of the American Journal of Nutrition they concluded that several epidemiologic studies had proven the benefits of eating garlic for stomach cancer. Those who ate raw garlic regularly, compared to those who ate a small amount or none, had about half the risk of stomach cancer and one third decreased risk of colorectal cancer. It has also been discovered that when meat is cooked at high temperatures and burnt slightly with garlic, the carcinogenic compounds it produces are limited. Without garlic when meat is burnt, the carcinogenic compounds are much higher.

Lowers Blood Pressure
Garlic has been found to be very effective in lowering high blood pressure. The reason garlic is so effective is because it relaxes your arteries and it eases the spasm of smaller arteries. Garlic has also shown the ability to help with nausea, shortness of breath and gas in your digestive tract.

Summary
Garlic is best eaten in its natural form. Taking a garlic supplement might help you, but you want to make sure that the supplement is potent and is derived in the best natural way, so as to preserve all the natural compounds that are in it. There are many other benefits garlic has, and this article has just touched upon them. It could for example help you with skin disorders like acne, ear infections or even toothache. The possibilities are endless when you`re considering how to get garlic into your diet. Soups are always a good first choice to try!

Garlic is natural medicine for treating high blood pressure

Thursday, October 08, 2009 by: Mike Adams
http://www.naturalnews.com/027195_garlic_b...d_pressure.html

Garlic is one of the most amazing medicinal herbs on the planet. It has been among my top-recommended healing foods and medicines for years. Most people know garlic as being anti-cancer. Others recognize its ability to naturally lower high cholesterol. But did you know that garlic also helps normalize high blood pressure?

Here, we present a collection of powerful quotes about garlic and high blood pressure, documented in some of the best health books ever written. Enjoy this collection of knowledge!

Garlic vs. high blood pressure
Onions have similar characteristics and are often used in combination with garlic. To preserve the beneficial effects of garlic it should not be boiled. The fresh juice is the most effective preparation. For nervous spasms, cramps and seizures, crush one clove of garlic in a glass of hot milk. For high blood pressure, take one clove of garlic each morning. Prepare oil of garlic by placing eight ounces of peeled minced garlic in a wide-mouthed jar with enough olive oil to cover. Close tightly and shake a few times each day; allow to stand in a warm place for three days.
- The Way of Herbs by Michael Tierra

Garlic has achieved a legendary reputation as an antihypertensive medication. It's been used in China for centuries for that purpose, and the Japanese government officially recognizes garlic as a blood-pressure depressor. American scientists first tried garlic against high blood pressure in 1921. Garlic consistently lowers blood pressure in laboratory animals.
- The Food Pharmacy: Dramatic New Evidence That Food Is Your Best Medicine by Jean Carper

Eat more garlic. It is another legendary folk remedy for high blood pressure, and it is effective, according to recent studies. Long used in China and widely used today in Germany as a blood pressure medication, garlic can have a striking impact. In a recent double blind German test of Kwai, an over-the-counter garlic preparation, doses comparable to a couple of daily garlic cloves pushed diastolic blood pressure down in patients with mild high blood pressure.
- Food Your Miracle Medicine by Jean Carper

I heard a lot about garlic being a good remedy for colds, but I was hesitant to try it because I also heard it lowers high blood pressure. Since my blood pressure is normal, I thought the garlic might cause it to drop. Fortunately, I read where a medical doctor said that garlic normalizes high or low blood pressure, but does not disturb normal blood pressure. With this assurance, I tried Kyolic garlic tablets the next time I felt I was starting to come down with a cold. Within a few days, I felt fine.
- Secrets of the Chinese Herbalists by Richard Lucas

The confidence the Egyptians had in garlic is demonstrated by the fact that they reportedly used it to strengthen the workers who built the pyramids. Pliny recommended garlic for 61 maladies in his Historia Naturalis; Hippocrates recommended it as a laxative, diuretic, and cure for tumors of the uterus. Garlic has been used to treat high blood pressure for centuries in China and Japan. In first-century India, garlic and onion were thought to prevent heart disease and rheumatism. Garlic even had a reputation as an aphrodisiac in Shakespearean England.
- Get Healthy Now with Gary Null: A Complete Guide to Prevention, Treatment and Healthy living by Gary Null

A number of scientific studies suggest another reason that garlic is your heart's friend: Its ability to bring down high blood pressure. Exactly how much can garlic reduce your blood pressure? It's not as fast-acting as high blood pressure medication, says Dr. Mowrey. But over time, he says, garlic can be almost as effective as lifestyle changes like weight loss, regular exercise and cutting back on salt intake.
- The Complete Book of Alternative Nutrition by Selene Y. Craig, Jennifer Haigh, Sari Harrar and the Editors of PREVENTION Magazine Health Books

According to David Hoffmann, B.Sc, M.N.I.M.H., of Sebastopol, California, eating a clove of raw garlic daily will help considerably in preventing or reversing the effects of high blood pressure. While garlic has been used for centuries in traditional cultures throughout the world as a multipurpose medicinal food, in recent decades more than 2,000 clinical studies have validated many of the folk-healing claims for "the stinking rose," as garlic was once called.
- Alternative Medicine the Definitive Guide, Second Edition by Larry Trivieri, Jr.

Three to ten cloves of garlic a day are needed to induce the beneficial effects for the cardiovascular system. However, the garlic cloves must be crushed, chopped, bruised, or chewed to release the full effect. You might want to try some of the popular garlic-rich Italian and Asian dishes. If you're worried about the famous odoriferous side effect of consuming garlic, do as the Europeans do and take your garlic in concentrated odor-free capsules.
- Intelligent Medicine: A Guide to Optimizing Health and Preventing Illness for the Baby-Boomer Generation by Ronald L. Hoffman, M.D.

Studies show that garlic has antibiotic properties as well as the ability to fight fungal infections, and at least twenty-eight studies have found garlic effective for lowering cholesterol levels. In one German experiment, volunteers taking an 800-mg garlic tablet saw their cholesterol levels drop an average of 12 percent over four months. Compounds in garlic dilate the blood vessels and may help high blood pressure, congenital heart disease, and lung conditions. Can garlic also prevent cancer? Some scientists are finding out.
- Medicines From Nature by Peggy Thomas

Another group of researchers proposed that garlic's antiplatelet activity and other cardiovascular effects may be due to activation of nitric oxide synthase (NOS) and subsequent production of nitric oxide. The correlation between low levels of nitric oxide and high blood pressure has been known since 1991, and this research correlated the effect of garlic extract on NOS and platelet aggregation. Raw, dried, aged, and macerated garlic as well as garlic oil have all demonstrated antiplatelet effects. Ajoene may be one of the most potent antiplatelet compounds in garlic.
- The Encyclopedia of Popular Herbs by Robert S. McCaleb, Evelyn Leigh, and Krista Morien

In the eighteenth century, Esteyneffer recommended both garlic and onion for a wide variety of illnesses, uses that continue today. The Mountain Pima insert a clove of garlic into the anus to treat fever. The Mayo use garlic in capsules for arthritis and cancer and to reduce fat. Mexican Americans insert the clove to treat susto, fright disease. Both respect garlic for its magical properties. Garlic is used for high blood pressure and against fright; onion has been used for fever.
- Healing with Plants in the American and Mexican West by Margarita Artschwager Kay

As an antithrombotic agent, ajoene is at least as potent as aspirin and its activity is enhanced by other breakdown products of the garlic. Allicin is found to lower serum cholesterol by blocking its biosynthesis. Fresh garlic, garlic juice, aged garlic extracts or the volatile oil - all lowered cholesterol and plasma lipids, lipid metabolism, and atherogensis both in vitro and in vivo. Methyl-allyl trisulfide of the garlic helps expand constricted blood vessels, thereby preventing high blood pressure.
- Indian Herbal Remedies: Rational Western Therapy, Ayurvedic and Other Traditional Usage, Botany by C. P. Khare

The typical study compares diets high in fat with and without Garlic. Garlic diets consistently produce the lowest cholesterol levels. In the 1940s, one investigator found that 40 of 100 patients with high blood pressure experienced a reduction of 20 mmHg or more after about a week of garlic treatment. In another study, a water extract of garlic was given to hypercholesterolemic patients for two months during which time the patients experienced a 28.5% reduction in cholesterol - the dose was equivalent to about 10 grams of garlic per day.
- The Scientific Validation of Herbal Medicine: How to Remedy and Prevent Disease with Herbs, Vitamins, Minerals and Other Nutrients by Daniel B. Mowrey, Ph.D.

One study looked at 41,000 American women and found that one or more servings a week of garlic was associated with a 35 percent decrease in the risk of colon cancer. It is thought that garlic's sulfur compounds are key in preventing these types of cancers by helping to control carcinogens (cancer-causing substances). High blood pressure is recognized as one of the leading causes of heart disease, and garlic has been shown to have mild blood-pressure-lowering effects. Clinically, I would not rely on garlic alone to lower blood pressure.

- The Natural Physician's Healing Therapies by Mark Stengler, N.D.

craig-oxley - November 1, 2009 12:49 PM (GMT)

Notice the MUCUS FILTH! Without this filth and damaged cells through chemicals and pollution there can be NO bacterias, Viruses and Fungi PERIOD! Clean up that body and eat to God's laws not mans bullshit. Now whats the first thing they turn to below? Yes the mighty raw Allium sativum cloves and Allium cepa bulbs the kings of defense and attack! I'm telling you peoples now that you must have a 2 month continual stock of Allium sativum and a three week continual stock of Allium cepa. Both are extremely powerful medicine and extremely cheap and available FOR NOW! Be prepared! You'll probably find that these people are making up vodka tinctures of these herbs as we speak for preservation/medicine for long term. -Craig

Shock! Pestilence expected in Ukraine? 20 people died of influenza already

// 28.10.2009 // 13:39 //
http://mignews.com.ua/en/articles/376222.html

Flu epidemic in the Ternopil Region, which appeared a week ago, mowed down nearly 10,000 of residents. Moreover - unknown virus has already killed seven people. Two residents of the regional center and five villagers (among them was a woman who recently gave birth to a child) died from pneumonia caused by **catarrhal infection**. Another four people have been in the grace condition in hospitals of Ternopil.

As the head of public health city department Vasyl Blykhar reported, all victims of infection were young people who previously had no problems with health. Supposedly they sought help too late, on the sixth or seven day. Quarantine is declared in the region, schools are closed. They say infection is coming to the neighboring areas of Western Ukraine. In the Lviv Region a few districts are preparing for quarantine, particularly, Drohobych and Boryslav districts.

As a resident of Ternopil Olexandra Melys toldh, a lot of people wearing flu masks have appeared in the city. **Ternopil residents are buying garlic, onion and vodka for prophylaxis.** There are queues for pills and drops from a cold, there is lack of the most popular drugs, "- says a pensioner Lyudmila. - They say that in fact 16 people have already died".

Local residents fear swine flu mows down them. Doctors reassure: laboratory studies at the local level do not confirm that it is swine flu. "We will be able to confirm the type of influenza in 1,5 week, when research results will be received from London", - says Bohdan Onyskiv, the head of the regional health administration department. One reason for large-scale disease might be sudden cold snap, when a week ago Halychyna was covered with snow and frost. According to another version, wage

earners, who brought the virus from abroad, are guilty of it.

The doctors do not rule out that the death of residents occurred precisely because of influenza. But only virology examination may confirm information about it. It will be made in Kyiv within 7-14 days. But the head of the Verkhovna Rada Committee on Health protection Tatiana Bakhteyeva said that the Ukrainian examination is not a guarantee: "Our labs have a weak foundation for such research and nobody can guarantee the results will be correct."

Experts say that officials of the Ministry of Health can keep silent about the situation in order not to sow panic. "We can not rule out that people could die from swine flu", says Professor of Immunology Fedor Lapy. According to him, 7 deaths in the region for a week is too much.

"The United States has declared a pandemic of swine flu, a thousand of people have already died. It is in the United States, where there is a vaccine, but we will have just plague", - adds the first deputy head of the Committee on Health Vyacheslav Peredery.

01:56 p.m. Information about the death of four people as a result of complications of influenza has come also from the Drohobych district, Lviv Region. As the head of the Health protection Department of Drohobych city executive committee Andriy Shevkenych, this is due, first of all, with ill-timed treatment in a medical institution, late hospitalization and self-treatment. "Only during the previous day the ambulance received over 50 calls related to the symptoms of influenza. As a result, 11 people were hospitalized," - said Andriy Shevkenych.

Also, according to Andriy Shevkenych, a headquarters under the leadership of the Deputy Chairman of Drohobych, chairman of Staff has been founded for struggle against virus. Hr 100,000 have been allocated for struggle against flu. Quarantine is declared in schools and kindergartens quarantined. Additional seats are assigned in children's hospitals of Drohobych Stebnyk.

"In my opinion, this is the peak. We will hope for decrease in number of cases in a week", - said Andriy Shevkenych.

The Ministry of Health reported that a commission has been founded involving experts from ministries and scientists from the Academy of Medical Sciences in order to study the causes of increasing influenza and acute respiratory viral infections in the Ternopil Region.
05:03 p.m. Chairman of the Ternopil Regional State Administration Yuri Chyzhmar signed a decree on October 28 to allocate from the reserve Hr 50,000 funds of the regional budget for the purchase of tools for diagnosis influenza and acute respiratory viral infections.

In general population of Ternopil and southern regions of the region, in particular Chertkovsky, Terebovlya, Husyatinsky, Borshchevsky, are ill. Patients who died had not visited countries affected by A (H1N1) "California" flu and lived in various parts of the region.

Despite the fact that unknown virus is raging in Western Ukraine, which is killing people, the Health Minister Vasyl Kniazevych says everything is under control. He said today at a press briefing in the Cabinet of Ministers of Ukraine that in connection with epidemic of acute respiratory infections in the Ternopil Region the Ministry of Health created a special headquarters. He sent the chief sanitary doctor of Ukraine to Ternopil.

The head of the Ministry of Health confirmed that as a result of the epidemic of influenza 9 people died (in the Ternopil Region - editor.), who were diagnosed with "pneumonia". 95 people have been registered with similar diagnosis and hospitalized in the Ternopil Region.

According to Vasyl Kniazevych, 25 people who are ill with pneumonia are now in the grave condition (among them are children, but most of them are adults). An express-diagnostics and laboratory studies of all diseased are done. "The virus H1N1 has not been confirmed", - assured Minister of Health and urged people not to panic and not to create excitement. "Call a doctor and let him help you", he added.

Ministry of Health has confirmed 20 deaths from pneumonia in Ternopil, Ivano-Frankivsk and Lviv Regions, deputy Minister of Health Vasyl Lazoryshynets reported at a press conference.

He said that in the Ternopil region since October 13 95 people have been hospitalized with such diagnosis, 25 of them are in the grave condition, and 10 patients died. In the Ivano-Frankivsk Region since the same time 25 people with the same diagnosis have been hospitalized, 7 of them - in a grave condition, 6 people died. In the Lviv Region since October 1 6 patients have been hospitalized, 2 of them are in a grave condition, 4 people died. By Segodnya newspaper, Ukrainian News

Me thinks this man is trying to stay clear of any pandemic dont' you? -Craig

Irish minister's raw garlic habit

Garlic has been used as a health remedy for more than 5,000 years

Tuesday, 3 November 2009E-mail this to a friend Printable version
http://news.bbc.co.uk/1/hi/world/europe/8340120.stm

Raw garlic may not be most people's idea of a tasty snack, but details have emerged of Irish Finance Minister Brian Lenihan's unlikely fondness for munching on the herb.

Although it's renowned for its many healthy properties as well as being a traditional safeguard against vampires, Mr Lenihan is reported to have used it to stay awake during late-night talks about the Republic's troubled economy.

The revelation emerged in an extract from a book by economist and television personality David McWilliams, who says he met the minister in September 2008 at the height of the banking crisis.

"He pulled a bulb of garlic out of his pocket and started to peel it. It was one of the odd moments in a long night of odd moments.

"In subsequent meetings, the raw garlic was produced and squashed into bowls of soup. This time he just peeled a clove and left it on the table.

Brian Lenihan is said to have begun the habit when he became finance minister

"He explained to me that the garlic gave him strength and kept him healthy and alert. I had no reason to doubt him.

"He went on to say that he had been chomping raw garlic all summer, since he'd got the finance job."

Details of Mr Lenihan's habit were confirmed by Minister of State Pat Carey, who said on a radio programme that Mr Lenihan "constantly chews garlic".

Mr Lenihan is following in the footsteps of many people throughout history who used garlic to improve their physical and mental strength in challenging times.

Health remedy

Roman soldiers ate garlic before battle, Greek athletes took it before a race, and the workers building the pyramids were issued garlic with their rations so that they could chew it all day long as they manhandled the heavy blocks into position.

It may be a wonder herb, but one unfortunate side-effect is that it can lead to bad breath.

Experts suggest eating a sprig of chopped, fresh parsley, but this might look a bit strange in polite company.

Garlic is thought to have been used as a health remedy since 3000 BC.

It is a member of the Lilly family and contains sulphur and amino acids as well as minerals such as germanium, selenium and zinc as well as vitamins A, B and C.

That Other Flu Rose: Garlic

Posted by: Lesley Tierra in seasonal herbs, prevention, herb, colds and flus, antiviral, antibiotic herbs on Oct 16, 2009
http://www.planetherbs.com/index.php?optio...html&Itemid=141

o matter what name you give it (or what animal you name it after), we're now full swing into the flu season. Michael's written on the great benefits of onion poultice; how can I pass up touting one of my favorite flu/lung/cough herbs – garlic? So while you're plastering your chest with an onion poultice, eat or drink some form of garlic as well.

Garlic is said to be a cure for every ailment but the one it causes: bad breath! Its delightful fragrance comes from the presence of sulfur compounds, nature's own antibiotic (but if you eat parsley after the garlic, much of its undesirable odor is eliminated). Garlic is a rejuvenating herb because it both stimulates metabolism and detoxifies. In fact, the body absorbs it so quickly that if you were to rub a clove on your feet, you would be able to taste it within seconds!

Garlic is one of the very best herbs for respiratory conditions, colds, flu, sore throats, infections and earaches. Because it so powerfully heals lung ailments, I recommend it to most all patients with coughs or mucus (especially white or clear mucus).

I have found two methods to be particularly effective for lung ailments: garlic juice or garlic appetizer.

Once when I visited my parents I developed walking pneumonia (and didn't know it). I tried a variety of different herbs but had no results. Finally, I purchased a bottle of garlic juice at a chain grocery store and drank one teaspoonful every two to three hours. Within the first day I was well on the road to recovery and by the end of the third day, completely healed.

Another time I had a terrible debilitating cough on Mother's Day. My son and husband wanted to take me out to lunch to celebrate and since I didn't want to disappoint them, I

went along thinking I would keep them company but not eat. Luckily we found an Italian restaurant where, as we waited to order, a large appetizer of bread with raw garlic in olive oil sat on our table. Knowing garlic would help me, I coated several pieces of the bread with masses of the raw garlic dipped in olive oil and ate them with relish. By the time our meals had arrived, my cough was nearly gone and the next day I had fully recovered. I have seen had many a patient experience similar results using garlic juice or appetizer.

Of course, garlic has TONS of other great medicinal uses. It's a specific for regulating blood pressure, both high and low, and lowers blood cholesterol and triglyceride levels and plaque in vessels, thus treating atherosclerosis. The deodorized garlic capsules work well in this case, which is a blessing, for it is quite convenient and of course, odorless (in fact, the aged garlic may be superior for these actions).

As well, raw garlic effectively improves weak digestion, stimulates circulation and treats arthritis, rheumatism, lower back and joint pains, genito-urinary diseases, nervous disorders, cramps and spasms and heart weakness. For any of these eat the raw cloves, or drink the juice or syrup. It may also be used in food poisoning due to shellfish.

The Chinese use garlic as a preventative and treatment for parasites and intestinal worms, particularly hookworms, pinworms and ringworm of the scalp. Either insert an oiled garlic clove in the rectum, use garlic enemas (made from garlic tea), eat 3-5 raw cloves of garlic, 3-6 times daily, apply the paste (mashed garlic in sesame or olive oil) topically for ringworm, and in general, use heavy doses for these indications.

Garlic is also good for amoebic dysentery, and an effective antibiotic for staphylococcus, streptococcus and bacteria resistant to standard antibiotic drugs. It is effective for vaginitis and leukorrhea (coat cloves in oil, wrap in muslin, saturate in olive oil and directly insert into vagina) and anti-fungal for the treatment of Candida albicans and yeast infections.
Garlic

Allium sativum; Liliaceae; da suan; Sanskrit: lasunam

Part Used: bulb

Energy, taste: hot; spicy

Organs affected: Lung, Spleen, Large Intestine, Stomach

Actions: expels parasites

Properties: stimulant, diuretic, diaphoretic, hypotensive, alterative, digestant, carminative, expectorant, antiseptic, antispasmodic, parasiticide, antibiotic,

antibacterial, antifungal, anticoagulant, lowers cholesterol

Biochemical constituents: volatile oil (about 0.2%) including allicin and aliin, B Vitamins, minerals

Dose: 6-15 gm; Since the volatile oils hold its active ingredients, garlic must be taken fresh for acute ailments rather than deodorized in capsules. For acute conditions, take 1 tsp. every hour of syrup, oil or juice; 3-5 cloves, raw, toasted or as paste/day; 30-60 drops tincture, 1-4 times/day

Precautions: avoid in high doses during pregnancy; do not use with Excess Heat or Yin Deficiency with Heat signs, acute inflammations, or take with problems of the mouth, tongue or throat; prolonged direct contact to the skin of fresh garlic can cause irritation; excessive use can irritate the stomach

Other: purple-skinned garlic has a stronger effect against parasites; eat with food as a preventative

Indications: respiratory conditions, colds, flu, sore throats, infections, earaches, cough, high and low blood pressure, high cholesterol and triglyceride levels, atherosclerosis, weak digestion, poor circulation, arthritis, rheumatism, lower back and joint pains, genito-urinary diseases, nervous disorders, cramps, spasms, heart weakness, parasites, intestinal worms (particularly hookworms), pinworms, ringworm of the scalp, amoebic dysentery, staphylococcus, streptococcus, vaginitis, leukorrhea, Candida, yeast infections

Stop feeding them mucus all day long whilst hurting their Kidneys forever. This is just filth plain and simple. -Craig

Ear Infections: Use a Home Remedy of Garlic Juice

Friday, December 18, 2009 by: Kim Evans
http://www.naturalnews.com/027761_ear_infections_garlic.html

Children are often plagued with ear infections and they're often taken to doctors who ply them with antibiotics. However, antibiotics destroy our healthy bacteria, which is our first line of immune defense. This leaves children, and adults, wide open for numerous health problems later in life after they've taken antibiotics. Ear infections are most often caused by a bacteria, virus, or fungus in the ear and the juice of a few cloves of raw garlic with a little water is an effective natural antibiotic, antiviral, and anti-fungal. This simple mixture can be placed right in the ear a couple times a day as an easy home

remedy to beat common ear infections.

However, before you do this, you should know that with ear infections, it can be painful while the garlic is killing what needs to be killed. The pain, however, generally lasts just a few minutes and when the problem is eliminated, there will be no pain even with the same dosage of garlic water.

To make the mixture, juice a few cloves of garlic and strain the juice to ensure it's without chunks or solid residue. Then, add approximately five times as much purified water as garlic juice. Then simply tilt your head to the side and pour in some of the garlic water. Keeping your head cocked to the side, let the garlic juice remain in your ear for a few minutes or as long as you can stand. When you're ready, simply tilt your head to the other side to drain the remainder, and rinse your ear in your next shower. With young children, or if you have a low tolerance for pain, you may want to dilute the juice even further.

It generally takes just a dose or two before the pain - and problem - are eliminated. And most would agree that the momentary pain beats having your immune system compromised for the rest of your life - whether you're an adult or child - just because your doctor didn't tell you how to replenish your healthy bacteria after he or she gave you drugs that destroyed them.

If you've already taken antibiotics and are turning to home remedies as a back plan, it's important to also get started in replacing your healthy bacteria. Having an abundance of these friendly microbes in your gut will help you avoid many problems. Dr. Richard Anderson tells us that one dose of antibiotics can wipe out all of our healthy bacteria.

Healthy bacteria are found naturally in raw fermented foods, including sauerkraut, kim chi, and kombucha. Quality yogurts also contain plenty of healthy bacteria, but yogurt is also mucus-forming which contributes to clogged pathways in the body. In particular, mucus-forming foods contribute to clogged sinuses - and clogged sinuses are connected with ear infections. Due to this, it's better to get your healthy bacteria from vegetable-based sources. Healthy bacteria are also available as supplements known as probiotics. Just be sure to purchase a good brand - and one with at least as much of the Bifidobacteria strain as the Lactobacillus bacteria (acidophilus, etc.) strain.

GARLIC CURES CANCER: My 98 year old

uncle eats fresh garlic every day

By einron
http://hubpages.com/hub/garliccurescancer9...uncleeatsgarlic

GARLIC

GOD provides HERBS for FOOD In the creation of the universe. He had also provided every thing necessary for the survival of mankind. And God said, "Behold, I have given you herb bearing seed, which is upon the face of all the earth, and every tree, in the which is the fruit of a tree yielding to you it shall be meat" (Genesis 1:29).

In verse 30, God continues: "And to every beast of the earth, and to every fowl of the air, and to every thing that creepeth upon the earth, where in there is life, I have every green herb for meat: and it was so."

There is only one verse recorded in the Bible which mentions garlic (Numbers 11:5):

"We remember the fish, which we did eat in Egypt freely; the cucumbers, and the melons, and the leeks, and the onions, and the garlic:"

HERBS

Herbs are plants having medicinal, culinary, or aromatic properties. God forsaw the necessity of healing herbs for mankind. Diseases abound and man is searching for ways to combat diseases. The garlic bulb is found to be most potent and versatile in

treating diseases like infections, arthritis, cancer and heart disease. Garlic also boosts the immune system.

Approximately 3,000 years before the birth of Jesus Christ, man had used garlic for healing and herbalists have been writing about it for at least 2,000 years.

Garlic is common in Eastern countries. The Chinese and Thai use it in their cooking to flavour their dishes.The Crusaders brought it into Europe from Ascalon and it is known by the name of "shalot."

American College of Surgeons Oncology Group

ACOSOG established to evaluate the surgical management of patients with malignant tumors.

Sun Yat-Sun University Cancer Center, GuangZhou

NATIONAL CANCER INSTITUTE

Several population studies conducted in China centered on garlic consumption and cancer risk. In one study, investigators found that frequent consumption of garlic and various types of onions and chives was associated with reduced risk of esophageal and stomach cancers, with greater risk reductions seen for higher levels of consumption (8). Similarly, in another study, the consumption of allium vegetables, especially garlic and onions, was linked to a reduced risk of stomach cancer (9). In a third study, greater intake of allium vegetables (more than 10 g per day vs. less than 2.2 g per day), particularly garlic and scallions, was associated with an approximately 50 percent reduction in prostate cancer risk (10).

Evidence also suggests that increased garlic consumption may reduce pancreatic cancer risk. A study conducted in the San Francisco Bay area found that pancreatic cancer risk was 54 percent lower in people who ate larger amounts of garlic compared with those who ate lower amounts (11).

In addition, a study in France found that increased garlic consumption was associated with a statistically significant reduction in breast cancer risk. After considering total calorie intake and other established risk factors, breast cancer risk was reduced in those consuming greater amounts of fiber, garlic, and onions (12).

HOW MUCH GARLIC TO TAKE?

How much garlic may be useful for cancer prevention?
The National Cancer Institute, part of the National Institutes of Health, does not recommend any dietary supplement for the prevention of cancer, but recognizes garlic as one of several vegetables with potential anticancer properties. Because Furthermore, the active compounds present in garlic may lose their effectiveness with time, handling, and processing.
The World Health Organization's (WHO) guidelines for general health promotion for adults is a daily dose of 2 to 5 g of fresh garlic (approximately one clove), 0.4 to 1.2 g of dried garlic powder, 2 to 5 mg of garlic oil, 300 to 1,000 mg of garlic extract, or other formulations that are equal to 2 to 5 mg of allicin.

MY 98 YEAR OLD UNCLE EATS FRESH GARLIC EVERY DAY

Uncle Khoon Leong, my mother's brother is 98 years old and is still alive. He outlives his wife, a son and a daughter who died of breast cancer. He had a comparatively easy life for he succeeded my grandfather when he died as manager of a company called Soon Foh owned by my grandfather and his cousin collecting tin ore from the local Chinese tin miners and selling to the big British company in Menglumbu, 3 miles from Ipoh, the capital of Perak, Malaysia. Perak is the called the "Silver (tin) State" of Malaysia.

My grandfather employed the town band master, Mr. Dorado to give his children music lessons, violin lessons for the boys and piano lessons for the girls. When uncle was younger, he played tennis on one of the three tennis courts in grandmother's house with his brothers in law and friends. He keeps himself fit and does not eat out often in restaurants like our family.

After he returned from a tour of Europe with his friends, he spoke about the places he visited. What struck me was the Blue Grotto on the Isle of Capri and I knew that when I had the chance I would visit it. Praise and thank the Lord, I have the chance to visit the Blue Grotto.

"The Blue Grotto (Grotta Azzurra) is a noted sea cave on the coast of the island of Capri, Italy. Sunlight, passing through an underwater cavity and shining through the seawater, creates a blue reflection that illuminates the cavern.

The beauty of the Blue Grotto was described in 1826 by the German writer August Kopisch. Since then the Blue Grotto has become the emblem of the island of Capri. The grotto was well known by the Romans, as proved by the antique statues which were found in the Grotto. This discovery, the remains of an ancient landing place and the work on an underground tunnel, create an image of a natural cavern adorned by statues. The grotto was known to the locals under the name of Gradola, after the nearby landing place of Gradola, but it was avoided because it was said to be inhabited by witches and monsters."

Uncle Khoon Leong could afford to spend $500,000 (Malaysian) on his daughter's cure for cancer, but to no avail. Money cannot buy happiness or peace for Uncle Khoon Leong. She was sent to Singapore for treatment about 400 miles away from Ipoh where she lived. Singapore is supposed to have better cancer treatment than Ipoh.

CANCER GENE IN THE FAMILY

My grand parents had 5 sons and 5 daughters. There seems to be a cancer gene in the family. Three sons were lost to cancer, one to cancer of the throat, another to cancer of the rectum and a third to cancer of the stomach. Two of the daughters, Foo Siew Yeng and Foo Lean Yeng died from cancer of the breast.

THE NEXT GENERATION

Of the next generation, the third son of my eldest uncle also died of cancer. My cousin, Dolly Cheah, daughter of Siew Yeng died of skin cancer and her sister, Nancy died from breast cancer. Lean Yeng's third daughter Jenny succumbed to breast cancer.

Our family thought that we did not inherit the cancer genes but were proven wrong. There are now four members in our family having four different types of cancer. Three

are still battling against cancer of the ovary, prostate glands and colon. The one with the breast cancer did not survive.

It is tragic that so many of my relatives die from different forms of cancer. However, many of us are Christians and trust in the Lord to see us through the rough times. We understand that tribulation and trials are common to all men, but as Christians we are stronger and better to weather the storm. We do not understand why 2nd uncle is still alive at 98 years and he survives while two of his children left the world so much earlier. His habit of eating one fresh garlic clove must have helped him. We knew of uncle's habit of eating fresh garlic but we still did not follow his example. Garlic has a pungent smell if eaten raw and if eaten regularly, the body reeks of the smell. It may put most people off because of the smell. However, garlic greens are pleasant to eat if stir fried with beef or chicken.

God provided herbs for food for mankind right from the start of creation. Now man is slowly finding out the benefits of God's grace. Thank God for His mercy and love of mankind for providing herbs to cure diseases.

Home Remedies with Garlic Quickly Relieve Ear Aches and Ear Infections

Tuesday, June 08, 2010 by: Tony Isaacs
http://www.naturalnews.com/028946_ear_infections_garlic.html

Troublesome ear aches and ear infections can usually be relieved in short order with home remedies which include garlic. Garlic has a natural antibiotic called allicin and it is an essential ingredient in some of the most effective home remedies for ear infections and ear aches. Garlic can also be used alone and it can be taken orally to speed the recovery from ear and other infections.

One way to obtain garlic oil is to simply take garlic gel capsules and pierce the capsules to get the garlic oil out. You can also use the juice from freshly minced or crushed garlic and you can make your own fresh garlic based oil as follows:

Cut up three or four cloves of garlic. Place the garlic in a double boiler and cover with an inch of olive oil. Cover the pot, and warm the oil gently over low heat for one hour. Strain the oil through a piece of cheesecloth, and store it in a covered glass jar in the refrigerator.

One extremely effective remedy for ear aches and ear infections can be found in the combination of garlic, colloidal silver, tea tree oil, olive oil and apple cider vinegar. Mix together three drops of tea tree oil with two tablespoons of olive oil, a teaspoon of

colloidal silver and a teaspoon of apple cider vinegar. Warm the mixture slightly and then lie on your side with your head on a towel (or paper towels) with the infected or aching ear facing up. Use an eyedropper to draw up the mixture and then slowly fill your ear to near the top. Continue to lie on your side for several minutes; then, take the towel, hold it to your ear, lie on your other side and let the mixture drain out of your ear onto the towel or paper towels. Repeat two to four times daily. You should experience immediate relief and complete resolution within 24-48 hours. Note: If you do not have all of the ingredients, any combination of the ingredients will likely be successful. Also, oil of oregano can be substituted for the tea tree oil.

You can also ease the pain and pressure of an ear infection with a blend of mullein (Verbascum densiflorum) and garlic infused oils. These oils kill pain and fight bacteria. Another garlic based remedy combination calls for garlic, apple cider vinegar and honey. Still another garlic remedy can be made by combining garlic oil or juice in combination with an extraction of juice from mango leaves. Mango leaf extract can also be used separately as a remedy for earaches and ear infections.

Notes:

Any remedy placed inside the ear should be warmed to a comfortable temperature first. One way to warm an ear remedy is to place a glass bottle containing the remedy mixture in a pan of hot water until it is comfortably warm. Alternatively, one can run hot water from the faucet over the bottle until the desired temperature is reached. Another warming method is to heat a small amount of the mixture in a steel or silver spoon over an open flame. A fourth method is to place a bottle with the mixture in your armpit for a few minutes.

People that get a lot of ear infections might actually be allergic to dairy products, egg whites, wheat, peanuts or soy. Or, their intake of fatty foods may be too high.

If you suspect a punctured or ruptured eardrum do not use home remedies. Instead see a qualified medical professional.

Garlic oil shows protective effect against heart damage in diabetics

Thursday, October 07, 2010 by: S. L. Baker
http://www.naturalnews.com/029971_Garlic_o...art_damage.html

Diabetes isn't a disease that only impacts the pancreas and plays havoc with blood sugar levels -- it ups the risk for a host of other health problems, from damaged vision to nerve pain. And over 30 percent of diabetics in the U.S. have some kind of heart disease, too, according to statistics from the Framingham study. In addition to large

vessel disease and accelerated atherosclerosis, diabetes is also associated with diabetic cardiomyopathy (DCM), which enlarges the heart and makes it more thick and rigid than normal. Complications from cardiomyopathy include heart failure, abnormal heart rhythms, fluid buildup in the lungs and legs and death.

But new research just published in the Journal of Agricultural and Food Chemistry shows a simple, natural therapy -- garlic oil -- may prevent this potentially deadly heart problem which inflames and weakens the heart muscle.

Background information included in the study, which was conducted by scientists from China Medical University and Chung Shan Medical University in Taiwan, noted that people with diabetes have at least two times the risk of death from heart disease as others. In fact, heart disease is behind about 80 percent of all diabetes-related deaths. Dr. Wei-Wen Kuo, who headed the new research, and his colleagues gathered data from past studies which indicated garlic might protect against heart disease in general. They also found reports indicating garlic could help control the abnormally high blood sugar levels that occur in diabetes. So they decided to look specifically at whether garlic's multiple heart healthy benefits could add up to protection from diabetic cardiomyopathy.

In experiments with laboratory rats with diabetes, the scientists fed the animals either garlic oil or corn oil. The rodents who were given garlic oil experienced beneficial changes in their cardiovascular health -- changes associated with protection against heart damage. How was garlic responsible for these benefits? The scientists stated that garlic oil appears to have potent antioxidant properties. In all, they have identified more than 20 substances in garlic oil that may keep hearts and the cardiovascular system of diabetics healthier. "In conclusion, garlic oil possesses significant potential for protecting hearts from diabetes-induced cardiomyopathy," the report concluded.

More breaking garlic news: in a study just published in Journal of Natural Medicine, scientists from Krupanidhi College of Pharmacy in Bangalore, India, reported that garlic appears to have blood pressure lowering as well as cardioprotective abilities, too.

Editor's note: NaturalNews is opposed to the use of animals in medical experiments that expose them to harm. We present these findings in protest of the way in which they were acquired.

Keith - October 23, 2010 02:33 AM (GMT)

craig, how can i take the garlic aftertaste out of my mouth after i chew it? i kinda like it but most of the time it lingers on for a while and gets annoying.

Garlic 'remedy for hypertension'

By Helen Briggs
Health reporter, BBC News
17 November 2010 Last updated at 01:48
http://www.bbc.co.uk/news/health-11767440

Garlic may be useful in addition to medication to treat high blood pressure, a study suggests.

Australian doctors enrolled 50 patients in a trial to see if garlic supplements could help those whose blood pressure was high, despite medication.

Those given four capsules of garlic extract a day had lower blood pressure than those on placebo, they report in scientific journal Maturitas.

The British Heart Foundation said more research was needed.

Garlic has long been though to be good for the heart.

Garlic supplements have previously been shown to lower cholesterol and reduce high blood pressure in those with untreated hypertension.

In the latest study, researchers from the University of Adelaide, Australia, looked at the effects of four capsules a day of a supplement known as aged garlic for 12 weeks.

They found systolic blood pressure was around 10mmHg lower in the group given garlic compared with those given a placebo.

Researcher Karin Ried said: "Garlic supplements have been associated with a blood pressure lowering effect of clinical significance in patients with untreated hypertension.

"Our trial, however, is the first to assess the effect, tolerability and acceptability of aged garlic extract as an additional treatment to existing antihypertensive medication in patients with treated, but uncontrolled, hypertension."

Experts say garlic supplements should only be used after seeking medical advice, as garlic can thin the blood or interact with some medicines.

Ellen Mason, senior cardiac nurse at the British Heart Foundation, said using garlic for medicinal purposes dates back thousands of years, but it is essential that scientific research proves that garlic can help conditions such as raised blood pressure.

She said: "This study demonstrated a slight blood pressure reduction after using aged garlic supplements but it's not significant enough or in a large enough group of people

to currently recommend it instead of medication.

"It's a concern that so many people in the UK have poorly controlled blood pressure, with an increased risk of stroke and heart disease as a consequence. So enjoy garlic as part of your diet but don't stop taking your blood pressure medication."

Doctor's dandy idea leads to a promising cancer finding

By Brian Cross, Postmedia News November 10, 2010
http://www.montrealgazette.com/health/Doct...5715/story.html

WINDSOR, Ont. — Extract from dandelion roots dug out of lawns by a University of Windsor scientist and his students make cancer cells "commit suicide."

Oncologist Dr. Caroline Hamm got the idea to look into dandelions after two leukemia patients refused their next course of chemotherapy, yet returned to the cancer centre not on stretchers, but with improved test results after a steady diet of dandelion tea.

Hamm contacted University of Windsor biochemist Siyaram Pandey. Two cases "were nothing, it could be coincidental," Pandey said, recalling his early skepticism. But he did some preliminary research and set his students loose.

They meticulously dug up dandelion roots — thanks to Ontario's pesticide ban, they didn't have to worry about toxins — and applied the root extract they formulated to leukemia cells.

"There it did great, it did work," said Pandey, who added the leukemia cells effectively commit suicide within 24 hours of getting the dandelion treatment.

"It killed the cells very selectively. It only killed the cancer cells. The regular cells were not killed."

The results were recently published in the Journal of Ethnopharmacy.

"Here you have a non-toxic alternative to chemotherapy," said John Dufresne, a retired

University of Windsor biochemist who administers the program. Pandey's research could lead to a product that could treat cancers resistant to chemotherapy drugs, he said. "It's almost in a sense a naturopathic approach to cancer treatment and to me that's very exciting."

Pandey and his team — Hamm and students Pamela Ovadje, Sudipa Chatterjee, Carly Griffin and Cynthia Tragrants — are getting $60,000 over two years from the Windsor and Essex County Cancer Centre Foundation's Seeds4Hope program to conduct further research.

Title: Coconut Oil is the Antiviral of Nature

craig-oxley - July 24, 2009 05:36 PM (GMT)

Coconut Oil is the Antiviral of Nature

Wednesday, July 15, 2009 by: Kim Evans
http://www.naturalnews.com/026624_coconut_...ds_viruses.html

In a time when strange viruses are making headlines around the world, perhaps it's time you knew about the most powerful natural antiviral around: coconut oil. The antiviral activity in coconut oil is unparalleled, even among the most resistant viruses, and the best part is, if it's virgin and organic, there isn't a man-made chemical in the mix.

Think it's too good to be true?

Bruce Fife, C.N., N.D. and author of The Coconut Oil Miracle shares, "Laboratory tests have shown that the MCFAs (medium chain fatty acids) found in coconut oil are effective in destroying viruses that cause influenza, measles, herpes, mononucleosis hepatitis C, and AIDS; bacteria that can cause stomach ulcers, throat infections, pneumonia, sinusitis, urinary tract infections, meningitis, gonorrhea, and toxic shock syndrome; fungi and yeast that lead to ringworm, candida, and thrush; and parasites that can cause intestinal infections such as giardiasis." Sounds like a powerhouse to me.

The antiviral, antibacterial, and antifungal properties of coconut oil are directly attributed to the medium chain fatty acids (MCFAs) in the oil, including capric acid and caprylic acid, and the powerful lauric acid. These fatty acids are concentrated in coconut oil; they make up over 60 percent of all that's in the oil.

Medium chain fatty acids are unique and found in only a few places in nature. Interestingly, another place medium-chain fatty acids are found is in mother's milk. In mother's milk, these medium-chain fatty acids are what protects the infant as his/her immune system is developing. And the more the mom has in her body, the more protection the infant will receive.

As antiviral and antibacterial agents, medium chain fatty acids work like this:

Like humans, viruses and bacteria have a skin, or outer coating to keep foreign invaders out. Most viruses and bacteria have a malleable, fluid-like skin that is composed of a fatty substance. Inside this fatty skin resides the rest of the organism, including the organism's DNA.

Because the fatty acids in coconut oil are similar to the pathogen's own skin, the fatty acids are attracted to the organism and are easily absorbed right into it. For the pathogen, it's like opening the door to an ax murderer, because they look like its best friend.

Once inside, the pathogen finds that the medium chain fatty acids are actually much smaller than the fatty acids that make up its own outer casing and this begins to break apart the pathogen's casing.

According to Fife, the smaller medium chain fatty acids "weaken the already nearly fluid membrane to such a degree that it disintegrates. The membrane literally splits open, spilling its insides and killing the organism."

It does this all without causing any harm to human cells or tissues.

View Full Version: THE Rh FACTOR

Title: THE Rh FACTOR

craig-oxley - October 8, 2008 01:44 AM (GMT)

Volume Two - Issue Five

THE Rh FACTOR

We are about to put out to pasture one of the greatest sacred cows of all time--the Rh factor. Millions of dollars in research have been spent on this subject. Many lives have been lost because of a lack of understanding of just what causes the Rh factor and how to remedy the situation. Because of the many inquiries by readers concerning the Rh factor in the human blood stream, we are going to discuss the subject in this issue of the newsletter.

The Rh factor is a heredity susceptibility to toxicity of the bloodstream: it is not necessarily a lifelong burden inherited by generation after generation, but a temporary toxic condition of the bloodstream which can be remedied by first cleaning up the bowel and then the bloodstream.

The tremendous complication and confusion that science has wrapped around the Rh factor deem it a virtually established and incurable situation save for the Rh vaccine which can be administered to the woman unsensitized to the Rh factor when she delivers her baby. This vaccine is actually a potent anti-Rh antibody (an immunization through the use of a toxic substance) in the form of the 7S fraction of gamma globulin, a two-armed molecule.

According to the World Book Encyclopedia, the Rh factor is a substance in the red blood cells of most persons (85%). Red blood cells that contain the Rh factor agglutinate (clump) if they come into contact with an antibody called anti-Rh. The antibody is a substance produced by the body in response to a specific foreign material, or antigen. The antibody acts in an immune reaction to defend the body by destroying or nullifying the antigen against which it is made. The antigen which chemically is a protein is antagonistic to a human or animal organism in such a way that it forms an

antibody against it. The blood factors A, B, and Rh are antigens. As an example: an antibody that is formed in Rh negative individuals will attack and destroy red cells of persons who are Rh positive in response to an antigenic challenge by the Rh factor. This reaction can produce serious illness or death. Persons who have the Rh factor are known as Rh positive. Those packing it are Rh negative. Karl Landsteiner and Alexander Wiener, who discovered the factor in rhesus monkeys in 1940, named it Rh for the monkey.

Anti-Rh does not occur naturally in the blood. But, if an Rh negative person receives a transfusion of Rh positive blood, anti-Rh may build up in his blood plasma. By the time the anti-body has been produced, the donor blood is, in most cases, so diluted that no serious reactions take place. But if the patient receives later transfusions of Rh positive blood, the anti-Rh will attack the Rh positive red blood cells and cause agglutination.

The Rh factor is inherited. The child of an Rh negative mother and a Rh positive father may be Rh positive. Before birth, some of the baby's blood cells may enter the mother's blood (through the placental barrier). Then the mother may build up anti-Rh. Most of the antibody does not form until after the baby is born, however, so it seldom causes any problems with the first child. But if the mother becomes pregnant with another Rh positive baby, she now has a ready-made supply of anti-Rh. The flow of large amounts of her anti-Rh into the child's blood can cause clumping and destruction of the infant's red blood cells. This condition is called erythroblastosis fetalis, or Rh disease. Rh disease can result in severe anemia, brain damage, and even death. Where the Rh disease does occur, doctors treat the condition by replacing the baby's blood with fresh blood. In most cases, this procedure eliminates any long term effect of the disease. In several early examples in Rh literature, the mother contributed to the toxicity of her child through breast milk, since breast milk is like a blood transfusion.

Now we shall describe four of the diseases which can result to the fetus or the infant as a result of the Rh factor; some of these diseases were described as early as Hippocrates.

"In one of these disorders, babies were born extremely misshapen, their bodies swollen by fluid. Most had died before birth. Occasionally, one would be live-born--a pale limp baby with a distended belly. Respiration is initiated with great difficulty, if at all," observers noted. "During the brief period that life remains (breathing) is characterized by great irregularity and gasping inspirations."

Fetuses and newborn babies that died of this sickness--and die they invariably did--were said to have hydrops, which means, roughly, to be waterlogged, or have universal edema (swelling).

A second, seemingly different, sickness sometimes struck live-born babies who at first seemed relatively healthy. A few hours after birth, their bodies began to change color.

Their skins became deep yellow, golden, or bronzed. When they were examined carefully, their little bellies were found to be swollen--due to enlargement of the liver, spleen, and other organs. Underneath yellowing skin, the flesh became pallid and bloodless. Some of these babies died in heart failure, apparently for want of red blood cells. For others, death came a different way. They grew lethargic, moving their limbs only in rigid, stiff motions. Their eyes looked squinty. Their cries became feeble and high-pitched. They fed poorly. Convulsions followed, and the most fortunate, perhaps, soon died. "Surviving infants," a textbook author later remarked, "are physically helpless, unable to support their heads or to sit. Walking is delayed or never acquired and marked (mental) retardation is present." In fatal cases, these babies' brains were found to be stained bright yellow by bilirubin, a substance made in the liver from the remnants of damaged red blood cells. In some less severe cases, if the brain was not damaged, the baby might fully and spontaneously recover. This condition was popularly called "yellow jaundice"-a redundancy, since "jaundice" means yellow. Its technical name was icterus gravis neonatorum--severe yellowing of the newborn.

The third seemingly unrelated sickness was an especially severe anemia. This deficiency in red blood cells sometimes was complicated by inexplicable episodes of hemorrhaging into the baby's lungs, gut, or spinal column. Whatever its cause, which was unknown, this condition seemed to be triggered by events before birth, and so was designated congenital anemia. Usually it became critical in the second or third week of life. Some babies died; most recovered.

The fourth disorder was a disturbance of the blood and blood forming tissue in fetuses and newborn babies. It has been named erythroblastosis fetalis, meaning the presence of too many erythroblasts, or immature red cells. Erythroblasts are unable to do mature red cells' regular work of carrying oxygen to the body tissues and carrying away carbon dioxide. They could be identified and counted on a blood smear under the microscope because they possess cell nuclei--which disappear as red cells mature. A normal newborn's blood contained at most one or two erythroblasts per hundred red cells. But in erythroblastic babies these inadequate cells might account for a quarter of all the red cells. Not surprisingly, the surfeit of erythroblasts occurred in babies who had an enormous excess of blood-forming, or hematopoietic, tissue. Instead of being largely confined to the bone marrow, as is normal in the newborn, in erythroblastic babies this tissue had spread through the entire body. It filled and caused swelling of the liver and spleen, and extended into the kidneys, along blood vessel walls, and even encroached upon the brain." (Zimmerman, 1973, pp. 20-23).

The following illustrations are examples of antibodies seen by scientists through the microscope. They are cell-deteriorators. "Antibodies are contained in a small fraction of the serum called gamma globulin ... The 7S is a lighter, smaller, two-armed molecule. The 19S is larger, heavier, and has five arm-like projections. At the tip of each projection is a part that grabs and anchors to the antigen against which I fie antibody is directed."

Relation of the Liver to Erythroblastosis Fetalis

Early in gestational life, red cells are made by the fetus' liver and spleen. But, normally, blood-making in these organs ends before birth; red cell manufacture shifts to the marrow of certain bones. Ferguson was struck by the fact that several of his autopsy cases were, in this respect, grossly abnormal. These dead babies' livers and spleens were filled with patches of blood making activity; erythroblasts were present in extraordinary numbers. (Zimmerman, 1973, p. 23-24.)

"The Rh incompatibility is responsible for erythroblastosis in 92 per cent of cases. Postmortem examinations performed upon infants who died despite repeated transfusions with Rh negative blood revealed that their deaths were usually due to overwhelming toxicity induced by liver insufficiency." (Wallerstein, 1948, p. 170-178). Often fatty degeneration is noted and liver cells are loaded with fat. In other words, the liver is not able to carry on its function of purifying the blood.
Detoxification Procedures

It is imperative that all expectant mothers and fathers have a clean, uncongested, well-functioning liver. The fetus can only inherit the conditions of its ancestors. We owe it to the future generations to provide them with top quality organs. This we can do through proper nutrition: cleansing, wholesome foods, clean water, sunlight, fresh air, relaxation and exercise, herbal foods where necessary to rebuild debilitated areas of the body. We must depart from the traditional medicinal toxic arsenal of drugs upon society. It is much simpler to prevent the tragedies brought about by the Rh factor, which is nothing more than a toxic blood stream, than to command the forces of hoards of technicians to be on standby to correct our ignorant and lazy misjudgments.

We begin the detoxification procedure by first cleaning up the bowel so that the nutrients can be absorbed, and wastes do not back up in the system. For this we use the lower bowel formula: Barberry bark (this herb will also help the liver), cascara sagrada, cayenne, ginger, lobelia, red raspberry leaves, turkey rhubarb root, fennel, and golden seal root. This combination will restore vitality to the intestines. Its function, as well as the other formulas mentioned are described in more detail in the book Dr. Christopher's Three-Day Cleansing Program and Mucusless Diet.

If the liver is particularly congested, we suggest the liver-gall bladder formula which contains the herbs barberry, wild yam, cramp bark, fennel seed, ginger, catnip and peppermint. This combination will aid in purifying the blood stream. For if the bile does not flow freely into the intestinal tract, it goes directly into the blood stream and circulates throughout the system causing a toxic condition known as cholemia, producing indigestion, sluggishness, fever, fatigue, constipation, upset stomach, chills, and vomiting, among some of the symptoms. In addition to the above formula, the castor oil fomentation may be used over the liver. This will open the constipated capillaries within the liver.

The bloodstream will now enjoy a good blood purifying formula such as the Red Clover Combination which contains herbs that are cleansers, astringents, cholesterol removers, and those that strengthen and rebuild vein and artery walls. The Red Clover Combination contains red clover blossoms, chaparral, licorice root, poke root, peach bark, Oregon grape root, stillingia, Cascara sagrada, sarsaparilla, prickly ash bark, burdock root and buckthorn bark. The suggested dose is three cups of the tea a day or two "0" capsules three times a day six days a week until the blood stream is cleaned of toxins. Whenever the Red Clover Combination is used, it should be taken after the bowels have been emptied so that it may be more readily absorbed through the clean intestine into the blood stream.

We should, of course, change over to the mucusless diet and go through a monthly three day cleansing using fruit juices, steam distilled water and whatever herbal aids are necessary.

It would be wise to check the iris of the eye to determine exactly which organs need special attention once the bowel and blood stream are well on their way to cleanliness. It has been our experience, in observing women who have had problems with the Rh factor in the past, that the blood zone as seen in the iris, appears a very toxic yellow. With proper attention, this condition can be seen to diminish within a few months.

The Female Corrective Formula will strengthen the reproductive system of the female, while the Prostate Formula will help the prospective father. Both parents will benefit by the Hormone and Estrogen Formula. Both parents should begin these detoxification procedures before conception. During pregnancy, the mother should drink plenty of red raspberry leaf tea; approximately one quart a day. One may find a more detailed discussion on preparation for pregnancy in the volume Childhood Diseases, by John R. Christopher. People could do much to correct high risk pregnancies with the Creator's available remedies if only they would take the time to learn about how to care for the body.

I well remember an incident a number of years ago, of spending some time counseling with a young lady and her boy friend. They had brought the girl's parents with them. They were deeply in love and wanted to get married. However, the girl, as much as she loved this young man, had begged him not to pressure her to marry him because of her present physical condition. Her whole system was in such a deplorable condition that there was no menstrual cycle to be detected in any accuracy at all. The menstrual period would start; then shortly she would stop flowing and in several days might start again and continue for several weeks of heavy flow. Other times she would go six or eight weeks, or more, without another menstrual period. When her mother had come to see me a few days earlier, the girl had menstruated for so many weeks, she was anemic. Her period had been so long and frequent that she was so weak and run down, she spent much of her time in bed. This weak condition was so bad, she had been told

by her doctor that she could never have children if she did get married or planned to; but she would be better off to remain single.

Her fiance insisted that they should get married and he would take care of her throughout her life, not worrying whether or not she could bear him children. But, she did not want to spend the rest of her life a sickly woman.

I advised them to follow a blood rebuilding program and both assist and encourage each other. The program started with three-day cleansing cycles and then included a mostly vegetarian (and mucusless) diet with lots of fresh fruits and vegetable salads, pure fruit and vegetable juices (especially carrot) and the use of Dr. Christopher's Female Corrective herbs as well as our special formula for the glands. (Read his book "The Incurables" as well as "Three Day Cleanse" pamphlets, etc.) We promised that if they would cooperate and follow instructions, her bloodstream could be rebuilt and her system strengthened before the year was over.

They got married and he nursed her at home, watching her diet carefully, and helped her step by step to follow the mucusless diet and to use various herbs to assist in the rebuilding of her reproductive organs. They watched her blossom out over the next few months. In a little over a year of married life, the young lady became the proud mother of a healthy baby boy. How much nicer it is to be a healthy happy mother instead of an invalid! This couple proved that an "ounce of prevention" is better than a "pound of cure."

Up in the Brigham City, Utah area I had an extremely interesting case come to our study group to see if we had a program that could be of some assistance. The lady wanting help had had three children and all three had Rh negative factor problems. (Each of the three children had to have their blood drained out and different blood filled in). All had a difficult time pulling through the ordeal and staying alive.

Any mother having this condition Rh factor, and having three children, one right after the other with the same problem, if she is an average woman, would say "no more"! But the good Lord made brave women from the beginning for a lot of us to have as valiant mothers who love holding and caring for another new baby so much that they will still take the chance! Anyway, to add insult to injury, this lady did not only have the Rh factor problem, but had just had open heart surgery. The obstetrician warned her that if she became pregnant again, she and/or the baby could die. But she wanted a large family.

The first thing we had her do was go on the "basics"; for instance, to use the lower bowel formula and clean out the bowels, and drink a gallon of steam distilled water each day to keep flushing the system. She drank no less than a quart of red raspberry leaf tea, using two capsules of Dr. Christopher's Red Clover Combination blood purifier formula and followed the "Dr. Christopher's Three Day Cleanse and Mucusless Diet".

This woman's program was watched carefully during the entire nine months and the progress was excellent. When the next baby came it was with no Rh factor problem (no blood pumped out and replaced).

This woman and her husband became parents of two more babies born a few years later, and both of them were free of this Rh negative factor.

It has been very satisfying to the parents, as well as to us who helped guide them, to know that this serious condition can be cured if we will but do something about it "naturally" as explained herein.

Good common sense, knowledge of right foods, and the Lord's good herbs can make life better for all of us if we will just use these methods.
Letters

Dear Dr. Christopher,

The main reason for writing to you was to tell you what happened to my husband's 92 year-old grandmother who was visiting with us late July. While she was sweeping our porch off, her shoe loosened and she was climbing a short flight of cement stairs. She tripped and fell flat on her face. Her daughter, my mother-in-law, heard her face hit the cement, very loud crack. Grandma was taken care of--for the first aid part--by my husband (who teaches first aid and advanced courses for the Red Cross) and she rested. Grandma did not want any ice of the face for fear of catching a cold, so only cool towels could be used. She rested and claimed she was feeling fine -- but oh, did she look terrible.

Almost immediately her face turned purple. She is a spry lady and she went on being her chipper self, even after the accident. The rest of the family had the hard time -- looking at grandma and feeling so bad for her. THEN -- tada -- my shipment from the Herb Shop came with the BF&C syrup, the very next day. I convinced my mother-in-law to try some syrup on grandma's face -- to (hopefully) take the bruise away. Grandma had scraped her face on her nose and forehead, and the syrup felt immediately good, so the rest of her face was covered with it. The syrup is so simple to use, too.

The day the shipment came, grandma went to the doctor to make sure nothing had broken or was damaged that was not obvious to us. He assured her that everything was fine, but that the purple would change to green, yellow -- the whole schmeer! Also, her face would be swollen upon rising in the morning, but not to worry. Four days after the beginning application (2-3 times a day) her face was almost completely back to normal color. There had been no swelling in the morning, as the doctor predicted either. By the fourth day she was with her daughter in Hawaii for a visit and she called to tell me that her mother was feeling fine -- and looking back to normal.

The next story is about my large black dog. I did something dumb -- put some chemical anti-itch stuff on him to keep him from itching. Well, the next morning my husband said for me to check Chip's mouth, it seemed swollen. (He had licked it all off during the night - yuk!) I knew what had happened and said, I would, turned over and went back to sleep.

When I did see him (about one hour later) I was glad my husband had said to check him out. His pour mouth and lips were swollen out to the size of his head -- about 3 times the normal size. Poor baby. I was concerned about getting the swelling down, but also that his throat might swell up and he would not be able to swallow, or breathe. His tongue seemed okay and so did his throat. I put the BF&C syrup on the outside of is mouth -- he turned his face right after that so I could reach the other side. Then I gave him some yellow dock tablets to keep him from scratching. Also, he ate about 1½ jars of chickweed ointment. It seemed to soothe his mouth while the poison went out. We discovered he liked the CMM for poison oak -- he would lick it off my husband, given the chance. Strange dog. However, since we gave him the jars of chickweed, his appetite for it diminished to zero. The next morning Chips was fine -- in fact a few hours later the swelling was down dramatically. A happy ending to a dumb beginning. I'm learning.

My present plans include taking the Master Herbalist course next year. I have already made commitments for this year, but want to continue studying and learning -- and teaching.

Take care.

Scotts Valley, Calif.

The Rh-negative Factor:
"Reptilian Traits" (the DRAGON within)
LINK

Alexandra - October 21, 2008 01:17 AM (GMT)

Now I'm wondering...do women really need that RhoGam shot? My mother, who is Rh-, said she had to get one after I was born, because I'm Rh+. My younger sister is also Rh +.

And no, I've never shapeshifted.... :D

craig-oxley - October 21, 2008 03:16 PM (GMT)

Would be nice to have your blood copper content analyised. Also who did you say you were related to in the past of Royalty or whatever?

Alexandra - October 21, 2008 06:09 PM (GMT)

Yes, if my information is right I'm descended from King Edward III through two of his sons, John of Gaunt and Lionel of Antwerp, also supposedly from the Stuarts, specifically a second cousin of King James I.

craig-oxley - October 21, 2008 11:08 PM (GMT)

Your a stinking relative of Leo Zagami haha.

Alexandra - October 21, 2008 11:55 PM (GMT)

[Insert witty retort here.]

theresa - October 28, 2008 03:41 PM (GMT)

Alexandra...perhaps you and I are related. I descend from Smithsons, Watsons, Brownings and some 'Sheriff of Waterford' Poore. Dad said some 'round-heads'. Are there any 'good-uns', Craig? :lol:

Alexandra - October 28, 2008 04:02 PM (GMT)

I'm descended from Adams and Butler. I had two Butler ancestors, father and son, who were deacons. The father helped found Hartford, CT.

Supposedly an Adams ancestor fought in the Revolution, 8th cousin once removed of John Adams.

craig-oxley - October 11, 2009 03:46 PM (GMT)

QUOTE

A rhesus Negative. I suffer telekinesis. I have a problem being near anything electrical ie GPS, RADIOS, LIGHTSWITCHES etc. This usually happens first thing in the morning. I deal with it and get on with my day!

My vision is my best sense, yet i am highly sensitive to bright lights. I feel comfortable in my bedroom which has always had blue lighting.

I am allergic to GARLIC AND PENICILLIN. The doctor told me that garlic cleanses the blood but in RH NEG blood it does the opposite due to a different set up of the immune system.

reptilian traits? hmmm nopes i don't have that tail thing nor do i have scaly skin! lol.

Alchemy is such a wonderful thing! They are missing the bloodline. Blood is worth more than gold!!! It is life but it is also death.

I personally dont feel any better or anymore special than anyone else just coz i have a different blood type. I think its about time people stopped arguing and joined together to fight this war! Why the separation? So many things tear this world apart! let blood not be one of them! I would die for anyone to save them before myself.

Dont you see its not about the blood. Love is stronger than all!

This is interesting as someone I know with reptilian blood was hit harder by a recent U.N bio attack in London than her family. What was puzzling to me was why 5 cloves of Garlic daily didn't totally stop it in its tracks. Mind you God only knows how bad it would have been without the Garlic. So this was interesting for me to see above. Anyone know any depth on this, then let me know!

Alexandra - October 22, 2010 11:05 PM (GMT)

My father-in-law is Rh- and he and my mother-in-law both descend from royalty if my information is right. But hubby has Rh+ like I do.

Would be interesting to see what my son wound up with. Based on what I know of genetics, he could be anything from O- to AB+.

So--I carry the genes for it.

I don't believe that reptilian stuff, but perhaps it's more nephilim stuff?

Ginger effectively relieves even severe muscle pain, new research shows

Friday, October 08, 2010 by: S. L. Baker
http://www.naturalnews.com/029986_ginger_muscle_pain.html

Forget the aspirin and Big Pharma pills for your muscle pain. According to a new study just reported in the Journal of Pain, published by the American Pain Society, daily doses of raw or heat-treated ginger effectively relieve muscle aches and discomfort -- and that includes even severe pain following strenuous exercise.

For centuries, ginger has been used by practitioners of Chinese medicine and by traditional Indian and Japanese healers to treat a host of conditions including vomiting and nausea, chronic coughs, morning sickness, gastrointestinal complaints and migraine headaches. It has also been used to treat both rheumatoid arthritis and osteoarthritis. However, Western medicine has only recently started to seriously study the medicinal qualities of ginger.

So far, several studies have shown that ginger appears to have anti-inflammatory and analgesic properties similar to nonsteroidal anti-inflammatory drugs, but without the side effects (which can include gastrointestinal bleeding and ulcers). In one study, taking a daily dose of ginger (30 to 500 mg.) for four to 36 weeks successfully reduced knee pain in people suffering from osteoarthritis.

Now, in new research from the University of Georgia and Georgia College and State University (GCSU), scientists have found even more evidence that ginger is a potent muscle pain reliever. The scientists worked with seventy-four student volunteers who were divided into three groups. One group was given raw ginger, one group received heated ginger and the third group received a fake ginger placebo.

Muscle pain was induced in the volunteers by having them perform 18 eccentric muscle exercises. Then the research subjects were tested on 11 consecutive days to see if those taking the ginger had reduced muscle aches and pains. And they did -- dramatically. The results showed that both raw and heat-treated ginger lowered muscle pain intensity by 25 and 23 percent, respectively.

More breaking ginger news: in a study just reported in the journal Pediatric Blood and Cancer, researchers from the All India Institute of Medical Sciences in New Delhi have documented that ginger significantly reduced nausea and vomiting in children subjected to chemotherapy for cancer. In addition, new research published this month in the journal Molecular Vision suggests ginger may prevent or delay the development of cataracts in diabetics

More Evidence Cinnamon Helps Control Blood Sugar

Posted By Dr. Mercola | September 30 2010 | 1,038 views Share
http://blogs.mercola.com/sites/vitalvotes/...lood-sugar.aspx

A 12-week London study was recently conducted involving 58 type 2 diabetics with hemoglobin A1c (HbA1c) levels over 7 percent. Hemoglobin A1c is a marker for long-term glycemic control in diabetics.

After 12 weeks on 2g of cinnamon per day, study subjects had significantly lower HbA1c levels, as well as significantly reduced blood pressures (systolic, SBP and diastolic, DBP).

The researchers' conclusion:

"Intake of 2g of cinnamon for 12 weeks significantly reduces the HbA1c, SBP and DBP among poorly controlled type 2 diabetes patients. Cinnamon supplementation could be considered as an additional dietary supplement option to regulate blood glucose and blood pressure levels along with conventional medications to treat type 2 diabetes mellitus."

A Documentary Film by Stephen Kroschel Awarded Honorable Mention in the Feature-Length Documentary Category 2006 New York International Independent Film and Video Festival Filmmaker, Stephen Kroschel, sets out to find hard evidence of the effectiveness of the Gerson Therapy, a long-suppressed natual cancer treatment. His travels take him across both the Atlantic and Pacific Oceans, from upstate New York to San Diego to Alaska, from Japan to Holland and Mexico. In the end, he presents the testimony of patients, scientists, surgeons and nutritionists, who testify to the effectiveness of the Gerson Therapy and shows the hard scientific evidence to back up their claims. The question that remains is, "Why is this powerful curative therapy still suppressed, more than 75 years after it was clearly proven to cure degenerative disease?"

Title: Lung cancer rates are still RISING in women but
Description: *are falling among men [CHEMTRAILS]*

TheUnhivedMind - July 21, 2011 01:06 AM (GMT)

Lung cancer rates are still RISING in women but are falling among men

Prostate cancer cases increased by 12 per cent between 2008 and 2009

Last updated at 4:45 PM on 20th July 2011
http://www.dailymail.co.uk/health/article-...alling-men.html

Lung cancer in women is still rising but is falling in men of all ages, new research has revealed.

The Office of National Statistics released new data which shows a slow rising trend in the disease amongst women between 1993 and 2008 - but a considerable fall amongst men in the same period.

During the 15 year period the number of women with lung cancer rose from 35 to 39 per 100,000, whilst in men it fell from 88 to 60 per 100,000.

The graph shows falling lung cancer rates amongst men and slightly rising rates among women between 1993 and 2008

Cancer Research UK said the fall in lung cancer incidence in men over the last 20-30 years is directly linked to the fall in smoking prevalence in men in Britain in the second half of the last century.

Eighty two per cent of men smoked in 1948 compared to 22 per cent today.

In contrast, smoking was never a majority habit amongst British women, but prevalence of smoking among women in Britain remained stable after the war, when 41 per cent smoked, and 1970, when 44 per cent smoked, and the slow reduction of female smokers since.

It comes as the ONS also revealed figures which show the number of newly diagnosed cases of cancer generally in both men and women has risen in the last few years.

In 2009 there were 264,700 newly diagnosed cases of malignant cancers generally registered in England.

Of this total, 134,600 cancers were in men, representing an increase of five per cent from 2008, and 130,000 cases in women, a rise of three per cent in the same period.

The age-standardised incidence rate of all cancers is 424 men and 367 women per 100,000 population, compared to 411 males and 361 females per 100,000 population in 2008.

Worryingly, between 2008 and 2009, the number of prostate cancer cases increased by 12 per cent to 34,600 cases.

The largest increase in registrations was seen in the 65-69 and 70-74 year age groups.

Sarah Williams, Cancer Research UK's health information officer, said: 'It is worrying to see cancer rates going up in England. Part of this is down to improvements in the way the data is collected, meaning that fewer people with cancer were missed from the official statistics.

'Our ageing population accounts for some, but not all, of the increase and this underlines the importance of living a healthy life by not smoking, cutting down on alcohol and keeping a healthy weight.

'It's important to remember that survival rates have also increased, doubling in the last 40 years, and treatment is more likely to be successful when cancer is diagnosed earlier. So get to know your body, and see your doctor if you notice anything out of the ordinary.'

Cancer: This graph shows an increase in newly diagnosed cancer cases - particularly

prostate

The primary cause of lung cancer is cigarette smoke, with around 90 per cent of lung cancers in men and 83 per cent in women estimated to be caused by cigarettes.

Lung cancer accounts for around 14 per cent of all cancers in men and 11 per cent of all cancers in women.

In 1975 almost half of all adults were smokers but this has dropped to just over a fifth today.
PROSTATE CANCER

The three most common cancers for men are prostate, lung and colorectal

Prostate cancer accounts for over 25 per cent of all male cancers diagnosed in 2009

Between 2008 and 2009, the number of prostate cancer cases increased by 12 per cent to 34,600 cases and the largest increase in registrations was seen in the 65-69 and 70-74 year age groups

Experts think this may be due to increased detection

The ONS said the four most common cancers today were breast, prostate, lung and colorectal, which accounted for about 53 per cent of the new cases of malignant cancers.

In 2008, 424 men and 367 women per 100,000 people were diagnosed with the disease, compared to 411 men and 361 women in 2008.

The three most common cancers among women are breast, lung and colorectal.

Breast cancer accounts for around one in three newly diagnosed cases of cancer in women.

The chance of developing breast cancer incidence increases with age.

In 2009, the rise in the number of newly diagnosed cases started in women their mid thirties and increased in women in their forties, becoming more prevalent in females in their fifties and beyond.

TheUnhivedMind - July 18, 2011 05:33 PM (GMT)

Cancer rate rising in middle-aged

Improved screening has contributed to the rise in known cases

18 July 2011 Last updated at 11:50
http://www.bbc.co.uk/news/health-14184866

The risk of developing cancer in middle-age has risen by over 20% in a generation, figures from a cancer charity suggest.

The Cancer Research UK data show that in Britain in 1979, 44,000 people aged 40-59 developed the disease, compared with 61,000 in 2008.

CRUK said the rise for men and women was partly due to better screening, but also lifestyle factors like obesity.

However cancer survival rates have improved, doubling since the late 70s.

Last week, Macmillan Cancer Support warned overall cancer incidence had risen from a third to four in 10 people.

This latest analysis shows cases among the middle-aged increased from 329 per 100,000 to 388 per 100,000.

And among women in their 40s and 50s, cancer rates have risen by more than 25% - from 24,000 in 1979 to more than 36,500 in 2008.

Breast cancer rates increased by 50%.

In middle-aged men, prostate cancer rates rose six-fold over the same period.

Earlier diagnosis

The increasing number of people being diagnosed is, in part, due to the NHS breast screening programme and the PSA test for prostate cancer.

Lifestyle factors have also influenced cancer rates.

In women, use of the contraceptive Pill, drinking more alcohol, having children later and being overweight have increased breast cancer risk.

Skin cancers are also on the up in both men and women, due to people spending more time in the sun.

But improvements in screening does mean cancers can be detected earlier, and therefore treatment - which has also improved - is more likely to be successful.

Harpal Kumar, chief executive of Cancer Research UK's, said: "There has been undeniable progress in the treatment of cancer over the last 40 years and many more people are surviving the disease.

"But we must redouble our efforts to ensure that our research continues to discover new techniques to improve and refine diagnosis and treatment so that cancer survival becomes the norm for patients, irrespective of the cancer they have or their age at diagnosis."

TheUnhivedMind - July 18, 2011 01:19 AM (GMT)

The 'super tomatoes' fortified with minerals that combat cancer

Last updated at 12:55 AM on 16th July 2011
http://www.dailymail.co.uk/health/article-...bat-cancer.html

It is the perfect excuse to have that last piece of pizza.

‘Super tomatoes’ fortified with minerals have just hit shelves across the UK.

Ordinary tomatoes – which are already viewed as one of the superfoods – have been enriched with selenium, a powerful anti-oxidant that boosts the immune system and may prevent cancer.

The mineral, found naturally in foods such as Brazil nuts, shellfish and liver, is also important for the thyroid gland, which determines how quickly the body uses energy and also produces proteins.

The new tomatoes, which cost £1.99 for 300g, have gone on sale in Marks & Spencer. Food scientists for the company turned their attention to the mineral because it is lacking in UK diets. Low concentrations in farm soil means little of the mineral finds its way into home-grown foods. There is evidence that a deficiency may lead to heart disease and, while it does not tend to directly cause illnesses, it can make the body more likely to catch infections.

Dr Carina Norris, of the Nutrition Society, said the tomatoes were a great way to get the nutrient into our diets.

‘Selenium plays an important role in supporting the immune system, and it’s thought that getting adequate selenium reduces our risk of cancer,’ she said.

‘But many people in the UK don’t get enough from their diets – the latest data suggests the average person consumes well below the (daily) target of 60microgrammes for women and 75 for men.

‘So to get a “difficult” nutrient like selenium into a food that more or less everyone eats – such as tomatoes – has to be a good thing.’ The tomato is the latest product developed by Marks & Spencer to try to improve customers’ health.

It follows the store’s Vitamin D-enriched milk, yoghurts and juice developed to help tackle health problems caused by a lack of sunshine, such as rickets.

M&S produce technologist Dr Simon Coupe said: ‘We want to make it easy for our customers to eat healthily and our new tomatoes are win-win – the taste of summer with a boost for your immune system.’

TheUnhivedMind - July 18, 2011 01:20 AM (GMT)

Please remember that the Vitamin D added to milk is poison and ruins your health. You only want naturally converted minerals in your food from the plant and no other synthetic source. If this selenium is synthetic in any way or theres a GMO of some sorts then get rid and DO NOT CONSUME!

View Full Version: Health charity says four in 10 people will get

Title: Health charity says four in 10 people will get
Description: *cancer [ITS 1 IN 3]*

TheUnhivedMind - July 14, 2011 03:32 AM (GMT)

Health charity says four in 10 people will get cancer

By Adam Brimelow
14 July 2011 Last updated at 03:01
http://www.bbc.co.uk/news/health-14140424

Rising cancer rates mean four in 10 people in the UK get the disease at some point in their lives, a health charity says.

Macmillan Cancer Support says the figure has risen significantly in the past decade.

The charity says the rise poses a "massive challenge" for the NHS.

Ministers in England say they are working to improve cancer survival rates and the quality of life of after diagnosis and treatment.

Macmillan Cancer Support says a decade ago about a third of people, or 33%, developed cancer at some point in their lives. The charity says that figure has risen to more than 40%.

The estimates are drawn from projections published two years ago in the British Journal of Cancer, which concluded that at the end of 2008 there were two million cancer survivors in the UK and that the figure was rising every year.

Macmillan also looked at recent cancer incidence and mortality statistics for the UK, indicating that 310,000 people were diagnosed with cancer in 2008.

About 157,000 people died from the disease, and 89,000 who had been diagnosed with cancer died from other causes, making a total of 246,000 who died "with" cancer.

The charity says this accounted for 42% of total deaths in the UK - which stood at 580,000.

Macmillan says the increase is partly down to an ageing population - older people are more likely to develop cancer. It says lifestyle factors, such as diet and exercise, and improved diagnosis have also contributed to the rise.

'Massive challenge'

The chief executive of Macmillan Cancer Support, Ciaran Devane, said the calculations had important implications for the health service.

"It is really alarming that the number of people who will get cancer is now well past one in three and that there are so many more people with cancer today than even 10 years ago," he said.

"There are currently two million people living with cancer in the UK and that number is doubling to four million over the next 20 years. Yet no-one thinks the country can afford to double its spending on cancer. We've therefore got to become twice as effective in how we spend that money."

The charity says there is growing evidence of the long-term health problems many cancer patients are experiencing long after initial diagnosis and treatment. It says there is a need for more services to help people stay well at home, rather than waiting until they require emergency hospital treatment.

Major issue

The Care Services Minister for England, Paul Burstow, said it was absolutely right for Macmillan to raise this as a major issue.

"We agree with Macmillan. That's why we are working to deliver more personalised care and more help to keep people well in their own homes. We are investing more than £750m over four years to improve cancer outcomes," he said.

The chair of the Royal College of GPs, Dr Clare Gerada, said the figures highlighted the increasing impact of cancer on many people's lives.

"What is clear from this study is that cancer survival is not the whole picture. All healthcare professionals have a duty to see that patients receive the best possible care, and aftercare, following a diagnosis of cancer, and to ensure their patients are not just living, but living well," she said.

TheUnhivedMind - July 14, 2011 03:36 AM (GMT)

Right now Worldwide figures of Cancer are one in three people getting Cancer and the vermin causing this desire this figure to be one in two by 2010 onwards. That time is now folks and in some parts of the World there already is one in two dying from Cancer such as some masculines in parts of Canada. The last decade? Well just study the uranium weapons going off in all these wars since 9/11. Then look at how Chernobyl has increased thyroid disease and Cancer Worldwide over the last twenty five years as evident from the human and cat thyroid disorder boom in that period. This is all planned and its spoke about as if these figures of Cancer are something normal, THEY ARE NOT! This is global genocide.

TheUnhivedMind - July 11, 2011 06:27 PM (GMT)

VITAMIN A COULD HOLD KEY TO A KILLER CANCER

Monday July 11 2011 by Daily Express Reporter
http://www.express.co.uk/posts/view/258035...a-killer-cancer

VITAMIN A could hold the key to beating pancreatic cancer, according to British scientists.

The disease has the lowest survival rate of all cancers and once diagnosed most people do not survive a year.

Now an international research team from Barts Cancer Institute in London has found that raising levels of Vitamin A in healthy cells around the cancerous ones can inhibit cancer growth.

Consultant Dr Hemant Kocher, of Barts and The London NHS Trust, led the four-year joint project with Cambridge University and the Hubrecht Institute in Holland.

He said: “The findings should lead to better survival rates and different treatment methods for pancreatic cancer that annually kills almost 7,500 patients in the UK.” Dr Kocher said the research was based on a theory originally proposed in 1889.

Vitamin A, found in foods such as carrots and broccoli, is often deficient in many patients with the disease.

Clinical trials will now take place at Barts.

Unprecedented FDA vote declares Avastin, the world's best-selling cancer drug, UNSAFE

Last updated at 3:27 AM on 30th June 2011
http://www.dailymail.co.uk/health/article-...l#ixzz1Qmmu8iO0

Unsafe? The FDA has held a shock vote against Avastin, the blockbuster cancer drug

A shock vote has seen a panel of cancer experts rule that Avastin, the best-selling cancer drug in the world, should no longer be used in breast cancer patients.

The unprecedented vote by the Food and Drug Administration (FDA) clears the way for the government to remove its endorsement from the drug.

The advisory panel's comes less than a year after the same panel reached the same conclusion.

The six members of the FDA oncology drug panel voted unanimously that Avastin is ineffective, unsafe and should have its approval for breast cancer withdrawn.

'I think we all wanted Avastin to succeed but the reality is that these studies did not bear out that hope,' said Natalie Compagni-Portis, the lone patient representative on the panel.

The vote is not binding and FDA Commissioner Margaret Hamburg will make the final decision sometime after July 28.

The drug is approved for multiple cancers and will still be available for breast cancer, though insurers are expected to drop coverage if it loses FDA approval.

The FDA began steps to remove Avastin's breast cancer approval in December, but Roche took the rare step of appealing that decision and lobbied the agency and Congress for a second hearing.

The dramatic, contentious tone of the two-day hearing underscored the difficulty of removing an option for cancer patients, even when backed by scientific evidence.

'Make no mistake, this hearing is a death trial, not of Avastin but of these women who rely on Avastin to stay alive'

Immediately after the final vote, patients in the audience erupted in shouts against the FDA and its experts.

'What do you want us to take!? We have nothing else!' shouted Christi Turnage, of Madison, Miss.

Turnage said her cancer has been undetectable for more than two years since starting therapy with Avastin.

A spokesman for the Abigail Alliance, which advocates for access to experimental medicine, said the vote should be overruled.

'This was a kangaroo court,' said Steven Walker, the group's co-founder. 'There wasn't one dissenting thought up there, let alone one dissenting vote.'

Assuming the FDA follows through on the withdrawal, drugmaker Roche could lose up to $1 billion in revenue for its best-selling product, which generates over $6 billion per year.

Avastin is FDA-approved for various types of colon, lung, kidney and brain cancer, which are not part of the debate.

Doctors will still be allowed to prescribe Avastin for breast cancer, though insurers may not pay for it. When administration fees are included, a year's treatment of Avastin can cost $100,000.

Roche's Genentech unit argued the drug should remain available while it conducts more research on which patients benefit most from the injectable drug.

The drug is approved for breast cancer that has spread, or metastasized, to other parts of the body. Such cancer is generally considered incurable.

'The data tell us it is better for women diagnosed with metastatic breast cancer to have Avastin as an approved treatment option,' said Hal Barron, Roche executive vice

president.

Wednesday's vote came after two days of hearings that often resembled a courtroom trial, complete with testimony, cross-examination and a final jury verdict. In a public comment period Tuesday, Avastin patients and their families took the role of witnesses against the FDA.

'Make no mistake, this hearing is a death trial, not of Avastin but of these women who rely on Avastin to stay alive,' said Terry Kalley, whose wife takes Avastin for breast cancer.

Kalley formed a group called Freedom of Access to Medicines to protest and lobby the FDA. He says the group does not receive funding from Roche.

Panelists said Avastin's ability to slow tumor growth - measured through medical imaging scans - has not translated into meaningful benefit for breast cancer patients.

'I think as treating clinicians we have to ask ourselves: What are we doing in terms of helping patients? Simply delaying a change in a CT scan for a month or two is not significant unless it's accompanied by other improvements in how the patients are doing or overall survival improvement,' said panelist Dr. Wyndam Wilson of the National Cancer Institute.

The FDA granted Avastin accelerated approval in 2008 based on one study in which it slowed growth of breast cancer tumors for more than five months when combined with chemotherapy.

But that delay shrunk to less than three months in follow-up studies when the drug was paired with other types of chemotherapy.

Across all studies, patients taking Avastin did not live any longer and suffered side effects like infection, high blood pressure and blood clots.

Most cancer experts say the drug should remain available for patients who are already responding well, even if its approval is withdrawn.

'I think the FDA is doing the right thing since the drug has some serious complications,' said Dr. Stephanie Bernik of Lenox Hill Hospital in New York.

'However, there are definitely patients who are benefiting from the drug and if the FDA completely withdraws approval those patients may find it hard to get access.'

One potential option to keep the drug available would be for Roche to pay for it when patients have no other option. The company already provides the drug for free to patients who meet certain financial criteria or don't have health coverage.

Roche has suggested that Avastin works differently depending on which chemotherapy drug it is paired with.

The drugmaker essentially asked the FDA for time to repeat its initial study that had the strongest results, theorizing that Avastin works best with the chemotherapy paclitaxel. Such a study would not be completed before 2016.

But the FDA rejected that argument, saying there is no evidence Avastin interacts differently with various chemotherapies, and that continuing approval cannot be justified based on one study completed six years ago.

'No trial has shown that patients treated with Avastin lived longer than those not treated with Avastin,' said FDA's director for new drugs, Dr. John Jenkins. 'All clinical trials show an increase in serious adverse events.'

The Avastin review will have broad repercussions for patients and the pharmaceutical industry.

Since the early 1990s the FDA has granted accelerated approval to dozens of drugs based on promising early results, on the condition that their effectiveness is confirmed in later studies.

That policy has been praised by patients with HIV, cancer and other deadly diseases where access to experimental treatments can mean life or death.

But the flipside of the program means removing drugs from the market if their initial promise isn't confirmed by later studies.

And until last year the agency had never removed a drug from the market because of incomplete or unconvincing follow-up data.

With the removal of that leukemia drug from Pfizer, and now the proceedings over Avastin, analysts say the FDA is poised to crack down on drugs whose effectiveness hasn't been confirmed in later studies.

Description: *cancer risk*

TheUnhivedMind - June 29, 2011 03:18 AM (GMT)

Three hours in the sun a day 'can halve breast cancer risk'

Last updated at 11:35 AM on 28th June 2011
http://www.dailymail.co.uk/health/article-...ancer-risk.html

Spending an average of three hours a day exposed to sunlight can slash the risk of breast cancer by up to 50 per cent, according to research.

The research is the latest in a series of studies suggesting regular exposure to the sun's rays may have a powerful anti-cancer effect by stimulating the production of vitamin D in the skin.

Laboratory tests suggest breast cells are capable of converting vitamin D to a hormone that has anti-cancer properties.

Canadian researchers compared 3,101 breast cancer victims with 3,471 healthy women who had not suffered tumours.

Each one was quizzed on how much time they spent outdoors between April and October during four stages of life: their teens, twenties and thirties, forties and fifties and from 60 to 74.

The results, published in the American Journal of Epidemiology, showed that women who had at least 21 hours a week exposure to the sun's UV rays in their teens were 29 per cent less likely to get cancer than those getting under an hour a day.

For women who spent the most time out side in their forties and fifties, the risk fell by 26 per cent and for those above 60, sunshine halved their chances of a tumour.

Meanwhile, men who get the recommended amount of vitamin D are less likely to suffer heart attacks or strokes, a study has found.

The U.S. research, which followed nearly 119,000 adults for two decades found men who got at least 600 IU of vitamin D per day were 16 per cent less likely to develop heart problems or stroke than men who got less than 100 IUD. But there was no such pattern among women, the researchers at Harvard School of Public Health found.

Both findings should be balanced in terms of the skin cancer risks of exposure to the sun, experts cautioned.

CALCIUM SUPPLEMENTS ‘HALVE THE DANGER OF SKIN DISEASE’

Tuesday June 28 2011 by Daily Express Reporter
http://www.express.co.uk/posts/view/255435...f-skin-disease-

A DAILY dose of vitamin D and calcium supplements can more than halve the chances of at-risk women developing deadly skin cancer.

Those with a history of non-lethal forms of skin cancer have the highest risk of suffering a malignant melanoma, the most dangerous strain.

But a study found that if these women took a daily calcium-vitamin D combination they were 57 per cent less likely to develop the disease than those with a similar medical history.

Study leader Dr Jean Tang, from Stanford University in California, said: “If you previously had a non-melanoma skin cancer, calcium plus vitamin D might reduce your risk of the more deadly melanoma.”

In a study of 36,000 women aged 50 to 79, whose health was followed for an average of seven years, participants were given either a daily dose of calcium along with vitamin D or a “dummy” pill. Of those who took part, just 176 developed a melanoma.

But Dr Tang said only women with a history of non-melanoma skin cancer benefited from the supplements in the study published today in the Journal of Clinical Oncology.

Those with no history saw no reduction in melanoma risk.

Another study led by Dr Tang last year showed that elderly men with higher levels of vitamin D have fewer non-melanoma skin cancers. Future research by Dr Tang’s team will look at the effect of larger doses of vitamin D on patients at risk of skin cancer.

Study confirms safety, cancer-targeting ability of nutrient in broccoli

6-9-11
http://oregonstate.edu/ua/ncs/archives/201...ther-vegetables

CORVALLIS, Ore. – Sulforaphane, one of the primary phytochemicals in broccoli and other cruciferous vegetables that helps them prevent cancer, has been shown for the first time to selectively target and kill cancer cells while leaving normal prostate cells healthy and unaffected.

The findings, made by scientists in the Linus Pauling Institute at Oregon State University, are another important step forward for the potential use of sulforaphane in cancer prevention and treatment. Clinical prevention trials are already under way for its use in these areas, particularly prostate and breast cancer.

It appears that sulforaphane, which is found at fairly high levels in broccoli, cauliflower and other cruciferous vegetables, is an inhibitor of histone deacetylase, or HDAC enzymes. HDAC inhibition is one of the more promising fields of cancer treatment and is being targeted from both a pharmaceutical and dietary approach, scientists say.

“It’s important to demonstrate that sulforaphane is safe if we propose to use it in cancer prevention or therapies,” said Emily Ho, a principal investigator in the Linus Pauling Institute, lead author on the study and associate professor in the OSU Department of Nutrition and Exercise Sciences.

“Just because a phytochemical or nutrient is found in food doesn’t always mean its safe, and a lot can also depend on the form or levels consumed,” Ho said. “But this does appear to be a phytochemical that can selectively kill cancer cells, and that’s always what you look for in cancer therapies.”

The findings were published in Molecular Nutrition and Food Research, a professional journal. Research was supported by the National Cancer Institute, National Institute of Environmental Health Sciences and the OSU Agricultural Experiment Station.

The Linus Pauling Institute has conducted some of the leading studies on sulforaphane's role as an HDAC inhibitor – one, but not all, of the mechanisms by which it may help prevent cancer. HDACs are a family of enzymes that, among other things, affect access to DNA and play a role in whether certain genes are expressed or not, such as tumor suppressor genes.

Some of the mechanisms that help prevent inappropriate cell growth – the hallmark of cancer – are circumvented in cancer cells. HDAC inhibitors can help "turn on" these silenced genes and restore normal cellular function.

Previous OSU studies done with mouse models showed that prostate tumor growth was slowed by a diet containing sulforaphane.

"It is well documented that sulforaphane can target cancer cells through multiple chemopreventive mechanisms," the researchers wrote in their study. "Here we show for the first time that sulforaphane selectively targets benign hyperplasia cells and cancerous prostate cells while leaving the normal prostate cells unaffected."

"These findings regarding the relative safety of sulforaphane to normal tissues have significant clinical relevance as the use of sulforaphane moves towards use in human clinical trials," they said.

The results also suggest that consumption of sulforaphane-rich foods should be non-toxic, safe, simple and affordable.
About the Linus Pauling Institute: The Linus Pauling Institute at OSU is a world leader in the study of micronutrients and their role in promoting optimum health or preventing and treating disease. Major areas of research include heart disease, cancer, aging and neurodegenerative disease.

TheUnhivedMind - June 24, 2011 03:17 AM (GMT)

Global Rise in Cancer Cost $300 Billion in 2010, Harvard Economist Says

By Oliver Renick - Jun 23, 2011
http://www.bloomberg.com/news/2011-06-20/g...omist-says.html

(Corrects cost of pulmonary disease in fifth paragraph of story published June 20.)

Newly diagnosed cancer cases cost the global economy $300 billion in 2010, as illnesses once believed to be largely confined to wealthier countries took hold in developing nations, a Harvard University economist said.

Tobacco use, alcohol intake, obesity and decreased physical activity have grown in poorer countries, causing the rise of cancer and diabetes, said David E. Bloom, professor of economics and demography at Harvard's School of Public Health in Boston. Bloom and other researchers held a briefing today in advance of the United Nations High Level Meeting on noncommunicable diseases.

The Sept. 19-20 meeting will be the first gathering of the UN Assembly dealing with cancer, cardiovascular illness, chronic lung conditions and diabetes. These diseases cause 60 percent of deaths worldwide, killing 36.1 million people annually, according to an April report by the World Health Organization.

"Noncommunicable diseases will evolve into a staggering economic burden in the coming years," Bloom said. "It's a huge impediment to the mitigation of poverty."

Bloom said treating newly diagnosed cancer cases cost $300 billion globally in 2010, and obstructive pulmonary disease -- often correlated with smoking tobacco -- costs $400 billion a year.
Not Confined to Health

“Economic policy makers like ministers of finance and ministers of planning see noncommunicable diseases as an issue confined to the health sector,” a misperception that needs to be addressed, Bloom said. “Dangers of NCDs are well-ensconced in the business screen of the world community,” he said.

The global decline in productivity due to illness and deaths from noncommunicable diseases will reach $35 trillion by 2030, Bloom said, an amount seven times larger than the current level of global health spending. Noncommunicable diseases undermine physical and human capital, as losses of labor put a burden on developing countries, he said.

“The main asset the poor possess is their labor, and that is the most threatened by the noncommunicable diseases,” Bloom said.

Cary Adams, chief executive officer of the Union for International Cancer Control, said people in poorer countries were “getting fatter, lazier, smoking too much tobacco, and eating unhealthy food.”

“It is the poorest people in the poorest nations that suffer the most,” said John Seffrin, CEO of the American Cancer Society, at the briefing.
Poverty Cycle

Seffrin said more than 80 percent of noncommunicable diseases occur in low and middle-income countries. “Noncommunicable diseases perpetuate the poverty cycle,” he said.

The estimate of the costs of noncommunicable diseases includes medical care, transportation, information and education campaigns, and productivity losses from those who die, Bloom said. Of 14,000 business executives surveyed worldwide, he said half believed that noncommunicable diseases would have a negative impact on their bottom line.

“Think about health spending as not consumption but investment,” said Bloom. “As investment that yields a handsome rate of return.”

“This is a moral issue,” Seffrin said. “Unlike other health problems in the past, we know what’s coming.”

View Full Version: Glue targets cancer cells, prof says

Title: Glue targets cancer cells, prof says

Ken Ardel - June 22, 2011 10:45 PM (GMT)

http://www.torontosun.com/2011/06/22/glue-...cells-prof-says

TORONTO - Cancer cells can be controlled by targeting them with a glue-like substance, a study by a Toronto scientist says.

Patrick Gunning, a prof at U of T's Mississauga campus, says by gluing cancer growing proteins to the cell membrane the disease is stopped from growing out of control.

It's a totally a new approach to cancer therapy, Gunning says.

"Our approach inhibits the mobility of cancer-promoting proteins within cells — essentially, it's like molecularly targeted glue," he says.

The glue-like substance is shaped like a dumbbell — at one end is a molecular anchor that sticks to the membrane, and at the other is a molecule that binds to the cancer-promoting proteins. The anchor is a cholesterol molecule that is well-known to chemists for adhering to cell membranes.

The protein recognition molecule is fairly picky about what it will bind to, reducing the risk of drug-related side effects. On a normal cell, the glue-like substance should have minimal effect.

"We're really excited about the potential for this type of drug. This is ready to move to preclinical studies and this treatment could slow or stop the explosive growth of cancerous tumours. For patients, this might reduce the need for really powerful chemotherapy, which can be very hard to tolerate," Gunning says.

The study is published in the journal Angewandte Chemie.

Despite Industry Pressure, Government Cancer Report Finally Released
Print this page

Posted June 10, 2011 in Environmental Justice, Health and the Environment
http://switchboard.nrdc.org/blogs/jsass/to...t_released.html

Today the government released its 12th Report on Carcinogens (RoC) - naming styrene and formaldehyde as among the chemicals that are known (formaldehyde) or reasonably anticipated (styrene) to cause cancer in humans (see the media announcement here). This is a really big deal, because the chemical industry has been fighting tooth-and-nail to prevent these assessments - actually to prevent the whole report - from being finalized. It’s been held up for four years by industry interference, but the public has a right to know about the chemical risks that are foisted upon us through air and water pollution, off-gassing from consumer products, inadequate or unenforced regulations, etc. (see NRDC's Dr. Janssen's blog on chemical reform here)

The 12th RoC formaldehyde classification of a known human carcinogen is consistent with the determination by the World Health Organization, EPA, and a recent National Academies review (see my blog here for details and links). Specifically, all these prestigious scientific bodies identified cancer risks of the nasal cavity, and some types of leukemia. It was the leukemia risks that the chemical industry fought so hard against, even though the evidence comes from human epidemiology of industrial workers and embalmers. In fact, industry has used political pressure to hold up EPA's scientific assessment for 13 years, since 1998, and it's still in draft form.

Styrene has been tied up in similar political knots. Styrene is used to manufacture many plastics, latex paints, synthetic rubbers, polyesters and coatings. It is also approved for use in food-contact materials, and as an FDA-approved synthetic flavoring in ice cream and candy (see 12th RoC fact sheet here, and EPA fact sheet here). It is regulated as a

Hazardous Air Pollutant by EPA, and considered possibly carcinogenic to humans by the World Health Organization. EPA has been trying to update its styrene assessment since 1998, with no end in sight.

Atrazine, a toxic pesticide that is associated with birth defects in people, and in lab animal studies has been shown to cause cancer and impaired reproductive and immune development, was not listed in the 12th RoC after significant industry pressure (see letters from the grain growers here and from Syngenta, the chemical manufacturer here). More about atrazine harms is here.

The chemical industry fought the truth, the science, and the public - but, in the end our government experts came through for us, giving the public accurate information about the health risks from chemicals that are commonly found in our homes, schools, and workplaces.

What we really need to prevent this from continuing to happen is a chemical regulatory law that works to ensure safe use of chemicals BEFORE, not after they are sold to us. I hope you can support reform of our Nation's chemical law, called TSCA (more information here).

Important! The producers of this powerful film are allowing a full and FREE preview through June 13th! Please tell everyone you know to watch this film in it's entirety through June 13, 2011.
Visit the Mercola Video Library

Burzynski, the Movie is the story of a medical doctor and Ph.D biochemist named Dr. Stanislaw Burzynski who won the largest, and possibly the most convoluted and intriguing legal battle against the Food and Drug Administration in American history.

In the 1970's, Dr. Burzynski made a remarkable discovery that threatened to change the face of cancer treatment forever. His non-toxic gene-targeted cancer medicine could have helped save millions of lives over the last two decades had his discovery not been criminally suppressed by the US government, as his therapy, called "antineoplastons," have been shown to effectively help cure some of the most "incurable" forms of terminal cancer.

This documentary takes you through the treacherous 14-year journey Dr. Burzynski and his patients have had to endure in order to finally obtain FDA-approved clinical trials of antineoplastons.

His story is yet another testament that fact can be far stranger than fiction, as the film exposes the powerful, unscrupulous forces that work to maintain the status quo of the medical- and pharmaceutical industry at any cost—including the lives of millions of people.
Sources:
Burzynskimovie.com

Dr. Mercola's Comments:

Dr. Stanislaw Burzynski was born in the early 1940's in Poland, and was trained as both a biochemist and a physician. He's spent the last 35 years developing and successfully treating cancer patients suffering with some of the most lethal forms of cancer at his clinic in Houston, Texas.

I recently interviewed Dr. Burzynski about his cancer treatment—a gene-targeted approach using non-toxic peptides and amino acids, known as antineoplastons. Here, I will follow up with a review of his recently released documentary, Burzynski, The Movie.

It's an absolute jaw-dropper...

For anyone who has ever been affected by cancer, either directly or indirectly, the facts presented in this film will hit you like a rude slap in the face.

You will learn that not only did the US Federal government spend 14 years actively suppressing a cancer treatment that had a FAR greater success rate than any other treatment available, they also spent well over $60 million of US taxpayer dollars trying to put the inventor of the treatment in jail in order to steal his patents and either suppress or cash in on his discovery.

This film is an absolute MUST-SEE, as the summary I'm about to present below simply cannot do it justice. It's available for purchase at BurzynkiMovie.com, where you can view the first half-hour for free. The site also contains a large number of video clips, as well as a full transcript of the entire film, along with links to all the documentation presented.
What's so Special about Dr. Burzynski's Treatment?

The story begins back in the early 1970's when Dr. Burzynski discovered that people with cancer lacked a certain peptide, while those who were cancer free had a plentiful supply of it.

This finding eventually led him to create a medical treatment referred to as antineoplastons. The drug contains a mixture of peptides and derivatives of amino acids. These were known to act as molecular switches, but as genome research blossomed and science progressed, Dr. Burzynski discovered they also work as genetic switches, and that is why antineoplastons work so well. They're actually able to turn on cancer suppressing genes, while simultaneously turning oncogenes (cancer genes) off.

As explained in the film:

"Our bodies contain two categories of genes that allow cancer to flourish: oncogenes, and tumor suppressor genes. When someone has cancer, they have a higher level of oncogenes switched on, with a higher level tumor suppressor genes switched off.

The goal is to tell the body to both switch back on the tumor suppressor genes, and turn off as many oncogenes as possible."

While other gene targeting cancer drugs now exist, they're only capable of targeting a small number of specific cancer genes. Antineoplastons, on the other hand, targets a wide spectrum of cancer genes—about 100 of them at once. In a very simplistic way, antineoplastons are to cancer what a broad-spectrum antibiotic is to infectious disease.
Success Rates of Chemo and Radiation versus Antineoplastons

The film features several remarkable case stories of people who were successfully cured of cancer, but it's when the clinical trial data of conventional therapies versus antineoplastons are stacked against each other that the benefits of antineoplastons become really obvious:Radiation or Chemotherapy Only Antineoplastons Only
5 of 54 patients (9 percent)
were cancer free at the end of treatment 5 of 20 (25 percent)
were cancer free at the end of treatment
Toxic side effects No toxic side effects

Tackling Childhood Brain Tumors

Dr. Burzynski was so confident in his antineoplastons that he even accepted the most difficult and "hopeless" cases, such as childhood brain tumors. Conventional medicine has little or nothing to offer in these cases, and the side effects can be as horrific as the disease itself, if not more. Furthermore, the best outcome conventional treatment can offer is to slow down the growth of the tumor.

Using antineoplastons, however, Dr. Burzynski has been able to successfully cure many of these otherwise hopeless cases, such as Jessica Ressel.

She was 11 years old when she was diagnosed with brainstem glioma—an incurable brain tumor. After learning that she would die no matter what toxic drugs and radiation

treatments she underwent, the family decided to not put her through it. When they found Dr. Burzynski, they literally had nothing to lose...

Twelve months later—after having initially been told she had but a few months to live, and given no chance of survival at all—MRI's confirmed she was cancer-free. Her brain tumor was completely resolved. Today, Jessica is a healthy 24-year old woman, pregnant with her second child.

When comparing FDA-supervised studies of treatments for lethal childhood brainstem gliomas, antineoplastons again comes out as a clear winner:Chemotherapy Only Antineoplastons Only
1 of 107 patients (0.9 percent)
were cancer free at end of treatment 11 of 40 patients (27.5 percent)
were cancer free at end of treatment
0 of 107 patients (0 percent)
survived past five years 11 of 40 patients (27.5 percent)
survived past five years

Even more interesting, while some of Dr. Burzynski's patients did eventually die after the five-year mark, most who did NOT undergo chemotherapy prior to getting antineoplastons have gone on to live normal, healthy lives—yet another indication that in many cases, the conventional treatments are more lethal than the disease itself.
Side Effects of Chemotherapy Drugs

Here's just a sampling of the side effects of three conventional chemotherapy drugs:
Doxorubicin (nick-name: Red Death)—leukemia, heart failure, infertility, mouth sores
Etoposide—leukemia, nerve damage, inability to fight infections
Cisplatin—kidney damage, hearing damage, nerve damage, infertility

Another chemo drug, Mitotane, which is derived from DDT, is also used for pediatric patients even though no studies have ever been performed to ascertain its safety or effectiveness in children.
Dr. Burzynski's Troubles Begins...

The legal battle Dr. Burzynski found himself embroiled in over his invention is convoluted to say the least. There are many bizarre twists and turns, and I strongly urge you to watch the documentary to fully appreciate what happened.

Dr. Burzynski had tried to get the FDA to review and approve antineoplastons since 1977, to no avail. To make sure he would not get into trouble for using the experimental therapy in his practice, his legal team reviewed federal and Texas state laws, confirming that he was acting within the laws and could use antineoplastons in his own practice "to meet the immediate needs of patients," since he was a licensed physician.

Particularly if no other alternatives were available to the patient. He could not engage in interstate commerce, however, so he had to restrict the use of the drug to his home state of Texas.

But word spread, and patients started traveling to his office from out of state.

Suddenly, in 1984, he found out that agents from the Texas board of medical examiners were traveling to patients across the country trying to convince them to file charges against him.

What followed next truly challenges the rational mind.
Texas Board of Medical Examiners Try to Strip Away his Medical License

In 1988, despite not breaking any laws, and having produced more evidence than was required to show that his treatment was effective and that no harm was coming to his patients from it, the Texas medical board charged him with breaking a law that didn't exist, claiming it was grounds for revoking his medical license.

They didn't have a case, but kept the charges going by continuing to file slightly amended complaints, until finally, in 1993, the case went to trial. By then, 60 of Dr. Burzynski's patients had filed a petition for the medical board to stop harassing their doctor—a petition that the board successfully eliminated from the trial by filing a motion to strike it from the record.

Testifying on Dr. Burzynski's behalf, however, was a leading expert from none other than the National Cancer Institute (NCI), Dr. Nicholas Patronas, MD, a board certified radiologist since 1973, and the founder and chief of Neurology at the NCI. Even he recognized the absurdity of the board's case, and put his own career on the line to testify.

The judge ruled in Dr. Burzynski's favor, confirming that no laws had been broken.

You'd think that would be the end of it. But not so in this case. Instead of accepting defeat, the Texas medical board filed charges against Dr. Burzynski with the Texas Supreme Court.
The Method Behind the FDA's Madness

It eventually came to light that the US Food and Drug Administration (FDA) had pressured the Texas medical board to revoke Dr. Burzynski's medical license—despite the fact that no laws were broken, and his treatment was proven safe and effective.

But WHY?

It's been stated many times that a crime can be solved simply by following the money, and this case is no exception. The FDA and the pharmaceutical industry had realized

that if Dr. Burzynski's discovery—which he owned the patent for—received a fair review, chemotherapy and radiation would rapidly dwindle into obscurity, effectively crippling the industry. Not only that, but if antineoplastons were approved, billions of dollars of cancer research funds would get funneled over to one single scientist who had exclusive patent rights...

Dr. Richard Crout, Director of the FDA Bureau of Drugs, once wrote in a 1982 newsletter:

"I never have and never will approve a new drug to an individual, but only to a large pharmaceutical firm with unlimited finances."

It became clear that ever since 1977, when Dr. Burzynski first tried to get antineoplastons approved, the FDA had begun scheming to eliminate the threat he and his discovery posed to the entire cancer industry...

The Harassment Continues Unabated

The FDA, under the direction of Commissioner Dr. David Kessler, called no fewer than FOUR different grand jury investigations into Dr. Burzynski's practice, despite the fact that none of the grand juries ever found him to be at fault, and no indictment ever came from any of the investigations.

But the FDA did not let up.

Finally, in 1995, just days after the final grand jury investigation, which also had found no fault, Dr. Burzynski was inexplicably indicted on charges of fraud, and 75 counts of violating federal law. If found guilty, he now faced 290 years in federal prison, and $18.5 million in fines.

A year later, in a bizarre twist brought about by congressional and public pressure, the FDA agreed to accept all of Dr. Burzynski's patients into a series of 72 FDA-supervised phase 2 clinical trials.

A 1996 article in The Washington Post noted:

"The prosecution marks the first time the FDA has tried to jail a scientist for using a drug on which he is conducting FDA authorized clinical trials."

Federal Government Spent $60 Million Trying to Bury Dr. Burzynski

This second trial cost American tax payers a whopping $60 million just in legal fees alone—that's not counting the cost of continually harassing him (including several raids on his office) and his patients over the preceding 11 years. Dr. Burzynski spent $2.2 million on his own defense, $700,000 of which was raised by Dr. Julian Whitaker through requests for donations in his newsletter Health & Healing.

On March 4, 1997, the judge declared it a mistrial, due to a deadlocked jury. However, after stating the government had not presented sufficient evidence in its case, he ordered that Dr. Burzynski be acquitted of 42 of the 75 counts.

But the FDA wasn't done yet. They took him to court AGAIN!
Third Time's the Charm...

At this point, many were becoming increasingly aware that something very bizarre and unusual was going on. Jurors from the first trial even joined patients in protests outside the court house. One clear-headed juror from the previous trial stated:

"Please don't waste my money abusing the system to make sure that you maintain your power!"

On May 28, 1997, after three hours of deliberation, the jury came back with their final verdict: Not Guilty.

By now you're probably thinking that this victory surely must mark the end of the wrongful harassment of Dr. Burzynski.

But no. It gets worse.
Secret Dealings Hide True Intents

While this ongoing drama unfolded over the course of more than a decade, something even more sinister was taking place behind the scenes, unbeknownst to Dr. Burzynski and his legal counsel.

In 1989, Dr. Burzynski had retained Dr. Dvorit Samid as a research consultant, and she did a lot of work with the antineoplaston ingredients. At the time, Dr. Samid worked at the Uniformed Services Medical School in Baltimore. She later transferred to the National Cancer Institute.

By 1990—while the Texas medical board kept filing one amended complaint after the other against Dr. Burzynski, in an effort to revoke his license—he had decided that the easiest way to keep the government from putting him out of business or in prison, was to partner with a pharmaceutical company. As luck would have it, he'd treated the sister-in-law of the Chairman and CEO of Élan Pharmaceuticals, and Élan eagerly drafted a letter of intent stating they would aggressively pursue the filing of the necessary protocols with the FDA for approval and marketing of antineoplastons.

Dr. Samid began working closely with Élan on the project. But once the financing, licensing agreements and royalties had been negotiated and agreed upon, Élan suddenly changed its tune, stating they had significant doubt as to whether the active substances could be patented, which would render an agreement meaningless.

As it turns out, Élan had instead partnered with the National Cancer Institute (NCI), where Dr. Samid got the position of section chief. They then co-sponsored laboratory research and clinical trials on just one of the antineoplastons' ingredients—an ingredient that Dr. Burzynski had NOT been able to patent due to the fact that it was already known. However, he had also already determined it to be very limited in terms of effectiveness on its own, over a decade ago.

Élan and the NCI spent tens of millions of dollars testing this single ingredient... Not surprisingly, it failed. Dr. Burzynski had already established that the ingredients must be used in combination in order to be effective. After realizing they could not duplicate the effectiveness of Dr. Burzynski's antineoplastons, the NCI finally agreed to conduct his clinical trials under the direction of Dr. Michael Friedman.
Sabotaging Trials—Par the Course for the National Cancer Institute

How do you sabotage a clinical trial?

It's actually easier than you might think. You'll have to watch the film to get all the details, but in summary, the trials were closed prior to completion, and were written off with the statement that "no conclusion can be made about the effectiveness or toxicity of antineoplastons." But it was clear, based on the study data, that seven of the nine patients enrolled received NO antineoplastons whatsoever! The others received dosages that were far lower than recommended.

Adding insult to injury, in 1999, about a year after Dr. Burzynski had been acquitted a third and final time, the NCI published these invalid trials in the medical literature, citing antineoplastons as a complete failure. So sure, Dr. Burzynski was a free man; cleared of all charges and free to practice medicine, but now the National Cancer Institute had effectively undermined the credibility and commercial viability of his medical discovery...

What the film reveals next, truly boggles the mind.

After the National Cancer Institute intentionally violated all protocols of their own antineoplaston trials, and after all state and federal agencies had failed in their 14-year campaign to remove Burzynski from society—after all of the dust settled—a profound truth began to emerge.
Theft and Patent Infringement—All in a Day's Work

In October 1991—while the Texas medical board kept filing amended complaints against him in an effort to revoke his license, due to pressure from the FDA—the National Cancer Institute (NCI) had conducted a site visit to Dr. Burzynski's clinic, and verified that "anti-tumor activity was documented by the use of antineoplastons."

As it turns out, a mere 17 days after this visit, the United States of America as represented by "The Department of Health and Human Services," filed a patent for

antineoplastons AS2-1... one of the two antineoplastons Dr. Burzynski had already patented.

The inventor listed?

"Dr. Dvorit Samid," Dr. Burzynski's former research consultant. The patent states:

"The invention described herein may be manufactured, used and licensed by or for the government, for governmental purposes, without the payment to us of any royalties thereon."

Over the next four years, while the witch hunt to put Dr. Burzynski behind bars was in full swing, the US Government filed 10 more patents antineoplastons.

By the summer of 1995, around the time that Burzynski was indicted for fraud and 75 counts of violating federal law, Dr. Michael Friedman—who sabotaged the NCI antineoplastons trials—had left the NCI and become Deputy Commissioner of Operations for the FDA, working directly under FDA Commissioner Dr. David Kessler—the man responsible for dragging Dr. Burzynski in front of no less than four different grand juries a few years earlier.

In November of 1995, a month into Dr. Burzynski's trial, where he faced 290 years in prison, the US Patent office approved the first US Government patent for antineoplastons. Between 1995 and 2000, the US Patent office approved all 11 copycat patents on antineoplastons AS2-1....
Who Pays for Their Crimes?

By now your head is probably spinning, so let's recap.

Dr. Burzynski developed a cancer treatment that surpassed all other treatments on the market, and the FDA, the pharmaceutical industry, and the National Cancer Institute all knew it. They also knew he was the sole owner of the patents for this therapy, and these two facts combined, threatened the entire paradigm of the cancer industry.

The cancer paradigm is based on very expensive machines and toxic drugs. There's an enormous amount of money to be made in this paradigm, and Dr. Burzynski single-handedly threatened to overturn it.

So they tried to copy his invention using a single non-patented ingredient. It failed. The next step was to steal the whole thing right from under him. There was just one problem. They knew they couldn't use the stolen patents as long as Dr. Burzynski walked free and had the ability to defend his rights to them... So they concocted 75 fraudulent charges to tuck him away in jail for the rest of his life.

Fortunately for us, they failed in that too.

Dr. Whitaker sums it up nicely when he says:

"How can the US Patent office be corrupted to the point they issue patents for a medical treatment that's already been patented and issue them to someone who had nothing to do with their discovery or use? And how can the Patent office then assign these fraudulent patents to some of the most powerful institutions in the American government? And, imagine, all of this was done while these same agencies were spending millions of taxpayer dollars trying to put Dr. Burzynski in jail, so he could not fight the criminal theft of his discovery!"

As I said in the beginning, the facts of this case challenge the mind of any sane and rational person, but make no mistake about it: These things did happen, and Dr. Burzynski has all the documentation to back it up.

The US Government did harass and intimidate, and they did try to falsely imprison a brilliant scientist, simply because he'd discovered an effective cancer therapy, while simultaneously engaging in patent infringement.

Now, while this was an enormous personal hardship for Dr. Burzynski, the US Government also, through their enormous greed, in a very direct way prevented millions of cancer patients to receive a non-toxic therapy that could have saved their life. Remember, Dr. Burzynski has been trying to get antineoplastons reviewed and approved since 1977, to no avail. It's absolutely heartbreaking to consider the cost of this criminal behavior in terms of human life, including young children.
The Deadly, But Highly Profitable, Cancer Paradigm

While the stolen patents are filled with useful information about the benefits and efficacy of antineoplastons, one statement in particular sums up the problem with the current cancer paradigm:

"Current approaches to combat cancer rely primarily on the use of chemicals and radiation, which are themselves carcinogenic and may promote recurrences and the development of metastatic disease."

Dr. Burzynski's therapy, as you may recall, is non-toxic, giving patients the option to at least not suffer more grievous harm from the treatment itself, in addition to a significantly greater chance of being cured.

I'm sure that whenever someone donates their hard-earned money or participates in a pink-ribbon walkathon, they believe they're doing a good thing. They believe they're helping fund vital cancer research that will hopefully, some day, find a cure for cancer. Little do they know that much of this money goes toward perpetuating the status quo of cancer treatment, namely highly toxic drugs and expensive machines—the same old paradigm centered around profit.

As of 2010, the National Cancer Institute's annual budget is $5.2 billion. Dr. Burzynski cannot get a single dime of it. All of his research into antineoplastons over the past 35 years has been self-funded.

Think about that for a moment. Not one dime has been funneled toward developing one of the most promising cancer therapies to emerge in the past three decades... Are you still convinced they have your best interest at heart, and are diligently working to "find a cure for cancer"?

Title: U.K. CANCER RATES CLIMB
Description: *[CLUB OF ROME DEPOPULATION]*

TheUnhivedMind - June 9, 2011 03:16 PM (GMT)

Of course the usual bunkum excuse of age is used rather than the poisons in the air, water and food along with the quack medical trash etc. Whats the pathetic front, Cancer Research U.K. doing, other than helping suppress real Cancer reversing protocols and taking peoples hand outs all day long?

QUOTE

Cancer rates up as UK population ages

Mortality levels dropping with better treatment, but concern remains over care for older sufferers

James Meikle
guardian.co.uk, Thursday 9 June 2011 14.06 BST
http://www.guardian.co.uk/world/2011/jun/0...eing-population

The incidence of cancer in the UK continues to rise as the population ages, but death rates are falling with improved diagnosis and treatment, official figures suggest.

Statistics on newly-diagnosed cases and mortality published by the Office for National Statistics (pdf) on Thursday reveal about 153,800 men and 152,300 women were told they had cancer each year during 2006-08. That is a rate of 421 per 100,000 and 365 per 100,000 respectively; the rate over 2005-7 was 415 and 359.

The latest mortality figures – 81,000 men (212 per 100,000) and 74,000 women (153 per 100,000) each year — represented slight drops on the previous rates of 214 and 154. Of all cancers, breast cancer has the highest incidence for women (123 cases per 100,000) and prostate cancer for men (100 per 100,000).

Wales had the highest average annual cancer incidence rate for men (467 per 100,000) and Scotland for women (398 per 100,000) – although more than 80% of all diagnoses and deaths are in England. Concerns remain across the UK about cancer mortality rates compared with those in other countries, and a study on Wednesday warned that older people still faced "age-bias" in treatment for cancer.

The Department of Health in England is launching pilot schemes to try to improve access to cancer services, and Mike Richards, its cancer director, has said that he expects the incidence of smoking-related cancers to tumble now the UK's "tobacco epidemic" is past. Further changes in lifestyle,

including lower alcohol consumption and more exercise, are also needed to reduce risks of other cancers.

TheUnhivedMind - June 9, 2011 03:27 PM (GMT)

WE ARE THE SICK MAN OF EUROPE FOR CANCER CARE

More than 250,000 people in England are diagnosed with cancer every year and around 130,000 die

Thursday June 9,2011
By Jo Willey Health Correspondent
http://www.express.co.uk/posts/view/251610...for-cancer-care

NHS cancer care and survival rates lag seriously behind other leading nations, it was claimed yesterday.

A damning study has revealed later diagnosis, treatment delays and an age bias in a health service that is the sick man of Europe.

Older patients are being particularly let down, according to the report by leading think-tank The King's Fund.

The fund, which examines ways to improve the NHS, looked at a number of international studies on cancer survival rates. Overall, England has worse survival rates for cancer than other countries including Canada, Australia, Sweden and Norway, and the gap is wider for older people.

More than 250,000 people in England are diagnosed with cancer every year and around 130,000 die.

If England's cancer survival rates matched the European average, then 5,000 lives would be saved every year and if they matched the European best, then 10,000 lives would be saved, said The King's Fund. According to Macmillan Cancer Support, 15,000 people over the age of 75 die prematurely each year from the disease.

Catherine Foot, senior fellow at The King's Fund, said: "The evidence points to early diagnosis as being key to improving outcomes.

"We hope urgent priority is given to closing the gap in survival rates between different groups in society."

In January, the Government pledged itself to cancer outcomes "comparable with the best in the world".

Liberal Democrat Care Services Minister Paul Burstow said: “This is further evidence of why we need to modernise the NHS. It is unacceptable that our cancer survival rates lag behind our European neighbours and that 15,000 people in the UK over 75 are dying prematurely from cancer each year when compared to the best-performing countries worldwide.”

View Full Version: Scientists cure cancer, but no one takes notice

Title: Scientists cure cancer, but no one takes notice

TheUnhivedMind - May 14, 2011 01:55 PM (GMT)

Right now answers to the dis-ease caused by the pollutants, radiation and viruses in the environment are not wanted by The Worshipful Company of Apothecaries. They're here to make profit and control the population nothing more. With a population reduction program in place to reduce the World's population by 75% by 2050 do you seriously think they'd allow any true help to death sentenced people? Of course not, they even promote the dis-ease causing foods as for now sickness is one of the replacements for the lack of manufacturing towards the gross domestic product. I suggest if the information below interests you then you study the chemical Hydrazine Sulphate and how its been used for a long time to fight Cancer with good results.

QUOTE

Scientists cure cancer, but no one takes notice

By cgull8m
http://hubpages.com/hub/Scientists_cure_ca...ne_takes_notice

Canadian researchers find a simple cure for cancer, but major pharmaceutical companies are not interested.

Researchers at the University of Alberta, in Edmonton, Canada have cured cancer last week, yet there is a little ripple in the news or in TV. It is a simple technique using very basic drug. The method employs dichloroacetate, which is currently used to treat metabolic disorders. So, there is no concern of side effects or about their long term effects.

This drug doesn't require a patent, so anyone can employ it widely and cheaply compared to the costly cancer drugs produced by major pharmaceutical companies.

Canadian scientists tested this dichloroacetate (DCA) on human's cells; it killed lung, breast and brain cancer cells and left the healthy cells alone. It was tested on Rats inflicted with severe tumors; their cells shrank when they were fed with water supplemented with DCA. The drug is widely available and the technique is easy to use, why the major drug companies are not involved? Or the Media interested in this find?

In human bodies there is a natural cancer fighting human cell, the mitochondria, but they need to be triggered to be effective. Scientists used to think that these mitochondria cells were damaged and thus ineffective against cancer. So they used to focus on glycolysis, which is less effective in curing cancer and more wasteful. The drug manufacturers focused on this glycolysis method to fight cancer. This DCA on the other hand doesn't rely on glycolysis instead on mitochondria; it triggers the mitochondria which in turn fights the cancer cells.

The side effect of this is it also reactivates a process called apoptosis. You see, mitochondria contain an all-too-important self-destruct button that can't be pressed in cancer cells. Without it, tumors grow larger as cells refuse to be extinguished. Fully functioning mitochondria, thanks to DCA, can once again die.

With glycolysis turned off, the body produces less lactic acid, so the bad tissue around cancer cells doesn't break down and seed new tumors.

Pharmaceutical companies are not investing in this research because DCA method cannot be patented, without a patent they can't make money, like they are doing now with their AIDS Patent. Since the pharmaceutical companies won't develop this, the article says other independent laboratories should start producing this drug and do more research to confirm all the above findings and produce drugs. All the groundwork can be done in collaboration with the Universities, who will be glad to assist in such research and can develop an effective drug for curing cancer.

You can access the original research for this cancer here.

This article wants to raise awareness for this study, hope some independent companies and small startup will pick up this idea and produce these drugs, because the big companies won't touch it for a long time.

Wolveshater - May 14, 2011 04:17 PM (GMT)

I see that Doc, of SACRAMANIAC YT fame is committing suicide by allowing The Worshipful Company of Apothecaries to feed him once weekly with CHEMO DEATH treatments, and its and 11 month treatment program he is on, JUDGEMENT..? Bummer man !

Title: 2 YR OLD BOY CURED OF BRAIN CANCER WITH MARIJUANA

TheUnhivedMind - May 4, 2011 10:19 PM (GMT)

Boy, two, with brain cancer is 'cured' after secretly being fed medical marijuana by his father

By Daily Mail Reporter
Last updated at 3:16 PM on 4th May 2011
http://www.dailymail.co.uk/health/article-...ana-father.html

A desperate father whose son was suffering from a life-threatening brain tumour has revealed he gave him cannabis oil to ease his pain. And he has now apparently made a full recovery.

Cash Hyde, known as Cashy, was a perfectly healthy baby when he was born in June 2008 but became sick shortly before his second birthday.

At first he was misdiagnosed with glandular fever before his parents Mike and Kalli, from Missoula in Montana, were given the devastating news he had a serious brain tumour.

The little boy had to have arduous chemotherapy treatment to reduce the growth, which had drastic side effects including seizures and a blood infection.

Mike Hyde with his son Cash who was diagnosed with a severe brain tumour

Cash had to have high-dose chemotherapy which made him very ill

His distraught parents were repeatedly told he was likely to succumb to the illness because the condition was so bad.

After one bout of high-dose chemotherapy, Cash was so weak he could not lift his head and was too sick to eat any solid food for 40 days.

It was at this point that Mr Hyde decided to take action and go down the route of medical marijuana to try to help his young son.

Cash's doctors refused to even discuss the option but his father went and sought authorisation elsewhere and then secretly administered it through his son's feeding tube.

He also told doctors to stop giving Cash the cocktail of anti-nausea drugs he had been taking - although he never told them what he was doing.

Mr Hyde told KXLY News that his son started looking better right away.

Cash's father secretly gave him medical marijuana through a feeding tube

The youngster with his older brother Colty as he is treated in hospital

Mr Hyde said: 'He hadn't eaten a thing in 40 days - and, it was really incredible to watch him take a bite of a piece of cheese. It shows that he wants to live'.

He credits the cannabis oil with helping his son get through the chemo, and say Cash has now been declared cancer free by doctors.

The boy is now back and home and living the life of a typical young boy, playing with his elder brother Colty.

Medical marijuana is legal in some states, including Montana, but its use for children is poorly understood and quite rate.

The US federal government does not recognise the legality of using the drug for medical reasons and frequently clashes with states over the issue.

Mr Hyde told KXLY: 'It's very controversial, it's very scary. But, there's nothing more scary than losing your child.'

Cash is now at home and able to live like a normal little boy

View Full Version: PCD drug against Cancer is NOTHING NEW!

Title: PCD drug against Cancer is NOTHING NEW!
Description: *[+CRAIG'S COMMENTS]*

craig-oxley - October 16, 2010 02:48 PM (GMT)

http://www.moneymorning.com/research-repor...492&g=96&r=Milo

Destroys Deadly Cells in Three

Breathtaking Steps…

What you're about to see is something that only a handful of people have been privy to so far.

It's the three-step process that defeats the deadliest disease known to man.

It works so effectively with the human body that some scientists describe it as "rapturous."

Step One: PCD makes the body's own T-cells (the most powerful, natural cancer killers), find the cancer cells. And then it actually makes these T-cells LINK ON to them. This has never been done before.

You see, cancer cells are extremely "clever." It's why they're so deadly. They can recognize attacks like these and generate "self-defense" chemicals that let them elude T-cells – and even begin multiplying to outnumber them!

This has been the downfall in most cancer therapies to date.

But no more.

You see, thanks to PCD, these T-cells are made to "lock on" in a new way… a way that the cancer cell simply doesn't recognize – and thus can't defend against.

The scientists at the Maryland lab call it a "cytolytic synapse"… but you can just think of it as a cancer-destroying Warrior.

Step Two: Cancer-killing agents are released that literally punch holes right into the tumor cell.

That's followed by an assault of natural T-cell proteins that create the "programmed cell death."

At this stage, tumors are destroyed. Without chemo, radiation or side effects.

And yet, the next stage is even more amazing…

Step Three: As soon as the destruction of one cancer cell is underway, the Warrior cell breaks away and moves to the nearest adjacent cancer cell, where it strikes again!

Throughout the killing process, the body's own T-cells start to proliferate.

This leads to an increased number of cancer-killing T-cells at the site of attack.

The tumor area soon has an ever-growing army of cancer-killing "Warrior Cells."

This is like beating cancer at its own game. We believe it's a modern day medical miracle.

Of course, for early investors, this breakthrough could be just as miraculous. Here's why…

craig-oxley - October 16, 2010 03:03 PM (GMT)

This information is nothing new at all and in fact not quite deep enough. First of all we do not want any synthetic poison in the body doing anything with our bodies. A cancer cell has a stealth sheath with the same negative polarity as your immune system. When the immune system comes across the cancer it doesn't see anything harmful and its repelled in the process. Think of two magnets when you place the same polarity together they push apart. We have to break open this sheath then the immune system can be exposed to the positive polarity of the inner cancer cell and destroy it. The reason cancer has this sheath isn't because its highly clever and wants to evade destruction quite as you'd think. Its there because cancer is totally natural to a human being especially the feminine being who has the ability to create life where the placenta is formed. This placenta is cancer which only starts its slow deterioration stage from the time the child starts to grow a functioning pancreas. Why is this? Because certain proteolytic enzymes made by the pancreas kill the sheath by burning holes within thus exposing the inner cell for destruction. I've highlighted another method of doing this is with natural food compounds known as saponins like in the wonderful Mung beans. So none of this science is new at all in fact it really dates back to around 1906 and a Doctor by the name of John Beard based in Scotland with his 'The Unitarian Trophoblastic Theory.' As always I will say that its no good opening up a cancer cell to attack if theres a weak immune system present through toxicity and lack of correct cleansing and nutrition of the body. If you're Splenic and Kidney function is low which will be the case then this must be addressed in order to boost the immune function. You can be sure a PCD drug will not boost your immune system correctly but in fact tax it further if it falsely creates immune responses from something not quite able to do it. Similar to how Coffee weakens Kidney gland functioning (adrenals) by stressing but never nourishing and healing like say adaptogenic herbs would like do such as Ling Zhi (Reishi) or Withania (Ashwagandha). You'll also note how useful Ling Zhi is against cancer and

typical poison cancer treatments. Ling Zhi is excellent on the immune system. Another herb of much use both in blood cleansing and immune response is Echinacea although the true window frame for its use continually is just fourteen days. Don't believe the hype of some companies out to make a buck telling you that you can take Echinacea for eight weeks a time. On the other hand Reish mushroom is fine for regular use and something really special for the immune system is Huang Qi known as Astragalus. That will really boost your immune response just like Echinacea but again it can be continually used. Even if you stop taking it and have been taking it for a while prior, you'll then have a higher immune response for up to in some people two months of not taking it at all. This herb is very important with cancer and is very skilled at healing the all important Splenic function whilst bringing in the Qi more to the body.

TheUnhivedMind - April 26, 2011 03:45 PM (GMT)

May I remind you that Dr. Sam Chachoua was doing this kind of work but more specifically for the patient via bacterial coatings using bacteria which the individual patents were most responsive to with their immune responses. So its old news and Sam does it much better.

View Full Version: MISTLETOE FIGHTS CANCER

Title: MISTLETOE FIGHTS CANCER

craig-oxley - December 31, 2009 01:00 PM (GMT)

Its well known about both Mistletoe (Viscum album) and Periwinkle (Catharanthus Roseus) when tackling Cancer. The Druids used Mistletoe berries to fight Cancer, especially externally on the skin. Its anti Cancer effects were known by Hippocrates and Pliny the Elder. A herb you shouldn't take with Mistletoe is Gotu Kola (Hydrocotyle asiatica). One of the compounds responsible against Cancer from Mistletoe is ML-1 known as Mistletoe Lectin-1. Theres also immune stimulation occuring via its Polysaccharides. The Knight of Malta controlled allopathic death doctors use both these herbs to synthesis some of their compounds to make deadly synthetic poisons which kill the patient. Two prime examples are Vinchristine and Vinblastine tied to two of Perwinkle's bisindole alkaloids, Vichristine and Vinblastine. When herbs are used in their whole state with all compounds present there is no hurt on the patient. When compounds are standardised and made synthetic then trouble starts. This is exactly how the Knight of Malta created FDA manages to rid us of healing herbs they wish away from the people in order to maximise their kill and profit agendas. A common formula for Cancer using Periwinkle was Poke Root (Phytolacca americana), Marshmallow (Althaea officinalis), Perikwinkle (Catharanthus Roseus) and Goldenseal (Hydrastis canadenis). -Craig

Human energy fields: Beings of light

by Lynne McTaggart
http://www.homoeopathyclassical.com/articl...ergy_field.html

Fritz-Albert Popp thought he had discovered a cure for cancer. It was 1970, and Popp, a theoretical biophysicist at the University of Marburg in Germany, had been teaching radiology - the interaction of electromagnetic (EM) radiation on biological systems. Hed been examining benzo[a]pyrene, a polycyclic hydrocarbon known to be one of the most lethal carcinogens to humans, and had illuminated it with ultraviolet (UV) light.

Popp played around with light a lot. Hed long been fascinated by the effect of EM radiation on living systems, and had been trying to determine the effects of 'exciting' this deadly compound with UV light.

What he discovered was that benzo[a]pyrene absorbed the light, then re-emitted it at a completely different frequency, like a CIA agent intercepting a communication from the enemy and jumbling it up. Here was a chemical which doubled as a biological frequency scrambler. Popp then performed the same test on benzo[e]pyrene, another polycyclic hydrocarbon and virtually identical to benzo[a]pyrene, save for a tiny alteration in its molecular makeup. This tiny difference in one of the compound rings was critical as it rendered benzo[e]pyrene harmless to humans, and UV light passed through unaltered.

Popp puzzled over this difference, and continued to experiment with UV light and other compounds. He performed his test on 37 different chemicals, some cancer-causing, some not. After a while, he was able to predict which substances could cause cancer. In every instance, the compounds that were carcinogenic took the UV light, absorbed it and changed the frequency.

There was another odd property of these compounds: each of the carcinogens reacted only to light at a specific frequency - 380 nm (nanometres). Popp kept wondering why a cancer-causing substance would be a light scrambler. He began reading the scientific literature specifically about human biological reactions, and came across information about a phenomenon called photorepair.

It is well known from biological laboratory experiments that if you blast a cell with UV light so that 99 per cent of the cell, including its DNA, is destroyed, you can almost entirely repair the damage in a single day just by illuminating the cell with the same wavelength at a much weaker intensity. To this day, scientists dont understand this phenomenon, but no one has disputed it.

Popp also knew that patients with xeroderma pigmentosum eventually die of skin cancer because their photo-repair system cant repair solar damage. Popp was also struck by the fact that photorepair works most efficiently at 380 nm - the same frequency that the cancer-causing compounds react to and scramble.

This was where Popp made his logical leap. Nature was too perfect for this to be simple coincidence. If the carcinogens only react to this frequency, it must somehow be linked to photorepair. If so, this would mean that there must be a light in the body responsible for photorepair. A compound must cause cancer because it permanently blocks this light and scrambles it, so photorepair cant work anymore. Popp was profoundly taken aback by the thought of it all. He wrote the paper up, and a prestigious medical journal agreed to publish it.

Not long after, Popp was approached by a student named Bernhard Ruth, who asked Popp to supervise his work for his doctoral dissertation. Popp told Ruth he was prepared to do so if the student could show that light was emanating from the human body. This meeting was fortuitous for Popp because Ruth happened to be an excellent experimental physicist. Ruth thought the idea was ridiculous, and immediately set to work building equipment to prove Popps hypothesis wrong. Within two years, Ruth had constructed a machine resembling a big X-ray detector (EMI 9558QA selected typed), which used a photomultiplier to count light, photon by photon. Even today, it is still one of the best pieces of equipment in the field. The machine had to be highly sensitive because it had to measure what Popp assumed would be extremely weak emissions. In 1976, they were ready for their first test with cucumber seedlings.

The photomultiplier showed that photons, or light waves, of a surprisingly high intensity were being emitted from the seedlings. In case the light had to do with an effect of photosynthesis, they decided that their next test - with potatoes - would be to grow the seedling plants in the dark. This time, when the seedlings were placed in the photomultiplier, they registered an even higher intensity of light. Whats more, the photons in the living systems theyd examined were more coherent than anything theyd ever seen (see box, p 3).

Popp began thinking about light in nature. Light was present in plants and was used during photosynthesis. When we eat plant foods, he thought, it must be that we take up the photons and store them.

When we consume broccoli, for example, and digest it, it is metabolised into carbon dioxide (CO2) and water, plus the light stored from the sun and photosynthesis. We extract the CO2 and eliminate the water, but the light, an EM wave, must be stored. When taken in by the body, the energy of these photons dissipates and becomes distributed over the entire spectrum of EM frequencies, from the lowest to the highest.

This energy is the driving force for all the molecules in our body. Photons switch on the bodys processes like a conductor bringing each individual instrument into the collective sound. At different frequencies, they perform different functions. Popp found that molecules in the cells responded to certain frequencies, and that a range of vibrations from the photons caused a variety of frequencies in other molecules of the body. Light waves also answered the question of how the body manages to carry out complicated feats with different body parts instantaneously, or do two or more things at once.

These biophoton emissions, as Popp called them, provided an ideal communication system for the transfer of information to many cells across the organism. But the single most important question remained: where was the light coming from?

A particularly gifted student talked him into another experiment. It is known that when ethidium bromide is applied to samples of DNA, it insinuates itself in between the base

pairs of the double helix, causing DNA to unwind. The student suggested that, after applying the chemical, they measure the light coming from the sample. Popp found that the greater the concentration of ethidium, the more the DNA unravelled, but also the stronger the intensity of light. Conversely, the less he used, the less light was emitted.

He also found that DNA could send out a wide range of frequencies, some of which seemed to be linked to certain functions. If DNA stored this light, it would naturally emit more light on being unzipped.

These and other studies proved to Popp that one of the most essential sources of light and biophoton emissions was DNA. DNA was like the master tuning fork of the body. It would strike a particular frequency and certain molecules would follow. It was also possible, he realised, that he had stumbled upon the missing link in current DNA theory that could account for perhaps the greatest miracle of all in human biology - how a single cell can turn into a fully formed human being (see box, p 4).

With biophoton emissions, Popp believed he had an answer to the question of morphogenesis as well as Gestaltbildung - cell coordination and communication - which could only occur in a holistic system with one central orchestrator. Popp showed in his experiments that these weak light emissions were sufficient to orchestrate the body. The emissions had to be low intensity because these communications took place on a quantum level, and higher intensities would have an effect only in the world of the large.

The number of photons emitted seemed to be linked to the organisms position on the evolutionary scale - the more complex the organism, the fewer photons were emitted. Rudimentary animals and plants tended to emit 100 photons/cm2/sec at a wavelength of 200-800 nm, corresponding to a very-high-frequency EM wave well within the visible range, whereas humans emit only 10 photons/cm2/sec at the same frequency.

In one series of studies, Popp had one of his assistants - a 27-year-old healthy young woman - sit in the room every day for nine months while he took photon readings of a small area of her hand and forehead. Popp then analysed the data and discovered, to his surprise, that the light emissions followed certain set patterns - biological rhythms at 7, 14, 32, 80 and 270 days - when the emissions were identical even after one year. When there was an increase in photons coming off the right hand, there was a similar increase from the left hand. In terms of light, the right hand knew what the left hand was doing.

Similarities were also noted by day or night, by week and by month, as though the body were following the worlds biorhythms as well as its own. So far, Popp had studied only healthy individuals and found an exquisite coherence at the quantum level. But what kind of light is present in those who are ill? He tried out his machine on a series of cancer patients. In every instance, these patients had lost those natural periodic rhythms as well as their coherence. The lines of internal communication were

scrambled. They had lost their connection with the world. In effect, their light was going out.

Just the opposite is seen with multiple sclerosis: MS is a state of too much order. Patients with this disease are taking in too much light, thereby inhibiting their cells ability to do their job. Too much cooperative harmony prevented flexibility and individuality - like too many soldiers marching in step as they cross a bridge, causing it to collapse. Perfect coherence is an optimal state between chaos and order. With too much cooperation, it is as though individual members of the orchestra are no longer able to improvise. In effect, MS patients are drowning in light.

Popp also examined the effects of stress. In a stressed state, the rate of biophoton emissions goes up - a defence mechanism designed to restore the patients equilibrium.

All these phenomena led Popp to think of biophoton emissions as a sort of correction by a living system of Zero Point Field fluctuations (see box, p 1). Every system likes to achieve a minimum of free energy. In a perfect world, all waves would cancel each other out by destructive interference. However, this is impossible with the Zero Point Field, where these tiny fluctuations of energy constantly disturb the system. Emitting photons is a compensatory gesture to stop this disturbance and attempt a sort of energy equilibrium. As Popp thought of it, the Zero Point Field forces a human being to be a candle. The healthiest body would have the lowest light and be closest to a zero state, the most desirable state - the closest a living thing could get to nothingness. Popp now recognised that what hed been experimenting with was even more than a cure for cancer or Gestaltbildung. Here was a model which provided a better explanation than the current neo-Darwinist theory for how all living things evolve on the planet. Rather than a system of fortunate but ultimately random error, if DNA uses frequencies of every variety as an information tool, this suggests instead a feedback system of perfect communication through waves that encode and transfer information.

Popp came to realise that light in the body might even hold the key to health and illness. In one experiment, he compared the light from free-range hens eggs with that from battery hens. The photons in the former were far more coherent than those in the latter.

He went on to use biophoton emissions as a tool for measuring the quality of food. The healthiest food had the lowest and most coherent intensity of light. Any disturbance in the system increased the production of photons. Health was a state of perfect subatomic communication, and ill health was a state of communication breakdown. We are ill when our waves are out of synch.

It took some 25 years for Popp to gather converts from among the scientific community. Slowly, a few select scientists around the globe began to consider that the bodys communication system might be a complex network of resonance and frequency. Eventually, they would form the International Institute of Biophysics, composed of 15

groups of scientists from international centres around the world.

Popp and his new colleagues went on to study the light emissions from several organisms of the same species, first in an experiment with a type of water flea of the genus Daphnia. What they found was nothing short of astonishing. Tests with a photomultiplier showed that the water fleas were sucking up the light emitted from each other. Popp tried the same experiment on small fish and got the same result. According to his photomultiplier, sunflowers were like biological vacuum cleaners, moving in the direction of the most solar photons to hoover them up. Even bacteria swallowed photons from the media they were put in.

Plus, it dawned on Popp that these emissions had a purpose outside of the body. Wave resonance wasnt only being used to communicate inside the body, but between living things as well. Two healthy beings engaged in photon sucking, as he called it, by exchanging photons. Popp realised that this exchange might unlock the secret of some of the animal kingdoms most persistent conundrums: how schools of fish or flocks of birds create perfect and instantaneous coordination. Many experiments on the homing ability of animals demonstrate that it has nothing to do with following habitual trails, scents or even the EM fields of the earth, but rather some form of silent communication that acts like an invisible rubber band, even when the animals are separated by miles of distance.

For humans, there was another possibility. If we could take in the photons of other living things, we might also be able to use the information from them to correct our own light if it went awry. Popp had begun experimenting with such an idea. If cancer-causing chemicals could alter the bodys biophoton emissions, then it might be that other substances could reintroduce better communication. Popp wondered whether certain plant extracts could change the character of the biophoton emissions from cancer cells to make them communicate again with the rest of the body. He began experimenting with a number of non-toxic substances purported to be successful in treating cancer. In all but one instance, these substances only increased the photons from tumour cells, making them even more deadly to the body.

The single success story was mistletoe, which appeared to help the body to resocialise the photon emissions of tumour cells back to normal. In one of numerous cases, Popp came across a woman in her thirties who had breast and vaginal cancer. Popp found a mistletoe remedy that created coherence in her cancer tissue samples. With the agreement of her doctor, the woman stopped any treatment other than the mistletoe extract and, after a year, all her laboratory tests were virtually back to normal. A woman who had been given up as a terminal cancer case had her proper light restored just by taking a herb.

To Popp, homoeopathy was another example of photon sucking. He had begun to think of it as a resonance absorber. Homoeopathy rests upon the notion that like is treated

with like. A plant extract that at full strength can cause hives in the body is used in an extremely diluted form to get rid of it. If a rogue frequency in the body can produce certain symptoms, it follows that a high dilution of a substance which can produce the same symptoms would also carry that frequency. Like a resonating tuning fork, a suitable homoeopathic solution might attract and then absorb the abnormal oscillations, allowing the body to return to normal health.

Popp thought that EM molecular signalling might even explain acupuncture. According to Traditional Chinese Medicine, the human body has a system of meridians, running deep in the tissues, through which flows an invisible energy the Chinese call chi, or the life force. The chi supposedly enters the body through these acupuncture points and flows to deeper organ structures (which do not correspond to those in Western biology), providing energy (or the life force).

Illness occurs when this energy is blocked at any point along the pathways. According to Popp, the meridian system transmits specific energy waves to specific zones of the body.

Research has shown that many of the acupuncture points have a dramatically reduced electrical resistance compared with the surrounding skin (10 kilo-ohms and 3 mega-ohms, respectively). Orthopaedic surgeon Dr Robert Becker, who has done a great deal of research on EM fields in the body, designed a special electrode recording device that rolls along the body like a pizza cutter. His many studies have shown electrical charges on every one of the people tested corresponding to the Chinese meridian points.

Mistletoe cures woman's cancer
after she shuns chemotherapy

By Daily Mail Reporter
Last updated at 11:37 AM on 28th December 2009

A cancer sufferer has told how mistletoe saved her life after she shunned conventional treatments.

Joan van Holsteijn put her faith in the healing properties of the plant, which is more commonly associated with Yuletide romance.

She turned down potentially life-saving chemotherapy and instead had injections of misteltoe.

Amazingly, it has worked wonders: the tumours in her leg are now gone and she's well on the road to recovery.

Mrs van Holsteijn, from Milltimber in Aberdeenshire, said: 'I owe my life to misteltoe. I feel so grateful and well and healthy. I've got my life back, all thanks to the plant.

'I have never had it in the house before but this year I've got a sprig of misteltoe at my front door. I want everyone to know about it.'

The 53-year-old, originally from Holland, sought medical advice after a painful lump the size of an egg developed on her leg. Doctors diagnosed her with non-Hodgkins lymphoma.

Her specialist recommended doses of chemotherapy. But Joan, a therapist at the Camphill special needs school, didn't want to go down that route.

She said: 'I was very scared. I was scared of the cancer, and scared of chemo because you can become so ill from it.

> **QUOTE**
>
> How does mistletoe help to fight cancer?
>
> The introduction of the mistletoe berry into the body is designed to kickstart the immune system, which should realise something is wrong. The body should then fight back against the cancer, as well as the mistletoe.

'It runs down to your immune system to the point where you don't feel well. Even if you get better from the cancer you still have to deal with the treatment.

'Usually patients try chemotherapy then mistletoe, but I didn't want to do that.'

She was given injections of a medicine made from mistletoe berries at Park Attwood Clinic in Birmingham.

Within six months the lump on her leg had shrunk. After 18 months it was gone completely, along with other tumours.

She said: 'My doctor told me just to try chemo and nothing else.

'But after I started the mistletoe he was very supportive. I've been back several times for body scans and the tumours have all gone now.

'All that's left behind is scar tissue. I feel absolutely fantastic.'

Mrs van Holsteijn, who lives with husband Simon, 48, and daughter Lisa, 14, is now clear of cancer, but will require further check-ups to ensure it doesn't return.

Debbie Thomson, chief executive of cancer charity Clan, said her organisation used misteltoe in its doctor-run clinics.

She said: 'Misteltoe therapy is both supportive and complementary and helps to reduce the indirect effects of cancer.

'It is assumed that surgery, radiotherapy and chemotherapy are important first-line and supportive tools for the treatment of cancer.'

outsider - December 31, 2009 01:16 PM (GMT)

Craig, feel free to delete this if you don't want this in here....

But I have heard that Mistletoe contains DMT and was/is also used for its entheogenic properties.

TheUnhivedMind - April 24, 2011 11:58 PM (GMT)

Note folks how it seems these ancient peoples knew the power of Mistletoe on the light body of the human being.

QUOTE

The Sprig of Acacia.

Intimately connected with the legend of the third degree is the mythical history of the Sprig of Acacia, which we are now to consider.

There is no symbol more interesting to the masonic student than the Sprig of Acacia, not only on account of its own peculiar import, but also because it introduces us to an extensive and delightful field of research; that, namely, which embraces the symbolism of sacred plants. In all the ancient systems of religion, and Mysteries of initiation, there was always some one plant consecrated, in the minds of the worshippers and participants, by a peculiar symbolism, and therefore held in extraordinary veneration as a sacred emblem. Thus the ivy was used in the Mysteries of Dionysus, the myrtle in those of Ceres, the erica in the Osirian, and the lettuce in the Adonisian. But to this subject I shall have occasion to refer more fully in a subsequent part of the present investigation.

Before entering upon an examination of the symbolism of the Acacia, it will be, perhaps, as well to identify the true plant which occupies so important a place in the ritual of Freemasonry.

And here, in passing, I may be permitted to say that it is a very great error to designate the symbolic plant of Masonry by the name of "Cassia"--an error which undoubtedly arose, originally, from the very common habit among illiterate people of sinking the sound of the letter a in the pronunciation of any word of which it constitutes the initial syllable. Just, for instance, as we constantly hear, in the conversation of the uneducated, the words pothecary and prentice for apothecary and apprentice, shall we also find cassia used for acacia. 177 Unfortunately, however, this corruption of acacia into cassia has not always been confined to the illiterate: but the long employment of the corrupted form has at length introduced it, in some instances, among a few of our writers. Even the venerable Oliver, although well acquainted with the symbolism of the acacia, and having written most learnedly upon it, has, at times, allowed himself to use the objectionable corruption, unwittingly influenced, in all probability, by the too frequent adoption of the latter word in the English lodges. In America, but few Masons fall into the error of speaking of the Cassia. The proper teaching of the Acacia is here well understood. 178

The cassia of the ancients was, in fact, an ignoble plant having no mystic meaning and no sacred character, and was never elevated to a higher function than that of being united, as Virgil informs us, with other odorous herbs in the formation of a garland:--

"...violets pale,

The poppy's flush, and dill which scents the gale,
Cassia, and hyacinth, and daffodil,
With yellow marigold the chaplet fill." 179

Alston says that the "Cassia lignea of the ancients was the larger branches of the cinnamon tree, cut off with their bark and sent together to the druggists; their Cassia fistula, or Syrinx, was the same cinnamon in the bark only;" but Ruæus says that it also sometimes denoted the lavender, and sometimes the rosemary.

In Scripture the cassia is only three times mentioned, 180 twice as the translation of the Hebrew word kiddak, and once as the rendering of ketzioth, but always as referring to an aromatic plant which formed a constituent portion of some perfume. There is, indeed, strong reason for believing that the cassia is only another name for a coarser preparation of cinnamon, and it is also to be remarked that it did not grow in Palestine, but was imported from the East.

The acacia, on the contrary, was esteemed a sacred tree. It is the acacia vera of Tournefort, and the mimosa nilotica of Linnæus. It grew abundantly in the vicinity of Jerusalem, 181 where it is still to be found, and is familiar to us all, in its modern uses at least, as the tree from which the gum arabic of commerce is obtained.

The acacia, which, in Scripture, is always called shittah 182 and in the plural shittim, was esteemed a sacred wood among the Hebrews. Of it Moses was ordered to make the tabernacle, the ark of the covenant, the table for the showbread, and the rest of the sacred furniture. Isaiah, in recounting the promises of God's mercy to the Israelites on their return from the captivity, tells them, that, among other things, he will plant in the wilderness, for their relief and refreshment, the cedar, the acacia (or, as it is rendered in our common version, the shittah), the fir, and other trees.

The first thing, then, that we notice in this symbol of the acacia, is, that it had been always consecrated from among the other trees of the forest by the sacred purposes to which it was devoted. By the Jew the tree from whose wood the sanctuary of the tabernacle and the holy ark had been constructed would ever be viewed as more sacred than ordinary trees. The early Masons, therefore, very naturally appropriated this hallowed plant to the equally sacred purpose of a symbol which was to teach an important divine truth in all ages to come.

Having thus briefly disposed of the natural history of this plant, we may now proceed to examine it in its symbolic relations.

First. The acacia, in the mythic system of Freemasonry, is preeminently the symbol of the IMMORTALITY OF THE SOUL--that important doctrine which it is the great design of the institution to teach. As the evanescent nature of the flower which "cometh forth and is cut down" reminds us of the transitory nature of human life, so the perpetual renovation of the evergreen plant, which uninterruptedly presents the appearance of youth and vigor, is aptly compared to that spiritual life in which the soul, freed from the corruptible companionship of the body, shall enjoy an eternal spring and an immortal youth. Hence, in the impressive funeral service of our order, it is said, "This evergreen is an emblem of our faith in the immortality of the soul. By this we are reminded that we have an immortal part within us, which shall survive the grave, and which shall never, never, never die." And again, in the closing sentences of the monitorial lecture of the Third Degree, the same sentiment is repeated, and we are told that by "the ever green and ever living sprig" the Mason is strengthened "with confidence and composure to look forward to a blessed immortality." Such an interpretation of the symbol is an easy and a natural one; it suggests itself at once to the least reflective mind, and consequently, in some one form or another, is to be found existing in all ages and nations. It was an ancient custom, which is not, even now, altogether disused, for mourners to carry in their hands at funerals a sprig of some evergreen, generally the cedar or the cypress, and to deposit it in the grave of the deceased. According to Dalcho, 183 the Hebrews always planted a sprig of the acacia at the head of the grave of a departed friend. Potter tells us that the ancient Greeks "had a custom of bedecking tombs with herbs and flowers." 184 All sorts of purple and white flowers were acceptable to the dead, but principally the

amaranth and the myrtle. The very name of the former of these plants, which signifies "never fading," would seem to indicate the true symbolic meaning of the usage, although archaeologists have generally supposed it to be simply an exhibition of love on the part of the survivors. Ragon says, that the ancients substituted the acacia for all other plants because they believed it to be incorruptible, and not liable to injury from the attacks of any kind of insect or other animal--thus symbolizing the incorruptible nature of the soul.

Hence we see the propriety of placing the sprig of acacia, as an emblem of immortality, among the symbols of that degree, all of whose ceremonies are intended to teach us the great truth, that "the life of man, regulated by morality, faith, and justice, will be rewarded at its closing hour by the prospect of eternal bliss." 185 So, therefore, says Dr. Oliver, when the Master Mason exclaims, "My name is Acacia," it is equivalent to saying, "I have been in the grave,--I have triumphed over it by rising from the dead,--and being regenerated in the process, I have a claim to life everlasting."

The sprig of acacia, then, in its most ordinary signification, presents itself to the Master Mason as a symbol of the immortality of the soul, being intended to remind him, by its evergreen and unchanging nature, of that better and spiritual part within us, which, as an emanation from the Grand Architect of the Universe, can never die. And as this is the most ordinary, the most generally accepted signification, so also is it the most important; for thus, as the peculiar symbol of immortality, it becomes the most appropriate to an order all of whose teachings are intended to inculcate the great lesson that "life rises out of the grave." But incidental to this the acacia has two other interpretations, which are well worthy of investigation.

Secondly, then, the acacia is a symbol of INNOCENCE. The symbolism here is of a peculiar and unusual character, depending not on any real analogy in the form or use of the symbol to the idea symbolized, but simply on a double or compound meaning of the word. For α•α•ια, in the Greek language, signifies both the plant in question and the moral quality of innocence or purity of life. In this sense the symbol refers, primarily, to him over whose solitary grave the acacia was planted, and whose virtuous conduct, whose integrity of life and fidelity to his trusts, have ever been presented as patterns to the craft, and consequently to all Master Masons, who, by this interpretation of the symbol, are invited to emulate his example.

Hutchinson, indulging in his favorite theory of Christianizing Masonry, when he comes to this signification of the symbol, thus enlarges on the interpretation: "We Masons, describing the deplorable estate of religion under the Jewish law, speak in figures: 'Her tomb was in the rubbish and filth cast forth of the temple, and Acacia wove its branches over her monument;' akakia being the Greek word for innocence, or being free from sin; implying that the sins and corruptions of the old law and devotees of the Jewish altar had hid Religion from those who sought her, and she was only to be found where innocence survived, and under the banner of the divine Lamb; and as to ourselves, professing that we were to be distinguished by our Acacy, or as true Acacians in our religious faith and tenets." 186

Among the nations of antiquity, it was common thus by peculiar plants to symbolize the virtues and other qualities of the mind. In many instances the symbolism has been lost to the moderns, but in others it has been retained, and is well understood, even at the present day. Thus the olive was adopted as the symbol of peace, because, says Lee, "its oil is very useful, in some way or other, in all arts manual which principally flourish in times of peace." 187

The quince among the Greeks was the symbol of love and happiness; 188 and hence, by the laws of Solon, in Athenian marriages, the bride and bridegroom were required to eat a quince together.

The palm was the symbol of victory; 189 and hence, in the catacombs of Rome, the burial-place of so many of the early Christians, the palm leaf is constantly found as an emblem of the Christian's triumph over sin and death.

The rosemary was a symbol of remembrance, and hence was used both at marriages and at funerals, the memory of the past being equally appropriate in both rites. 190

The parsley was consecrated to grief; and hence all the Greeks decked their tombs with it; and it was used to crown the conquerors in the Nemean games, which were of a funereal character. 191

But it is needless to multiply instances of this symbolism. In adopting the acacia as a symbol of innocence, Masonry has but extended the principle of an ancient and universal usage, which thus consecrated particular plants, by a mystical meaning, to the representation of particular virtues.

But lastly, the acacia is to be considered as the symbol of INITIATION. This is by far the most interesting of its interpretations, and was, we have every reason to believe, the primary and original, the others being but incidental. It leads us at once to the investigation of that significant fact to which I have already alluded, that in all the ancient initiations and religious mysteries there was some plant, peculiar to each, which was consecrated by its own esoteric meaning, and which occupied an important position in the celebration of the rites; so that the plant, whatever it might be, from its constant and prominent use in the ceremonies of initiation, came at length to be adopted as the symbol of that initiation.

A reference to some of these sacred plants--for such was the character they assumed--and an investigation of their symbolism will not, perhaps, be uninteresting or useless, in connection with the subject of the present article.

In the Mysteries of Adonis, which originated in Phoenicia, and were afterwards transferred to Greece, the death and resurrection of Adonis was represented. A part of the legend accompanying these mysteries was, that when Adonis was slain by a wild boar, Venus laid out the body on a bed of lettuce. In memorial of this supposed fact, on the first day of the celebration, when funeral rites were performed, lettuces were carried in the procession, newly planted in shells of earth. Hence the lettuce became the sacred plant of the Adonia, or Adonisian Mysteries.

The lotus was the sacred plant of the Brahminical rites of India, and was considered as the symbol of their elemental trinity,--earth, water, and air,--because, as an aquatic plant, it derived its nutriment from all of these elements combined, its roots being planted in the earth, its stem rising through the water, and its leaves exposed to the air. 192 The Egyptians, who borrowed a large portion of their religious rites from the East, adopted the lotus, which was also indigenous to their country, as a mystical plant, and made it the symbol of their initiation, or the birth into celestial light. Hence, as Champollion observes, they often on their monuments represented the god Phre, or the sun, as borne within the expanded calyx of the lotus. The lotus bears a flower similar to that of the poppy, while its large, tongue-shaped leaves float upon the surface of the water. As the Egyptians had remarked that the plant expands when the sun rises, and closes when it sets, they adopted it as a symbol of the sun; and as that luminary was the principal object of the popular worship, the lotus became in all their sacred rites a consecrated and mystical plant.

The Egyptians also selected the erica 193 or heath, as a sacred plant. The origin of the consecration of this plant presents us with a singular coincidence, that will be peculiarly interesting to the masonic student. We are informed that there was a legend in the mysteries of Osiris, which related, that Isis, when in search of the body of her murdered husband, discovered it interred at the brow of a hill, near which an erica, or heath plant, grew; and hence, after the recovery of the body and the resurrection of the god, when she established the mysteries to commemorate her loss and her recovery, she adopted the erica, as a sacred plant, 194 in memory of its having pointed out the spot where the mangled remains of Osiris were concealed. 195

The mistletoe was the sacred plant of Druidism. Its consecrated character was derived from a legend of the Scandinavian mythology, and which is thus related in the Edda, or sacred books. The god Balder, the son of Odin, having dreamed that he was in some great danger of life, his mother, Friga, exacted an oath from all the creatures of the animal, the vegetable, and the mineral kingdoms, that they would do no harm to her son. The mistletoe, contemptible from its size and weakness, was alone neglected, and of it no oath of immunity was demanded. **Lok, the evil genius, or god of Darkness, becoming acquainted with this fact, placed an arrow made of mistletoe in the hands of Holder, the blind**

brother of Balder, on a certain day, when the gods were throwing missiles at him in sport, and wondering at their inability to do him injury with any arms with which they could attack him. But, being shot with the mistletoe arrow, it inflicted a fatal wound, and Balder died.

Ever afterwards the mistletoe was revered as a sacred plant, consecrated to the powers of darkness; and annually it became an important rite among the Druids to proceed into the forest in search of the mistletoe, which, being found, was cut down by the Arch Druid, and its parts, after a solemn sacrifice, were distributed among the people. Clavel 196 very ingeniously remarks, that it is evident, in reference to the legend, that as Balder symbolizes the Sun-god, and Lok, Darkness, this search for the mistletoe was intended to deprive the god of Darkness of the power of destroying the god of Light. And the distribution of the fragments of the mistletoe among their pious worshippers, was to assure them that henceforth a similar attempt of Lok would prove abortive, and he was thus deprived of the means of effecting his design. 197

The myrtle performed the same office of symbolism in the Mysteries of Greece as the lotus did in Egypt, or the mistletoe among the Druids. The candidate, in these initiations, was crowned with myrtle, because, according to the popular theology, the myrtle was sacred to Proserpine, the goddess of the future life. Every classical scholar will remember the golden branch with which Aeneas was supplied by the Sibyl, before proceeding on his journey to the infernal regions 198--a voyage which is now universally admitted to be a mythical representation of the ceremonies of initiation.

In all of these ancient Mysteries, while the sacred plant was a symbol of initiation, the initiation itself was symbolic of the resurrection to a future life, and of the immortality of the soul. In this view, Freemasonry is to us now in the place of the ancient initiations, and the acacia is substituted for the lotus, the erica, the ivy, the mistletoe, and the myrtle. The lesson of wisdom is the same; the medium of imparting it is all that has been changed.

Returning, then, to the acacia, we find that it is capable of three explanations. It is a symbol of immortality, of innocence, and of initiation. But these three significations are closely connected, and that connection must be observed, if we desire to obtain a just interpretation of the symbol. Thus, in this one symbol, we are taught that in the initiation of life, of which the initiation in the third-degree is simply emblematic, innocence must for a time lie in the grave, at length, however, to be called, by the word of the Grand Master of the Universe, to a blissful immortality. Combine with this the recollection of the place where the sprig of acacia was planted, and which I have heretofore shown to be Mount Calvary, the place of sepulture of Him who "brought life and immortality to light," and who, in Christian Masonry, is designated, as he is in Scripture, as "the lion of the tribe of Judah," and remember, too, that in the mystery of his death, the wood of the cross takes the place of the acacia, and in this little and apparently insignificant symbol, but which is really and truly the most important and significant one in masonic science, we have a beautiful suggestion of all the mysteries of life and death, of time and eternity, of the present and of the future. Thus read (and thus all our symbols should be read), Masonry proves something more to its disciples than a mere social society or a charitable association. It becomes a "lamp to our feet," whose spiritual light shines on the darkness of the deathbed, and dissipates the gloomy shadows of the grave.

TheUnhivedMind - April 21, 2011 10:58 PM (GMT)

Cancer patients in London rate their hospital care as worst in the country

Kiran Randhawa, Health and Social Affairs Correspondent
21 Apr 2011
http://www.thisislondon.co.uk/standard/art...-the-country.do

Cancer patients in London have the worst experience of care during treatment than any where else in the country, research reveals today.

Eight NHS Trusts in the capital are among 10 at the bottom of a league table measuring patients' experiences. Leading hospitals are among those rated poorly by cancer sufferers on issues including the support they received while being treated, whether they had confidence in staff, whether there were enough medics on duty and how much information they were given on their disease.

Imperial College Healthcare NHS Trust, which covers St Mary's Hospital in Paddington and Charing Cross Hospital in Hammersmith, was at the bottom of the list of 158 trusts across the country. The Royal Free in Hampstead was second worst while Barts and the London Trust was fourth from bottom.

The league table, published by Macmillan Cancer Support, is based on Health Department research into the experiences of almost 70,000 patients in the first three months of last year. The responses do not cover their medical treatments.

The wife of a patient treated by Imperial College Healthcare NHS Trust said his final week was "awful". The woman, named only as Philippa, said her husband, who had appendix cancer and died in 2009, did not receive the care he should have.

The 62-year-old said: "As my husband approached death in hospital the support I

needed so desperately wasn't there. I wanted to talk about stopping his suffering but the consultant was very rushed and unapproachable, and then went abroad. The Macmillan nurse we'd had at the start of his treatment had to leave after four months. She'd helped us with all the practical things like pain management, benefits and parking. She'd been the human face of the NHS but when she left there was a huge void of support."

Ciarán Devane, Chief Executive of Macmillan Cancer Support, said: "Cancer patients are being let down by many trusts. The experiences you have in hospital can have a massive impact on your health and wellbeing and how well you cope once you leave hospital. We hope that the trusts given a red card will work with community services and take urgent action to improve the care they offer cancer patients."

NHS London called the survey results "very disappointing". It said it was reviewing how cancer services are run to ensure they "change for the better".

View Full Version: Radiation exposure chart admits cancer radiotherap

Title: Radiation exposure chart admits cancer radiotherap
Description: *delivers fatal dose to patients*

TheUnhivedMind - April 20, 2011 05:45 PM (GMT)

Radiation exposure chart admits cancer radiotherapy delivers fatal dose to patients

by Mike Adams, the Health Ranger, NaturalNews Editor
April 20 2011
http://www.naturalnews.com/z032136_radiati...sure_chart.html

(NaturalNews) Thanks to the Fukushima catastrophe, we've all been learning a lot about the laws of physics lately -- especially about radiation. To help explain it all, the folks over at InformationIsBeautiful.com have created a radiation explanation chart that shows the relative levels of harm from various doses of radiation (link below).

The InformationIsBeautiful website is pretty cool. The folks there specialize in making complex data visually interesting. I've admired some of their work for quite some time.

So I was checking out their new "Radiation Dosage Chart" which explained all the effects of receiving radiation doses of various levels. The chart revealed things like:

• 100 mSv Annual dose at which increased lifetime cancer risk if evident
• 250 mSv Dose limit for US radiation workers in life-saving operations
• 1,000 mSv Temporary radiation sickness. Nausea, low blood count. Not fatal.

... and so on.

As I read down the chart, things got really interesting. View the chart yourself here: http://www.naturalnews.com/images/r...

• 2,000 mSv Severe radiation poisoning
• 4,000 mSv Extremely severe dose - survival possible
• 5,000 mSv Extremely severe radiation dose - high chance of fatality

• 6,000 mSv Usually fatal dose
• 10,000 mSv Fatal dose

And then, right there on the chart, the very next line was a huge eye-opener, because it said:

• 20,000 mSv Highly targeted dose used in cancer radiotherapy

Cancer radiotherapy dose is fatal?
Okay, so wait a minute. A dose of 10,000 is fatal, yet the cancer industry uses twice that dose to "treat" cancer? I knew cancer radiation treatments were barbaric, but I never knew they were twice the amount considered absolutely fatal.

This outcome was so intriguing that I took a screen capture of the chart. That's what you're seeing at: http://www.naturalnews.com/images/r...

The next day, I went back to the InformationIsBeautiful.net website to make sure I really saw what I thought I saw. After all, if cancer radiotherapy is being given at 20,000 mSv, that's a pretty big story, especially in light of the Fukushima fallout and the increasing radiation burden on populations everywhere. So I brought up the website, and guess what?

The 20,000 mSv cancer radiotherapy line had been removed from the chart.

You can now see this for yourself at the InformationIsBeautiful website: http://www.informationisbeautiful.n...

Notice anything missing? The 20,000 mSv line has been removed. It now jumps from 10,000 to 30,000.

Jokingly stated, it seems that the Information Is Beautiful website might now appear to be the Information Is Missing website.

Cancer industry influence?
So how do you think this line about 20,000 mSv in cancer radiotherapy got removed? I suppose there are a number of possible explanations for it. One particularly conspiratorial explanation is that someone from the cancer industry probably asked them to remove it. The cancer industry, after all, doesn't want people knowing the simple truth that cancer radiotherapy involves a fatal dose of radiation. And no industry operates with more secrecy than the cancer industry, it seems, with all its cover-ups about the dangers of chemotherapy and its continued suppression of the truth about vitamin D and its cancer preventive effects.

Then again, the InformationIsBeautiful website has actually done a fantastic job of producing information about Vitamin D and sunlight exposure. This is precisely the kind

of information the cancer industry doesn't want people to see: http://www.informationisbeautiful.n...

(Pretty cool chart, eh?)

Just to give these folks a chance to explain all this, I sent off an email to David at the InformationIsBeautiful website asking them to clarify why they pulled the cancer radiotherapy information off their radiation dosage chart. Perhaps there's a completely innocent explanation for it, I thought, and I want to know the real story here.

The email I received in return was a polite response with a collection of frequently asked questions and answers. I don't blame the guys there for using this -- they're probably incredibly busy these days -- but I was intrigued by one of the answers in the email itself: It said that the InformationIsBeautiful team has "done commercial work for GE, the BBC, Google and many others."

And who is GE? They are, of course, one of the world's top manufacturers of radiotherapy equipment!

You can see an example of their radiotherapy machines at http://radiologynews.gehealthcare.c...

So now we have the Information Is Beautiful team pulling the "cancer radiotherapy" line out of their chart, then admitting they are a paid client of General Electric, a top manufacturer of radiotherapy equipment.

None of this proves anything, of course, but it probably raises a few eyebrows. Is there a financial conflict of interest at work here? Personally, I like their website a lot, and I'm a fan of their charts. So I don't want to think they might be engaged in some sort of intentional censoring of their chart data just to protect the cancer industry. But I've seen stranger stuff happen, for sure...

Is this a case of blatant information distortion?
The Information Is Beautiful website, by the way, isn't necessarily known for censoring their information due to political pressure. They do seem to be good guys in plenty of ways. For example, they say they're donating the proceeds from the sales of their radiation dosage chart to help with Japan relief efforts, and that's admirable. They also produce a lot of other really useful charts that have been very popular across the 'net.

Then again, the cancer industry can be very, very threatening to those who don't submit to its suppression of information both on the web and across the mainstream media.

Now, the trolls and paid online muckrakers hired by Big Pharma will of course insist that I'm making all this up. They'll say the chart never had the 20,000 line in it. I must have

Photoshopped my screenshot to put it there, they'll charge. These people never stop lying in their attempts to smear those who are working each day to expose the deceptions of the pharmaceutical industry, of course. (They are actually paid by Big Pharma to poison the 'net.)

Fortunately for me, there is yet another source of evidence that backs up my story. A thread over at Gizmodo.com contains the exact same original radiation dosage chart that captured as a screen shot. It shows quite clearly the original 20,000 mSv line.

You can see that page at http://gizmodo.com/#!5786933/the-mo..

I am taking a screen shot of that page, too, just in case it magically disappears. If you go there and don't see the chart, rest assured that's exactly what happened (I've seen this happen hundreds of times with sensitive topics).

The chart image on that page links to an archived image on Gawkerassets.com which contains the full chart: http://cache.gawkerassets.com/asset..

And there, for all the world to see, is the full chart, with the 20,000 mSv "cancer radiotherapy" line, credited to David McCandless, March 2010, InformationIsBeautiful.net

Now, just in case that image also gets squelched off the 'net, I have saved a copy of it as well. (You might want to save off your own copy just in case.)

Version 1.35 has less information than version 1.0
Interestingly, if you go back to the version of the chart on the InformationIsBeautiful website, you'll notice that it currently says version 1.35 along the bottom (http://www.informationisbeautiful.n...).

What's really interesting is that if you compare the Version 1.0 and Version 1.35 charts, there are no significant differences other than the removal of the 20,000 mSv cancer radiotherapy line.

In other words, as this chart got "upgraded," its content actually got pared down. And what exactly got cut from the chart? The line about cancer radiotherapy.

Again, I am not accusing the guys over at InformationIsBeautiful of outright censorship or anything. There might be an innocent explanation for all this. But I've seen before how knowledge gets selectively removed from the most visible information sources, keeping people in the dark about something that is quite literally killing them.

So we'll see where this goes. I'm genuinely curious to see what their response is to this article. If they're polite and have a reasonable explanation for this, I'll do my best to pass it along. Heck, maybe they'll even want NaturalNews to help promote some of

their upcoming charts on health issues such as vitamin D. Their charts are, after all, uber cool.

What are the actual radiation doses used by the cancer industry?
In the mean time, you might be wondering about another possibility: Is it possible that the line was pulled from the chart because it was not accurate? Maybe it was a typo, and the cancer industry doesn't even use that high of a dose.

Interestingly, a post beneath the chart on the Gizmodo thread, posted by user scarbrtj, says:

Chart says 20,000 mSv (20 Gy) is a "highly targeted dose used in cancer radiotherapy." Not really. That (very low) dose is almost never used for any cancer. For example, a dose of 80,000 mSv (80 Gy) is used for prostate cancer (and incidentally side effects are minimal to zero long-term because the radiation is so targeted in this case)... 60,000 mSv for breast cancer... 70,000 mSv for lung cancer... 50,000 mSv for rectal cancer.

Not that random internet posters have instant credibility or anything, but here we have a user explaining that far higher doses are routinely used in other cancer treatments.

Just to double check my facts here, I went looking for more information on the actual radiation doses used in cancer treatments. It turns out that 20,000 mSv (roughly 20 Gy) is on the low end. Epithelial tumors, for example are routinely treated with 60 to 80 Gy! Source: Wikipedia (http://en.wikipedia.org/wiki/Radiat...)

Even more interestingly, doses of 45 - 60 Gy (roughly 45,000 - 60,000 mSv, see notes below) are used as a cancer prevention dose in breast cancer and cancers of the head and neck.

The radiotherapy scam exposed -- again!
Just in case you're not following all this, what we're seeing here is that 10,000 mSv is a fatal dose. The 20,000 mSv line was removed from the chart between versions 1.0 and 1.35. Meanwhile, the cancer industry is routinely using 60,000 mSv focused on the head and neck as a way to "prevent" cancer!

Are you starting to see how huge this cancer radiotherapy scam really is? Think about it: If exposure to just 100 mSv can actually cause cancer, then how can exposure to 60,000 mSv somehow "cure" it?

Not surprisingly, the cancer industry's lies fall apart when you look at the science. No wonder the industry has to work so hard to keep people misinformed. If cancer patients knew they were receiving literally 60,000% higher radiation doses (that's 60,000 mSv versus 100 mSv) than the level necessary to significantly increase the risk of cancer, they probably wouldn't sign up for more "treatments."

For the record, mSv and Gy units (Grays) don't always convert neatly and nicely back and forth, so these numbers are approximate, and they can vary based on the type of radiation and its so-called "biological damage conversion factor." As explained on the RadProCalculator website (http://www.radprocalculator.com/FAQ...):

Rad and Gray are absorbed dose units. When we look at radiation being absorbed in tissue, the absorption varies with the energy of the radiation. With a higher energy deposition in tissue, there are more rads or more Grays deposited than a lower energy deposition at the same rate (particles or photons per second). Now, what is a rem and what is a a Sievert? The term rem came from an acronym that means Roentgen Equivalent Man, in another words the equivalent biological damage done to human tissue. Some radiation emissions, when depositing the same energy as other radiation emissions, do more biological damage to the human organism than others. How does one convert? To go from rad to rem or from Gray to Sievert, you need a multiplication factor that represents the effective biological damage. Most training texts call this a quality factor (QF) or a radiation weighting factor. Some training texts call it a biological damage conversion factor but what it truly represents is the the ratio of biological damage done by radiation types to the biological damage done by gamma radiation. For gamma, x-ray and beta radiation, this factor is 1. For alpha, it is 20. For neutrons it is between 3 and 10, and is generally conservatively taken as 10. What this implies is that a rad or Gray of alpha energy absorbed by soft human tissue does 20 times more damage than a rad or Gray of gamma, x-ray or beta energy absorbed. Since for gamma, x-ray and beta, the multiplication factor is 1, one rad equals one rem and one Gray equals one Sievert.

So the actual calculations of damage depend on what numbers you use for the QF (radiation weighting factor). But even if you're off by 10 or 20 percent, the dosage of radiation being used in cancer radiotherapy is orders of magnitude higher than the dose needed to cause cancer in a very high percentage of those people who are exposed.

The cancer industry's own treatments, it turns out, are its best source of repeat business.

This is also true with chemotherapy, because the No. 1 side effect of chemotherapy is -- guess what? -- cancer!

I'll keep you posted on the response (if any) we receive regarding this issue.

Experts concerned by variations in colon cancer death rates after surgery

Overall fewer people are dying, but authorities are considering publishing surgeons' performance ratings to raise standards

James Meikle
guardian.co.uk, Monday 11 April 2011 23.30 BST
http://www.guardian.co.uk/science/2011/apr...h-rates-surgery

The first comparisons of NHS hospitals' success rates in treating bowel cancer show "worrying variations" in patients' deaths within a month of surgery and could pave the way for publication of performance ratings of individual cancer surgeons, as they already are for heart surgeons.

Although the study suggests there have been improvements between 1998 (when the national 30-day mortality rate was 6.8%) and 2006 (when it was 5.8%), the 30-day mortality rate of 6.7% over the nine years was poor compared with figures from Scandinavian countries, Canada and the US, which range from 2.7% to 5.9%.

Research at Leeds University, funded by the charity Cancer Research UK and published in the medical journal Gut, found deaths were higher in certain groups, including men, the elderly, people who were "worse off", had advanced cancer, presented as emergencies, or had other diseases.

But even taking into account these factors, there were big differences between the best and worst performing trusts.

For the period between 2003 and 2006, the percentage of patients dying soon after surgery ranged from around 2% in Central Manchester University Hospitals NHS

foundation trust, to more than 15% for Burton Hospitals NHS foundation trust, Staffordshire.

Four other centres – Whittington Hospital NHS trust in north London, Rotherham NHS foundation trust, Northampton General Hospital NHS trust, and Colchester Hospital University NHS foundation trust, , Essex – had death rates above 10%.

Two more – Countess of Chester Hospital NHS foundation Trust and Shrewsbury and Telford Hospital NHS trust – along with Central Manchester trust, had rates below 5%, much better than the national average.

More recent figures compiled by the National Cancer Intelligence Network(NCIN) suggest that the five worst performers did improve between 2006 and 2008.

Professor Mike Richards, who oversees national cancer strategy for the NHS, said death rates after surgery for bowel cancer were continuing to fall because of better training, new keyhole surgery procedures and improved post-operative care.

"There's good evidence that at a national level things are getting better," said Richards. As other developments, such as a national screen programme, became effective, he said, "I would predict this is a cancer where we will see more improvement than almost any other cancer over the next five years".

Post-operative death rates for patients with other common cancers were now likely to be scrutinised in the same way, Richards said.

Each year more than 35,000 new cases of colorectal, or bowel, cancer are diagnosed in the UK, and more than 16,000 people die from the disease. The new study looked at data from more than 160,000 patients who had surgery for bowel cancer, carried out by 150 hospital teams.

Professor Paul Finan, one of the researchers, who works for Leeds General Infirmary and the NCIN, said: "It's very encouraging to see that overall the 30-day post-operative mortality rate is decreasing across the country. But, having adjusted for those factors that can affect post-operative mortality, it is a concern that there is significant variation between hospitals.

"Understanding why this has occurred is a complex matter and is now a priority for the NCIN and the wider cancer community. It's vital to learn from the trusts with very low post-operative mortality so that we can identify and spread best practice across the NHS and so help to reduce post-operative mortality further."

Dr Lesley Walker, Cancer Research UK's director of cancer information, said: "Thirty-day mortality data following bowel cancer surgery is one of the key measures used by surgeons and the cancer care teams to monitor their progress. The evidence provided

here asks a number of important questions which we now need to answer.

"Getting the best UK cancer data that we can is crucial to any meaningful analysis of our record on cancer and must be a priority for the NHS."

The Burton trust said "constant vigilance and improvement" had reduced mortality rates after surgery. Consultant surgeon James Eckersley said: "We always strive to take on board new innovations to make surgery even safer."

View Full Version: Strawberries 'may help prevent cancer'

Title: Strawberries 'may help prevent cancer'

TheUnhivedMind - April 6, 2011 03:39 PM (GMT)

Strawberries 'may help prevent cancer'

6 Apr 2011
http://www.thisislondon.co.uk/standard/art...event-cancer.do

Strawberries may hold back development of one of the most deadly cancers, research suggests.

A study found that eating freeze-dried strawberries reduced the cancer-causing potential of abnormal growths in the oesophagus, or gullet.

Based on the findings, scientists believe the fruit may help to prevent or delay oesophageal cancer in high risk patients.

Survival rates for the disease are low, with only around 8% of patients living five years after diagnosis.

Each year, 8,000 people in the UK are found to have oesophageal cancer and 7,600 die from the disease.

Combined use of tobacco and alcohol, poor diet, and chronic acid reflux are all risk factors for oesophageal cancer, the sixth most common cause of cancer death in the world.

"Morse" actor John Thaw died from the disease aged 60.

Typically, the disease is preceded by abnormal pre-cancerous growths or lesions that can be graded according to the stage they have reached on the path to malignancy.

The new research, conducted in China, involved 36 individuals with pre-cancerous changes who were considered to be at high risk of oesophageal cancer.

Each participant ate 60 grams, or two ounces, of freeze-dried strawberries daily for six months.

Biopsy tissue samples were surgically removed from the patients for analysis before and after they began their fruit therapy.

The results, presented today at the annual meeting of the American Association for Cancer Research in Orlando, Florida, showed that 29 of the group experienced a noticeable reduction in the grade of their pre-cancerous lesions.

Molecular changes pointing to cancer inhibition were also seen.

Study leader Dr Tong Chen, from Ohio State University Medical Center in Columbus, US, said: "We predict that the majority of patients with pre-cancerous lesions in their oesophagus will develop oesophageal cancer over subsequent decades.

"Our study is important because it shows that strawberries may slow the progression of pre-cancerous lesion in the oesophagus.

"Strawberries may be an alternative, or may work together with other chemopreventive drugs, for the prevention of oesophageal cancer. But, we will need to test this in randomised placebo-controlled trials in the future."

She said strawberry consumption suppressed a number of molecular biomarkers linked to processes involved in the development of oesophageal cancer, including cell proliferation, inflammation and transcribing genetic codes.

Freeze-drying strawberries concentrates their cancer-fighting chemicals almost 10-fold, she added.

A previous study led by Dr Chen found that feeding freeze-dried strawberries to rats significantly inhibited the development of oesophagus tumours.

TheUnhivedMind - April 6, 2011 03:30 PM (GMT)

CARROTS MAY HOLD KEY TO KILLING OFF TUMOURS

Wednesday April 6 2011 by Daily Express reporter
http://express.co.uk/posts/view/238960/Car...ing-off-tumours

A NUTRIENT in carrots and sweet potatoes may prove a vital weapon against breast cancer in the early stages of the disease, research suggests.

Retinoic acid, derived from vitamin A, also rejuvenates the skin and a weak version of it is used in anti-wrinkle face creams.

The chemical affects cell growth, proliferation and survival. So far, studies of its potential as a cancer therapy have proved inconclusive but now a new laboratory study has shown that retinoic acid reverses early changes in cells that lead to breast cancer.

The research points the way to developing promising cancer treatments based on it or other chemicals with a similar biological effect.

US scientists homed in on the key role played by a gene that activates retinoic acid's anti-cancer properties.

The results, presented yesterday at the annual meeting of the American Association for Cancer Research in Orlando, Florida, suggest that it can halt cancer progression early on, but not at later stages.

Carrots and sweet potatoes may prove a vital weapon against breast cancer

"There appears to be no way to revert the tumours with retinoic acid when they become too advanced," said study leader Dr Sandra Fernandez, from Fox Chase Cancer Center in Phila-delphia.

But certain experimental drugs may increase the effectiveness of retinoic acid in later stages of breast cancer, she said.

These drugs were already being used to manage a certain type of leukaemia.

View Full Version: Student who 'hated the sun' dies of skin cancer

Title: Student who 'hated the sun' dies of skin cancer
Description: *[PERFECT EXAMPLE OF TODAYS NONSENSE]*

TheUnhivedMind - April 6, 2011 01:46 AM (GMT)

Student who 'hated the sun' dies of skin cancer aged just 21

By Daily Mail Reporter
Last updated at 11:11 PM on 5th April 2011
http://www.dailymail.co.uk/health/article-...ed-just-21.html

Cerys Harding always tried to avoid sunburn and never used sunbeds

A young woman who always took extreme care in the sun has died from skin cancer at the age of 21.

University student Cerys Harding, from Cardiff, died just four months after being diagnosed with the disease.

Her mother Beverly, 50, said dark-haired Cerys had always tried to avoid sunburn - and never used sunbeds.

'Cerys was so careful,' she said: 'She was the only person on the beach that had a towel over her as well as under her.

'She was a girl who never never sat in the sun - she hated the sun. She had dark hair and dark eyes and it didn't make sense, none of it did. She didn't use sunbeds or anything like that.'

The university student had only recently celebrated her 21st birthday in November when doctors discovered the skin cancer.

Beverly, 50, said: 'She'd had this funny turn and she didn't know what had happened. I just rang NHS Direct because she didn't seem really ill and we made an appointment

for later that day.

'At the doctor’s we were told she needed a brain scan but we still weren’t really worried. We went up to hospital to have the scan and it all snowballed from there.'

The family, from Canton, Cardiff, described Cerys as an 'angel' and 'a parent’s dream'.

Her mother said: 'Never in a million years did we think anything like this would ever happen to Cerys as she still had so much to give.'

Her father David, 52, said: 'She was worried about leaving us, that’s the first thing she said. She was always thinking of other people. All she said was that it wasn’t meant to be.'

Both David and Beverly took time off work to care for Cerys and took her on one last holiday to Paris following the news - while family also flew over from Australia for one final Christmas together.

Her brother Lloyd, 24, said: 'It was as normal as it could be. She told us: "I don’t want everyone crying all over me I just want to carry on as normal." So that’s what we did.'

Cerys's family are mystified why she should have developed skin cancer when she was so careful about protecting herself. It quickly spread from her skin into her brain, chest and spine.

Her brother added: 'We may never know exactly what caused it.'

Cerys wanted to be a primary school teacher and was studying history at Swansea University. She did not finish the full three years of her history degree but was awarded it to her on the merit of the work she had already done.

Cancer Research UK say that each day more than two people under 35 in Britain are diagnosed with malignant melanoma - the deadliest form of skin cancer.

Cancer Research UK spokesman Ed Yong said up to 80 per cent of skin cancers are directly related to over-exposure to the sun.

He said: 'Research has shown that the vast majority of skin cancers are caused by over-exposure to UV radiation from the sun.

'It is impossible to say what happened in this individual case but we cannot stress how important it is to protect yourself from the sun.'

The charity’s 2011 SunSmart campaign reveals an alarming tripling in melanoma rates among British 15-34 year olds since the late Seventies.

At that time, there were around 290 cases of melanoma among 15-34 year-olds. Now more than 900 young Britons are being diagnosed with the disease each year - more than two a day.

Thirty years ago, there were 1.8 cases of melanoma per 100,000 people in this age group. Now there are 5.9 cases per 100,000.

Latest available figures show that the total number of cases of malignant melanoma for all ages increased from 10,800 in 2007 to 11,700 in 2008 – a rise of 8.5 per cent.

Caroline Cerny, Cancer Research UK's SunSmart campaign manager, said: 'It's very worrying to see that the number of young adults being diagnosed with this potentially fatal disease has risen so dramatically, especially since cancer is typically a disease that affects older people.

'With summer approaching after such a harsh winter, everyone is looking forward to enjoying some sunshine. But it's more important than ever to be aware of the dangers of getting sunburnt.

'Young women in particular need to take care since they are more than twice as likely to be diagnosed with melanoma than young men.'

TheUnhivedMind - April 6, 2011 01:48 AM (GMT)

Another nice example to help the truth about the fact that the Sun fights Skin Cancer unless you act stupid in the sun like many idiotic youths and adults. The Sun will heal your skin cancers if exposed to Sunlight properly all through the day once you're used to the level of Sun you're getting locally. Start slow and build up exposing the area for hours at a time everyday. Toxins getting into the skin causing cell stimulation may eventually kick off the Cancer if the used up cell doesn't die and get replaced.

View Full Version: Cannabis and Cannabinoids against Cancer -NCI

Title: Cannabis and Cannabinoids against Cancer -NCI

TheUnhivedMind - April 2, 2011 12:47 AM (GMT)

Cannabis and Cannabinoids

http://www.cancer.gov/cancertopics/pdq/cam...fessional/page4

Laboratory/Animal/Preclinical Studies

Antitumor Effects
Appetite Stimulation
Analgesia

Cannabinoids are a group of 21 carbon terpenophenolic compounds produced uniquely by Cannabis sativa and Cannabis indica species.[1,2] These plant-derived compounds may be referred to as phytocannabinoids. Although delta-9-tetrahydrocannabinol (THC) is the primary psychoactive ingredient, other known compounds with biologic activity are cannabinol, cannabidiol, cannabichromene, cannabigerol, tetrahydrocannabivirin, and delta-8-THC. Cannabidiol, in particular, is thought to have significant analgesic and anti-inflammatory activity without the psychoactive effect (high) of delta-9-THC.
Antitumor Effects

One study in mice and rats suggested that cannabinoids may have a protective effect against the development of certain types of tumors. [3] During this 2-year study, groups of mice and rats were given various doses of THC by gavage. A dose-related decrease in the incidence of hepatic adenoma tumors and hepatocellular carcinoma was observed in the mice. Decreased incidences of benign tumors (polyps and adenomas) in other organs (mammary gland, uterus, pituitary, testis, and pancreas) were also noted in the rats. In another study, delta-9-THC, delta-8-THC, and cannabinol were found to inhibit the growth of Lewis lung adenocarcinoma cells in vitro and in vivo .[4] In addition, other tumors have been shown to be sensitive to cannabinoid-induced growth inhibition.[5-8]

Cannabinoids may cause antitumor effects by various mechanisms, including induction

of cell death, inhibition of cell growth, and inhibition of tumor angiogenesis and metastasis. [9-11] Cannabinoids appear to kill tumor cells but do not affect their nontransformed counterparts and may even protect them from cell death. These compounds have been shown to induce apoptosis in glioma cells in culture and induce regression of glioma tumors in mice and rats. Cannabinoids protect normal glial cells of astroglial and oligodendroglial lineages from apoptosis mediated by the CB1 receptor. [10,11]

In an in vivo model using severe combined immunodeficient mice, subcutaneous tumors were generated by inoculating the animals with cells from human non-small cell lung carcinoma cell lines.[12] Tumor growth was inhibited by 60% in THC-treated mice compared with vehicle-treated control mice. Tumor specimens revealed that THC had antiangiogenic and antiproliferative effects.

In addition, both plant-derived and endogenous cannabinoids have been studied for anti- inflammatory effects. A mouse study demonstrated that endogenous cannabinoid system signaling is likely to provide intrinsic protection against colonic inflammation. [13] As a result, a hypothesis that phytocannabinoids and endocannabinoids may be useful in the prevention and treatment of colorectal cancer has been developed.[14]

Another study has shown delta-9-THC is a potent and selective antiviral agent against Kaposi sarcoma-associated herpesvirus (KSHV), also known as human herpesvirus 8. [15] The researchers concluded that additional studies on cannabinoids and herpesviruses are warranted, as they may lead to the development of drugs that inhibit the reactivation of these oncogenic viruses. Subsequently, another group of investigators reported increased efficiency of KSHV infection of human dermal microvascular epithelial cells in the presence of low doses of delta-9-THC.[16]
Appetite Stimulation

Many animal studies have previously demonstrated that delta-9-THC and other cannabinoids have a stimulatory effect on appetite and increase food intake. It is believed that the endogenous cannabinoid system may serve as a regulator of feeding behavior. The endogenous cannabinoid anandamide potently enhances appetite in mice.[17] Moreover, CB1 receptors in the hypothalamus may be involved in the motivational or reward aspects of eating.[18]
Analgesia

Understanding the mechanism of cannabinoid-induced analgesia has been increased through the study of cannabinoid receptors, endocannabinoids, and synthetic agonists and antagonists. The CB1 receptor is found in both the central nervous system (CNS) and in peripheral nerve terminals. Similar to opioid receptors, increased levels of the CB1 receptor are found in sections of the brain that regulate nociceptive processing.[19] CB2 receptors, located predominantly in peripheral tissue, exist at very low levels in the CNS. With the development of receptor-specific antagonists, additional information

about the roles of the receptors and endogenous cannabinoids in the modulation of pain has been obtained.[20,21]

Cannabinoids may also contribute to pain modulation through an anti-inflammatory mechanism; a CB2 effect with cannabinoids acting on mast cell receptors to attenuate the release of inflammatory agents, such as histamine and serotonin, and on keratinocytes to enhance the release of analgesic opioids has been described.[22-24]

View Full Version: Both parents with advanced Cancers

Title: Both parents with advanced Cancers
Description: *[WHY AREN'T PEOPLE SEEING WHATS GOING ON*

TheUnhivedMind - March 26, 2011 01:59 AM (GMT)

Parents of 18-month-old girl in heartbreaking fight to survive after both diagnosed with advanced cancer in a week

By Daniel Bates
Last updated at 6:14 PM on 25th March 2011
http://www.dailymail.co.uk/news/article-13...ced-cancer.html

When Nathan Bond was diagnosed with terminal cancer, his wife Elisa took comfort in the knowledge she would always be there to look after their 18-month-old daughter at their home in Brooklyn, New York.

Then the unthinkable happened - she was diagnosed with cancer too.

Both parents have been told they could have just five years to live as the disease ravages their bodies.

Assuming the doctors are right, neither could live to see little Sadie's seventh birthday.

The news has left them 'hoping for a miracle' to stop their daughter becoming an orphan before she reaches high school.

The couple are now being comforted by friends and family who have started a website to collect donations to help pay for their treatment.

'I wanted to grow old with my husband and care for our daughter,' said Elisa, 36, an aspiring actress who currently works as a real estate agent.

'Now I'm just hoping for a miracle.'

On Valentine's Day this year Nathan, a 38-year-old painter, was told he had stage three

colorectal cancer. Doctors gave him a 60 per cent chance of living longer than five years.

As they were still recovering from the shocking news, the results came back from tests on a lump on Elisa's breast.

They showed is was cancerous and had spread throughout her body.

Her disease is so advanced it is considered incurable, and doctors gave her just a 16 per cent chance of living beyond five years.

The couple, who married in June 2005, have been forced to take leave of absence from their jobs to attend the daily appointments for tests and check-ups.

They have also started a blog detailing their daily struggle to stay fit and healthy.

In the latest post, Nathan told how he and and Elisa were preparing for their fourth and second chemotherapy treatments respectively - the first time they would have the treatment at the same time.

He told the New York Daily News: 'We're fighting the statistics so we can be here for our daughter.'

He added the couple have been overwhelmed by support from their friends and family who are accompanying them to the hospital.

He said: 'Everyone should have a chance to feel this much love once it their lives. Despite our cancer, we feel very lucky.'

The website their friends and family have set up has so far raised $25,000 to help cover expenses not paid for by their insurance company.

Thousands of strangers have sent in messages of support which have buoyed them up during dark days.

The website says: 'Elisa and Nathan Bond, two artists both full of charm, humour, talent, zeal, love for each other and their families, are a couple one feels lucky to have in their life.

'This young couple - so young and energetic, committed and passionate, dedicated to family and community - has given so much to so many in such a short time.

'Now, as they face their biggest challenge in life, they need your help and support.'

Laura Gentles, 36, a public relations executive who has known Elisa since their college

days at Vanderbilt, added: ‘We're here to support Nathan and Elisa any way we can’.

Cancer-blocking herb to be taken off shelves in Europe

09 March 2011
http://www.wddty.com/cancer-blocking-herb-...-in-europe.html

A herb used in Traditional Chinese Medicine (TCM) can block cancer growth, researchers have discovered this week – and it's about to disappear from stores throughout Europe.
The herb, thunder god vine (lei gong teng), has been used for centuries by TCM as a remedy for rheumatoid arthritis. But researchers from Johns Hopkins School of Medicine say it can also stop tumour growth. Its active ingredient, triptolide, is an anti-inflammatory, an immunosuppressant, contraceptive – and anti-tumour agent, says Jun Liu, professor of pharmacology and molecular sciences.

Yet, on May 1, it will disappear from the shelves.....

IT SOUNDS NUTTY, BUT PECANS BEAT CANCER

Eating pecans can help prevent heart disease and cancer, a report showed yesterday

Saturday February 26,2011
By Geoff Maynard
http://express.co.uk/posts/view/231260/It-...ans-beat-cancer

EATING pecans can help prevent heart disease and cancer, a report showed yesterday.

A research study demonstrates that naturally occurring antioxidants in the nuts may help contribute to heart health and disease prevention.

Pecans contain different forms of the antioxidant vitamin E known as tocopherols, plus numerous phenolic substances, many of them with antioxidant abilities.

They are especially rich in one form of vitamin E called gamma-tocopherols. The findings illustrate that after eating pecans, gamma-tocopherol levels in the body doubled and unhealthy oxidation of LDL – bad – cholesterol in the blood decreased by as much as 33 percent.

Oxidized LDLs may further contribute to inflammation in the arteries and place people at greater risk of heart problems.

“Eating pecans increases the amount of healthy antioxidants in the body,” said researcher Ella Haddad, associate professor in the School of Public Health department of nutrition at Loma Linda University in California.

Eating pecans can help prevent heart disease and cancer, a report showed yesterday

“This is important in helping to prevent development of diseases like cancer and heart disease.”

Dr Haddad analysed biomarkers in blood and urine samples from 16 men and women between the ages 23 and 44 who ate a sequence of three diets composed of whole pecans, pecans blended with water, or a control meal of equivalent nutrient composition.

The pecan meals contained about three ounces of the nut.

Samples were taken prior to meals and at intervals up to 24 hours after eating.

Following the test meals composed of whole pecans and blended pecans, researchers found that amounts of gamma-tocopherols – vitamin E – in the body doubled eight hours after both meals, and oxygen radical absorbance capabilities – a scientific method for measuring antioxidant power in the blood – increased 12 and 10 per cent respectively two hours after the meals.

Following the whole-pecan meal, oxidized LDL cholesterol decreased by 30 percent after two hours, 33 per cent after three and 26 per cent after eight.

The results were published in The Journal of Nutrition.

“This study is another piece of evidence that pecans are a healthy food,” said Dr Haddad.

“Previous research has shown that pecans contain antioxidant factors. Our study shows these antioxidants are indeed absorbed in the body and provide a protective effect against diseases.”

Research from Loma Linda University published earlier showed that a pecan-enriched diet reduced levels of LDL cholesterol by 16.5 per cent – more than twice the American Heart Association’s Step I diet, which was used as control.

The pecan-enriched diet lowered cholesterol levels by 11.3 per cent, also twice as much as the Step I diet.

View Full Version: Rise in PSA protein 'not prostate cancer sign'

Title: Rise in PSA protein 'not prostate cancer sign'
Description: *[QUACKERY FROM DAY ONE]*

TheUnhivedMind - February 25, 2011 07:27 PM (GMT)

Rise in PSA protein 'not prostate cancer sign'

PSA tests 'no use alone' in finding prostate cancers

25 February 2011 Last updated at 11:29
http://www.bbc.co.uk/news/health-12566513

Further concerns have been raised over the reliability of protein testing as an indicator of prostate cancer.

A US study of 5,000 men in the Journal of the National Cancer Institute found even a rapid "doubling time" in prostate specific antigen (PSA) levels was not necessarily linked to cancer.

The researchers said a rise was not a cause for concern if a man's PSA was low, and he had no other symptoms.

UK men can request PSA tests, although there is no screening programme.

The National Screening Committee ruled that out because of concerns about over-diagnosis.

Simply having raised PSA is not a clear sign that a man will have cancer.

It could also be an indication that he has another condition, such as a benign prostate condition or a urinary infection.

In addition, a normal PSA result does not guarantee that a man does not have cancer.

Around 35,000 men are diagnosed with prostate cancer every year in the UK, and

10,000 die from the disease.

'Stronger evidence'

The researchers from the Memorial Sloan-Kettering Cancer Center gave healthy men aged over 55 annual PSA tests for seven years.

At the end of the study, men not diagnosed with prostate cancer had biopsies.

The researchers found that basing decisions on biopsies on high PSA velocity - a rapid doubling time in their PSA level (ie from three to six) - would lead to a larger number of procedures, with around one in seven men being biopsied - having a tissue sample removed.

They say that while some cancers would be diagnosed, it would also mean a large number of unnecessary biopsies.

Dr Andrew Vickers, who led the study, said: "If a man's PSA has risen rapidly in recent years, there is no cause for concern if his total PSA level is still low and his clinical examination is normal."

Dr Peter Scardino, chair of the Department of Surgery at Memorial Sloan-Kettering, who also worked on the research, said: "We have previously published papers determining that PSA naturally varies from month to month and have urged men whose PSA suddenly rises to wait six weeks and repeat the test before agreeing to a needle biopsy.

"This new study in a large population of men provides even stronger evidence that using changes in PSA as a basis for recommendation for biopsy leads to many more unnecessary biopsies and does not help to find the more aggressive cancers that we want to find and treat."

Emma Malcolm, chief executive of the UK charity Prostate Action, said: "This study's findings are consistent with those of a 2009 European study that showed doubling time is not significant for prostate cancer."

She said a family history of prostate or breast cancer could increase a man's risk, as did being of Afro-Caribbean origin, and that those men should have further investigations if they had raised PSA levels.

However Ms Malcolm added that men in their 50s who did not have those risk factors should simply be aware of the symptoms of prostate problems, including having to go to the toilet a lot in the night, not being able to urinate and feeling the need to empty their bladders but being unable to.

Cannabis ingredient 'restores taste buds and lost pleasure in food to cancer patients'

By Daily Mail Reporter
Last updated at 12:36 PM on 23rd February 2011
http://www.dailymail.co.uk/health/article-...asure-food.html

The ingredient that gives cannabis its 'high' can help cancer patients recover their sense of taste, researchers say.

A group of patients who had been treated with chemotherapy for advanced cancer were given capsules that either contained THC - the psychoactive chemical in cannabis - or dummy lookalike pills.

The 21 volunteers took the tablets for 18 days and were then asked to fill in questionnaires.

An ingredient in cannabis was found to restore enjoyment of food to patients with advanced cancer

Researchers from the University of Alberta, Canada, found 73 per cent of those who took THC reported an increased liking for food, compared to 30 per cent of the placebo group.

Just over half of the THC takers said the medication 'made food taste better' compared to one in 10 of the control group.

While both groups consumed roughly the same amount of calories during the trial, the THC patients said they ate more protein and enjoyed savoury foods more.

The THC-takers also reported better quality of sleep and relaxation than in the placebo group.

While the experiment is small scale it is the first to explore the touted qualities of THC through random selection of volunteers and use of a 'control' group by which to make a comparison.

Lead investigator Professor Wendy Wismer said the findings were important because cancer, or its treatment, can cripple appetite and lead to dangerous weight loss.

Many cancer patients eat less as they say meat smells and tastes unpleasant following treatment.

'For a long time, everyone has thought that nothing could be done about this,' Professor Wismer said.

'Indeed, cancer patients are often told to 'cope' with chemosensory problems by eating bland, cold and colourless food. This may well have the result of reducing food intake and food enjoyment.'

Professor Wismer said that doctors should consider THC treatment for cancer patients suffering from loss of taste, smell and appetite.

THC was well tolerated, and in terms of side effects there were no differences between the THC and placebo groups, which suggests that long-term therapy is also an option, she said.

Cannabis is a Class B drug in the UK and is illegal to have, give away or sell.

The study appears in the journal Annals of Oncology, published by the European Society for Medical Oncology.

Mammograms Fail to Find Tumors in Breast Cancer Survivors

By Pat Wechsler - Feb 22, 2011 11:13 PM GMT+0000
http://www.bloomberg.com/news/2011-02-22/m...study-says.html

Mammograms are more likely to miss new tumors in women who have had breast cancer before than in those without a history, a study published today found.

While the imaging technology found cancer at an early stage in women with a history of the disease, it had a lower accuracy compared with screening of women who didn't have breast cancer previously, according to a study in the Journal of the American Medical Association. It failed to detect new tumors on average 35 percent of the time where the disease had resurfaced in breast cancer survivors compared with 24 percent for women who didn't have the disease earlier, said Diana Miglioretti, a study author.

The reasons for the discrepancy are unclear, said Miglioretti, a researcher at the Group Health Research Institute in Seattle. The difference may be related to the treatments women with breast cancer undergo or to a more aggressive nature of the second cancer in previous sufferers, causing it to develop between mammograms, she said.

"Women who have had breast cancer are also more alert to changes in their body and may seek additional screenings even if their mammogram turned up negative," Miglioretti said.
Twice as Likely

Breast cancer survivors are twice as likely to have the disease recur than those who haven't developed tumors before. The study reviewed 58,870 mammograms for 19,078 women with a history of the disease and the same number of screenings for 55,315 women with no history.

There's no evidence in the study that suggests more frequent mammograms would necessarily remedy the difference in detection, Miglioretti said, although breast cancer survivors tend to have more tests than those without a history.

The study also showed that women with a history of the disease are more likely to be called back for follow-up tests. Eighteen percent of women who had breast cancer had follow-up tests ordered versus 8 percent for those without a history. Of 1,000 women who have had breast cancer, about 1 percent can be expected to develop the disease again in a year, she said.

An estimated 207,000 breast cancer cases were diagnosed in 2010 and the disease killed about 40,000 women, according to the National Cancer Institute.

Surgeons May Be Operating Too Much When Breast Biopsy Needed, Study Finds

By Pat Wechsler - Feb 19, 2011 12:26 AM GMT+0000
http://www.bloomberg.com/news/2011-02-19/s...tudy-finds.html

Doctors are choosing to operate on women who need breast biopsies more often than recommended by national guidelines rather than perform a safer, cheaper needle biopsy, a university study found.

Almost one-third of the 172,342 biopsies done in the state of Florida from 2003 to 2008 were done surgically, even though national guidelines recommend 10 percent or less should rely on this more costly procedure, according to a study published today by doctors at the University of Florida in Gainesville. Instead, physicians should be relying on needle biopsies when breast abnormalities are detected, the report said.

Women who received surgical biopsies may have been able to avoid any operation had doctors chosen the needle technology, said Stephen R. Grobmyer, senior author of the study appearing in the American Journal of Surgery. About 70 percent to 80 percent of biopsies don't uncover cancer, he said. The "overused" surgical biopsy technique is costing Florida more than $37 million a year in unnecessary charges, the study found.

"There's a pretty clear advantage to using needle biopsies, which is less expensive and better for the patient," Grobmyer, medical director of the university's breast center, said in a telephone interview. The study showed needle biopsy charges to be as much as half the cost of surgical procedures, he said.

Breast biopsies are performed to investigate whether abnormalities uncovered by mammograms and other imaging technology are cancerous. About 1.6 million breast biopsies are performed nationally every year.

For at least five years, professional medical guidelines have recommended that needle biopsies be used for 90 percent to 95 percent of the procedures. Needle biopsies are often performed by radiologists.

Fewer Infections

The needle biopsies are as effective in diagnosing cancer, result in fewer operations and have lower infections and complications rate, the study found. Many surgical biopsies that uncover a malignancy require follow-up surgery to make sure the entire cancer is removed, particularly when the lymph nodes are involved.

“This may suggest that more education is needed for both doctors and patients,” Grobmyer said. “An opportunity to cut costs and make things better for patients is being missed.”

An estimated 207,000 breast cancer cases were diagnosed in 2010 and the disease killed about 40,000 women, according to the National Cancer Institute.

NATIONWIDE SCREENING FOR LUNG CANCER WILL SAVE LIVES

A lung cancer screening project could save thousands of lives a year

Saturday February 19,2011
By A Daily Express reporter
http://www.express.co.uk/posts/view/229936...will-save-lives

A LUNG cancer screening project could save thousands of lives a year and may have as big an impact on the disease as the breast-test programme.

Monitoring patients at high risk of lung cancer can detect tumours early and reduce death rates by 20 per cent, research suggests.

The Department of Health will fund screening for 4,000 patients in England with the study rolled out across the rest of Britain as a pilot if it proves successful.

Despite being the biggest cancer killer, very little progress has so far been made in boosting survival from the disease. Almost 41,000 people in the UK are diagnosed with lung cancer every year and 35,000 die. Fewer than one in 10 diagnosed are alive five years later.

The NHS study will involve patients aged between 50 and 75 who have the highest risk of developing lung cancer – those with a one-in-20 chance of suffering tumours in the next five years.

Patients will go for a CT scan of their lungs which will reveal any unusual changes. Those with nodules that look threatening will be asked to have a follow-up scan to see if the nodule has altered.

A lung cancer screening project could save thousands of lives a year

Patients with nodules that have doubled in size could have a dangerous lung cancer and will be offered treatment.

At the moment, people will not be diagnosed with lung cancer until they go to their GP with a permanent cough, breathing problems or chest pain.

Professor John Field, principal investigator for the UK Lung Cancer Screening Trial, told the doctors' magazine Pulse: "The success of CT screening trials could potentially lead to the implementation of a national lung cancer programme, which could have an enormous impact. We could see significant changes in managing the disease, similar to the impact of breast screening over the last 15 years."

Dr David Baldwin, lead respiratory physician for the trial, said: "We are becoming convinced that this is the way to reduce mortality from lung cancer, and we could widen the screening population very easily."

He added: "We are discussing that actively at the moment and I really do think we need to be ready for the possibility that people will say we need to be introducing a screening programme right away. There is a lot of support from the Department of Health for screening." The trial will assess how many patients agree to have screening and how many lives are saved, as well as the cost.

The scientists will also look at the risks of screening, including the exposure to radiation from the scan and whether the images ever provide misleading diagnoses.

The biggest cause of lung cancer is still smoking. Around nine in 10 cases in men were caused by it and more than eight in 10 among women.

People who smoke 25 cigarettes a day have 25 times the risk of getting lung cancer compared to non-smokers.

TheUnhivedMind - February 19, 2011 06:20 PM (GMT)

Remember folks that SV40 from the Polio vaccine is a big part of the Lung and Brain tumours. Maybe people should be looking for this, but if that came out people would ask how a monkey virus entered the human body. This is impossible via natural methods, it has to be done via man-made methods of injection and genetic alteration. So as they yearly dose up feminines with radiation for Breast Cancer (Mouse Mammory Virus) they'll do the same for everyone with the Lungs. So prepare to get Lung cancer the more you fall for their trickery.

Description: *Doesn't Help survival*

TheUnhivedMind - February 9, 2011 06:37 PM (GMT)

Breast Cancer Surgery to Remove Extra Lymph Nodes Doesn't Help Survival

By Rob Waters and Michelle Fay Cortez - Feb 9, 2011 5:01 AM GMT+0000
http://www.bloomberg.com/news/2011-02-08/b...p-survival.html

Removing lymph nodes from the armpits of women undergoing surgery for breast cancer may not always be needed to prevent recurrence, according to a study that may change routine treatment in about 20 percent of cases.

Breast cancer patients in current medical practice generally have one or two “sentinel” lymph nodes removed and tested as part of their surgery. If tumor cells are found, more nodes are cut off and tested in a procedure that can cause side effects such as swelling and limited arm mobility.

The study published yesterday in the Journal of the American Medical Association found that women who had multiple lymph nodes removed were no more likely to survive than patients who had one or two of the nodes closest to the cancer taken for testing. The study may alter the typical treatment for thousands of patients with early breast cancer, researchers said.

“This study and others like it may ultimately change the standard for breast surgery among women with breast cancer,” said Otis Brawley, chief medical officer of the American Cancer Society, in an e-mail. “It may also lead to breast cancer treatments that cause less harm.”

The study followed 891 women who received chemotherapy and radiation and had lumpectomies, the removal of noticeable tumors. The study didn’t include women who had mastectomies, in which a full breast is removed.

All the women had a sentinel node removed and tested as part of their surgery. If cancer was found in the node, additional lymph nodes were taken in one group of women. Another group received follow-up treatment only of chemotherapy or radiation.

No Greater Benefit

The women who had multiple nodes removed had no greater survival benefit than those who had only a single node taken away because radiation and chemotherapy were sufficient to halt their malignancies, the researchers wrote.

Julie Gralow, a breast cancer doctor, said she and her colleagues at the Seattle Cancer Care Alliance are changing their advice to patients as a result of the findings, which were presented last year at medical meetings.

“We decided that for patients who met the exact criteria of the study, we would tell them it was now an option not to have their lymph nodes removed,” Gralow said yesterday in a telephone interview.

Breast cancer is the most common solid tumor in women, striking an estimated 207,000 American women in 2010 and killing about 40,000, according to the National Cancer Institute.

“Implementation of this practice change would improve clinical outcomes in thousands of women each year,” the researchers wrote. Changes at hospitals would reduce surgery complications and improve quality of life, they said.

Killing Stray Cells

Surgeons removed all the lymph nodes for decades to determine how far the cancer has spread and to eradicate any stray malignant cells that may cause recurrences, said researcher Kelly Hunt, chief of Surgical Breast Oncology at the University of Texas’s M. D. Anderson Cancer Center in Houston. The study results show that isn’t necessary for some patients, she said.

“After you identify who has positive lymph nodes, it’s not removing additional nodes that is important, it’s getting patients the right therapy,” Hunt said. “This is higher risk cancer that has already spread and has the potential to spread more. Our focus needs to be on treating those cells that may have gone to other organs, rather than focusing on the breast and more surgery.”

While everyone in the study had cancer in their sentinel lymph nodes, only 28 percent had involvement of other lymph nodes. Chemotherapy, radiation and hormonal therapy took care of the malignant cells that had spread to other nodes, Hunt said yesterday in a telephone interview.

"It's just been ingrained in our surgical training for decades, that to do an appropriate cancer operation you need to remove all the lymph nodes just to be safe," Hunt said. "With the chemotherapy and hormonal therapy we have now, we don't need patients to submit to these more aggressive surgical procedures."

TheUnhivedMind - February 9, 2011 06:40 PM (GMT)

Of course it doesn't help survival you've just removed one of your main defenses against the spread of Cancer and also totally weakened your immunity and lymph cleansing system for life. When Cancer is gets found in the Lymph glands they immediately remove these but this is totally ignorant and dangerous. The reason its collected in the Lymph is because the Cancer is going around the body right that minute. The Lymph has tried to block off the amount going around the body but now you've taken the firewall down as they get whipped out by quacks. So tell me whats going to happen when theres no defenses, lack of immunity and of course a body open to the air for a period of time on the surgeons table? Yes a spread of the Cancer. Please wake up and keep away from these bloody idiots.

View Full Version: Delaying Hormone Therapy Lowers Risk of Breast

Title: Delaying Hormone Therapy Lowers Risk of Breast
Description: *Cancer*

TheUnhivedMind - January 28, 2011 11:49 PM (GMT)

Delaying Hormone Therapy Lowers Risk of Breast Cancer, Oxford Study Finds

By Eva von Schaper - Jan 28, 2011 9:00 PM GMT+0000
http://www.bloomberg.com/news/2011-01-28/d...n-u-k-says.html

Women taking hormone drugs during or around menopause have a higher risk of developing breast cancer than those who wait five years, according to a study of more than 1.1 million British patients.

The magnitude of the risk was also linked to the type of hormone replacement therapy the women took, researchers said today in the Journal of the National Cancer Institute, an Oxford University Press publication not affiliated with the U.S. National Cancer Institute.

The study updates research that showed a link between the therapy, known as HRT, and breast cancer risk, and is the first to investigate the timing of the treatment. A tie between hormone type and risk had been suggested by the U.S. Women's Health Initiative, a set of clinical trials and a study of health records for 161,808 postmenopausal women.

"What we found and what had been suggested earlier is that if you start taking HRT at or around menopause, the risks of breast cancer are higher," said Valerie Beral, lead researcher for the latest study and director of the cancer epidemiology unit at Oxford University in Oxford, England, in a telephone interview today. "It's not only the interval, it's also the kind of HRT the women are taking."

The study found that about 55 percent of the 1.1 million women in the study, recruited from 1996 to 2001, reported taking hormone therapy at some time in their lives.

Timing Important

Among women in their 50s who never took hormones, the annual rate of breast cancer was 3 per 1,000 in the study. There was little to no increased risk for women getting estrogen alone at the time of study if they had started the therapy at least five years after menopause. If they had begun estrogen alone less than five years after menopause, their risk increased to 4.3 breast cancers per 1,000.

Women who had started the combination of estrogen and progestin less than five years after menopause showed a rate of 6.1 per thousand, about double the risk of never-users, the results showed.

“We’ve known for a while that HRT can increase the risk of breast cancer,” said Ed Yong, head of health information for Cancer Research UK, a London-based charity, in an e-mailed message today. “This study suggests that there might be some situations in which that risk is small or negligible.”

Delaying HRT therapy to minimize risk may not be feasible, because hormones are usually prescribed to alleviate symptoms during menopause, not five years later, Beral said.

Wyeth Drugs

Reduced estrogen levels during menopause may cause the part of the brain responsible for temperature control to malfunction, according to the North American Menopause Society, a nonprofit organization based in Mayfield Heights, Ohio. Hot flashes strike suddenly and can be accompanied by rapid heartbeat, nausea, dizziness, headaches, muscle weakness and fatigue, according to the group.

Wyeth, acquired in October 2009 by New York-based Pfizer Inc. for $68 billion, is the largest maker of hormone replacement drugs. Annual sales of Wyeth’s hormone-replacement drugs topped $2 billion before results from the Women’s Health Initiative released in 2002 suggested women using the medicines had a higher breast cancer risk.

The National Cancer Institute, based in Bethesda, Maryland, estimates that there were 209,000 new cases of breast cancer in the U.S. last year, and about 40,000 deaths from the disease.

TheUnhivedMind - January 28, 2011 12:56 AM (GMT)

Doctors eye chemicals for rise in child cancers

By Agence France-Presse
Wednesday, January 26th, 2011 -- 11:03 pm
http://www.rawstory.com/rs/2011/01/chemica...-child-cancers/

WASHINGTON — A mom whose four-year-old died after losing a battle to a brain tumor called Wednesday for tougher US regulation of chemicals suspected of being behind a rise in childhood cancers.

"There's growing evidence linking toxic chemicals and carcinogens in the environment with childhood cancer," Christine Brouwer told a telephone news conference as she described losing a child to cancer.

"I'll most likely never know what caused my daughter's cancer, but researchers are finding more and more links between the hazardous substances in our homes and workplaces and cancer and other diseases."

Brouwer's daughter Mira underwent several operations and endured painful and nauseating treatments to try to beat the cancer she was diagnosed with just before her second birthday, on January 27, 2004.

After several rounds of surgery and months of treatment, Mira's cancer went into remission and she seemed to have won her fight against the ailment.

But it came back on her fourth birthday, killing her weeks later.

Her family questioned why the child was struck by such a serious illness so young, and Brouwer's suspicions turned toward the chemicals found in cleaning fluids for the floors

that babies crawl on, in the plastic of the bottles they drink from and in some of the foods they and their parents eat.

Boston University professor of environmental health Richard Clapp said the incidence of childhood cancer in the United States has grown about one percent a year for the past two decades.

"It's clear that at least one component of the cause is environmental chemical exposure," he said.

Epidemiologists have linked chlorinated solvents to childhood leukemia and other solvents to brain cancer in children, said Clapp, who served as director of the Massachusetts Cancer Registry for 10 years in the 1980s.

Pediatrician Sean Palfrey said doctors suspect chemicals and other environmental pollutants are behind a rise in everything from cancer to allergies to asthma in children.

"The problem with our current situation is that we are putting so many chemicals out into our environment, and our bodies have no idea how to detoxify them, don't know how to prevent them being absorbed," he said, calling for tougher US laws on chemicals.

Brouwer, Clapp and Palfrey were participating in a news conference organized by the Safer Chemicals, Healthy Families advocacy group, which says the 35-year-old Toxic Substances Control Act does not cover the vast majority of chemicals in US consumer products and urgently needs an overhaul.

View Full Version: Why is Denmark the cancer capital of the world?

Title: Why is Denmark the cancer capital of the world?
Description: *[ITS DANMARK NOT DENMARK!]*

TheUnhivedMind - January 26, 2011 02:10 AM (GMT)

Why is Denmark the cancer capital of the world?

Denmark has been named as the world's cancer capital, with some 326 people in every 100,000 developing the disease each year.

By Nick Collins 8:30AM GMT 24 Jan 2011
http://www.telegraph.co.uk/health/healthne...-the-world.html

One reason why Danish people seem to be particularly susceptible to cancer is that its record of diagnosing the disease is so good, meaning that more cases are picked up by the country's doctors than in most other parts of the world.

But there are also lifestyle factors which could be having an influence on the figures reported by the World Cancer Research Fund from the World Health Organisation.

A larger than average proportion of Danish women are smokers, while the country also has high levels of alcohol consumption, both of which have been shown to increase the risk of developing cancer.

The figures show that high-income countries tend to have higher rates of cancer than less developed parts of the world, with 13 European countries, the USA, Canada, Australia and New Zealand among the top 20 states for overall cancer rates.

This is likely to be due in part to better diagnostics in developed countries, but the tendency of wealthier populations to be more obese, consume more alcohol and get less exercise are also a significant factor.

Professor Martin Wiseman, Medical and Scientific Adviser for WCRF, said: “We know that people in high-income countries are more likely to be overweight, to drink a lot of

alcohol and to be inactive.

“There is strong scientific evidence that these factors increase risk of several common cancers and these figures show the effect of this. When you look at the list, it is clear that the countries that do worse for these factors tend to be nearer the top.

“The high incidence rates in the UK, Denmark and other high-income countries are not inevitable and lifestyle changes can make a real difference to people’s risk. In fact, scientists estimate that about a third of the most common cancers in the UK and other high-income countries could be prevented by maintaining a healthy weight, being more physically active and eating more healthily."

Title: Alcohol and poor diet linked to UK breast cancer
Description: *rates [DIET THE MOST AND MMVIRUSES]*

TheUnhivedMind - January 26, 2011 02:09 AM (GMT)

Alcohol and poor diet linked to UK breast cancer rates

Women in Britain are more likely to be be diagnosed with breast cancer than those in most other developed countries because of their unhealthy lifestyles, according to a new study.

By Martin Beckford 12:01AM GMT 24 Jan 2011
http://www.telegraph.co.uk/health/healthne...ncer-rates.html

Analysis of data collected by the respected World Health Organisation shows Britain has higher rates of the potentially fatal disease than the USA, Australia, Germany and Spain.

In only 10 of the 50 countries assessed by the researchers do women have a higher chance of being diagnosed with breast cancer than those in the UK.

The experts said that many of the 46,000 breast cancer cases in the UK each year could be avoided if British women drank less, ate more healthily or took more exercise.

More than a quarter of women who develop the disease in Britain die from it, as survival rates have remained low despite record investment in the NHS under Labour.

Professor Martin Wiseman, medical and scientific adviser for the World Cancer Research Fund, which compiled the new study, said: “We know that people in high-income countries are more likely to be overweight, to drink a lot of alcohol and to be inactive.

“When you look at the list, it is clear that the countries that do worse for these factors tend to be nearer the top.

“The high incidence rates in the UK, Denmark and other high-income countries are not inevitable and lifestyle changes can make a real difference to people’s risk.”

Sarah Woolnough, Cancer Research UK’s director of policy, said: “We do know that up to half of all cancers could be prevented by changes to lifestyle such as giving up smoking, keeping a healthy weight and cutting down on alcohol. People can also reduce their risk by eating a healthy balanced diet that is high in fibre, fruit and vegetables and low in red and processed meat.

“All these things, along with taking regular exercise and avoiding sunburn, can reduce the risk of developing cancer.”

More and more British women have been developing breast cancer in recent decades as diets have worsened, excessive drinking has become more common and exercise rates fallen.

Detection rates have improved thanks to the development of advanced screening techniques and increased awareness, but 12,000 women still die from the disease each year as Britain spends less on treatment drugs than other European nations.

Earlier this month the Department of Health announced a new £750million cancer strategy aimed at saving the lives of 5,000 people a year in England, by giving GPs greater access to advanced diagnosis and improving investment in radiotherapy.

The WHO, through a project called GLOBOCAN, collects figures on the incidence of and deaths from the most common types of cancer for countries across the world, standardised for age in order to aid comparisons.

Its most recent data, analysed by the WCRF for today’s report, show that Belgium had the highest rates of breast cancer in 2008, with 109.2 cases per 100,000 women.

Britain is 11th, with 89.1 cases per 100,000, not as bad as Denmark, the Netherlands, Israel, Ireland or New Zealand but worse than many other leading nations as well as less developed countries where lifestyles are less sedentary. Just 50 in every 100,000 women develop breast cancer in Estonia and Montenegro, for instance.

Britain is the 12th worst of the 50 countries in terms of rates of all cancers among women.

The picture is slightly better for men, where the UK ranks as the 33rd worst. Overall, across both sexes, Britain is ranked 22nd worst out of 50 countries with 267 out of every 100,000 people developing tumours.

International studies have shown that Britons now eat and drink more than their

counterparts in many other countries.

Recent figures from the Office for National Statistics show that one in seven women over the age of 16 drinks more than double the recommended daily allowance of alcohol every week, while 24 per cent of women in England are classified obese.

Denmark was given the overall title of “cancer capital of the world”, and although it has a good record of diagnosing the disease, the WCRF said the country’s residents drank a lot and Danish women were heavy smokers.

Meg McArthur, Senior Policy and Information Officer, Breakthrough Breast Cancer, said: “Although these statistics show that we have further to go before we have a future free from the fear of breast cancer in the UK, it is important to remember that more women than ever are surviving due to better screening, improved treatment and greater awareness.

“Breast cancer is thought to be due to a combination of lifestyle, genetic and environmental factors and although some risk factors cannot be changed, women can reduce their risk by drinking less, maintaining a healthy weight and exercising regularly.”

The Government and leading cancer charities insist that Britain’s position near the top of the cancer incidence tables shows that the disease is being picked up by doctors, which aids early treatment, and point out that other countries may not record data so accurately.

Sarah Woolnough, from Cancer Research UK, added: “Comparing cancer incidence rates between different countries can be misleading due to differences in how the data is collected. In some countries, such as the UK, the whole population is accounted for in the data. But in others, coverage is much smaller, so the overall figures might not actually be representative of the whole country.

“Age is the biggest risk factor for cancer, so high-income countries where people live for longer will tend to have higher incidence rates.”

The National Cancer Director, Professor Sir Mike Richards, said: “There are many important factor to consider when looking at cancer incidence figures - for example smoking, alcohol, obesity, and other lifestyle choices.

“We want to vastly improve cancer outcomes - that’s why we will shortly be launching the first ever Government awareness campaign for cancer, to promote earlier diagnosis and to save more lives.”

View Full Version: Human Bacteria In The Production Of Human Cancer

Title: Human Bacteria In The Production Of Human Cancer

TheUnhivedMind - January 26, 2011 12:29 AM (GMT)

Human Bacteria In The Production Of Human Cancer
A Short Report With Photographic Evidence
© 2011 Alan Cantwell MD - All Rights Reserved
1-25-11
One of the most remarkable medical findings in the new 21st century is the recognition that 90% of the cells that make up our body are not human cells. On the contrary, most of our cells are the trillions of microbial cells (primarily bacteria) that inhabit our bodies and share our lives. According to microbiologist Brett Finlay: "We really are a superorganism. From the moment we are born until we die, we live in a symbiotic relationship with our microbes."

The National Institutes of Health has launched a $115-million Human Microbiome Project to identify, analyze and catalog the hundreds of microbial species residing in or on the human body. Modelled after the Human Genome Project, which decoded most of the human genes in the 1990s, the goal of the microbiome project is to determine which microbes are harmful and to figure out ways to prevent or treat diseases they cause.

"Pleomorphic" bacteria and human cancer

It is peculiar that the trillions of bacteria that are part of us do not appear in textbooks of histology (the microscopic study of normal tissue) and pathology. And there is no pathology textbook of cancer that illustrates bacteria in cancerous tissue. This is strange because bacteria, even with their small size, can be seen with a light microscope, unlike viruses which cannot be visualized microscopically due to their smaller size. If human bacteria were implicated in the production of human cancer, they would undoubtedly be visible microscopically in cancer tissue. This report suggests that bacteria are indeed implicated in cancer, and that they can be seen in cancerous tissue.

The idea that bacteria might be connected in some way to cancer was totally rejected a century ago by the medical establishment. Since that time any association between bacteria and cancer has been largely regarded as medical heresy. Nevertheless, a few foolhardy investigators (including myself) have continued to report on pleomorphic bacteria as a possible cause of cancer.

"Pleomorphism" means the ability of a microbe to exhibit more than one forms. For more than a half-century, bacteria associated with cancer have been described as having a "life cycle" comprised of virus-sized forms, filterable granules, larger granules the size of ordinary cocci, "globoidal forms," rod-like forms, much larger fungus-like forms, and other forms. To traditional microbiogists who believe in the "monomorphic" nature of bacteria, that is the ability of a microbe to reproduce by merely splitting in half, the idea of a cancer germ with a life cycle is considered anathema. Despite this tremendous controversy, the proposed microbiology of cancer cannot be understood without considering so-called pleomorphic bacteria. Highly recommended is microbiologist Milton Wainwright's "Extreme pleomorphism and the bacterial life cycle: A forgotten controversy," available on the Internet.

Despite the widespread rejection of the bacterial theory of cancer, Australian researchers Barry Marshall and Robert Warren discovered in 1982 that bacteria (now called Helicobacter pylori) were frequently the cause of stomach inflammation (gastritis) and stomach ulcers. They were awarded the Nobel Prize in Medicine in 2005 for this pioneering work. Ulcers can sometimes lead to stomach cancer; and doctors now accept H. pylori as a bona fide cause of this type of cancer. Prior to the acceptance of bacteria-caused ulcers and cancer, it was firmly believed that bacteria could not exist and thrive in the acid environment of the stomach. H. pylori can now be easily identified microscopically, provided a special stain (like a silver or a Giemsa stain) is applied to the stomach biopsy tissue. The microbe is pleomorphic, having both a spiral and a coccoid intracellular form.

Cancer bacteria research

Despite the general non-acceptance of a bacterial cause of cancer, there is a wealth of research dating back to the late nineteenth century on this subject. The most important contributions to the bacteriology of cancer were reported by a team of four women, beginning in the 1950s. These included physician Virginia Livingston, microbiologist Eleanor Alexander-Jackson, cell cytologist Irene Diller and biochemist and tuberculosis icon Florence Seibert.

Livingston's cancer work actually began in 1947 when she discovered tuberculosis-like acid-fast bacteria in a non-cancerous connective tissue disease called scleroderma, a systemic disease in which the skin hardens due to thickening and abnormalities of the collagen portion of the skin. This scleroderma research quickly led her and her co-workers into cancer research in which similar acid-fast bacteria were found and studied extensively over the next three decades. Livingston believed the cancer microbe was essentially a "connective tissue parasite." In scleroderma tissue the microbes are seen in their most naked form infiltrating the collagen fibers and bundles (Fig.6)

My mentors Livingston and Alexander-Jackson were the first to discover that bacteria could be detected in cancer biopsy material if a special "acid-fast" stain was applied to the tissue specimens. The women also realized that cancer bacteria survived in the body in the "cell wall deficient form", thus enabling these microbes to escape detection and/or eradication by the immune system. Such bacteria were derived from "ubiquitous bacteria" normally residing in all human beings.

Various researchers have reported the cancer germ as an intracellular and an extracellular parasite, meaning that the bacteria can be found both within and outside the cell. The shape of the bacteria is usually the round coccus-like form. These coccal forms vary in size from the size of ordinary staphylococci to extremely tiny granular forms barely visible with the light microscope. These forms in tissue are compatible with pleomorphic forms of cell wall deficient bacteria. Some CWD bacterial forms have the ability to pass through laboratory filters designed to hold back bacteria. Thus, some growth forms of cancer bacteria are virus-sized and submicroscopic. The relationship, if any, of these submicroscopic virus-like forms of CWD cancer bacteria to the "true" viruses has not been studied.

Cancer cytologist Irene Diller and her co-workers demonstrated that these intracellular bacteria could also be found within the nucleus of the cell. Seibert stressed that this was an extremely important finding because it indicated these bacteria could have access to the genetic information stored within the cell nucleus, thereby inducing cancerous cell changes via transfer of genetic information.

The appearance of bacteria in cancerous tissue

It is not possible to easily visualize cancer bacteria in the routine tissue stain (hematolylin-eosin stain) employed to diagnose cancer. (This was also the reason that stomach bacteria were never detected in ulcers and stomach cancer.) Although most physicians cringe at the idea of a "cancer microbe", such bacteria can be seen in cancerous tissue sections by using the highest magnification of the light microscope and oil immersion, as well as a suitable stain like the "acid-fast" stain. The acid-fast stain is a time-honored stain used to detect acid-fast (red-stained) forms of tuberculosis (Tb) bacteria.

In addition to the typical purple-stained or blue-stained intra and extracellular coccoid forms characteristic of the cancer microbe, one can occasionally encounter large bizarre forms of pleomorphic cell-wall-deficient bacteria in tissue sections. Such forms are known to microbiologists as "large bodies." They can attain the size of red blood cells and even larger. These may be the forms described in cancer tissue in the late nineteenth century by Scottish pathologist William Russell, who termed such elements as "the parasite of cancer." (For more details on "Russell bodies" and "large bodies" and their implications in the cancer process, see my internet article "The Russell body: The forgotten clue to the bacterial cause of cancer".)

A century ago microbiology was in its infancy and cell wall deficient bacteria and "large bodies" were unknown. But experts nevertheless totally discredited Russell's "parasites" as mere cellular degenerations of no great import. His so-called cancer parasites are now widely known by pathologists as "Russell bodies," who consider them as non-microbial in nature. The possibility that they could represent pleomorphic forms of bacteria is never considered. Various recent reports confirm the existence of a new pathologic condition of the stomach, associated with Helicobacter pylori infection and numerous Russell bodies and Russell body-containing plasma cells. The new entity is called "Russell body gastritis."

Physicians often argue that any bacteria associated with cancer are merely "secondary invaders"-bacteria which can easily proliferate in cancer-damaged tissue after the cancer has formed. However, a careful study of "pre-cancerous" lesions, such as sun-damaged skin, will reveal that the bacteria are present prior to the development of full-blown skin cancer. Additionally, a study of breast cancer tissue supposedly "clear" of cancer cells can show the presence of these bacteria in cancer-free tissue areas. One of my reported patients with Hodgkin's disease (lymphoma) was cured of his cancer, but the bacteria that were associated with his cancer were still present at autopsy, indicating that radiation does not kill human bacteria, although it can destroy cancer cells and eliminate cancer tumors. It is likely that these primordial bacteria that have grown side by side with human cells for eons will prove to be the hardiest life forms on earth, perhaps even achieving immortality.

The purpose of this brief report is to remind people interested in the cause of cancer that bacteria have been detected and reported in major forms of cancer, such as breast cancer, prostate cancer, AIDS-related Kaposi's sarcoma, lung cancer, Hodgkin's lymphoma, as well as in certain other cancerous and non-cancerous diseases. Photos of this cancerous tissue (Figures 1-5) illustrate the appearance of bacteria encountered in acid-fast stained tissue sections. Figure 6 shows these coccoid forms most clearly in the dermis portion of skin in scleroderma, the disease which originally led to Virginia Livingston's discovery of the "cancer microbe." Whether bacteria can be demonstrated in every form of cancer and in every patient from whom cancerous tissue is available, is not known.

Figure 1: In center, intracellular round tightly-packed coccoid forms in breast cancer. Acid fast stain, magnification times 1000, in oil.

Figure 2. Intracellular coccoid forms in prostate cancer. Acid-fast stain, x1000, in oil.

Figure 3. Arrows point to extracellular coccoid forms in the dermis of the skin of AIDS-related Kaposi's sarcoma. In the insert are staphylococci cultured from the tumor. Acid-fast stain, x1000, in oil.

Figure 4. Arrows point to intracellular and extracellular coccoid forms in the lymph node showing Hodgkin's lymphoma. Acid-fast stain, x1000, in oil.

Figure 5. Intracellular tightly-packed coccoid forms in lung cancer at the edge of the tumor. Acid-fast stain, x1000, in oil.

Figure 6. "Naked" coccoid forms nestled between the collagen fibers of the skin of scleroderma. Acid-fast stain, x1000, in oil.

New developments in 21st century microbiology

The discovery of trillions of "human bacteria" should lead to renewed interest in their role as possible cancer-producing agents and agents of chronic disease. The Human Microbiome Project (HMP) is currently characterizing these communities of bacteria (called the "metagenome") and studying their collective influence on human development, physiology, immunity, and nutrition. As a result, new insights into the production of disease are beginning to emerge. Proal and co-workers (2009) in their study of bacteria in chronic autoimmune disease write: "As our knowledge of the genes associated with the disease states expands, we understand that humans must be viewed as superorganisms in which a plethora of bacterial genomes - a metagenome - work in tandem with our own." Some of the 90% of microbial cells in Homo sapiens create metabolites that interfere with the expression of genes associated with autoimmune disease.

More and more research suggests that bacteria share and exchange genes with one another in a process known as "horizontal transfer of genes." Can bacteria transfer their genes to human cells? Could transfer of bacterial genes to human cells induce cancerous change?

In this regard, Agrobacterium tumefasciens is a bacterium that produces tumors (crown gall) in plants by inserting a bit of its DNA into the plant cell. The Agrobacterium host range is not limited to the plant kingdom; the microbe has been shown to

also transform many species of fungi and even prokaryotes (cells that lack a nucleus). The ability of Agrobacterium to genetically transform human-derived cancerous HeLa cells further widens the range of potential hosts of Agrobacterium to include humans and perhaps other animal species (Tzfira et al. 2006).

One of the century-old stumbling blocks causing widespread rejection of a bacterial cause of cancer has also been the inability of researchers to precisely identify the type and species of so-called cancer microbes. The intermittent acid-fastness of cancer bacteria suggests a close relationship to the mycobacteria, the most important species of which is Mycobacterium tuberculosis, the cause of human Tb. However, in general, bacteria cultured from cancer are highly pleomorphic and are impossible to classify precisely. This is also consistent with CWD bacteria found universally in the blood of both healthy and diseased individuals. Such blood bacteria have been shown to be a hodge-podge of staphylococcal and streptococcal-like bacteria, as well as cocco-bacilli.

The inability to precisely characterize cancer germs is also in keeping with the current revolution in microbiologic thought regarding the classification of bacteria. In a recent essay in Nature, Goldenfeld and Woese (2007) state that the "emerging picture of microbes as gene-swapping collectives demands a revision of such concepts as organism, species and evolution itself. The available studies strongly indicate that microbes absorb and discard genes as needed, and in response to their environment. Rather than a discrete spectrum, we see a continuum of genomic possibilities, casting doubt on the validity of the fundamental concept of species, extended into the microbial realm. The lack of usefulness of the species concept is inherent in the recent forays into metagenomics."

Bacteria and "the cause of cancer"

If one googles "the cause of cancer", the American Cancer Society website provides a laundry list of well-accepted causes, including the most obvious: smoking, diet, radiation, excessive sun exposure, environmental carcinogens, inherited genetic abnormalities, to name only a few. Human bacteria of the kind discussed and illustrated in this report are nowhere on the list. This is because they are not taken seriously by the medical establishment. Like the bacteria in stomach ulcers that were unrecognized for a century, these bacteria comprise the best kept secret in medical science.

How could unrecognized bacteria cause cancer? All cancer-causing agents injure tissue and cells. Radiation, for example, can also transform the genetic structure of cells. And human bacteria could easily proliferate in damaged pre-cancerous tissue. In addition, inflammation has long been associated with cancer; and bacteria are frequently associated with inflammation. It seems reasonable to assume that the trillions of bacteria in our bodies could play some role in the abnormal tissue and cellular environment that precedes the development of cancer.

It is hoped that this communication will stimulate further thought, open mindedness, and investigation into the role of bacteria in human cancer. The century-old experience with undetected stomach bacteria indicates the dangers of dogmatism in medical thought. It is possible that a recognition of these primordial and human bacteria will lead to new ways to prevent and treat cancer by eliminating and/or lessening the proliferation of these microbes in diseased tissue.

The idea that "human bacteria" might play a role in cancer is both sobering and frightening. How do we restore healing when our own germs "act-up"? However, knowledge of these bacteria is essential if we are to deal with this reality. As Walt Kelly of Pogo fame once wrote: "We have met the enemy and he is us." Sobering indeed!

***

This communication is dedicated to the memory of Lucia Cabrera, R.N. [1968-2011], cancer victim.

Alan Cantwell is a retired dermatologist who has studied the microbiology of cancer for over 40 years. View Full Version: Common weed petty spurge 'could treat' skin cancer

Title: Common weed petty spurge 'could treat' skin cancer
Description: *[ALL WEEDS ARE ANTI-CANCER]*

TheUnhivedMind - January 25, 2011 11:57 PM (GMT)

Common weed petty spurge 'could treat' skin cancer

By Michelle Roberts
25 January 2011 Last updated at 16:59
http://www.bbc.co.uk/news/health-12275507

Sap from the common garden weed petty spurge appears to treat non-melanoma skin cancers, experts are reporting in the British Journal of Dermatology.

But they tell patients not to "try it at home" since the treatment is still experimental and can irritate the skin.

Their study involved 36 patients with non-melanoma skin cancer lesions.

Although not the most serious form of skin cancer, non-melanoma lesions are very common, accounting for a third of all cancers detected in the UK.

They include basal cell carcinoma (BCC) and squamous cell carcinoma (SCC) and usually occur in older people.

Most cases of non-melanoma skin cancer can be easily treated and cured with surgical removal or freezing, or using a special kind of light therapy that kills the cancer cells.

However, for some people these treatments will fail or are not deemed suitable.
Promising early findings

The study involved 36 of such patients who collectively had a total of 48 non-melanoma lesions.

Each was treated with the sap of the petty spurge plant, or Euphorbia peplus, which

was applied to the skin once a day for three days.

The plant sap has been used for centuries as a traditional medicine, and the researchers wanted to put it through its paces in a proper clinical trial.

After a one month, 41 of the 48 cancers had shown a complete clinical response to the treatment, meaning no trace of the tumour could be found on clinical examination.

Patients who experienced only a partial response to the first round of treatment were then offered a second course.

The lesions which responded positively to one or two courses of treatment were then followed up further for between two and 31 months. .

After an average of 15 months following treatment, two thirds (68.5% or 30 of the 48) of the skin cancer lesions were still showing a complete response.

The researchers say large-scale studies are now needed to test the active ingredient in the weed's sap, a substance called Ingenol mebutate, as a potential new treatment option.

Studies show that when Ingenol mebutate is applied to the skin it not only kills the cancerous cells but also recruits white blood cells known as neutrophils that appear to reduce the risk of relapse by destroying any residual malignant cells that could allow the tumour to re-grow.

Kimberley Carter of the British Association of Dermatologists said: "This is a very small test group so it will be interesting to see what larger studies and the development of the active ingredient in E. peplus sap will reveal.

"Whilst it would not provide an alternative to surgery for the more invasive skin cancers or melanoma, in the future it might become a useful addition to the treatments available to patients for superficial, non-melanoma skin cancers.

"Any advances that could lead to new therapies for patients where surgery is not an option are definitely worth investigating.

"It is also very important to note that this is definitely not a treatment people should be trying out at home.

"Exposure of the sap to mucous producing surfaces, such as the eyes, results in extreme inflammation and can lead to hospitalisation."

Cancer Research UK said that people with suspect skin lesions should continue to see doctors who can advise the best treatment.

Breast cancer: The UK is among the worst for rates of the killer disease

Monday January 24,2011
By Sarah Westcott
http://express.co.uk/posts/view/224883/Bre...r-British-women

BRITISH women are more likely to develop breast cancer than females from some of the poorer countries in the world, shocking new figures show.

The UK is among the worst for rates of the killer disease – due to unhealthy lifestyles and binge drinking.

Britain, which sees breast cancer affect 45,000 women a year and is our most common form of cancer in females, ranks 11th out of 50 countries, according to league tables from the World Cancer Research Fund.

There are on average 89.1 cases of the disease detected per 100,000 women in Britain – while the rate in Jamaica is 56.8, in Bulgaria 55.5 and in Estonia 50.2.

But Meg McArthur, from Breakthrough Breast Cancer, said: “Though these statistics show we have further to go before we have a future free from the fear of breast cancer in the UK, it is important to remember that more women are surviving due to better screening, improved treatment and greater awareness.”

Of the top 50 countries for all forms of cancer, the UK comes 33rd for male cancers and 12th for female.

More British women per 100,000 – 260.5 – develop one form of the disease than in France (254.9), Italy (251.6), Germany (245.7) and Sweden (241.2). The highest rates for all forms of cancer in women are found in Denmark (325.3)and New Zealand (287.1).

For both sexes, Denmark is the cancer centre of the world with a rate of 326.1 while the UK is 22nd on 266.9.

The WCRF, which compiled tables from World Health Organisation data, said high-income countries generally have much higher cancer rates.

Professor Martin Wiseman, medical adviser for the WCRF, said: “We know people in high-income countries are more likely to be overweight, to drink a lot of alcohol and to be inactive.

“But high incidence rates in these countries are not inevitable and lifestyle changes can make a real difference to people’s risk.”

View Full Version: Lemon (Citrus) a miraculous product to kill cancer

Title: Lemon (Citrus) a miraculous product to kill cancer

Ken Ardel - January 23, 2011 12:49 PM (GMT)

Institute of Health Sciences, 819 N. L.L.C. Charles Street Baltimore , MD 1201.

This is the latest in medicine, effective for cancer!

Benefits of lemon.

Lemon (Citrus) is a miraculous product to kill cancer cells. It is 10,000 times stronger than chemotherapy. Why do we not know about that? Because there are laboratories interested in making a synthetic version that will bring them huge profits. You can now help a friend in need by letting him know that lemon juice is beneficial in preventing the disease. Its taste is pleasant and it does not produce the horrific effects of chemotherapy. If you can, plant a lemon tree in your garden or patio. How many people die while this is a closely guarded secret so as not to jeopardize the beneficial multimilionnaires large corporations? As you know, the lemon tree is down, does not occupy much space and is known for its varieties of lemons and limes. You can eat the fruit in different ways: you can eat the pulp, juice press, prepare drinks, sorbets, pastries, ... It is credited with many virtues, but the most interesting is the effect it produces on cysts and tumors. This plant is a proven remedy against cancers of all types. Some say it is very useful in all variants of cancer. It is considered also as an anti microbial spectrum against bacterial infections and fungi, effective against internal parasites and worms, it regulates blood pressure is too high and antidepressant, combat stress and nervous disorders.
The source of this information is fascinating: it comes from one of the largest drug manufacturers in the world, says that after more than 20 laboratory tests since 1970, the extracts revealed that: It destroys the malignant cells in 12 cancers, including colon, breast, prostate, lung and pancreas ... The compounds of this tree act showed 10,000 times better than the product Adriamycin, a drug normally used chimiothérapeutte in the world, slowing the growth of cancer cells. And what is even more astonishing: this type of therapy with lemon extract not only destroys malignant cancer cells and does not

affect healthy cells.

Title: CANCER SUFFERERS TO BE GIVEN THEIR DANGEROUS CHEMO
Description: *POISON AT HIGH STREET BOOTS CHEMISTS*

TheUnhivedMind - January 23, 2011 02:52 AM (GMT)

Cancer sufferers 'to be given chemotherapy at branches of Boots' in extraordinary shake-up of NHS

By Glen Owen
Last updated at 11:36 PM on 22nd January 2011
http://www.dailymail.co.uk/health/article-...ocal-Boots.html

Cancer patients will receive chemotherapy at their local branch of Boots as part of a revolutionary shake-up of the NHS.

Hospital bosses have been in secret talks with the chemists' chain about expanding its High Street operations to include walk-in treatment for cancer.

Last night Health Secretary Andrew Lansley said the aim was to deliver 'a service tailored to an individual's need'.

The extraordinary proposal comes just days after Mr Lansley caused a storm by announcing radical reforms which will lead to 24,000 NHS management staff being made redundant and GPs being given control of buying services from 2013.

A key, and controversial, part of the shake-up is to allow 'any willing provider' to treat patients 'provided that they deliver high-quality standards of care'.

Now Boots, which already offers optician, dentistry and pharmacy services, is in talks to take over more of the traditional functions of hospitals.

Under the cancer plan, patients receiving chemotherapy would be able to go a medical

centre at their nearest Boots, where nurses would administer the drugs.

Chemotherapy is typically given once a week for three weeks followed by between four to six further cycles, with sufferers connected to a drip for around four hours for each session.

Although most sufferers attend hospital as day patients, it can be administered at home. Doctors argue that there is no reason why boutique medical practices on the High Street could not do the same.

Boots is also in secret talks about taking over part of the NHS's 'phlebotomy' service – the taking of blood samples and other bodily fluids for analysis.

Negotiators argue that it would be more convenient for patients, as well as limiting exposure to hospital infections.

According to a source at Boots, in branches with more than one floor most of the turnover comes from the ground floor.

The company believes it would be more profitable if it dedicated its upper floors to medical services.

Mr Lansley said: 'It should be up to patients, with the advice of their doctor, to choose where they receive treatment. Some cancer patients may prefer to be treated in the community in this way; others may prefer a more traditional setting.

'Choosing a service tailored to an individual's needs is an important part of this. While this development is a local decision, strict national guidelines on quality of patient services must be adhered to.'

A Boots spokeswoman said: 'We are working with the NHS to develop instore services for patients. A number of options are being considered, but are in their early stages.'

David Pruce, a director of the Faculty of Pharmaceutical Medicine, said: 'Cancer patients may have to travel long distances to hospitals.

'It would be much nicer if they could go somewhere closer to home. It would depend on the seriousness of their condition, but as long as there were trained nurses on site it would not present medical difficulties.'

TheUnhivedMind - January 23, 2011 02:55 AM (GMT)

This is absolutely disgusting, not only do we still use this barbaric quack treatment which in truth is for population reduction. But now they want high street chemist stores to administer the poison to Cancer sufferers. Now tell

me what will happen if a patient takes ill? Can someone tell me what clean up procedures will be used for any chemo spills on the floor? Anybody would think we're dealing with a simply pill popping painkiller here but we're not. Its time this medical quackery was stopped immediately and any of these Common Purpose idiotic ideas stopped. Remember folks that Cancer is one in every three here in the U.K. now and within just a few years this is will be recorded at one in two. No longer will going to 'Boots' for some throat lozengers be the norm it will be Cancer treatment ready for your wooden box that will be the norm. Is it any wonder we see all the time here lots of averts for cancer insurance, to insure in case of getting Cancer. What a sick bastard World we now live in and an even sicker society which accepts this disease as normal. To accept the false chemo treatment well thats the sickest joke of all.

Description: *review*

TheUnhivedMind - January 21, 2011 04:59 PM (GMT)

Breastfeeding benefit to cancer survivors, says review

Survival rates for childhood cancers continue to improve

21 January 2011 Last updated at 08:50
http://www.bbc.co.uk/news/health-12242853

Women who have survived childhood cancer could benefit if they breastfeed their own children, according to research.

Cancer survivors are often at increased risk of conditions such as obesity and weak bones.

Scientists from St Jude Children's Research Hospital in Memphis concluded that breastfeeding could help neutralise those risks.

The review appears in the Journal of Cancer Survivorship.

Progress in cancer biology and therapies means that greater numbers of patients who get cancer in childhood are surviving.

However, some groups of survivors are at an increased risk of health problems later in life - known as "late effects".

Survival rates for childhood cancers have improved considerably and continue to improve. In the UK, for every 10 children diagnosed with cancer, almost eight will survive for five years or more, compared with just three in ten in the late 1960s

Source: Cancer Research UK

The researchers examined previous studies on the impact of breastfeeding and on the long-term health effects of surviving childhood cancer.

They identified three common "late effects" experienced by women who have survived childhood cancer.

These are: bone mineral density deficits; metabolic syndrome which can lead to obesity, diabetes and cardiovascular disease; and a risk of developing further cancers, particularly breast cancer.

Breastfeeding is known to lessen the risk in all three of these areas.
Risks and benefits

Bone mineralisation can be adversely affected by childhood cancer treatment and may mean some survivors are more likely to develop early-onset osteoporosis, or brittle bones.

The research now suggests that breastfeeding could help with this as, after weaning their children, the bone density of mothers who breastfeed often exceeds pre-pregnancy rates.

Metabolic problems, including increased body mass index, occur in higher rates in some childhood cancer survivors.

Those particularly affected include survivors of lymphocytic leukemia, testicular cancer and those who had bone marrow transplantations. Breastfeeding is known to reduce the incidence of obesity.

Survivors of childhood cancers are also at increased risk of getting cancer later in life, and the researchers say that women are are greater risk than men, because of breast cancer. Breastfeeding is associated with a reduced risk of breast cancer.

The researchers said it was clear that breastfeeding was a good option for childhood cancer survivors - but said it was important that primary care providers familiarise themselves with the late effects of cancer and cancer therapy.

Support

One late effect, however can be an inability to produce breast milk.

Women particularly likely to be affected are those who have had cancer therapies which affect their levels of growth hormone. Therapies which affect levels of growth hormone in children include the use of cranial radiation to treat brain tumours and central nervous system irradiation for leukemia.

Adequate levels of growth hormone is essential to the development of breasts, to enable them to lactate later in life.

Young women who have breast cancer treatment, either surgery or radiation, are also at risk of being unable to lactate later in life.

Researchers said it was precisely because of these difficulties that mothers who had survived cancer should be given particular support to breastfeed - wherever it was still possible for them to do so.

Researcher James Klosky said breastfeeding for this group made particular sense: "Our message is that breastfeeding, in addition to diet and exercise, avoiding tobacco use, and engaging in safe sexual behaviour, is one more behaviour that survivors of childhood cancer can engage in to promote health and potentially ameliorate adverse late effects of cancer treatment."

View Full Version: Abortion Has Caused 300K Breast Cancer Deaths

Title: Abortion Has Caused 300K Breast Cancer Deaths
Description: *Since Roe*

TheUnhivedMind - January 20, 2011 01:21 AM (GMT)

Abortion Has Caused 300K Breast Cancer Deaths Since Roe

by Steven Ertelt | Washington, DC | LifeNews.com | 1/17/11 4:44 PM
http://www.lifenews.com/2011/01/17/abortio...aths-since-roe/

A leading breast cancer researcher says abortion has caused at least 300,000 cases of breast cancer causing a woman's death since the Supreme Court allowed virtually unlimited abortion in its 1973 case.

With tens of millions of abortions since the high court's decision and research confirming abortion increases the risk of contracting breast cancer, undoubtedly a large number of breast cancer cases, caused by abortion, have occurred over the last 38 years.

Professor Joel Brind, an endocrinologist at Baruch College in New York, worked with several scientists on a 1996 paper published in the Journal of Epidemiol Community Health showing a "30% greater chance of developing breast cancer" for women who have induced abortions. He recently commented on how many women have become victims.

"If we take the overall risk of breast cancer among women to be about 10% (not counting abortion), and raise it by 30%, we get 13% lifetime risk," Brind explains. Using the 50 million abortions since Roe v. Wade figure, we get 1.5 million excess cases of breast cancer. At an average mortality of 20% since 1973, that would mean that legal abortion has resulted in some 300,000 additional deaths due to breast cancer since Roe v. Wade."

Brind said his estimate excludes deaths from the use of abortion to delay first full term pregnancies – a recognized breast cancer risk.

Karen Malec, the head of the Coalition on Abortion/Breast Cancer, a public awareness group, says the number of studies showing the abortion-breast cancer link continues to grow in the years since Brind's groundbreaking 1996 analysis of the major studies at that time.

"During the last 21 months, four epidemiological studies and one review reported an abortion-breast cancer link," she noted. "One study included National Cancer Institute branch chief Louise Brinton as co-author. We count nearly 50 published epidemiological studies since 1957 reporting a link. Biological and experimental studies also support it."

"Experts proved in medical journals that nearly all of the roughly 20 studies denying the link are seriously flawed (fraudulent). Like the tobacco-cancer cover-up, these are used to snow women into believing abortion is safe," Malec added.

Surgeons like Dr. Angela Lanfranchi, a Clinical Assistant Professor of Surgery at Robert Wood Johnson Medical School in New Jersey who has extensively explained how abortion increases the breast cancer risk, have seen first-hand how abortion hurts women.

In 2002, Angela Lanfranchi, MD testified under oath in a California lawsuit against Planned Parenthood that she had private conversations with leading experts who agreed abortion raises breast cancer risk, but they refused to discuss it publicly, saying it was "too political."

As the co-director of the Sanofi-aventis Breast Care Program at the Steeplechase Cancer Center, Lanfranchi has treated countless women facing a breast cancer diagnosis. Lanfranchi was named a 2010 Castle Connolly NY Metro Area "Top Doc" in breast surgery.

In an article she wrote for the medical journal Linacre Quarterly, Lanfranchi talks about why abortion presents women problems and increases their breast cancer risk:

Induced abortion boosts breast cancer risk because it stops the normal physiological changes in the breast that occur during a full term pregnancy and that lower a mother's breast cancer risk. A woman who has a full term pregnancy at 20 has a 90% lower risk of breast cancer than a woman who waits until age 30.

Breast tissue after puberty and before a term pregnancy is immature and cancer-vulnerable. Seventy five percent of this tissue is Type 1 lobules where ductal cancers start and 25 percent is Type 2 lobules where lobular cancers start. Ductal cancers account for 85% of all breast cancers while lobular cancers account for 12-15% of breast cancers.

As soon as a woman conceives, the embryo secretes human chorionic gonadotrophin

or hCG, the hormone we check for in pregnancy tests.

HCG causes the mother's ovaries to increase the levels of estrogen and progesterone in her body resulting in a doubling of the amount of breast tissue she has; in effect, she then has more Type 1 and 2 lobules where cancers start.

After mid pregnancy at 20 weeks, the fetus/placenta makes hPL, another hormone that starts maturing her breast tissue so that it can make milk. It is only after 32 weeks that she has made enough of the mature Type 4 lobules that are cancer resistant so that she lowers her risk of breast cancer.

Induced abortion before 32 weeks leaves the mother's breast with more vulnerable tissue for cancer to start. It is also why any premature birth before 32 weeks, not just induced abortion, increases or doubles breast cancer risk.

By the end of her pregnancy, 85% of her breast tissue is cancer resistant. Each pregnancy thereafter decreases her risk a further 10%.

A woman can use this information to make an informed decision about her pregnancy. If she chooses to abort her pregnancy for whatever reason, she should start breast screening about 8-10 years later so that if she does develop a cancer, it can be found early and treated early for a better outcomes.

View Full Version: SOYA BEANS MEANS A NEW WAY TO GUARD AGAINST CANCER

Title: SOYA BEANS MEANS A NEW WAY TO GUARD AGAINST CANCER

TheUnhivedMind - January 14, 2011 04:01 AM (GMT)

SOYA BEANS MEANS A NEW WAY TO GUARD AGAINST CANCER

Edamame beans are a source of soya.

Friday January 14,2011
By Jo Willey
http://express.co.uk/posts/view/223025/Soy...-against-cancer

SOYA beans may be the key to protection against two of the most dangerous cancers.

Two new university studies show the food can stop the spread of prostate cancer and guard against breast cancer.

Researchers from a Chicago university found that one pill a day of genistein, a nutrient found in soya, appeared to turn on genes that prevent the spread of cancer cells. This may keep them localised and stop the widening of the disease.

Meanwhile a separate study of more than 1,200 women in New York showed that isoflavones – oestrogen-like plant chemicals found in soya beans – can reduce both the risk of getting breast cancer and the size of tumours.

Both sets of findings were presented at a conference of the American Association for Cancer Research in Philadelphia.

They come after a study in China, where large amounts of soya products are eaten, found women with the highest consumption had a 32 per cent lower risk of breast cancer recurrence.

However, some experts fear the isoflavones may in fact promote breast cancer and interfere with the breast cancer hormone therapy drug Tamoxifen.

The prostate cancer study was led by Dr Raymond Bergan, of Northwestern University in Chicago. He found that genistein, when given once a day as a pill one month prior to surgery, inhibited prostate cancer cells from spreading to other parts of the body. “All therapies designed to stop cancer cell movement that have been tested to date in humans have basically failed because they have been ineffective or toxic,” he told the conference.

“If this drug can effectively stop prostate cancer from moving in the body, theoretically, a similar therapy could have the same effect on the cells of other cancers.” In the other study Anne Weaver, a graduate student at Buffalo University in New York, found soya isoflavones may modify breast cancer.

Researchers compared 683 women with breast cancer with 611 healthy volunteers and looked at their intake of isoflavones from diet rather than supplements. Those with the highest isoflavone intake had a 30 per cent decreased risk of having an invasive breast tumour and a 60 per cent lower risk of having a low-grade tumour.

Pre-menopausal women with the highest intake of isoflavones had a 30 per cent decreased risk of Stage One disease, a 70 per cent decreased risk of having a tumour larger than 2cm, and a 60 per cent decreased risk of Stage Two breast cancer. These connections were not seen among post-menopausal women.

Ms Weaver said: “These findings are not definitive and need to be considered in the context of further follow-up and confirmation. Still, we definitely saw a reduction that deserves further investigation.”

Soya bean products include tofu, miso and soy milk. A common form is the edamame bean, which originated in China and is the only vegetable to contain all nine amino acids, making it a complete source of protein. It is also high in fibre, folic acid, vitamin C and helps lower cholesterol. It is even rumoured to be an aphrodisiac.

Soya isoflavones are chemicals found in soya foods that mimic the action of oestrogen within the body. The three main soya isoflavones are genistein, daidzein and glycitein. As well as acting like beneficial oestrogens, they also have antioxidant properties.

Japanese women who have a high proportion of soya in their diets have low rates of osteoporosis and fewer menopause symptoms.

TheUnhivedMind - January 14, 2011 04:04 AM (GMT)

Folks do you remember what the most favourite Western herb for fighting Cancer is? Why its Red Clover and guess what that herb contains? You got it, that isoflavone, Genistein. Remember the first herb Dr John Ray Christopher would speak of when dealing with Cancer was always Red Clover, the only herb he made a complete chapter in his book for. The only problem with Soya is that the majority of it now is Genetically Modified and therefore poison. Please study my Mung bean information for another angle to Cancer:

View Full Version: Oestrogen 'may fuel oral cancer' in young women

Title: Oestrogen 'may fuel oral cancer' in young women

TheUnhivedMind - January 5, 2011 03:36 AM (GMT)

Oestrogen 'may fuel oral cancer' in young women

Mouth cancer is one of those included

4 January 2011 Last updated at 07:58
http://www.bbc.co.uk/news/health-12098317

The hormone oestrogen could be fuelling head and neck cancers in young women, explaining why the disease is on the increase in that group, a US team says.

Writing in Cancer Prevention Research, they said oestrogen helped pre-cancerous cells move and divide by triggering the activity of an enzyme.

Head and neck cancer, including mouth, tongue and throat cancers, affects up to 9,000 people every year in the UK.

UK experts said the work was interesting, but at an early stage.

There has been an increase in diagnoses of head and neck cancers in younger women over the last 10 years, but most cases are still seen in men aged 50-74.

Smoking and drinking alcohol are known risk factors.
Cell death

The researchers at Fox Chase Cancer Center carried out lab tests which showed oestrogen triggers the activity of CYP1B1.

However, activity was only seen in pre-cancerous cells, and not in healthy cells or ones that had become cancerous.

When the research team blocked the activity of the enzyme, pre-cancerous cells were

less able to move and divide.

Dr Margie Clapper, who led the research, said: "CYP1B1 could be a wonderful target in pre-cancerous lesions of the head and neck, because by attacking it, we might stop these lesions from progressing or moving to a more advanced stage."

Dr Kat Arney, a spokeswoman for Cancer Research UK, said: "This research has been carried out using cancer cells grown in the lab, and while it's an interesting finding, more work is needed before we know for sure what role oestrogen plays in head and neck cancers."

TheUnhivedMind - January 5, 2011 03:38 AM (GMT)

Please remember folks that Cancer is healing gone wrong, its trophoblast cells. Therefore when one understands that estrogen is part of the healing process then one understands how it plays a role with Cancer. We cannot just stop the estrogen otherwise we damage body healing and in order to get over Cancer we need healing.

Worrying levels of iodine deficiency in the UK

By Michelle Roberts
12 April 2011 Last updated at 00:51
http://www.bbc.co.uk/news/health-13034582

The researchers suggest fortifying salt with iodine would help

Researchers are warning iodine deficiency could be becoming endemic in the UK and are suggesting manufacturers should start adding it to table salt.

A study involving more than 700 teenage girls at nine UK centres found more than two-thirds had a deficiency.

Experts say the problem stems from children drinking less milk, which is a good source of iodine.

Women of childbearing age are most at risk - even mild deficiency can harm a baby's developing brain.

Iodine deficiency is the most common cause of preventable mental impairment worldwide, affecting a third of the world's population. It also causes thyroid problems.

Since 1993 the World Health Organization (WHO) has conducted a global programme of salt iodisation to boost dietary levels and prevent deficiency, largely in the developing world.

Many European countries, including Switzerland and Denmark, have also signed up to the WHO programme.

In the UK, however, it is not compulsory for manufacturers to add iodine to salt.

Dr Mark Vanderpump, who conducted the latest study on behalf of the British Thyroid Association, says this "could be the most viable solution".
Low levels

The study measured the urinary iodine levels of 737 teenage girls from nine UK centres - Aberdeen, Belfast, Birmingham, Cardiff, Dundee, Exeter, Glasgow, London and Newcastle.

Nearly 70% of the samples revealed an iodine deficiency and nearly a fifth (18%) of samples showed very low iodine levels, below 50•g/L rather than the acceptable minimum of 100•g/L.

The researchers say a large-scale investigation into the iodine status of the entire UK population is now needed to understand the full extent of the problem.

Dr Vanderpump told a meeting of the Society for Endocrinology: "Our data suggest the UK is now iodine deficient, warranting a full investigation of the UK iodine status. We need to look into this now to decide whether public health bodies need to step in."

He said, historically, half of our dietary iodine intake has come from milk. "One cup of milk gives you about 50% of your daily iodine needs.

"And tests on milk show that its composition has not really changed, so it must be that children are drinking less milk than before. That's what we suspect."

He said the phasing out of free milk for school children had not helped matters. Currently in the UK, free milk is only offered universally to the under-fives.
Fortification

Dr Vanderpump, a consultant physician at the Royal Free Hampstead NHS Trust, said it was time to look at adding iodine to dietary salt.

"The World Health Organization has made iodine-deficiency a global priority and has been campaigning for at-risk countries to add iodine to their salt, a campaign which has been very successful.

"If it turns out that we do have a problem, this could be the most viable solution."

Cathy Collins, a spokeswoman for the British Dietetic Association, said it might be simpler to target teenage girls and advise them to drink more milk and eat more of other foods rich in iodine, such as seafood.

"I'm not surprised by the findings because teenage girls do not tend to drink a lot of milk or eat a lot of oily fish.

"Getting girls to have a bit more of these in their diet might help, or taking a multivitamin every day would give them 100% of the iodine they need."

She said it was unclear whether other age groups were also deficient, but said it was likely that many people were not getting as much as they ideally need.

A Department of Health spokesman said: "We monitor the nutritional status of the population through a rolling programme of diet and nutrition surveys. We keep track of emerging research and will consider the need for assessing iodine status through urinary analysis in future surveys."

TheUnhivedMind - April 12, 2011 01:54 PM (GMT)

Its no good adding Iodine to poisonous white table salt and then warning people daily not to take salt is it? Where do these clowns get off? Salt was always iodine efficient until they removed it. We don't want their version of Iodine we want the natural. Stick to utilising seaweeds and super foods containing the substance. Lack of iodine equals depopulation.

View Full Version: KELP benefits

Title: KELP benefits
Description: *potassium iodide alternative*

wades77 - March 15, 2011 08:06 PM (GMT)

I see that people are finding it hard here in the USA, to buy potassium iodine, in the light of the Japanese catastrophe. We have some kelp, but Im not sure of the shelf life it has, and how beneficial it will be as a iodide alternative.
I read online that:
Buy topical iodine or betadine - go to an animal feed store or vet.

This will be the easiest and cheapest way to provide the iodine you'll need to protect your thyroid in the event of fallout. Paint it on your skin...do NOT ingest.

TheUnhivedMind - March 16, 2011 01:59 AM (GMT)

If you want to ingest then you will need to utilise herbal iodine or Lugol's Iodine but not any of these others. Remember Iceland Moss, Kelp, Bladderwrack, Wakame, Green Blackwalnut etc.

craig-oxley - October 18, 2010 12:21 AM (GMT)

Concern Develops for Iodine Levels in Australian Foods

Friday, October 15, 2010 by: Deb Campbell
http://www.naturalnews.com/030048_iodine_foods.html

Health authorities in Australia have issued a warning over high iodine levels discovered in certain foods. A case involving twenty-five people affected by excess exposure to iodine has resulted in damages being sought in the Supreme Court.

A popular brand of soy milk in Australia has been found to have caused illnesses in at least eight people who consumed the product. In addition to these cases, a researcher at Sydney University has found that "between January and June 2010, 48 retrospective Australian cases of thyroid dysfunction associated with this brand of soy milk were also notified to local public health authorities".

Iodine intake above a certain level is known to cause problems in thyroid function for otherwise healthy adults and babies. The thyroid gland is vital to metabolism, growth and development. In adults an excess of iodine can result in over-activity (hyperthyroidism) of the gland which can lead to issues: such as anxiety, heart palpitations, diarrhoea, irritability, insomnia and other complications. More concerning though is that babies who have received it via breast milk can experience the reverse: an under-active thyroid (hypothyroidism). When occurring at such a young age, this can lead to very damaging long-term issues in affected children.

A prime example is seen in developing countries where hypothyroidism is much more common; many children are experiencing as a consequence enlarged glands (goiter), stunted growth, mental retardation and thyroid problems for life.

The excess doses seen in Australia in a soy product is alarming given soy consumption

has increased dramatically in developed cultures over the past decade among people of all ages. Authorities are now seeking ways to increase the monitoring of imported foods like soy, as well as commercially available seafood preparations. Seafood is a potential problem because it is a naturally rich source of iodine, so keeping levels within a safe range is essential.

Current recommended safe intake of iodine is relatively small compared to other nutrients and is dependent upon age.

- Younger children (1 to 8 years) 90ug*
- Older children (9 to 13 years, boys and girls) 120ug
- Adolescents (14 to 18 years): 150ug
- Adults: 150ug
- Pregnant and breastfeeding women: 220ug and 270ug respectively.

*1 ug = 1 microgram

Other natural sources of iodine include dairy, eggs, some vegetables and iodine supplements.

The soy case has been filed in the Supreme Court and the number of claimants is expected to rise.

View Full Version: iodine

Title: iodine

The Mad Hatter - February 12, 2010 08:39 PM (GMT)

Could anyone tell me the correct type/brand of iodine to use i have seen some people say not to use Lugol's iodine solution what about Edgar Cayce iodine. Any other information on iodine will be appreciated.

craig-oxley - February 13, 2010 05:32 PM (GMT)

Ideally one will get their iodine from foods and herbal medicine. This would be the likes of Spirulina, Bladderwrack, Green Blackwalnut Hull, Kelp and so forth. Lugol's is synthetic so really it shouldn't enter the body. I did take it for a long period of time and I did heal many issues I needed to upon it though. I don't have much experience of Edgar Cayce's version also I heard once someone say they felt fatigued on his but not on the Lugol's which they felt was better. What I will say is that their lowering the power of the Lugol's now. If you do get a lower powered Lugol's you'd have to double the dosage, but check before hand. This Lugol's is highly powerful in the body I assure you and not to be messed with.

View Full Version: Iodine prevents breast cancer

Title: Iodine prevents breast cancer

craig-oxley - November 19, 2009 04:53 PM (GMT)

Iodine prevents breast cancer

Thursday, November 19, 2009
http://www.naturalnews.com/027530_iodine_brst_cancer.html

Breast cancer seems to be on everyone's mind these days: How do you detect it? Prevent it? Reverse it?

Fortunately, preventing breast cancer is easy, and iodine is one of the key nutritional strategies for accomplishing precisely that.

Here, we bring you an extremely informative collection of information about how iodine helps prevent breast cancer. You'll learn how it works, which different sources of iodine are available today, and which books to read to learn more.

Personally, I strongly recommend the books and website of Dr. David Brownstein (http://www.drbrownstein.com)

Iodine and breast cancer
Big Pharma has no financial interest in looking at any natural product, including iodine. Q: Does iodine supplementation cause goiter? A: No. Iodine deficiency causes goiter, not iodine supplementation. Medical research has shown this for over 100 years. Q: Does iodine deficiency cause breast cancer? A: Breast cancer is a multi-factorial illness. However, the evidence linking iodine deficiency to breast cancer is overwhelming. Iodine deficiency may not be the sole cause of the epidemic of breast cancer that is plaguing us today, but, it plays a very large role in this illness.
- Iodine: Why You Need It, Why You Can't Live Without It by David Brownstein, M.D.

The thyroid gland needs approximately 6mg/day of iodine for sufficiency. The breasts need at least 5mg of iodine; that leaves 2mg (13mg-llmg) of iodine for the rest of the

body. This 2mg is still well above the RDA (14x the RDA) of 150mcg/day of iodine. Either way, this would explain why the RDA for iodine is inadequate and why it is necessary not only to get your iodine levels evaluated but, more importantly, to supplement with the correct amount and form of iodine. FINAL THOUGHTS The connection between iodine deficiency and breast cancer as well as fibrocystic breast disease is strong.
- Iodine: Why You Need It, Why You Can't Live Without It by David Brownstein, M.D.

Donnie Yance, a health care provider who works with many women diagnosed with breast cancer, believes that a genetic predisposition to a weak immune system is a very strong risk factor for breast cancer. Iodine and thyroid hormones (both natural and synthetic) generally reduce risk of breast cancer. Max Gerson, M.D., an acclaimed (and controversial) cancer specialist, believed that iodine was critical to the process of countering cancer. Some researchers speculate that the low rate of breast cancer in Japan is due to the iodine-rich diet.
- Breast Cancer? Breast Health! The Wise Woman Way by Susun S. Weed

At iodine sufficiency, the largest amounts of iodine are found in fat tissue and muscle (striated) tissue. If obesity is present, the body's need for iodine increases as the fat cells of the body would require more iodine. As previously mentioned, women's breasts are major sites for iodine storage. Maintaining adequate iodine levels is necessary to ensure an adequately functioning thyroid gland and normal breast architecture. I believe it will also lower the incidence of breast cancer and help women overcome breast cancer.
- Iodine: Why You Need It, Why You Can't Live Without It by David Brownstein, M.D.

Breast milk contains more iodine than formula milk and premature babies who are formula-fed may be at risk of deficiency. Iodine deficiency may play a role in fibrocystic breast disease. Hypothyroidism and iodine deficiency may also increase the risk of breast cancer, as a higher incidence of disease has been found in iodine-deficient areas. Good sources of iodine include vegetables grown in iodine-rich soil, kelp, onions, milk, milk products, salt water fish and seafood.
- The New Encyclopedia of Vitamins, Minerals, Supplements and Herbs by Nicola Reavley

Other than the thyroid, the highest concentration of iodine is found in women's breast tissue. When the level of iodine is low, the risk of acquiring breast cancer is greater, and as we're aware, the fluoride found in Prozac disrupts the iodine, reducing the iodine level. Also, women who acquire breast cancer normally have elevated estrogen and a low level of progesterone in their breast tissue as well. The natural progesterone keeps the estrogen levels in check, basically preventing the problem. And if you really want to prevent the problem, you should definitely avoid Paxil?
- Antidepressants, Antipsychotics, And Stimulants - Dangerous Drugs on Trial by Dr David W Tanton, Ph.D.

Excess iodine is excreted in the urine or the sweat, tears, and bile. There have been no reported cases of iodine toxicity from naturally occurring sources in food or water. The RDA of iodine is 150 mcg for an adult male. Iodine deficiency has been known to cause hypothyroidism. It has been associated with increased cholesterol levels, atherosclerosis, fibrocystic breast disease, and breast cancer. Iodine deficiency can also be devastating to the developing brain, causing a mental retardation known as cretinism. Most developed countries, therefore, screen for hypothyroidism at birth.
- Fundamentals of Naturopathic Endocrinology by Michael Friedman, ND

But to get back to the topic of seaweed and breast cancer, there is more in seaweed than just iodine. Seaweed as a popular dietary component in Japan is a rich source of both iodine and selenium. Selenium acts synergistically with iodine. Selenium status may affect both thyroid hormone regulation and iodine availability.
- You Don't Have to be Afraid of Cancer Anymore by Bill Sardi

Women are particularly at risk due to environmental agents depleting iodine reserves and other agents exposing them to radioactive 1-131. After the thyroid gland, the distal portions of the human mammary glands are the heaviest users/concentrators of iodine in tissue. Iodine is readily incorporated into the tissues surrounding the mammary nipples and is essential for the maintenance of healthy functioning breast tissue. The radioactive decay of 1-131 in breast tissue may be a significant factor in the initiation and progression of both breast cancer and some types of breast nodules.
- Fundamentals of Naturopathic Endocrinology by Michael Friedman, ND

"There is growing evidence that Americans would have better health and a lower incidence of cancer and fibrocystic disease of the breast if they consumed more iodine," he says. Miller points out that Japanese consumption of iodine through seaweed is many, many times that of the United States, and that the health comparisons between the two countries are disturbing. He suggests that iodine consumption may be one of the many reasons why the incidence of breast cancer is so high in the United States and so low in Japan.
- The Most Effective Natural Cures on Earth: The Surprising, Unbiased Truth about What Treatments Work and Why by Jonny Bowden, Ph.D., C.N.S.

The foods richest in iodine are dulse and kelp. All sea vegetables basically contain all of the minerals of the sea, bringing us a good source of trace minerals in general. Iodine seems to work as a monitor, or controller, for calcium metabolism. It's one of the key minerals. Iodine has the highest frequency of all of Nature's essential minerals. It supports enzyme systems that help the functioning of certain thyroid hormones and assists in regulating cellular metabolic rates. It may be helpful in protecting against breast cancer.
- Spiritual Nutrition: Six Foundations for Spiritual Life and the Awakening of Kundalini by Gabriel Cousens, M.D.

Certain parts of the country have little or no iodine in the soil and isolated agrarian cultural groups who refrained from using iodized salt and cattle feed were subject to this disorder. Iodine deficiency in children may result in mental retardation. In addition, iodine deficiency has been linked to breast cancer and is associated with fatigue, neonatal hypothyroidism, and weight gain.
- Prescription for Nutritional Healing, 4th Edition: A Practical A-to-Z Reference to Drug-Free Remedies Using Vitamins, Minerals, Herbs & Food Supplements by Phyllis A. Balch, CNC

Women in Japan commonly consume seaweed, known for its iodine content. Seaweed is reported to reduce the risk for breast cancer. [Japanese Journal Cancer Research 92: 483-87, 2001] In one study, thyroid disease incidence was higher in breast cancer patients than in healthy women (58% versus 18%). But other studies do not confirm that abnormal thyroid hormone levels are associated with breast cancer. [Nutrition Cancer 27: 48-52, 1997] It may be that an increased ratio of thyroid hormone over estrogen sets up a growth-promoting effect on breast tumors.
- You Don't Have to be Afraid of Cancer Anymore by Bill Sardi

Thyroid and iodine Hypothyroidism and /or iodine deficiency are associated with a higher incidence of breast cancer. Experimental iodine deficiency in rats results in a mammary dysplasia histologically similar to human FBD. Thyroid hormone replacement therapy in hypothyroid, and some euthyroid, patients may result in clinical improvement. Research has shown that thyroid supplementation (0.1 mg/day Synthroid) decreases mastodynia, serum prolactin levels, and breast nodules in, supposedly, euthyroid patients.
- Textbook of Natural Medicine 2nd Edition Volume 2 by Michael T. Murray, ND

There have been attempts to link two other dietary factors to breast cancer because Oriental women, so resistant to the disease, have better dietary supplies of selenium and iodine than do American women. These relationships may prove more tenable, for highly complex reasons. Selenium is related to the metabolism of Vitamin E, which I have already described as an anticancer factor, and iodine is related, of course, to thyroid function, which, as a member of the community of glands, is interrelated with the metabolism of estrogen.
- Breast Cancer: A Nutritional Approach by Carlton Fredericks

Breast cancer has been linked to iodine deficiency, and the soil in both Japan and Iceland is rich in both iodine and selenium. Japanese people also consume large amounts of fish, vegetables, and green tea, which may be a factor. The Cancer Control Convention in Japan has reported that germanium may be important in the prevention and cure of cancer. A daily dose of seven to ten servings of fruits and vegetables can reduce cancer risk by about 30 percent.
- Prescription for Nutritional Healing, 4th Edition: A Practical A-to-Z Reference to Drug-

Free Remedies Using Vitamins, Minerals, Herbs & Food Supplements by Phyllis A. Balch, CNC

"We think it's very important for the breast," Cann says about iodine. This mineral, he believes, may prevent and even shrink breast tumors by combining with certain fatty acids and stopping cancerous cells from multiplying. And without the selenium, iodine doesn't do its job properly. You can see the power of this dynamic duo in Japan, where people eat about 5 grams of sea vegetables virtually every day. Cann points out the Japanese have one of the highest life expectancies and a very low rate of breast cancer.
- Eat and Heal (Foods That Can Prevent or Cure Many Common Ailments) by the Editors of FC&A Medical Publishing

An association has been made between low thyroid function and breast cancer; as a source of iodine and other trace minerals, sea vegetables provide optimal nutrition for the thyroid gland. The high content of potassium in seaweed is good for the heart and kidneys. The iodine in seaweed aids in weight loss also. Seaweed nourishes membranes, making it good for nervous disorders, skin conditions, colds, and constipation. It is high in chromium, which helps to control blood sugar levels.
- Prescription for Dietary Wellness: Using Foods to Heal by Phyllis A. Balch, CNC

It may not be chance correlation, then, that geographic differences in the incidence of these diseases are associated with differences in the selenium and iodine values in foods. Selenium is an antioxidant in the body, protecting the chromosomes from damage which can lead to cancer. Iodine, as you probably know, is essential to thyroid function, but it may also play a role, directly or through its function in thyroid hormone, in susceptibility to breast cancer.
- Breast Cancer: A Nutritional Approach by Carlton Fredericks, Ph.D.

Seaweed is nature's richest, most bioavailable source of organic iodine, a substance lacking in the average American diet and directly related to the high incidence of thyroid disorders. Many of my patients with ovarian or breast cancer are deficient in iodine and show signs of low thyroid function. Seaweeds are also an excellent source of calcium and potassium and are rich in all minerals. They help in the removal of radioactive and toxic heavy minerals. I am thankful to herbalist Ryan Drum for teaching me the importance of this neglected food.
- Herbal Medicine, Healing and Cancer: A Comprehensive Program for Prevention and Treatment by Donald R. Yance, j r.,C.N., M.H., A.H.G., with Arlene Valentine

Iodine - Available in seafood, sea vegetables such as kelp and dulse, and iodized salt, iodine protects against breast cancer and is needed for proper energy metabolism as well as the growth and repair of all tissues.
- Alternative Medicine the Definitive Guide, Second Edition by Larry Trivieri, Jr.

Spencer of Frenahay Hospital in Bristol found that the so-called "goiter belts" (regions

where goiter is extremely prevalent, due to low levels of iodine in the water and diet) had higher than average cancer rates, a finding that extended over 15 nations on four continents. According to Dr. Bernard Eskin, director of endocrinology at the Department of Obstetrics and Gynecology at the Medical College of Philadelphia, iodine deficiencies are associated with breast cancer in both rats and humans.
- Stopping the Clock: Longevity for the New Millenium by Ronald Klatz and Robert Goldman

A large fraction of absorbed iodine is taken up by the thyroid gland via the sodium/iodide symporter. In addition to the thyroid gland, active iodide occurs in the salivary glands, the gastric mucosa and in the lactating mammary gland. The nonlactating mammary gland does not accumulate iodide. Recently, it has been reported that accumulation of iodide via a sodium/iodide symporter appears to occur in human breast cancer tissue. The major route of excretion of excess iodine is by the kidneys.
- PDR for Nutritional Supplements by Sheldon Saul Hendler and David Rorvik

Turning from excessive intake of a dietary factor to deficiency, the association of inadequate diet with decreased resistance to malignancies is well documented. Iodine deficiency may lead to an underactive thyroid and ultimately to a goiter, and goiters have been clearly associated with an increased risk of breast cancer. Similarly, recognizable thyroid underactivity has been demonstrated in 10 percent of the women with another type of cancer (endometrial).
- Breast Cancer: A Nutritional Approach by Carlton Fredericks, Ph.D.

Both our mammary glands (breasts) and our thyroid glands have been linked from the time we were embryos and both have a special ability to store iodine. This function is vital during pregnancy and breast-feeding. Because bromide has been replacing iodide in our bread and in our breasts for the past fifty years, it is feared that this has led to an increase in both breast cancer and fibrocystic breast disease (both of which have increased dramatically over this time period).

Title: Red Clover combination tea
Description: *Need advice on decocting*

Sylph - January 8, 2009 02:13 AM (GMT)

Craig,

In making Dr. Christophers clover combination, should one decoct all the herbs seperately and when using the tinctures for the herbs is there any problem with putting all the tincture drops in the same glass of water?

Red Clover combination

Red Clover
Chaparral
Liquorice
Oregon grape
Barberry
Sarsparilla
Burdock
Plantain
Golden Seal
Marshmallow

craig-oxley - January 8, 2009 07:12 AM (GMT)

You can take the tinctures individually or as together. I take a large amount of herbs all together and at high dosage! The body knows what it has to do with them. I would do them altogether!

View Full Version: The Causes and Treatment of Cancer

Title: The Causes and Treatment of Cancer

craig-oxley - October 17, 2009 11:06 AM (GMT)

Meridian Institute: RESEARCHING THE SPIRIT-MIND-BODY CONNECTION
The Causes and Treatment of Cancer:
A Research Report Based on the Readings of Edgar Cayce
by David McMillin, MA, Meridian Institute, December, 2002
ctd. from previous page
B. Complementary and Alternative Medicine

Complementary and alternative medicine (CAM) refers to combination or integration of conventional treatment with alternative therapies. Therapies may be used alone, as an alternative to conventional therapies, or in addition to conventional, mainstream therapies. Edgar Cayce's approach has a strong CAM emphasis as documented in the following excerpts.

In meeting, then, the needs of the conditions, we would add to that as is being applied for the disorders - for the abrasions or eruption - those properties of the animated ash, with the ultra violet ray over those centers (that is, the violet ray) from which the head, neck, shoulders, receive their impulse for the circulation through the nerve and blood supply; namely, the upper dorsal and cervical region. The dose of the ash would be one-eighth grain each day; the ultra violet being applied every OTHER day, see? not direct, but to those that make for impulses TO the circulation and nerve and blood supply.

(Q) Should the body follow the treatment of Mr. Boone, the cancer specialist?

(A) As just been given, that added TO, see? (4901-1)

Thirty minutes after taking the ash, apply the ultra-violet in the area of the cerebrospinal from which that portion of the body receives its impulse - that is, in the area of the 3rd, 4th and 6th dorsal, see? and not direct to the abrasion or the lump, or the tumor, that exists at the present.

(Q) How far from the body should the ultra-violet be placed?

(A) About thirty-four inches if hand lamp is used. Thirty-eight to forty inches if the heavy lamp is used. This would be from two and a half to three minutes, thirty minutes after the dosage of ash is taken.

Take the normal amount of exercise, and - as far as possible - FORGET about the condition! for we will dry it up, if we will do this! If the treatment is not to be adhered to, then the sooner the body is prepared for the operative measures the better - but, if this course is pursued, be sure from the blood test that coagulation is as near equally balanced as possible before the operation is undertaken. (4438-1)

Now, operative measures would be the better - but will require the treating with either a character of ultra-violet with the green light, or with radium - unless this becomes a malignant condition.

(Q) Should it be removed locally with novacain or should I go to the hospital?

(A) This again would be rather the choice of the physician removing same - but it will require after treatment either with the ultra-violet or infra-red, or the combination of these with the radium treatment.

(Q) What local application would you suggest for the breast?

(A) As indicated, the use of the ultra-violet or the use of radium. This should be determined by the physician. If the ultra-violet is used, do not use it without the green light. (1013-3)

C. Conventional Treatments

Numerous Cayce readings for persons with cancer contain recommendations for conventional medical treatment, usually combined with alternative treatments (complementary and alternative medicine). In certain cases where the cancer was progressive and extreme, surgery and/or radiation therapy were recommended. Modern chemotherapy techniques were not available during Edgar Cayce's era. The following sections document the most common conventional treatments recommended by Cayce for the treatment of cancer.

1. Surgery

Cayce considered surgery a valid treatment option for operable cancers. Keep in mind that Cayce viewed cancer as a parasite that must be removed from the system. Specific suggestions for preparation and recovery from surgery were sometimes given.

In the broken tissue as is found in the left extremity, forearm, or finger, or hand, this had best be removed by the break being adjusted through operation, see? for this, with the strain on the rest of the system, might become malignant, through the continual dross being left and carried there, as it continues to increase, in the strain, the attempting to

eliminate and seeking each and every channel, see? (265-3)

The body may be by care and attention builded to that wherein the system may be able to sustain through an operation to remove that portion of liver, and of stomach or duodenum, wherein the condition has become so accentuated, for this has not broken through entirely, for tissue has become hardened about the body of the malignant condition, yet this may break through at any time by overtaxing, or the body may be treated with those properties of radium. (4752-1)

Unless these conditions are removed, and the system brought nearer to the normal condition, the improper functioning and irritation will continue until there is produced such adhesions and such lesions as to bring about those conditions that would form those of the nature becoming in a manner and form of running sores, terminating either in forms of those pus sacks that would necessarily mean removal by operation, or becoming malignant in form such as to take away the whole vitality of the body. (3914-1)

In some readings, Cayce cautioned that surgery could spread the cancer.

Operation would not be effective; rather causing more of the chances of infection and spreading of condition in the body. (5651-1)

(Q) Considering all present conditions, would the operation be advisable?

(A) If there are the preparations and precautions afterward, else as given there will be growths developing from same, - not of the malignant nature as might be indicated, unless there is a breaking of tissue and infection after operation. (257-220)

Compare Why Choose Alternative Cancer Treatment (11), discussing Can Biopsies Spread Cancer?, Timing of Biopsy or Surgery & Menstrual Cycle, Inadvertent Spread of Cancer at Surgery, and related subjects.
2. Radiation Therapy

Radiation therapy was recommended in numerous readings for persons suffering from cancer. Often alternative modalities were also prescribed to decrease the side effects of radiation and to enhance the therapeutic effect.

Do add the X-Ray treatments for the liver, the kidneys and the disturbance in the bladder and the prostate areas. These, then, would be given over the area of the kidneys from the back one time, and the next time over the liver and gall duct area. These we would give about once or twice a week. (5051-1)

(Q) Is the treatment for cancer that I am now taking (of radium and X-ray) the treatment I should have?

(A) The treatment that should be kept, as given, only adding those conditions as have been given. The heavy Radium Applicator added, which keeps a constant distribution of those forces as are given through the radium, and the heavy ray, see? Also the culture. (4977-1)

As for the desire to maintain the activities of body, mind and soul, these have run their course well. The administrations that are being made with the x-ray are very good. It would be found that if there would be administered before the x-ray treatments are given, whenever they are given, one-eighth grain of Animated Ash, these would be more beneficial. (4050-1)

In the application, also would be well that the X-RAY be applied as DEEP therapy for the body. This will MATERIALLY aid in LOOSENING oxygen for the bone structure. While the body may become stiff for a time, unless activities are given, these may be materially aided by the masseuse or the massage that will keep in action the muscular forces, the activities of the whole system. (2457-4)

Do not burn too deep, but the X-Ray would give the greater extenuation to the activities of the physical forces as we find; and the keeping of the body in as cheerful a physical or mental mood as is practical - or in as practical a way as may be made.

(Q) How often should the X-Ray be used?

(A) These as they are being administered are very well; only don't burn too deep. (1577-1)

(Q) Are the X-Ray treatments helpful?

(A) They are staying, but it is necessary for the palliatives. Do not have too great a period of X-Ray treatments. Rest sufficient time between same, or let sufficient time elapse that there may be the reaction in the system; because burned tissue, though it is necessary to be destroyed by the high vibrations, is very hard to handle; and the low electrical forces of the Wet Cell Appliance carrying the Atomidine will be effective in this if they are not given too deep or too often - but they are helpful. (1359-1)

(Q) Should any Radium be given?

(A) Not unless there is a greater amount of spread of the disease, as we find. The X-Ray is the better application in the present. (1004-2)

(Q) Did X-Ray treatments weaken body?

(A) AS HAS BEEN INDICATED, if these are given properly and NOT too often - but allowing for those reactions and just sufficient of the manipulations to keep the eliminations distributed through their correct channels, these are the better conditions

as we find. (601-28)

And all of these conditions will be aided by not only the mental but the activity of the high vibratory forces through the body from the X-Ray. Let the X-Ray cover, then, of course, the kidneys and bladder. (601-25)

(Q) What effect will the X-Ray flashes have on the system?

(A) Stimulate those portions to activity and DESTROY the activities that make for inroads in the condition here.

(Q) Any danger of burning the flesh and causing other disorders?

(A) Always danger with X-Ray! This, then, should be given ONLY under the supervision of someone TRAINED in same. Hence, as indicated, such an one should be in sympathy with the activities of the one giving the osteopathic manipulations. (325-60)

Compare Possible Serious Side Effects of Conventional Cancer Treatment (Radiation) You Might Not Be Told About, Cancer Causes: Radiation, Ionizing Radiation (Fluoroscopy/ Mammography/Medical X-Rays) Proven & Preventable Causes of Breast Cancer and Whole-body CT scans can increase cancer risk.
3. Drugs

(excerpted)

In the Cayce readings, the most common conventional drugs for cancer involved opium-based pain medicines such as codeine and heroin, usually in a compound that includes botanical (herbal) medicines. Chemotherapy, as it is used today, was not a conventional medical option during Cayce's era.

It is necessary to use a sedative or a narcotic at times, - and when necessary to use such, we would use that which is of a hypnotic nature, rather than of the narcotic so much. While a hypnotic is a narcotic, it is not as habit-forming as codeine or morphine. (1967-1)

First we would give that, rather than so MUCH of the morphia to EASE the body - we would begin with the dosages of this, which will bring much more restful ease and comfort. While it will be necessary to gradually decrease the dosages of morphia, these will entirely take the place, will the body respond to the other properties as will be necessary. This should be prepared, preferably, in capsule - though a liquid. We would give this as the dose in each capsule:

Oil of Eucalyptol.....1 minim,

Canadian Balsam.....1 minim,

Oil of Turp, Rectified.....1/2 minim,

Heroin.....1/80 grain.

Give only one of these in sixteen hours….

(Q) Will complete recovery be possible?

(A) Be possible - but this will be determined better by the reactions in the system, for remember we are dealing with LIFE FORCES within themselves, or that which lives upon human tissue - CANCER! (5585-1)

Then, to bring that that would give the better relief for this body would be to give this as each dose, in capsule, at least one each day, not making more than 6 to 8 capsules, for they will disintegrate in time, see.

Eucalyptol.....1 minim,

Canadian Balsam.....1 minim,

Rectified Oil of Turp...1 minim,

Heroin.....1/60 grain. (4615-1)

Rather than applying those of morphia, use as these, that will bring an opportunity for the full functioning of the normal active forces of the mind of the body, to give that which is desired to be given by the body for those that administer, and minister, and have ministered, for the welfare of the physical body. Prepare in capsule as this: This the dose for each capsule:

Oil of Cinnamon.....1 minim,

Oil of Eucalyptus.....1 minim,

Oil of Turp.....1 minim,

Canadian Balsam.....1/2 minim,

Heroin (or equivalent of same)...1/80 grain.

This to be given every five hours apart. This will revive the reactory forces between the cerebro-spinal and the sympathetic nerve system, bringing the proper coordination between mental and the physical being. (125-2)

While it would be necessary to use those of the narcotics to ease the body, to produce

segregation, or to stop the inroads as may be found, as WE see - while not reducing the whole amount OF the narcotic, were we to use this internally we might find BENEFITS coming FROM this, WILL the physical body respond to same. This as each dose, taken internally: Prepare capsules, and make only a few of same at the time – this in each dose:

Oil of Eucalyptol.....2 minims,

Rectified Oil of Turp.....1 minim,

Canadian Balsam.....1 minim,

Codeine.....1/60th grain.

This may be taken once or twice each day.

Half an hour after taking this, we would apply the ultra-violet ray over body, especially in the abdominal and sacral region - see? (4249-1)

(Q) Is there anything better than the codeine for sleep?

(A) Nothing better that is not too much habit-forming and that doesn't require the large quantities to be taken more often. Do keep the stimulation of eliminations. These will be better for the body. (4050-1)

(Q) Is the diagnosis of cancer the correct one and is it the primary cause for her condition?

(A) The primary cause is an unbalanced chemical condition through the body, but it is localized - and the inducing of those influences which caused the setting up of the condition is now malignant in its nature….

(Q) Should we continue using sedatives such as codeine and pantapon? Or can you suggest something else which would eliminate the pain and not make her so sleepy?

(A) Best to continue to administer these, or hypnotics. (2512-2)

When the pains are so severe, while the narcotics are effective, this taken once a day or once in two days as we find - WITH the others - would be more effective but would necessitate its being administered by a physician:

In a capsule put:

Eucalyptus, Oil of.....1 minim,

Rectified Oil of Turp.....1/2 minim,

Compound Tincture of Benzoin.....1/2 minim,

Codeine.....1/4 grain.

These to be sure would become too heavy upon the digestive system unless it's far apart. The allaying though of the activity will be helped with this, as we find. Do not allow this to be taken oftener than once a day; this at the periods when the suffering is the severest. (1253-1)

To 2 ounces of compound simple syrup, add:

Oil of Eucalyptol.....40 minims,

Rectified Oil of Turp.....5 minims,

Tincture of Benzoin.....20 minims,

Codeine.....1 1/2 grains.

(This compound, or Codeine compound, well powdered before added, so it may dissolve when shaken together.)

The dose would be a teaspoonful three or more times each day, or in the beginning when necessary to keep the body from severe pain. This is to act in the place of injections of narcotics. This is not a curative, yet it is an active force and easily assimilated by the respiratory system in such a manner as to create for constructive influences IN the blood supply. And will also aid the body in being better able to breathe and clarify the blood supply. THIS taken internally. (511-1)

(Q) As the gentle massage does not put the body to sleep, what can you give as a sedative that will not affect the stomach or heart?

(A) This, as we find, may best be given under the direction of physician in charge. But as we find, the hypnotic rather than the narcotic derivative would be preferable for the body.

Luminal, as we find, would be most in accord or in keeping with the general conditions; though those derivatives such as codeine or the morphia are well. But the Luminal would be less upsetting to the assimilating system.

(Q) Who would be the best physician?

(A) Any physician who has the authority and the right to give it! (325-67)
D. Alternative Treatments

Cayce's recommendations for alternative medical treatments for cancer were diverse and highly individualized. Here are some of the most frequent alternative modalities.
1. Diet and Nutrition

Cayce's dietary recommendations for cancer tended to follow several key themes:

• Eat a diet that tends to produce a balanced pH in the system with a tendency towards alkalinity.

• Eat an abundance of fresh, raw fruits and vegetables that will tend to increase alkalinity in the system.
Compare acid-alkaline food table.

• Eat little or no meat, especially avoiding meat fats.
Compare Vegetarians live longer.

• Eat moderate amounts of nuts, especially almonds.
Compare Almonds as tumor preventatives.

• Eat specific vitality enhancing foods when the system is depleted.

• Many of the dietary recommendations for the treatment of cancer are also helpful for prevention.

Here are some excerpts that discuss these themes:

This is not a cancerous condition in this body, but it might be if allowed to remain…

As to the diet that should be given at this time: no meats; nothing carrying grease or any animal fats. Give milk and cereals, changed from day to another. Fruits carrying not too much acid, such as certain apples and pears. (5421-2)

In the matter of the diet, also, we would be mindful that there are as this:

Mornings - the citrous fruit diet, or stewed fruits, or the like. No coffee, no tea, no stimuli of any kind.

Noon - all the vegetables (GREEN) that the body may eat, see? especially of lettuce and tomatoes.

Evenings - be mindful that there are no bulbous vegetables taken, and the other vegetables at this meal should be well cooked. No meats, or fat meats. There may be taken with this meal a cereal drink, as of the Ovaltine, or rye, or such cereal drink. (4901-1)

Eliminate from the diet all fats, meats, heavy oils of any kind. (4438-1)

Let the diet be not of meats or too much sweets, but of vegetables and fruits - no tomatoes or strawberries – any other fruits of the acid state. But vegetable matter of all character. Let it be changed entirely so that the body receives influence of all. Cooked well, but not with fats. Season well, but not with black pepper, but with salt and cayenne. (3751-6)

Not too many fats, to be sure, though fish and fowl may be taken - but preferably not the fat portion of same. (3187-1)

(Q) What should be avoided in the diet, other than fats?

(A) That mainly to be avoided is fats.

DO give the body beef juice as a strengthening factor, but no fats in same - and this only in small quantities, and very little taken at a time. Give as medicine. (2956-2)

Give the body only liquids or semi-liquids in the beginning: Beef Juice (made from the lean beef, no fats nor fatty portions in same), Liver Extract, Blancmange, Arrowroot or the like. Not soups - these carry too much greases. Vegetable juices may also be taken a little later, if those properties as indicated settle the stomach. (1382-1)

In the diet, - do live mostly, for a while, on watermelon, carrots, beets; having these almost daily. The watermelon is for the activity of the liver and kidney, the beets and carrots are for the purifying of the blood, as combined with the Plantain Tea and Ointment. (3121-1)

In the diet keep towards those that are the less acid-forming foods; more of the alkalin-reacting. One meal each day should consist of the raw vegetables; made into a salad and used with dressing or olive oil. The fats should be principally from nuts, not from meats. Meats when taken should be lamb or fowl (but none ever fried). No fish should ever be taken by this body during these treatments, or during these properties. (1013-1)

During the periods that these treatments are followed, be mindful that the diet does not carry any of the greases that are of flesh. Any of the oils that are of fruit or vegetable compounds are well for the body; hence no butters, no fats or lards, or anything used other than those that originate from vegetables or fruits (either in the cooking or in the eating). Meat JUICES may be taken, but not the fats; so the juices should be made only from the lean portions. Vegetables, nuts and fruits should be the principal portion of the diet. (757-1)

Be precautious as to keeping away from things that are fat or greasy.

Have more of vegetables and of fruits. (454-7)

Feed ALL the food that is of a NOURISHING nature, but not from MEATS. Those of cereals, fruits, vegetables, AND such or principally of the nature that are the foods of the hare, the foods of the beef - these are DESTRUCTIVE forces TO such as may be seen in the condition attacking system. (2457-4)

With the decrease or elimination of animal fat from the diet in cases of cancer, Cayce recommended that fats be obtained from nuts, especially almonds.
Compare Almonds as tumor preventatives and Dr. Johanna Budwig's healing protocol where animal fats are virtually or mostly excluded for cancer patients.

(Q) Are there any foods that should be eliminated, and if so, suggest diet?

(A) Rather use the fruit and vegetable diet. The fats should be more from nuts than meats; for these, as we find, would be most helpful - and especially cashew nuts, almonds, filberts, and the like. (1000-11)

In at least two readings, Cayce made categorical statements about the preventive power of almonds.

And know, if ye would take each day, through thy experience, two almonds, ye will never have skin blemishes, ye will never be tempted even in body toward cancer nor towards those things that make blemishes in the body-forces themselves. (1206-13)

And, just as indicated in other suggestions, - those who would eat two to three almonds each day need never fear cancer. (1158-31)

Although reading 954-2 does not specifically state that eating almonds will prevent cancer for this woman, yet the implication is clear.

In the afternoon (middle of the afternoon) eat half an ounce of almonds; just almonds, you see….

See Almonds as tumor preventatives.

(Q) Is this body a cancerous type in view of tumors and extreme tensions?

(A) As indicated, this is a strain. If the body is built up sufficient for resistance, these disturbances in these directions should disappear. If tissue is allowed to become adhered, or if the tumors are allowed to form and then these become bruised, or there is the lack of the 'elan vitale' in the system to create proper coagulations, then such might arise. (954-2)

Since cancer tends to draw upon the vitality of the body, certain specific dietary recommendations were made to address [this] aspect of cancer treatment. Beef juice was the most frequently recommended dietary recommendation for strengthening and

increasing vitality.

As to any strengthening forces, give beef JUICES - ONLY! Sips will be worth more than several spoonsful attempted. (1282-1)

We would prepare regularly - every other day - about a pound of beef INTO Beef Juice! Not tea, not broth, but the Beef Juice! This would be taken rather often, but in very small quantities; and when taken almost CHEW it - though there is nothing to chew, of course - for it is liquid, but SIP it - when taking it about every two or three hours during the waking period. Take about a teaspoonful at the time, but take at least a minute or more to swallow that much, see? This will give strength, it will assimilate easily, and make for better conditions. Do not allow any fat to be in the beef when it is prepared. Preferably use the beef from the neck of the animal. (875-5)

Reading 570-1 contains these directions for making beef juice:

DIRECTIONS FOR MAKING PURE BEEF JUICE

Put small chunks raw beef in covered fruit jar. Put jar inside pan of water (water coming to about half the depth of jar). Boil until chunks of beef are thoroughly done. Strain. Keep juice in cool place. Dosage: Usually, for an adult, a tablespoonful at meals, diluted with water as a broth - but "very small quantities" must mean about a teaspoonful every two or three hours.)

Spirits frumenti, consisting of alcoholic beverage, egg, and milk was another common dietary recommendation to build the system in cases involving debilitation and fatigue. The small amount of alcohol may have also served to relax the body.

For the administration of that which will give better elements for the physical body, give stimulus of spirits frumenti, egg and milk; cooking the egg with the spirits frumenti and adding the milk to same; or small quantities of dry champagne may be given, very cold. These will add to the COMFORT of the body. (125-2)

Between the morning meal and the noon meal (about the middle of the morning) have a malted milk with the yolk of an egg beat in same, and a few drops of spirits frumenti to take the taste off of the egg. A full glass of this should be taken. (954-2)

Red wine and dark bread was recommended by Cayce to strengthen the body.

(Q) What beverages should be taken both at meals and between meals?

(A) As indicated. Any of those taken should be as indicated. However, once each day between meals there may be taken a small wine glass of RED wine, if this is taken with black or brown bread - very dry bread. Take it as a food, not merely as a drink; for this will be strengthening and helpful to the body. (975-1)

At four or five o-clock in the afternoon, or an hour to an hour and a half before the evening meal, take an ounce of RED wine with BLACK bread, or BROWN bread; that is, sour dough bread or the like. Sip the wine and eat the bread with it. (954-2)

Use those things that are body-building in the diet. The wines as indicated. Sips of the food values are the more strengthening. The red wine should be rather as the meal once a day, with the black bread only; preferably in the afternoon when greater strength is needed and the reaction will be the better. However, the light wine or champagne, that aids as a stimulation, would be sipped the more often in the other portions of the day or evening. (325-66)

Although Cayce typically relied on diet to meet nutritional needs, he sometimes recommended nutritional supplementation.

(Q) What is nicotinic acid?

(A) Nicotinic acid - it is that found especially in green leaves of lettuce, celery, cabbage and the like. It is a product of the B-1. It is that element which in the system aids in production of the leucocytes in the blood, or their element of activity.

(Q) Should B-1 be taken at the same time?

(A) This depends upon whether the foods taken carry sufficient quantity of B-1. B-1 is a vitamin not stored in body, but it is necessary that there be the consumption of such each day. While A, C, D and G at times attempt to take the place of same, the B-1 activity is much better taken in foods than in the segregated pellets or capsules. When it is impractical for obtaining the foods with sufficient quantities for the daily needs, very well to take B-1. But to overstress same may at times cause the reaction of the VERY distress that is attempting to be aided!

All foods yellow in their nature, that are naturally yellow, carry B-1. Re-enforced flour, and especially whole wheat, corn flakes, most cereals - if re-enforced with same. So, a normal helping of such each day is about a FIFTH of that necessary. Also it is found in orange juice, citrus fruit juices, the juice and the pulp of grapefruit and the like, and in ALL cereals, and in bread; and especially the GREEN leaves of lettuce, - not so much in the beautiful white pieces. The green pieces are usually thrown away, and the hearts of lettuce kept that aren't worth very much as food for individuals. Hence lettuce of the leafy variety is really better for the body, carrying the greater source of the nicotinic acid.

(Q) Yellow peaches in the can?

(A) All good. Yellow corn meal, squash, and every food that is naturally yellow in color. Carrots, raw and cooked - all of these. (257-236)

Do add wheat oil or wheat germ to the diet, as well as the compound B vitamins. Keep a normal diet, not too much of any kind of meats, and never any "red meats" of any character. (5113-1)

Hence this appears in the present to be more of a lymph involvement, but now and then the supplying of the vital energies lacking, especially in Vitamins D and B Complex, and K and G, the body is enabled to find or fight or to supply resistances in the fluid forces of the body for energizing and giving energy and life to the body. (3121-1)

But we would take the vital energies that may be obtained from the use of the Purity Cross Vitamins; and for this body take one tablet or capsule every other day, preferably when ready to retire of evening. (2961-1)

craig-oxley - October 17, 2009 11:06 AM (GMT)

(Q) Are oranges, grapefruit and bananas good for her?

(A) Oranges and grapefruit, but bananas are not so good. Take all of those that are of the yellow variety, such as: Squash, corn, corn meal, peaches and such. And it is well to keep not injections, if practical, but the vitamins of B-1 to create better coagulation. (2512-2)

(Q) Would it be advisable to take a good tonic for regaining strength more quickly? If so, please suggest one.

(A) Not in the present. A little bit later, in a week or ten days (time enough to get them at least), we would take one CODIRON tablet a day. Codiron (one word), by Lawrence Laboratories, Chicago. This is a stimulation of this character: Cod Liver Oil with Vitamins A, B, C, D and E, but in such measures that they will work well with the system. (560-6)

Reading 1013-3 contains specific nutritional recommendations to prepare for surgery:

Do those things as indicated, for - as there are the operative forces - there are the needs for a generous supply to the body in the regular diet of Vitamins B-1, A and D, as well as sufficient to produce better coagulation - either by injection or in tablet or capsule form - especially through those periods of preparation and through the periods when the operative measures are performed.

But there should be the general building up of the body, as well as the specific and local applications. All such vitamins are found in the reinforced foods; as in the flour, the cereals, all forms of vegetables cooked and raw that are of the yellow variety. (1013-3)

One of the more fascinating discourses on nutritional supplementation for cancer involves a reading given for a professor from Cornell University Medical College on the topic of Biotin. Edgar Cayce's wife, Gertrude (GC), gave the following hypnotic for a reading on Biotin.

GC: You will have before you the research which has been done on the structure of Biotin, as announced by Professor Vincent du Vigneaud, head of the Department of Biochemistry, Cornell University Medical College, Ithaca, N.Y. You will give a discourse on the mechanism of action of this powerful vitamin, as to bring about a clearer understanding of its effect on living things. Also you will advise if this chemical can be found in fish eggs; such as caviar, roe, etc.

Edgar Cayce responded:

Yes, - we have here the findings that have been indicated by Professor Vigneaud.

This, as we find, is a move in a direction in which improvements may be made in the general health of individuals where such tendencies of cancer are indicated.

As to any great value, as yet, in the preventing or the eradicating of conditions where these growths have reached such proportions as to be cellular forces in themselves, - this is yet questioned.

Biotin, as called, is found in the roe, especially of the shark and such fish, - more than it would be found in caviar or sturgeon.

This, of course, may be used as a means for removing those tendencies, and where conditions are begun.

Of course, as is understood, this disturbance (cancer) to the human body is of a different nature from many of the ills of the body. It, of course, is in many forms and characteristics. Those forms that are external may be aided much by the use of certain rays or lights that destroy certain cellular force, and make for the ability of a healthy body in other respects to meet conditions.

Those forms that are of the nature where glands are involved, - as in the breast or the like, - may be removed, in some stages of same, by surgery.

Those forms that are of the internal nature, - as in the lungs, the liver, the organs of the body, - and especially the female organs, - are of another character.

These all represent or present varied problems.

Now, the use of Biotin in any of these conditions would be a helpful influence, for it creates in itself an element that changes the form of the vibration about the molecule of

the blood, or the circulation through such areas.

It would be well that this research be carried on.

There are other sources, to be sure, from which helpful forces might be gained; and yet there is really the greater necessity of man's comprehension of ills as related to erring from the path of righteousness - or that of sin, and its relationships to all such conditions that are in the experience of man.

A form of vitamin may be obtained from certain nuts, - as the almond, - that would be helpful as a preventative. Also there may be obtained from the turtle egg those influences for longevity that may be created in certain cellular forces in the body.

All of these are worth considering; most of all, the spiritual aspects of same.

We are through for the present. (659-1)

Compare Edgar Cayce's perspective of cancer and Almonds as cancer/tumor preventatives, Edgar Cayce’s General Nutrition & Diet Recommendations, Cancer, Diet & Nutrition, and Supplements & Herbs.
2. Energy Medicine

Edgar Cayce recommended several alternative medicine modalties for the treatment of cancer. The most common was the use of the ultra-violet lamp which was typically used in conjunction with various forms of ash (animated ash, carbon ash, medicated ash) taken internally just before the ultraviolet light is applied to the body. The ultraviolet light was said to enhance various physiological functions, particularly leucocyte (immune system) functioning and coagulation. The ash was said to increase the oxygen level in the blood. Ultraviolet therapy was also sometimes recommended as a palliative treatment to produce comfort and reduce pain.

There may be help if there is still held that desire for life and activity. There is no healing of that which is spent. There may be ease and the better activity with the use of the ultra-violet light, if the green glass is used between the body AND the ultra-violet. This would be over those areas of the ribs, in the back, that there may be a greater flow and formation of the elements in the blood to create greater quantities of leukocytes in blood plasm.

Use the ultra-violet with the green glass for at least a minute, once a day, but have it thirty-eight to thirty-nine inches from the body - using only the Mercury light. The piece of green glass, about ten by twelve inches, would be at least fourteen inches from body. (3516-1)

Three to five minutes after taking each dose of the Ash, use the Ultra-Violet Ray (not the Carbon Light but the Mercury Quartz or the Cooper-Hewett (?) [Note given ECF

5/8/73 by Don Button: Cooper-Hewett is (or was) the Company name of a Mercury Quartz type Ultra Violet Lamp] Light) over the lower portion of the spinal system - but at least thirty-eight to forty inches from the body. This will help produce coagulation if assimilation is set up. (1382-1)

Every OTHER day, three to five minutes after the dose of Ash has been taken, apply the ultra-violet ray over those portions of the cerebrospinal system that govern the lower lungs. This should be NOT the carbon, but the hand lamp may be used - but preferably the mercury or quartz light; and this at least thirty-six to forty-two inches (36" to 42") from the body, this dependent upon the reaction of the body to same. Do not over redden the body, because more superficial than the deeper activity - but about a minute and a half to two minutes, dependent upon the reaction. This is only to be applied every other day, you see, in a manner that there may be loosened those influences that will allow more oxygen to act upon the blood stream; thus making for a purification in same that will aid in establishing help for the system. The light given following the Ash, every other day, is to cause the atomic forces in the Ash to react upon the blood stream; SENDING, then, as it were, these destroyer forces in the leukocytes of the system to destroy tissue that has become - as indicated - involved throughout the system, causing many twists and many activities to the organs themselves. (1070-1)

We would use one-eighth grain of the Animated Ash, at least every other day. Empty the powder on tongue and wash down with water; DO NOT take IN the capsule. And five to ten minutes after taking the Ash, we would use the Ultra-Violet Ray; not the Carbon Light nor the Sun Light, but preferably the Mercury Quartz Light; given across the lower portion of the lung area (from the back, you see), for one and a half to three minutes. Thus we will loosen more of the oxygen to combat the general conditions in the system; for these work with the nerves and muscular forces and those activities that tend for action through not only the respiratory system and the organs of the body through the glandular forces and mammary glands and in the throat and the stomach, but make for the better action towards an assimilation. (1000-11)

We would also take those properties of the animated ash, that will release in the system - with the use of the ultra-violet light, especially, with same - to give a healing to the intestinal system, increasing the oxygen and removing the pressures, taking up the inflammation that causes the pressure to the head, to the neck, and to the eyes, and that reduces the activity of the blood supply THROUGH the liver. This we would take in one-quarter grain doses at least twice each week, following about thirty to forty minutes afterwards (taking same in water) with the application of the ultra-violet light for three to five minutes, especially over the liver and the bowel area….

(Q) Is this trouble liable to be cancerous?

(A) May become so, unless there is the releasing of the blood supply in such an extent as to ward off, or to prevent the breaking of tissue. Hence the taking of the ash, or the

animated forces that loosen more oxygen in the system. (19-4)

A piece of green glass that was often placed between the ulraviolet lamp and the body to enhance the effect of the light. Here are some excerpts that describe the effect created by the green glass.

Infrared light was recommended in a few cancer readings.

We would then the next day take the Infra Red ray, after being heated with the green glass between the Infra Red and the body; and do not place the glass so close to the heat as to cause fracture or breaking, but closer to the body – that there may be the effect of the color as it is changed from the Infra Red, or the activity of Infra Red.

(This aside, now, for explanation - and as to why the change: The Infra Red is that which acts upon the STRUCTURAL portions of the body, and the COVERINGS of the structural portion, see? Then, altered through the effect of the rays passing through plate glass, or heavy glass, that is GREEN in color, acts upon not only the structural or bone portion of the body but upon the muscles and tendons of the body also, in eliminating poisons that have caused - and do cause – those eruptions in the various portions of the body, internally and externally, allowing these poisons to find those manners of being eliminated through the channels of eliminations in the system.) (757-3)

At least once a week (but not on the same days the ultra-violet is given) we would apply the Infra-Red ray, but when used screen the ray with the quarter inch crystal of the GREEN glass, so that the rays that penetrate to the structural portions (from which the bone structure produce cells that act in the capacity of the corpuscles themselves) are penetrated with the vibration from the GREEN rather than the red. This should be given for twenty to thirty minutes, at least forty inches from the body. (757-1)

Radium therapy, as a form of alternative medicine, was recommended in numerous cancer readings. There were two primary techniques – the Double X Radium Appliance and radium water. Here are some examples of how to use the radium appliance.

We, then, would use that of the Double X Radium Appliance, wearing same across the small of the back for at least five hours each day. Then, when lying on the back, we would lay same next to the body, across the right and lower portion of the abdomen. (5422-1)

Applying, then, the radium in the way as has been; also applying the Radium Applicator to those portions of the body, that the strengthening forces (that is - through the solar plexus) may assist in the distribution of the forces that overcome the condition. (4977-1)

Use as the application for the vibrations to be corrected in the system, that of the Radium Applicator about the spine, wearing the pad across the solar plexus, and changing every other week to that about the secondary cardiac plexus. Do this, and by

the time the full quantity of medicinal properties is taken, and this applicator has been worn for this same length of time, we will see corrections coming for the body. (4695-2)

Use the heavy Radium Appliance ever across the solar plexus, see? At least five minutes each day rest, lying prone, and lay pad across the throat, see? Just about where the Adam's apple would be on man, or at the lower portion of the tongue, see? (3710-1)

Several readings recommended radium water for treating cancer.

Use under the direction of physician (for it may not be applied in any other way and manner) that of RADIUM WATER as the internal forces for the system, see? …

Take at least TEN DOSES of the Radium Water and the treatments as go with same each day; that is those forces - though the Radium Water will be changed by the physician to meet the needs of the histology and of the conditions in the system. After the ten doses have been taken - that is, they may not be taken each day, or they may be taken each day - but after ten doses we would give further suggestions for this body. Dr. Tally may give this. (4741-1)

Then, that which may add the better condition to the body would be, taking those small properties as in that of the Radium Water, and with the application over the system (especially in those ganglia that give distress in system) that of the Violet Ray. The Radium Water should not be taken oftener than every second or third day. Necessitate being given under the direction of physician, see? (5721)

We would also give, every third day - but under the DIRECTION of a physician (and these had all best be given under the direction of a physician watching or tending the condition) - those of small doses of radium water. (Radium Water Company, Pittsburgh, Pa.) (5585-1)

The following reading recommended either or both forms of radium therapy (applicator or water).

The body may be by care and attention builded to that wherein the system may be able to sustain through an operation to remove that portion of liver, and of stomach or duodenum, wherein the condition has become so accentuated, for this has not broken through entirely, for tissue has become hardened about the body of the malignant condition, yet this may break through at any time by overtaxing, or the body may be treated with those properties of radium. As to the application, this shall be governed according to the abilities of system to resist same. This, as we find, will scatter same in system, yet were the eliminations of sufficient nature to carry out these drosses from system, we would bring the more relief to the body through this, or we may take into the body those properties of the radium water that will assist also in producing eliminations

properly throughout the system. Either or both of these may be given this body for the assistance to the body. (4752-1)
3. Manual Therapy

Manual therapy, the use of the hands to diagnose and treat illness, was recommended in numerous cancer readings to improve drainages and to absorb and eliminate toxicity in the system.
4. Herbal Medicine

Plantain was one of the most common herbs recommended by Edgar Cayce for the treatment of cancer. The application was usually either as a tea for internal consumption or as an ointment for external application. Reading 3121-1, given for a man suffering from sarcoma, recommended both methods of therapy:

First we would give that there be prepared an ointment from the leaves of young Plantain, at this particular season of the year, growing in the vicinity where this body lives.

Yes, it is this herb that you desire oft to get rid of, in the yard, garden or walk. But do not use the seed, so much, in the ointment. Gather the tender leaves, about the quantity that may be crammed, not too tightly, into a pint cup.

Cook this until it is rather thick. Do not allow to burn.

Then use it as an ointment over the areas where these protuberances gather at times - for they do vary. They become as warts or moles, that become infected and sore, and run. This ointment will tend to dry same.

But to purify these from the body-force, we would also take internally a Plantain Tea, made from the tender top leaves of the same plant, with - at this season, especially - the seed of the Plantain - about half and half. Fill half a pint cup with these, and add to one quart of Distilled or Rain Water - using only an enamel or glass container, not metal. Cook until reduced to about half the quantity, or half a pint of the liquid. Take this as a tea, a teaspoonful four times each day; after each meal and at bedtime. Keep this where it is cool, and if the quantity tends to turn a bit sour, discard it - but this whole quantity should be taken before it would sour. It is not so good to add a preservative for this particular material, for it changes this. (3121-1)
5. Prayer

Prayer was explicitly recommended in five of the 397 physical readings containing the word cancer.

The use of the Ultra-Violet with the green light would be helpful, but prayer is needed most. The massage will only quiet the body. Sedatives will have to be used at times. (3439-1)

The body has not yet recuperated from the effect of anesthesia - or the shock to the system. And unless there is a great deal of praying done, he won't be much better….

A gentle massage to quiet the body would be well, with prayer - and not by those who do not live what they pray. Do not merely pray that he will be well, but well for what? Do not pray for the body to be well for what the body can do for self but for those whom he has aided and also hindered. (3439-1)

Most of all, pray. Let the mental attitude be considered first and foremost. Do not promise thyself, nor thy God, nor thy neighbor, that you do not fulfill. (3121-1)

And, above all, PRAY! Those who are about the body, use, rely upon the spiritual forces. For the prayer of the righteous shall save the sick.

Know that all strength, all healing of every nature is the changing of the vibrations from within, - the attuning of the divine within the living tissue of a body to Creative Energies. This alone is healing. Whether it is accomplished by the use of drugs, the knife or what not, it is the attuning of the atomic structure of the living cellular force to its spiritual heritage.

Then, in the prayer of those, - live day by day in the same manner as ye pray - if ye would bring assistance and help for this body. (1967-1)

(Q) Any other suggestions?

(A) Do this - and pray! (1282-1

Know that this is being given to AROUSE the body to the realization that he must CONTINUALLY be on the guard; not just for a week, not for just a month! Not so much as to attempt to throw off on others, or to use the condition as an excuse, but rather to use the condition as a means to form those tendencies, those habits, those precautions which have been indicated so oft for the body. For, the warnings have been given again and again as to how to keep the body fit, - as to the foods, the diets, the exercise, the recreation, the rest, the building of the mental body, the time to play and the time to work, the time to recuperate the mental body, the time to make holy and the time to pray. (257-228)

Compare Cynthia Larson’s grandmother’s liver cancer healed by prayer alone.
6. Other Alternative Therapies

The Cayce readings contain numerous other alternative therapies. Some are interesting, but obscure. Others are somewhat mysterious.

The use of rabbit body parts for cancer treatment was prescribed in several Cayce

readings on cancer. Most often, the hide of a freshly killed rabbit was placed over an external cancer tumor as may be present in breast cancer.

Then, for the abrasion, as produced this strain and does not heal, we would cover this with the fur from the rabbit, and as often as possible have this NEW, and as with the life still in same, see? This will bring the greater relief for this body, [4615]. Do that. (4615-1)

In the gland region, under the arm, over the portion of the scapula, we would massage - GENTLY - each day - with those of the Iodex preparation, and keep from the irritation of clothing or pressures on same. We would keep covered with those of a young hare's fur, or rabbit fur - PREFERABLY that recently caught, or skinned; the skin, to be sure, prepared so that no infectious forces may arise from same. (5662-1)

The breast, or lump, may be massaged GENTLY - not bruised, to be sure, but gently massaged - with a mixture of one-quarter ounce of Iodex and one-quarter grain of the Animated Ash. Gently massage this once each day. Protect this [breast lump] by the use of hare fur, or the like, over same - with a gauze in between the fur and the skin. The VIBRATION from this is excellent for a tumor, and DISSIPATES same - if the system is HIGHLY eliminative in its activity, which it becomes with an excess of iodic effect in the blood stream. This iodic effect, with an activity of greases or too great protein (or meats), will be more harmful than helpful. As also would be an excess of potatoes, or beets, or such. Rather use leafy vegetables, with celery, carrots, turnips occasionally (especially the tops), cabbage, fruits and nuts. These would be well to keep the body well balanced, but do not include walnuts or pecans in these! Almonds, Brazilian nuts, cashew nuts, and the like, are well. Almonds, especially. (4438-1)

A couple of cancer readings describe a hypothetical treatment technique that involves using part of the rabbit leg to create a serum for treating cancer. It is not clear that this particular technique was ever actually used.

We would give then, THESE, as we find, would be the better corrective measures for this body, were there a serum made from that as is called the "wolve" [wolf] in the beef or the hare, at this season, and injections made in that region where the blood supply to the system is most effective. For this region of system this would be materially aided, or checked - or NICCOLITE, as this becomes….

(Q) How can this be made?

(A) This should be drawn off - that is, the wolve [wolf], see? - PUNCTURED by an hypodermic, see? This drawn off and then a culture made into the flesh of the same animal from which it's drawn, whether beef or hare. Then the culture applied to the HUMAN body, see? or blood drawn and a culture made FOR the human body and then applied to the body. There must necessarily be experimentations, with the proper heat, the proper precautions taken as to the character of cell as is destroyed in the culture

made, and in the activity of the animal as well as human when being used; but for this character of the condition this would be MOST effective in at least fifty percent of such ills. (2457-4)

(Q) What treatment would you prescribe for these?

(A) There is not much difference between the numbers, or amount of white and red corpuscles in the blood. An excess, perhaps, more of the leukocyte condition. That is, of the white or resistive force, at present, to relieve from the system the condition we have, that is, the condition of the face. The portion taken in by the parasite, we have had from the outside, there has been no more resistance in it than we have had. We need the same things we have had before, and we will improve the system here, by taking it away, or letting nature resist it here, as at the parts effected. Then, as we have the body improved, being eliminated from the system here, by the niccolite here onto the place itself. Or the same here of the rabbit, or wolve that we have in its back at the time of the year here. That is, the same construction. (4444-2)

Iodine therapy for cancer was recommended in various treatment formats. Iodex was a commercial product that was prescribed by Cayce for cancer prevention and treatment. Most often it was combined with animated ash and used as a topical application around tumors or sores.

For those places where there are BROKEN places in the head and neck and portions of the body, we would use a combination of Iodex and Animated Ash. To one ounce of the Iodex thoroughly mix ten grains of the Animated Ash. Use this as an ointment, gently massaging around the nobules, around those places and around the activities that cause so much distress. (799-1)

As we would find, as we have indicated heretofore, it would be well to use those properties around or close to the swelling or abrasions - or where the opening or the effusion has been active - to massage gently over the glands lower down; that is, under the arm and farther away. The Iodex infused with the Animated Ash. To half an ounce of the Iodex we would combine a grain and a half of the Ash, see? This should be THOROUGHLY mixed together….

(Q) How often should the Iodex-Ash ointment be massaged?

(A) Once each day, just what the body may absorb; not enough for discoloration or like that. This would preferably be done in the evening, while the emulsion from the Plantain and sweet butter would be better of mornings as the body is ready to dress, you see. (325-48)

Two readings encouraged experimentation with iodine transfusions for leukemia. The treatments were not applied in either case.

We find that this may be materially aided for this body, if there will be the use of the blood of the body combined with Iodine - Tincture of; one c.c., - this at the time of the next transfusion given back into the body.

This effect is the lack of the cells becoming activated upon by the iodine - that is a part of the structural activity through the system.

Necessarily, this will require that some tests be made upon activities, or organisms, to get the reaction of same.

But this offers a means, a channel for aid for the conditions. (2208-1)

We find that this may be materially aided for this body, if there will be the use of the blood of the body combined with Iodine - Tincture of; one c.c., - this at the time of the next transfusion given back into the body.

This effect is the lack of the cells becoming activated upon by the iodine - that is a part of the structural activity through the system.

Necessarily, this will require that some tests be made upon activities, or organisms, to get the reaction of same.

But this offers a means, a channel for aid for the conditions.

Ready for questions.

(Q) What percentage of the iodine solution should be given?

(A) As just indicated, this as to the percentage must be tested upon organisms in which blood is traceable to the same character of conditions existent in the organism, so that there may be the proper balance gained. The quantity, you see, would be as indicated.

(Q) How long will it take for recovery?

(A) Of course, this will necessitate more than one injection of same; but there should be seen longer and longer periods of the normal activity, if this is prepared and given as indicated.

It should not require more than a few weeks to see the direct improvement.

(Q) How often should these injections be given?

(A) Again, as indicated, it is necessary that this be tested upon organisms.

(Q) Will the suggestions given here be effective in treating Henry Werner Ketching, who

is also suffering from what the doctors call Leukemia, and is now at the St. Luke's Hospital on Morningside Heights, N. Y.?

(A) These methods will be effective in treating any individual case of such natures. For, the fusion is made of the blood of the INDIVIDUAL, you see, but combined WITH the transfusions.

When these are used, it will be found that there will be the ability to reduce the percentage of such cases more than fifty percent. (2208-1)
Discussion

The vast body of information provided by Edgar Cayce on the causes and treatment of cancer shows remarkable similarity to modern trends in this area. As Cayce suggested, cancer has many causes and can manifest in many forms. Whereas Cayce stated that there are nineteen different forms of cancer, modern researchers recognize over one hundred varieties (The American Institute For Cancer Research, 1999).

As Cayce observed, in many cases, cancer may represent a failure of natural processes. Specifically, cancer can be conceptualized as exaggerated cell replication and proliferation similar to the natural growth process in an embryo. Just like the embryo, cancer goes on to develop into its own entity. Unlike a healthy embryo, the growth of cancer cells does not stop at an appropriate time as determined by genetic constraints. In fact, it is most likely damage to the genetic material that allows the abnormal growth processes in the first place. Clearly, cancer draws upon the vitality of the host system in a parasitic mode.

Although chronic irritation is recognized as a potential cause of cancer by modern science, Edgar Cayce probably placed more emphasis on it as an etiological factor than do modern clinicians. Overexposure to cigarette smoke, sunlight, and other environmental irritants are the best documented sources of chronic irritation in the medical literature. Cayce stated that bruising or the accumulation of wastes are also sources of irritation.

Several alternative medicine approaches echo Cayce’s assertion that poor eliminations resulting in a buildup of toxicity can contribute to cancer. Gerson cited a buildup of toxicity throughout the body as a primary pathophysiological process in cancer. Gerson focused on the supporting the liver and cleansing the system via diet and coffee enemas (Gerson, 1958). Callebout recommends a 6-phase detoxification program including coffee enemas, liver flush, colon cleanse, whole-body purge, skin cleansing, and Russian steam bath (Callebout, 1997). Callebout’s recommendations are similar to many nonspecific Cayce-based therapies that are found in many Cayce readings, including those for cancer. This clinician may have been familiar with Cayce’s work since castor oil compresses are recommended by Callebout as a local treatment for cancer tumors.

Consistent with Cayce's views on prevention, contemporary research strongly supports the idea that many cancers can be prevented. About one-third of the 500,000 cancer deaths that occur in the United States each year are due to dietary factors. If you add to that those that are linked to smoking and alcohol consumption, as many as three-quarters of all cancer deaths are lifestyle-related (The American Institute For Cancer Research, 1999). Strictly on a statistical basis, making some basic lifestyle changes can tremendously decrease the risk of cancer. Although early diagnosis and treatment result in better prognosis, cancer is often fatal.

In contrast to the physical dimension of cancer, Cayce's emphasis on the holistic aspects of cancer does not find as much support in the mainstream cancer literature. Nurses are more likely to include the spiritual dimension of service when providing treatment for cancer patients (Taylor, 2001; Mytko & Knight, 1999; Martsolf, 1997). Alternative practitioners are more likely to utilize mental and spiritual approaches to cancer treatment than allopathic physicians (Diamond et al., 1997).

From a treatment standpoint, Cayce's approach could probably be best classified as complementary and alternative medicine. The integration of conventional and alternative therapeutic modalities is consistent with some current models. Surgery and radiation therapy have come a long way since Cayce's era. Chemotherapy was not an option for Cayce.

Some of Cayce's alternative therapies for the prevention and treatments for cancer are now recognized as effective. In particular, a diet low in meat and fats and high in vegetables and fruits is likely to help prevent cancer (The American Institute For Cancer Research, 1999). The role of diet as a treatment for cancer is more controversial.

Cayce's views on the therapeutic role of oxygenating therapies are similar to some modern alternative approaches. Whereas Cayce prescribed animated, carbon, and medicated ash, some contemporary practitioners utilize hydrogen peroxide and ozone treatments for the same effect (Dormandy, 1988; Ben-Yoseph & Ross, 1994; Altman, 1995; Varro, 1983).

The Cayce information on cancer suggests several hypotheses that can be tested via basic and clinical research. Here are some specific areas for future research.

• Plantain Therapy – Edgar Cayce stated that the juice of the plantain (a common plant), could be used relieve the symptoms of cancer. The plantain may be used externally as a poultice or internally as a tea. Researchers could provide plantain therapy to cancer patients with significant pain and monitor patient reports of symptom severity before and after therapy. The hypothesis is that plantain therapy will decrease symptom severity or frequency.

• Oxygen Therapy – Edgar Cayce advocated therapeutic interventions (such as animated or carbon ash) to increase oxygen levels in cancer patients. Basic research could be conducted to measure levels of oxygen in the system before and after administration of animated or carbon ash. Clinical research could focus on the efficacy of this type of therapy for cancer patients. The hypotheses are (1) that using the animate or carbon ash as Cayce recommended will increase systemic oxygen levels, and (2) that treatment of cancer patients with this techinque will decrease cancer symptoms and produce longer survival time.
Compare Ozone Cancer Treatment, Otto Warburg On The Prime Cause & Prevention of Cancer: Respiration of Oxygen in Normal Body Cells vs. Fermentation of Sugar in Cancer Cells and Dr. Johanna Budwig Diet & Protocol centered on increasing cellular oxygenation.

• Dietary Almonds – Cayce stated that daily almond consumption could reduce the risk of cancer. A study conducted on rats supports this concept (Davis & Iwahashi, 2001). Studies looking at the possible correlation of almond consumption and cancer rates could evaluate the potential of this preventive strategy. The hypothesis is that daily almond consumption will reduce the rate of cancer.
Compare Edgar Cayce's perspective of cancer & Almonds as cancer/tumor preventatives.

• Iodine Therapy for Leukemia – Two Cayce readings recommended experimentation with iodine transfusions in cases of leukemia. Experiments could be conducted using an animal model for leukemia. Perhaps the transgenic mice developed by Honda and Hirai (2001) for leukemia research could be used to test the hypothesis that p210bcr/abl that is detected in almost all chronic myelogenous leukemia could be decreased with iodine transfusions.

Note by Healing Cance Naturally: There is overwhelming evidence that animal models of human disease deliver results which jeopardize progress in medicine, see Cancer Research & Animal Experimentation: an Unholy Union?.

The present study is preliminary and has numerous limitations. Due to the limited resources (time) of the researcher, it is not as comprehensive as the Research Bulletin format that has been used by the Edgar Cayce Foundation for surveying other topics in the Cayce health readings. As stated previously, this study does not seek to determine the validity of the data. Rather, it is intended to identify important themes and research

hypotheses that can be explored in future studies.

Conclusion

The Cayce information represents a valuable resource for researchers, clinicians, and the general public. Current levels of scientific knowledge support many of the basic premises put forth by Cayce with regard to the cause and treatment of cancer. Further research must be done to determine the validity of the information, particularly with regard to clinical efficacy.

Title: NEW RULES OF THIS FORUM

craig-oxley - September 15, 2010 11:02 PM (GMT)

I have found that almost all people do not have the dedication, determination and strength to truly aid their health. They lack discipline and in truth are still stuck within the system bringing them down. They want everything easy or 'do as thou wilt'. If you people want to truly heal yourselves you cannot have this attitude. You cannot do what you want. You have to follow the laws of your being and what your being needs whether you want to or not. You're no different from a carriage which has a manual and a need for certain actions to be taken place. This can be using oil and the right oil to even tire tread depths and pressures. If these things aren't kept on top of correctly then your carriage will simple break down quicker. Your body is much more complex and needs many actions taking place daily. In truth a lot of your day should be spent not working behind a computer or in a factory but maintaining your health.

I have come to the conclusion that most people are not worthy of my time and effort spent upon them. I'm wasting my precious life on this planet sitting in front of a screen typing for periods of time. There are some people who will follow through with information, maybe find their own information after mine. There are those who will set themselves goals and correct their whole lifestyle, diet everything to suit. To heal this must be done or you're just wasting your time. Herbs will merely become puncture outfits no different in theory to drugs but with no or less side effects. You have to be prepared to cut out entire foods to suit your body environment. This is no laughing matter for half hearted actions.

If you want any kind of helpful advice from me from now on you must not waste my time. I do not want questions from others whether friends, family or off other forums. If someone wants information and has no access to a computer but knows you then fair enough. If you think you want to help someone without them really wanting it truly then forget it. People just don't want to be bothered and well if someone can't be bothered to do their own research or asking, then they aren't worth it. People will ask then not do or follow through. As I said most are worthless. If someone posts on a online

board somewhere "how can I combat this?" I don't want to know because they haven't asked me personally and in truth they probably don't want a proper answer. Many people on forums want allopathic informations or just instant quick fix pill popping which doesn't happen in hollistic health. Its all or nothing with me. So again unless I know that being genuinely wants information I'm not going to be replying to their/your question.

I've just realised that I'm just urinating in the ocean and expecting it to rise. It will never happen, just as you'll never pay a credit card off with small monthly payments. I need to focus on just those people of worth and who are doers instead of lame ducks pulling themselves and me down all the time. When one progresses in wisdom and life you do not want to be bought down by those who are a waste of your time. We increase our spiritual vibration as we improve we do not want to slow down or stagnate back to that pathetic being we once were. People will bring you down, hurt you and simply waste your time. I'm through with all that. I've had to break programming installed from birth and even recently. I've had to alter my way of thinking many times to suit what I learn is right. I admit without the past knowledge I wouldn't have the present but I still have to admit it wasn't quite right and the path now is right or closer at least. Therefore I now follow the Chinese system of health and utilise just parts of my old teachings from the likes of Dr Christopher. I try to utilise the good in both to bring about something better. Dedication is needed with Chinese medicine but if you follow it then you will succeed where others fail miserably.

Finally if you want some information and its already answered and you see theres Chinese information presented then please don't ask me again for the same thing. If you find its an older bit of information from me thats more of my old Western teachings then feel free to re-ask the question as I may be able to advise you deeper with my new teachings based on 6000 year old knowledge of great masters of medicine from China. Sorry for this new attitude but I'm just tired of many people at the moment not helping themselves.

View Full Version: Another sufferer of Eczema

Title: Another sufferer of Eczema

TheUnhivedMind - July 18, 2011 11:25 PM (GMT)

QUOTE

Ive been trying to get rid with good foods, coconut oil porridge etc And nothing seems to do the job. To be honest i just want this thing cure forever before i lose my mind over this. Ive seen on your Unhived Mind site, an article about dry roasting white rice to cure eczema, does this work ? and how would one go about doing this. Does it have to be a skillet or can you do it in any pan you chose.

If this doesn't cure Eczema, I think the only option left for me is fasting, although I know I'll worry about doing this even if I have put in the research. What route would you suggest I go? One last question, do you know of any type of rehab that offers to help you with water fasting, or can claim to cure Eczema?

I have one big question to ask you, have you visited a chiropractor yet and had them focus on the mid thoracic region as well as the complete spine/ neck???????? This is very important!

Until you do then you may run around in circle with your condition and especially if you do not understand the condition properly.

Are you still eating fruit? Do you eat meat as all? Do you take a good non-capsule Cod Liver Oil daily?

Have you stopped eating white potatoes, spices and nightshade foods? Have you stopped eating soups?

Have you addressed your Spleen dysfunction? Are you making sure all your food is cooked and warm?

Are you having a good bowel movement per day or more frequent movements to the same amount as a good one and is its moist, long, digested and easy to pass?

I have no idea about the rice article on my site as I never tried it out and it may help but I doubt it.

Are you taking in foods suitable for your condition which are rich in Zinc? You may need to resort into having an intake of Zinc which can be useful for these problems my mother knows of one feminine who has recently stopped her psoriasis with just zinc intake.

Have you ever Liver flushed at all and how many times etc?

Fasting will deplete your organs or energetics and cut off Qi flow to regions of the body as the body gets cold, the Chinese detest fasting and find it foolish. I have no idea of anyone who can help you with a fast directly, this vessel of U. K. has very little of anything useful. Water fasting can deplete your potassium levels so they should be monitored really. I no longer recommend fasts of any kind especially juice and fade fasts which I find are more dangerous than water fasts.

I suggest you strongly stay away from warming foods such as

Apricots
Artichoke
Basil
Beef
Black tea
Butter
Butterfish
Carp
Cayenne
Celery
Cherries
Chestnuts
Chicken
Chili
Cinnamon
Chives
Coconut
Coconut milk
Cod
Coffee
Coriander
Dates
Egg yolk
Fennel
Garlic
Ginger
Goose
Grapes
Green onion
Ham
Lamb
Malt

Mussels
Mustard
Mustard Greens
Nectarine
Oats
Olives
Onions
Oolong tea
Parsley
Peach
Pepper
Pineapple
Pine nut
Plums
Safflower
Shrimp
Soy oil
Sugar, brown
Sweet potato
Turkey
Turmeric
Vinegar
Walnuts
Wine

Look more to taking cooling foods such as:

Abalone
Agar
Banana
Barley
Beer
Beans
Bean curd
Bran
Buckwheat
Cottage cheese
Crab
Cucumber
White Duck (Dark duck is warming as is roasted duck)
Eggplant
Egg, white
Frog's Legs
Gluten
Kelp
Lettuce
Lotus Root
Malt
Mango

Marrow
Melon
Millet
Mulberries
Mung Beans
Mushrooms
Octopus
Oysters
Pears
Peas
Persimmons
Pumpkin
Rabbit
Rock salt
Rhubarb
Seaweed
Sesame oil
Snails
Spirulina
Sugar, cane
Summer squash
Sunflower seeds
Tangerine
Tea, green
Tofu
Tomato
Water Chestnut
Watercress
Watermelon
Wheat
Wheatberries
Wheat germ
White fungus

Also take neutral foods such as these:

Almonds,
Apples
Artichoke,
Jerusalem
Beans, Kidney
Bean sprouts
Beets
Black mushrooms
Blueberries
Cabbage
Carrots
Catfish
Cauliflower

Carob
Cheese
Clams
Corn
Currant
Eel
Figs
Guava
Grits
Honey
Huckleberries
Mackerel
Maple Syrup
Milk
Nutmeg
Okra
Olive Oil
Papaya
Peanuts
Pecans
Perch
Pinto Beans
Pork
Potatoes
Pumpkin Seeds
Quail
Raisin
Rice
Sardines
Sesame seeds
Shark
Shiitake Mushroom
Sugar, white
Strawberries
String bean
Sturgeon
Tapioca
Taro
Turnip
Vanilla
Whitefish
Winter squash
Yam
Yogurt

Remember my friend that the Lungs are the chief of the Skin and Hair and these are balanced by the Heart.

Take natural Aloe Vera and use a herbal formula of Gotu kola, Chrysantemum

flower, Tuckahoe (Poria cocos/Hoelen), Licorice root, Artichoke root and Dandelion root. Ideally this would be better as a decoction but you can take it as an alcoholic tincture also. The later isn't great for Yin problems as alcohol spreads Yang to all twelve meridians.

Make sure you drink enough fluid daily but this fluid must be warmed and not freezing, chilled or cold regardless of weather otherwise you're hurting the Spleen further which will also have a knock-on effect elsewhere. Your body needs Yin Qi as its lacking and your blood is

Do you suffer with being under weight or over weight? Any issues in this region?

TheUnhivedMind - July 23, 2011 04:02 PM (GMT)

QUOTE

I have the eczema on my - Lips (mild)- Temples (mild) Neck - arms (mild) top of my thighs - thumb - calfs - small spot on my ankle.

Where on your lips do you have the eczema is it in the corners and cracking I want to know with the lips. Please let me know from the picture I just knocked up for you (as I only have data on paper not online) where you have issues on

the lips. Can you tell me if your lips a very red, dry, cracked (other than eczema), blue, pale or whatever but your eczema patches I could do with knowing. If you do this I can then tell you where we may need to focus more as well.

If you have a decent digital camera and want to take a photograph of your tongue in the morning before food and drink and further into the day that would be an added bonus. If not then you can partially aid a diagnosis by giving me a description of the colour of the tongue and amount of coating and color of coating etc but photos are much better to work with as I could spot something you won't have thought off and positions on the tongue are important.

A high quality Calendula cream will work nicely topically whilst you work for however long internally. Everyone who's my cream have been happy with its performance except one real miserable know-it-all-nothing vegetarian female who had a flare up for WHATEVER reason (food who knows) for a day and quit instantly like a fool. Most times this cream will not flare you up even before healing but there may be a chance but you try it on just one spot don't you not all first? I hate people like her, you try to help and well sod her ignorant self. If my cousin thinks its great then it must be because he's very hard to please when it comes to perfection as such and his daughter's eczema was improved with this cream although they just moaned about the smell. The smell is perfectly fine and dandy and all these sheep always highlight something whilst they'll lump all sorts of false chemical poisons with smells on them without a moan. I spoke to someone the other day on the phone and they said, "well theres been scare stories about these herbs you know." Do you know what I said back? Well The Worshipful Company of Apothecaries in complete control of the medical establishment and the pharmaceutical companies kill 300,000 U.S. Citizen commercial slaves each year from pharmaceutical poisons what do you think of that? Fools my friend, lambs to the slaughter shall we say.

TheUnhivedMind - July 23, 2011 04:33 PM (GMT)

> **QUOTE**
>
> I was also wondering if you have any herbal tincture to aid with anxiety ?

This would have to be working with the Heart which is probably riddled with too much heat, remembering on this is also the organ of fire in the body the source of heat and fire. If the Kidney's are not balancing this organ then you can make too much heat or if they're over balancing you can be too little thus both will cause a problem which you see as anxiety. Keep your issues coming as much as you can remember as it all aids a better diagnosis and treatment closer to your real problems at the moment.

TheUnhivedMind - July 23, 2011 04:33 PM (GMT)

QUOTE

You say stay away from food such as coconut and oats, but you suggested taking coconut oil with oats for the healing of eczema ? and also you say i should look to foods such as wheat and gluten, but every other site suggests to stay strongly away from these, Isnt gluten a bad idea when someone has eczema ? i have seen a chiropractor , i went for 4 sessions but found it to be of no overall help plus he seemed to charge a great deal for a very short amount of time.

The lists are standard lists my friend for warm, cooling and neutral foods not 100% specific for your condition, thats something you had to figure out for yourself so to speak. Coconut oil some claim is cooling but I believe it to be warming like Coconut meat although it seems the Coconut milk may actually be cooling. Therefore although this worked well with me at the time in the Chinese system for this issue Coconut Oil if warming and I believe it is, then it would not be suitable at least early on in the game. Remember my friend I'm involved in a new knowledge of health far more advanced than the old knowledge and some of my old methods I no longer practice as such. I'm learning like everyone is learning regardless of how much knowledge I have already. Yes I'm fairly well up on everything but I'm not all seeing yet but getting closer but building up to the higher systems and mixing it all in and throwing away the rubbish as such and thus improving on existing systems. I used Coconut oil in oatmeal and it worked very well for me. I used to use Slippery elm and Marshmallow root at one time and that was fine but then another batch of slippery elm niggled the issue. The Spleen must be rebuilt up and NO fruits must be taken including Banana.

Time in a chiropractors office is very quick indeed especially after the first appointment which should be a good talking to you, a look at your body and frame and then treatment taking from between 30-60 minutes in total. From then on further appointments could be as little as 15 minutes. I've gone to a chiropractor a little late so then I could just go straight upstairs to him, I've took my clothes off and been finished and out the door again after paying in less than 15-20 minutes. So don't be harsh on your chiropractor because it doesn't take long to do what they want to do. So you don't believe it aided you at all? I assure you if he'd done you properly then your body will have had help in some direction from any subluxation correction he dealt with whether you see it or not so don't get too down because you didn't see anything for your current visible situation at the moment. How do you know he did a good job? Well we can always think like this and the only way would be to see a different one for an opinion, this is the problem unfortunately. You may find another one and things could be different but thats the game we have to play unfortunately. My first chiropractor was really good and then his replacement when he left was no where near as good. Now theres a new chiropractor there who's worked with the W.W.E Wrestling and P.G.A Tour golf stars so I'd expect him to be good, hopefully like my old Chiropractor. I haven't been for a while for certain reasons but I'm going when I can and I'll ask to see this new guy. Did he tell you what issues you had with your back or where he was

adjusting? Did he do you neck etc? Usually treatments for most people are around five treatments over a period of say 5-10 weeks say. If someone has dodgy bones like elderly then they're looking a 10-15 treatments over a larger span of time. In my case and others this Spine was the big problem with the Eczema and I swear by it. I also notice many people suffering this problem hunch over like I did and do at this moment. I've spoke to a few on email and a couple in person and they look shocked when you mention do you hunch over a lot and doing computing, drives and sitting all the time. Usually if you're having difficulty with Eczema treating its normally this mid thoracic area and as you can imagine until its corrected you'll go around in circles with herbs etc that may aid you well but stop using etc and you end up back in the mess.

If you go the water fasting route I found the only way is to do the very long water fasts but beware when you start eating again you may feel not too well especially if you make a mistake along the way with breaking the fast incorrectly. For example I felt great in one way so light and free like a baby as such but for about five days as I walked straight internally my it felt like my body was twist to the right so I was having to compensate for this when walking. Quite scary and you just pray that you calibrate up back straight, very weird feeling. Now the other guy who dumped on my site for David Icke's claptrap after I helped him with his Psoriasis, he beat me by a few days on his water fast and he had hallucinations after his fast for a while. I did also have a few days where I felt the room spinning by the way. Remember you're taking energy from the organs and you're also putting your body in survival mode, it believes it will die so it goes into this desperate mode. Okay my mother's cat got ill not long back, he fasted for about 4 days and you could smell the Acetone coming off him as you would when you do your fast if you do. Since then he got well and through his illness at the time but now he's suffering hyperthyroid problems and weight loss issues. Do not jump straight into a long water fast, you have to build up slowly like a two day then after a while a three or four day etc etc then it will be easier. I couldn't breath that well on my first two fasts for three days a piece and I would talk like a Darlek from the television show, Doctor Who. All my old bone breaks etc after fasting have never given me a single problem since unlike before fasting so it will do a lot of things but be prepared for certain kickbacks which may alarm you.

All I can say to you from my experience was that Lugol's Iodine was very powerful on the Eczema especially when I teamed it up with the Coconut Oil protocol I used. You need to study Lugol's for yourself and be aware that it too can cause complications if things go wrong but I am a strong believer in its power over eczema at the higher level dosages such as the eventual 8 drops per day of the original strength (many are half strengths today requiring 16 drops but check FIRST). Remember these levels have to be built up over a matter of weeks then held for a couple of months then lowered down slowly over weeks till you end up jut on 2 drops a day regular then. That is another option for you to look into.

QUOTE

> I understand what your saying, but to heal oneself while suffering from the eczema is very hard indeed, the net has so many conflicting info, I always end up forgetting about it. You say taking fruit whilst having eczema is bad for you? Yet another woman who made a site who claims she cured her eczema took a smoothie a morning of fruit. To be honest I do feel dizzy throughout the day, no alarmingly so, but enough to slightly worry me, so i do believe I MIGHT have thyroid problems. With the Lugol's Iodine, is that an ultimate solution for curing thyroid and eczema or just a step towards it? Also, the herbs you suggest are a bit to expensive for me to buy at the moment, is there any cheaper alternative for this? Maybe a simple tea I can buy? I really do appreciate your replies, it means an awful lot to me, for you to take time out answering my questions.

Do you think I do not know the difficulties of this problem? I had it for quite some time until I cured myself of it completely. If you think those herbs are expensive then my friend you'll have to pack it all in right now because any other form of treatment or herbs from elsewhere will be far worse. The Dizziness may be stemming from the heat and possibly wind within the Liver and I told you that Eczema is heat based and we all know how much the liver plays a part in the problem. You have to make sure the blood is efficient enough to decrease the toxins otherwise you suffer. Eczema and other problems do arise through thyroid issues whether the Thyroid is playing up already or not but remember the thyroid is a symptom of Spleen and Kidney at the core and these have to reach a certain low state for the thyroid to bang out, the Liver is a big part of thyroid also remember how it deals with hormones and knowing that when Spleen and Kidney play up you'll have affects from the Liver at some point and much dysfunction of the Liver will create Spleen problems as it balances the Spleen.

I have no simple solution tea bag I'm afraid. You could pick some dandelions from your garden (radiation) which would act as a cooler on your Liver. Do not use Dandelion coffee though as I believe this may be warming due to the process and roasting you see. If you've not done Liver flushing before you may find this of use after a few attempts. I found I could not have an intake of fruit when the gut was damaged and if you think about it then it doesn't make sense too and I improved well without fruit. She may have quite the same full symptoms as you or I had but this is where its all trial and error and annoying I know. If the stomach is having an issue then fruit to me is a no no even though the correct fruits will aid the cooling. If you wanted an herbal tincture combination for this from me you'd be looking at £30 per month + packing of course so yes unfortunately its not cheap to get what we need but pharmaceutical drugs are astro-diamonds private and well herbal medicine is not on the N.H.S. The only other route would be to get a referral from your quack with his head stuck up the backside of The Worshipful Company of Apothecaries to a homeopathic doctor where you may get homeopathic help for free on the N.H.S while it still exists.

> **QUOTE**
>
> You also put on an old article for reverse of eczema on your relief program, a parasite cleanse and the use of Pau D' Arco tea with Calendula and Liver boosters, do you still advise on using these ?

Hi I've been a little busy and tired to so I've been slack yesterday and today so winding up back to how I was soon hopefully. I did at one time use Pau D'Arco tea in between my Slippery Elm/Marshmallow root gruels when I first started a herbal type approach to the eczema problem I had. I also took internally Calendula if I remember correctly. I'll have a think for you shortly on what we can do but it will take a while before your symptoms will be gone but it shall happen and be eased.

View Full Version: Worried about mole

Title: Worried about mole

geetar - August 31, 2010 01:33 PM (GMT)

Hi Craig

My daughter has had a small brown mole on her tummy all of her life but recently it has changed shape. It is now more raised and we are obviously worried.
Ive thought about maybe applying castor oil and baking soda which in the past has been brilliant at removing warts but I know nothing about moles.
Im not letting her have it biopsied as I know that cutting it can make things a thousand times worse!
How do you suggest we might handle this Craig?

All the best

craig-oxley - August 31, 2010 06:03 PM (GMT)

First of all we need to understand what controls everything to do with the skin and this is the Lungs closely connected of course with the Kidneys. Now your wife has an issue with her Lungs which may have been passed onto your daughter through sins of omission and commission. So this means when we deal with the Skin we must be dealing very specifically with the Lungs. This may mean we have an issue with generative force from the Spleen or the sedations force from the Heart which the Lung is also very connected with. This of course could mean that the generative force of the Heart isn't functioning and therefore weakens the generative force from the Spleen. Its not always as simple to say exactly what the problem is in this arena without giving a diagnosis to be exact. Now if theres disturbances with the Lungs then this will eventually have a knock on effect when sedating the Liver and of course lack of generative force for the Kidneys. For now lets just think of it as a Lung problem.

I would strongly suggest she starts taking stingy Nettle leaf ideally fresh

from the garden and made into a soup. This is very potent medicine when done this way and will nourish the body whilst highly utilising the lymphatic system. Nettle also addresses the Lungs and most organs, its a serious super food and medicine. I'd also highly recommend the use of Chrysanthemum flower 2-5x daily. This too addresses both the Lymph and the Lungs. This herb and advise would also be wise to utilise for your wife regular for her lungs. Also for your wife I'd like to promote Honeysuckle when she's having difficulties during flu episodes etc. Always keep Chrysanthemum flower and Honeysuckle in your house at all times especially with coming pandemic attacks of the future if you already have Lungs difficulty. You can find this herb down at a Chinese supermarket and it costs peanuts although Honeysuckle is around double the price of Chrysanthemum as its a king on the Lungs during pneumonia etc. Start to learn how to decoct herbs into a strong tea and this is how you utilise these herbs which I use but I add Licorice root to my preparations which is wonderful for the Lung but not always as simple as adding this when someone has blood pressure issues whether stemming from the Heart or the Kidneys. I know theres a good Chinese store near you. So what we've done so far is activate the Lungs more and get that all important lymph cleansing and moving around. I'd also advise a good walk daily or some rebounding for a few minutes a day to help push that lymph fluid around. I'd also be utilising Hawthorn berry internally daily which you can pick yourself as I'm sure you know or you can buy the Haw (Shan Zha) from the Chinese store for peanuts for 200+ grams. This too works on the lymph as well as the digestive system tied to the Spleen (immunity) and the Heart. Remember the lymph system is larger than your blood system but without the pump unlike the blood. So you need to push the system around in order to cleanse. The virgin Castor oil you speak about works very much by drawing lymph fluid to the area and then it attacks by utilising the immune system which sees Castor oil as a toxin thus creating a massive immune response where ever its placed.

Topically I'd utilise a strong decocted fomentation twice daily for three hours each time of Red Clover. In between this I'd use some active UMF10+ or higher certified Manuka honey. Finally I'd utilise virgin Castor oil. Any spare time in between those I'd be hitting this area hard with Ozone insufflation utilising a small funnel with any old simple water Ozone generator. Just adapt a small funnel to some spare pipework for the particular generator and place a small hole in the tapering funnel piece about 10mm (1cm) from the open lip which would touch the skin so to speak. This is so theres no back pressure and allows smooth flowing ozone output and of course no damage to the machine. You may wish to study up on fresh broccoli juice topically too. Fresh gel from the Aloe Vera plant is also a very useful topical treatment but I stress straight from the plant. Much of the so-called Aloe-Vera gels sold in stores are dire and very poisonous if you look at the endless chemistry list of ingredients, its trash and gives real Aloe-Vera a bad name. She may wish to look into putting Lugol's Iodine topically on the area for a period of time daily and I'm quite

sure you're aware of the use of Lugol's and how it works against Cancer both topically and internally. Finally theres always the poultice made up of horsetail which I have plenty growing in my garden, its usually everywhere classed again as a horrible weed but we know different about weeds don't we?

I'd also advice the usage of the Reishi mushroom known as Ling Zhi which can be expensive but get this in tablet supplemental form only. Most of the whole food version in the stores comes from in door man farming rather than the Wild which is the most potent medicine. Much of the supplemental forms come from the Wild variety for medicinal reasons. This is also known as Ganoderma by the way and I take this twice daily and its powerful if you have a quality product. This also boosts the entire system whilst giving you excellent immunity especially if you get the Splenic function working which is key to immunity which is also one of the keys of fighting cancers as long as their exposed via proteolytic enzymatic reactions which stem from the Pancreas which may need addressing tied closely to the Liver and Kidney function (Son and Mother). For those interested a direct herb for the Pancreas itself is Mulberry. So when we utilise Reishi mushroom, Nettle leaf and Chrysanthemum flower you can rest assured the Liver is getting a good addressing which is vital just like with the Spleen. Much of these problems stem from blood stasis or what you may call stagnation. Hawthorn is the king of herbs for food stagnation and the digestive system tied closely to that Spleen again. If we want to really top off the Liver healing then I'd suggest the use of the amazing Artichoke and if this isn't available then the Chinese equivalent of Rehmannia (Chinese Foxglove). I've utilised both separately and right now I'm on Rehmannia. To aid further the Liver and the Kidney function we would add the wonderful Goji berry which can be found much cheaper in Chinese stores rather than health food stores or normal supermarkets which rip people off.

I would advise her to expose her stomach to the Sunlight regular but not so it burns, not that its likely to here in the U.K. She should make sure her body is more exposed to Sunlight in order to try to get some cholecalciferol production. I do not advise people buy into this Vitamin D supplementation craze at the moment as I believe the versions sold are poisons to the body and I think also Mercola exposed issues with rat poison and those Vitamin D3s promoted daily. I understand why Mike Adams rams on all day long about Vitamin D but unfortunately we must never take mans synthetic poisons and well if we can't get our energetic foods naturally then its still better not to take poisonous forms which may help with one symptom but may give you more different symptoms later on or worse symptoms.

Dr Christopher always promoted Red Clover for any kind of Cancer and as above I suggested this topically but internally this is fine. You might want to study his work on this herb and Cancer and how most anti-Cancer doctors have utilised this just as they've utilised Lugol's Iodine. I'd also suggest she start taking daily Mung beans either sprouted, cooked or just the decocted

water as I've highlighted against Cancer a while ago. These will also very much aid the Liver and bring cooling to the system as well as fight Cancer for you. Another great food which should be taken whilst it also removes the chemicals and metals from the body very well indeed and this is important. She should also eat daily 6-12 Red Chinese dates (also known as Jujube/Ziziphus or Da Zao). These will really aid the Spleen function which is so important. Another really good herb for both Spleen and immunity as well as bringing in Qi to the body is Astragalus known in China as Huang Qi which is very much like Echinacea but the good thing about this is that we can continue to use it for very long periods of time without its power lowering unlike the Echinacea. Echinaceas power lasts in truth fourteen days and no longer then it starts to weaken. Stores like Holland and Barrett will lie and claim fifty six days, this is so you'll keep buying more of their stock. Finally a really good herb for removing skin tags (moles/warts) whilst looking after the Skin is the very cooling and Spleen aiding, Job's Tear seed (semen Coix/Yi Yi Ren) what you do with this is mix it around 50/50 with normal rice and cook up as normal and eat. As we expect this herb also aids Lungs function, are you shocked at what I've explained to you? All dots are connected and things become much simpler to see when light is shone upon darkness. Finally she should be eating daily black Sesame seed (Hei Zhi Ma) between 2-6 teaspoons a day ideally roasted by itself. This can be mixed with oats after and in China they add some Walnuts to the mix.

craig-oxley - August 31, 2010 06:51 PM (GMT)

When you was born did God wrap you in clothing? Clothing is important during times of cold in order to protect your Qi and keep the Qi flowing around the body. When one is wearing clothing then these clothes must allow the body to breath and therefore must be natural fibers, in other words Cotton. We must not be wearing synthetic products which should really be lubricating the Earth's tectonic plates as oil was designed to do by

God. Oil is polluting this World but I do agree it has an importance for civilisation at this current time whilst we're not privy to all the secret vacuum energy type devices which are censored in order to keep control, greed and power. Do you realise that the majority of your breathing is done by your skin and not your mouth and Lungs?

geetar - September 1, 2010 11:56 PM (GMT)

Hey thanks Craig, thats brill! Ive read it through a few times and made some notes plus a shopping list. I'll get a print out tomorrow too, so that I can learn and refer from it. Phew, there's plenty of stuff to research which is great, and Im very interested in the way that you combine the Chinese knowledge with your regular healing approach! Yeah, the weak lungs run in the family from my wifes Mother through to our Daughters but I would never guess in a million years that there is a link to the skin!

Should I start the topical applications at the same time as the ingested herbs and should this be with a poultice?

Also, whats the best way to cook the black sesame seeds and the Mung beans?

Should I start her on Lugols in water also, as Ive noticed that you dont really recommend taking it internally anymore due to it not being assimilated by the body?

Im still a bit worried about disturbing the mole so to speak with the topical applications but then again whats the alternative!!

Yeah, there's a Chinese shop not far from us so Ill be down there in the morning..

Many many thanks for your help Craig, we are all so pleased that we have you on our side. Ill let you know how things progress.

All the best.

:) :)

craig-oxley - September 2, 2010 04:26 PM (GMT)

The Lungs are in fact connected to both the hair and the skin and control

the nose and large intestines. The Lungs also balance the Liver functioning so if this part of the functioning is impaired then the Kidneys may have difficulty balancing the Heart due to further generative force from the Liver.

Yes all the treatments can be done as the same time throughout the day. You can use either poultices (Slippery elm based or similar) or fomentations. This gets the herb direct to the area. A little heat to the area helps with absorption. Herbs work very well through the skin.

Black Sesame seeds should ideally be roasted by themselves in a pan on full flame for two minutes from the start of them popping. You'll notice the smell quickly rise and when you take them off the stove you'll noticed the oil. Remember they have an oil content of around fifty five percent. Let them cool then eat. Roasting them is the best method for making them highly medicinal for the Kidneys and enriching Yin in the body. These should be taken daily for life. Start with two teaspoons a day and progress to six. This is one of the great tools for improving the hair as this is tied to both the Lungs and Kidneys. Beware that you may mess up your favourite frying pan so choose an old one to use. Also use a splatter cover like what you can buy for a pound from Poundland as these work well. Ventilate your Kitchen as it will smoke somewhat before you take it off the stove to cool. I let mine cool in the back porch with the door open for five minutes.

I personally sprout Mung beans (Lu dou) which takes four days and I keep a buffer system going so I have Mung bean sprouts continuously. These are very easy to sprout compared to say the Aduki beans which are much slower. For cancer sufferers I would push the boiling of Mung beans as I highlighted in my article and the drinking of the water at the dosage provided. Of course people can also eat the bean too. Check out the article I did.

Utilise Lugol's Iodine topically. If she wants to understand Lugol's Iodine more after studing it and wishes to try that product internally its her choice. I'm speaking of it for topical application to the area. Of course you know its power against Cancers as highlighted by Harry Hoxsey and so many others. Again all the old formulas for reversal of Cancer seemed to contain Red Clover and Lugol's Iodine or a strong natural Iodine supplier like Wakame etc. I know how good Iodine is at healing parts of the body.

Sometimes these problems may look like their getting worse but in fact their getting hit by the system and will eventually be corrected. An internal program as well as topical is a must in order to try to correct some wrongs otherwise problems arise again and again whether one month, two years or ten. We must keep on top of the body's needs regular like the Chinese believe. If you look at the soups which Chinese cook say their chicken or meat within you'd be surprised the power of it as a medicine. They'll have Huang Qi, Da Zao, Dang Gui, Goji and all sorts mixed in. This is why when anyone spouts off to me oh well Chinese eat meat and they do well I laugh.

First of all not all Chinese eat meat but most that do eat small portions and they take medicinal foods which allow the body the accept this food and deal with it more efficiently. As I've said before in the West we suffer a lot from filth from mucus foods. In China they live off rice which is one of the worse mucus foods. Do they suffer as bad as we? This is because their Spleen function is much better and its the Spleen which deals with the mucus/phlegm. So again if your wife suffers with the Lungs and has phelgm (mucus) this is why, her Spleen is dysfunction also and its the Spleen which provides generative force to the Lungs to function.

You'll enjoy the Chinese supermarkets as theres a whole host of things you can get you've never heard of. You do need help such as what I've provided though. The dates I mentioned can be called Da Zao/Ziziphus/Jujube/ Chinese Red Dates. Mung beans can simply be called Green Beans or Lu dou in some of these stores. If you give them the names I've provided for you then they will be able to help you. I would also suggest you keep a bottle of Woodlock (Wong To Yick) in your home from the store too. This is most excellent for pains and I suggest you study up on it. Get the bottle which is boxed with the the three masculine figures on the back and one of the masculine figures on the green bottle label. Usually comes in the larger 50ml size. This is for topical use only. Click the link provided to see the Woodlock I'm recommending; http://www.scarfamilyditdajow.com/images/Wood_Lock_Oil.JPG

geetar - September 3, 2010 08:07 AM (GMT)

Yeah, I follow that cheers Craig. I think Ill buy a pan especially for the Black sesame seeds. Sounds like a small wok might do the trick, also be handy for other things.

I forget to buy some muslim for the poultices, will get that today.

Ok, boiling the Mung beans sounds simple enough, I must check out your article you mention.

Woodlock sounds very interesting I must check it out cheers. Id imagine this is applied directly to the chest?

Many thanks again Craig, Ill get cracking then!

Al the best

craig-oxley - September 3, 2010 12:31 PM (GMT)

Just a simple shallow frying pan will do my friend, thats all I use and it

works great but again get a splatter cover as these seeds pop out the pan otherwise. I would advise you to keep an eye on the pan when you're doing your two minutes start from the first lot of popping activity. If the heat is way too high then you may get some flames with the splatter on top compressing the heat in more. I had no problem with one pan without a splatter (not advised) but with the splatter on I had to watch it due to it flaming. When I use a thicker frying pan with the splatter I have no problems. So just see what you can and can't get away with before just walking away for minutes just in case. If you do get any flames don't panic as the flames aren't that large anyhow as we're only dealing with a maximum six teaspoons. What goes up if at all is simply the oil! Just turn the stove off and usually thats enough to stop it otherwise it burns down quick enough due to low content of oil. Don't panic and throw wet tea towels on it like chip pan fires which are far more dangerous by far. This usually never happens but I warn you as it can be a possibility.

Woodlock isn't necessarily for the Lungs its for all types of pain. Ideally you just rub a very small amount in the area paining you and gently apply pressures for around ten minutes for full effect. Woodlock becomes even greater when one knows the meridian system and uses it on certain points for certain regions you wouldn't have even thought of. An example is like Ki3, Ki6 on the ankle for the inner ear for instance. Under no circumstances can this be taken internally, its an external topical application medicine only.

Slippery Elm powder makes a good poultice base as it goes rock solid and sticks well.

http://z10.invisionfree.com/The_Unhived_Mi...showtopic=31354

geetar - September 5, 2010 11:40 AM (GMT)

Cheers for the links Craig.. wow, the info on the mung bean is very interesting! I bought a packet yesterday and have the distilled water ready, so am gonna boil up the beans today. The guy in the Chinese shop was very helpful. In fact when I asked him for some Woodlock oil he looked at me with a bemused smile and said "how did I know about it? " I told him that a friend of mine had studied Chinese natural healing and had reccomended them lol! His English isnt brilliant but he showed me how to apply it and also showed me a couple of pressure points to help with pain. He recommended a plant that can be boiled aswell called chow cho or something. Im going back there tomorrow to get some more stuff so Ill write down the name of the plant. You probably know it already Craig. I forgot the red dates also tut!

All the best.

craig-oxley - September 5, 2010 12:05 PM (GMT)

How could you forget the wonderful Da Zao dates? Shocking! Did you get the black Sesame seeds (Hei Zhi Ma)? I'm glad you had some more help with the Woodlock and its a very popular product because it works. Another similar is Tiger Balm but this is more for relaxing than pain like Woodlock. People do still use Tiger Balm for some pains. Woodlock is neutral on the body which is excellent where as Tiger Balm is cooling and wouldn't be as suitable for someone with Yang deficiency. Woodlock from a Chinese Doctor would cost you around £15-16 a shot but you should be able to pick it up for around £6 from a big Chinese supermarket. If you tell me the name of the plant I should be able to produce its effects and advise when and where it should be taken. Not all foods and herbs are suitable for everyone as we need to really know the internal environment of the individual first. Foods and herbs which are neutral are the best as usually they can be taken without too much fuss. Two good examples of neutrality is Licorice root and Reishi mushroom (Ling Zhi/Ganoderma).

geetar - November 6, 2010 08:21 AM (GMT)

Hi Craig

A quick update. After a few weeks of treating the mole its looking worse now, but Im thinking this might be herxheimer?
My Daughter is taking Red Clover tincture x3 per day. She has 20 drops in water and also applys the Red Clover directly on to the mole.
0nce a day she applys a drop of Lugols on to the mole, plus she has a drop in glass of water.
She applys Manuka honey x3 per day and lastly, Castor oil in the evening.
She's taking Mung bean juice, Red Dates and Black strap molasses daily.

Is this routine ok Craig?

Cheers

geetar - November 16, 2010 10:15 PM (GMT)

Hi Craig.

Good news. My daughter showed me the mole today and the extra growth she had on it has now gone and the mole is flat rather ran raised! Its also turned a lighter shade of brown rather than dark. This is a great relief for us all Im glad to say and my daughter sends you her thanks Craig. :)
Do you think she should keep up the treatment protocol a while longer to be on the safe

side?

Many thanks again.

TheUnhivedMind - November 16, 2010 11:12 PM (GMT)

That is good news and yes protocols are to continue for much longer. I'll write more shortly and answer your questions soon had lacking time.

geetar - July 11, 2011 02:59 PM (GMT)

Hi Craig

My Daughter showed me her mole today and is worried because its become raised and changed shape slightly! She said she wants to show the Doctor but I said to her that they'll cut it to biopsy it which could make matters worse. She already knows this but is still worried and wants to know if its dangerous! I said to her I would ask you your opinion. She said it seems worse since cupping with the ozone machine and she said she's still using the Lugols, Manuka Honey and the Red Clover???

Cheers

TheUnhivedMind - July 11, 2011 04:24 PM (GMT)

The choice is entirely hers with how she makes her mind up. This is the programmed fear thats within most people today. When dealing with problems like this with some of the methods like we are talking about then a raising further or increasing of tumor etc may well occur. This happens with people using the herbal eyewash formulas especially with the Cayenne present. They get their eyes swelling and panic that its either the eye formula hurting them or they have eye problems getting worse etc through fear. What it really was is simply a large release of toxins and filth usually a little to larger than usual thus resulting in swollen eyes or puss exiting eyes. This is of course part of the healing and once this has occurred then serious healing can take place as the localized constipation has been removed which causes the eye difficulties in the first place. Its the same principle here.

If you do a study on people dealing with Cancer my friend you'll hear and read numerous reports of their tumors expanding right before they started to clear away. This has frightened many a being off who is mentally weak and not well up on true healing. This is why everyone should become well schooled in real health so they can be free of fear and have true understanding in what they're trying to do and hollistic health. Luckily I've broken all previous programming and do not have the fear and I realize that using doctors is a ticket usually to a wooden box a lot sooner. We're all

going to die my friend and this starts as soon as you're formed by the trophoblast cells. We have to accept this and realize its not a worry and when everyone can do this including family then everything is fine. We all come from a frequency level which is actually perfect with zero chaos which some would term God as such. Only here on this plane of existence is there a chaos factor and in truth it is not chaos.

Study what happened to Dr Lorraine Day's tumors and health right before she reversed Cancer and how people thought she was about to die but she still wouldn't let them commit her to a wooden box by going the doctor route. Then all of a sudden wham she reversed her breast tumor the size of a grapefruit and is now well and happy teaching knowledge on the subject. So if it were me? I'd not be bothered by it and I'd be excited by what I'm seeing and some may say taking the risk. Your daughter is your daughter and has her own mind, wishes and desires or shall we say, believes she does. If she utilizes a doctor they will only look at what they believe to be the symptom at hand and supposedly deal (mask) that symptom. They may make a totally unrealistic diagnosis and spend lots of NHS money on procedures and pharmaceuticals as well which will then have a further knock on effect on the health and eventually leading to a wooden box. Of course these are my thoughts and the thoughts of many others who understand real healing. If she wants to go to a doctor real bad then I first of all would suggest you find a quality professional Chinese doctor locally or nearby and have their opinion on the situation before rushing to the inquisition clinic run by The Worshipful Company of Apothecaries.

If she's worrying a lot now about her mole then this worry will start to affect her Spleen which powers her Lungs and balances her Kidneys. Remember that skin issues stem from the Lungs and Kidney dysfunctions. Note your wife's issues with her Lung dysfunction! If theres fear in her emotions then she'll also be hindering the Kidneys direct and of course any problems with the Kidneys/Spleen will affect the Liver whilst we remember that the Lungs balance the Liver and the Liver balances the Spleen. See how any problems in these regions have a big knock on effect? So emotions have to be altered and calmed.

Ozone is a very powerful method of healing and is a great aid in cancerous work when combined with other treatments at the same time. Ozone insufflation is a powerful treatment whether it be by using a funnel with the small back pressure hole or by using bagging. If she's seen a big difference since doing the Ozone it shows the Ozone is having an affect which I'd personally see as a positive thing but again her mind is her own.

You say she has Red Clover, but how do you know the quality? I can put a label on the weakest of Red Clover and claim all sorts and you wouldn't know the quality of the product would you? She may have a good quality product but I don't know. Just saying, don't panic on quality of your herbs. So when we want to look at skin herbs that are dissolving and good for this

type of work we're looking at Thuja, black Walnut, Red Clover and Soapwort root.

She needs to be doing a whole protocol dealing with her Kidneys, Liver, Lungs and Spleen. She needs to be doing hydrotherapy on the area using hot/cold for 2-3 minutes then switches to the other for the same at least 7 times per session three times a day. Theres the heated Castor oil packs. She should be ingesting one tablespoon daily of a good Cod Liver Oil which has the correct ratio of Vitamin A to D (5:1 or max 10:1) such as the Holland & Barrett pure brand in the blue or red box, go for the red box if she wants it. She should increase her vitamin E level through foods like Avacado, Olives or Wheatgerm Oil etc. Don't forget to research the black slave ointments which The Worshipful Company of Apothecaries fear and always try to ban. Flax seed oil is good topically, especially when mixed with a resin of Podophyllum to cut the cell division. Liver work is always important using herb combinations such as Artichoke root, Milk Thistle, Boldo and Dandelion leaf. Remember herbs like Burdock root, Poke root, Blue Flag, Clivers, Echinacea, Rosehip, Butterbar, Greater Celandine and Mistletoe. Also have her go to a chiropractor regular making sure they focus on the thoracic region at T3/4/5/8/9/10/11 that should ensure theres no problems with nerve impulses to regions of importance and of course the chiropractor will usually work on all of the spine/neck after a diagnosis.

geetar - July 11, 2011 08:34 PM (GMT)

Many thanks Craig. My Daughter has read your recomendations and is optimistic again. She's just been on the ozone funneling and is feeling good. I'll take a trip to the chinese clinic tomorow and see what they have to say. My Daughter has been sitting in the sun today as she understands the goodness the sun rays give and wont go near sunblock anymore! I need to read your post a few more times to absorb the info and make a few notes and I'll keep you posted as to her progress.

Many thanks again for your help.

TheUnhivedMind - July 11, 2011 09:23 PM (GMT)

Remember natural cholesterol levels with the Sun and a vitamin A source. One should not produce Vitamin D without a backup of Vitamin A. Good old Cod Liver oil will provide the needed levels. Statin drugs of sorcery, washing of the skin and not eating saturated fat will lower Vitamin D production from the Sun as well as your fertility, just as the Club of Rome desires.

geetar - July 12, 2011 09:58 AM (GMT)

Thanks Craig. We're out of Cod Liver oil indoors so will add it to my list. Cheers

TheUnhivedMind - July 12, 2011 04:39 PM (GMT)

One tablespoon daily for each of the family members. For your dog you'll drop the dosages in accordance with the weight of the dog so if 50 pounds this is a third of 150 therefore a third of a tablespoon or less of oil would be fine. Another excellent source of vitamin D is Lard but make sure its pure Lard as many sold today are again frauds like the false butters which are mostly margarine poisons in disguise. This is why its easier to demonize animal products its not that the animal product is bad its the devious disguising of poisons as animal products. Remembering the agenda is to remove everyone off animal products which then lowers health and most definitely lowers fertility as desired. With the Cod Liver Oil you'll be getting the much needed Vitamin A and Vitamin D in the correct ratios. By the way if you want a good herb for the Lung then check out Cordyceps Sinesis. If you want to protect yourself from the radiation you'll need to use Ling Zhi known as Reishi mushroom.

geetar - July 14, 2011 11:16 AM (GMT)

Cheers Craig. I guess it would be fine to give a little cod liver oil to our cats? I tend to go for kerrygold butter as I heard this is the best of a bad bunch!
The Cordyceps Sinesis sounds very interesting, sounds like it would benefit the whole family! Yeah, def need to get some Reishi Mushrooms!!

Thanks again

TheUnhivedMind - July 14, 2011 12:39 PM (GMT)

The cats can take the Cod Liver Oil but only about a quarter of a teaspoon just twice a week and they won't like it I assure you. I recommend you feed them Liver twice a week instead and try to include in their diet proper Chicken and meats along with some fish. Keep them away from canned poisons as much as possible its not real food. My friend you'll first of all notice that Kerrygold is unsalted which should give you a clue that they're using some poison to preserve the butter. The second thing you should notice is that its lost a quarter of its fat and thus is not fit for man or beast as its been tampered with and no longer properly recognized in the body. There is absolutely nothing wrong with animal products if they're as nature intended and whole. Once they're played with then forget it as you can also be sure theres poisons mixed in with them such as vegetable oils in butter. When using milk use only full fat milk and guess what else you need to look out for as well as pasteurization? Yes its homogenisation where they play with the fat and this damages the milk and again is not fit for man or beast if the truth is known. So a good sign to always look for with butter is to look for a salted variety for starters. You'll find these on the internet from organic

suppliers do a search. I think Riverfood still do a quality butter or did. Lets remember that butter is very good for the adrenal glands.

http://www.riverford.co.uk/sacrewell/shop/...rd_butter_250g/

geetar - July 18, 2011 07:47 PM (GMT)

Cheers for the info Craig. Def gonna try the Riverford butter and might even try the organic beer! :)

TheUnhivedMind - July 19, 2011 12:40 AM (GMT)

Alcohol is only of use to people when they have a Yang deficiency and then in moderation. This is the trouble with alcohol is that it is warming and anything over I think its 15% is not natural in nature. The alcohol produces heat in every one of the twelve meridians you have so if someone is suffering Eczema for instance then ideally you'd go for decoctions over alcoholic tinctures.

View Full Version: I always sweat?

Title: I always sweat?

14april2000 - July 12, 2011 04:54 PM (GMT)

Is it normal?

TheUnhivedMind - July 12, 2011 10:41 PM (GMT)

No this is absolutely not normal my friend it shows that you have some dysfunctions most likely in your Lung and Heart. I would need more details to tell you even more detail on your personal circumstances. What happens when you do some exercise and the body heats up? You sweat right? Well think about it just for a minute and you'll cotton on that your body is producing heat for some reason constantly. We need to work out the exact areas in trouble then deal with them. I would recommend you use for now the Mung bean water I've highlighted for Cancer in the past. I would also recommend you use Artichoke Root, Chrysanthemum flower and Melissa. These are cooling herbs to the body. For your Heart you'd be looking at Hawthorn berry, Flower pollen and Reishi mushroom. You've heard me speak about Wei Qi before right? Well not only does it protect you from so-called infections entering the body but it also is tied to the regulation of the outside of the body. This Wei Qi is generated by the Lung function and if this weakens this will lead to evils getting through the weak protection. It doesn't surprise me that the Heart is involved with all this when you understand that it controls the balance of the Lung. The herbs I've mentioned are just something you'd be looking towards but I need more detail for more direct herbs as such perfectly for you.

Whilst you're suffering this I would highly suggest you start making sure you become hydrated and aware of the information by Dr Fereydoon Batmanghelidj. You're loosing fluid as sweat and until this is corrected at the core then this loss must be replaced. Where do you sweat exactly? I need to know all the spots and which may be more than others. Does your sweat have a powerful odor and a yellow color? Do you itch from it at all? You also may need to use a chiropractor but again I need more info to give you an overall better diagnosis. When you wake up in the morning notice the color of your tongue and throughout the day and any coating color.

Look especially for redness, dryness and cracks and yellow coatings. What is your weight like? Any problems with loosing weight and having problems putting it back on? Do you suffer energy problems like fatigue? What is the quality of your hair like? Make sure you do not use chemical deodorants as these are highly poisonous and you end up in your own concentration camp chamber if you do. I would suggest you use crystal rock deodorants until you correct the problem.

View Full Version: Cancer worries

Title: Cancer worries

TheUnhivedMind - July 12, 2011 04:26 PM (GMT)

QUOTE

ATTENTION BRETHREN IN CHRIST JESUS... I HAVE A PRAYER REQUEST ON BEHALF OF MY FUTURE WIFE...

Please pray to God our Father in the name of Jesus that He may grant my future wife strength, wisdom and guidance tomorrow as she seeks to confirm cancer like symptoms being demonstrated by her body as of late.

Thank you! The effectual fervent prayer of a righteous man availeth much. James 5:16 KJV

Hopefully everything will be fine and it will be a false alarm.

My advise to you would be to now cut back on Jesuit research and focus like I did a lot more on health which is your first importance of all. Remember knowing Jesuits are running things will do nothing to protect your health and those you know around you. You need a balance if not more on health. Remember we battle as keyboard warriors against the Order but we're being bombarded daily by the agenda at the ground level. One of the major attacks on us right now is via our health by the Knights of Malta via their, The Worshipful Company of Apothecaries and of course the butchers at The Worshipful Company of Barbers who both feed off the misery caused by their minions and mostly from The Worshipful Company of Fuellers commanding The Pentagon, The Department of Defense and The Department of Energy where today we're now getting a constant attack on our body's from radiation. The first big attack in this form was with Chernobyl in 1986 then we had Operation Desert Storm followed on by the Bosnian war and now the current Knight of Malta crusade in the Middle East under the command of the Holy Roman Emperor, King Juan Carlos of Spain, the Protector of the Holy Sites of the Latin Kingdom of Jerusalem.

Finally of course we have The Worshipful Company of Fuellers attack on Fukushima, Japan of March 11th 2011 using the U.S. Navy to do the dirty

deed either using a nuclear device in the sea bed or emulating it somehow via the ionospheric weaponry tied to the Percy family through The Book Keeper, Barbara Bush the handler of the Icepick known as Knight of Malta, George H.W. Bush of the Deutsche Verteidigungs Dienst commanding still to this day the Central Intelligence Agency headquartered at the George Bush Center for Intelligence in Langley, Virginia. Not forgetting how the current Director for Counterterrorism, Audrey Tomason wished for 'humane' depopulation on a large scale via radiation poisoning. When one looks at the symptoms of illness today we witness radiation sickness especially when you understand the Splenic, Liver and Kidney dysfunction occurring. Yes the food and diet is playing as massive role but this radiation agenda is very well hidden especially as we cannot see, taste or touch it. We can even get no Geiger counter readings and thus still inhale hot radioactive particles.

So you have to make yourself aware of my Mung bean water protocol which is excellent for use against Cancer and a whole host of poison/toxin originating illness. You have to make yourself aware of filth in the body and the work of the most excellent, William Beaumont and forget entirely the work of Roman Catholic fraud, Louis Pasteur. We need the body free from filth as William highlighted, this is the source of most illness today and radiation is filth. What Beaumont didn't speak about was the importance of the Spleen function when dealing with filth and this is an area under large scale attack. The Chinese know all too well the power of the Spleen and its importance and believe me its key to more than the Liver I believe although without the Liver there would be no balance to the Spleen. But on the other hand without no Lung there would be no balance to the Liver to balance the Spleen and without the Spleen there would be no working Lung in the first place. Anyway all organs are of importance and of unique function to providing hopefully balance in the system. She should go through a nice deep but controlled cleanse for a while to remove all filth quickly but safely out. Once this is achieved then a rebuilding of the body is needed in accordance with the rules of the Chinese health system focusing on the Spleen, Liver, Lung, Heart and Kidney dysfunctions.

Old curers of Cancer were Dr John Ray Christopher, Dr Max Gerson, Dr Richard Schulze, Dr William Donald Kelley. You may wish to study Dr John Beard of Scotland and his Trophoblast knowledge which is of much importance. When you do you'll understand more on what some of the many roles of the Pancreas are and how important this organ is. Remembering that Pancreatic cancer is one of the most serious there is and you'll understand why after following Beard's knowledge. Now after doing this, once again you'll understand the importance of the Spleen which controls the Pancreas, Stomach and your digestion which as you can imagine is amazingly important. Unfortunately when the Spleen is at certain low levels of dysfunction this can affect how we have to treat our problem as some foods may not be able to be used until the Spleen is at a higher level of function. So for instance someone with a low digestion may have

trouble with taking Cod Liver Oil and suffer the Western form of wind within the system to the point of it being constant and unbearable.

One has no need to worry about Cancer when they become schooled about it and understand the body correctly both from a Western herbalist perspective but more importantly a Traditional Chinese Medicine perspective. If you can combine the two using the good side of Western herbalism you should get a good synergy and increased speed of healing than just using the one if executed correctly. Something I try to do these days. So for instance with Cancer I don't believe that TCM is as hardcore as it should be and I believe we need a deep cleanse then a build up more in like with TCM even if the initial stages of the cleanse breaks some of the energetic rules of Chinese medicine, as long as we correct these quickly afterwards.

One must also make sure emotions are relaxed and free from Chaos because with the body it will not bring Order like a secret society would do. If theres fear this will damage the Kidney function further and if theres worry this will damage the Spleen function both something we just don't want to happen and why good thoughts and positive affirmations are needed. If one prays this can aid the body via the left hemisphere of the brain working on the physical reality but you need to use meditation to utilise the right hemisphere of the brain to work on the non physical and therefore the spirit. If you really want to aid yourself spiritually then you'll use some visualization work via the regulator of both the left and right hemispheres being the Pineal gland in the center of the skull not the front of the head. Access this region using the Royal blue colour before working in this region. I suggest colour therapy when working on the spirit such as the green colour helping with oxygenation and more tied to the heart Chakra region. Certain essential oils come in handy when utilising this work especially Frankincense when dealing with the Pineal gland.

Title: Tameness & bad memory.

Cold - June 20, 2011 08:22 PM (GMT)

I feel so lazy, don't have the ambition to do anything at all. Just wanna lie down.
I'm also suffering from very bad memory.

Any help is appreciated.

Thank you.

TheUnhivedMind - June 20, 2011 09:52 PM (GMT)

Sounds like you may be suffering with a thyroid symptom. Do you suffer a problem with concentrating on things like the computer scene and have like a brain fog? I can tell you that you have Kidney dysfunction right now from what you've given me. Also remember Thyroid problems stem from Kidney and Spleen dysfunction too. Do you feel cold or always want the heating on in your home? What do you drink and eat? I'd be looking at concentrating on Liver, Spleen and Kidney work including the Kidney glands known as adrenals. Herbs can heal you but you have to have proper foods and especially natural minerals. Let me know more and I can give you more specific herbal medicine knowledge. Whats your emotional state like? Do you get angry easy or do your worry or any sadness etc think about it carefully. Any parts of your body got problems of any sort whether is reoccurring mouth ulcers or bone problems etc.

> Do you suffer a problem with concentrating on things like the computer scene and have like a brain fog?

Yes.

> **QUOTE**
>
> Do you feel cold or always want the heating on in your home?

I get cold rather easily yes.

> **QUOTE**
>
> What do you drink and eat?

A lot of the regular bad stuff that's rampant in society. I smoke, drink cola, coffee, candy etc etc. I know I need to change my habits, but it's tough for me lol. It really is time for a change. I do try to drink a lot of bottled water though.

> **QUOTE**
>
> Whats your emotional state like? Do you get angry easy or do your worry or any sadness etc think about it carefully.

I get in a bad mood very easily, worry and ponder about things quite often, it's tough for me to come to conclusions. Logical thinking is also difficult for me. I do everything by gut feeling if you know what I mean.

> **QUOTE**
>
> Any parts of your body got problems of any sort whether is reoccurring mouth ulcers or bone problems etc.

When it's winter I get these things in both corners of my mouth easily, don't know if it means anything. Also, when I do a sudden full stretch of the arm in a bit of a forced position to reach for something, I sometimes get one of these localized pressure pains near my shoulder blades which last about a minute, dunno how to describe it.

And I feel a bit tired a lot of the time, even after a good night sleep. An occasional yawn during the day is not uncommon.

And I also have a bit of dark rings underneath my eyes.
And I have a problem with my eyes as well. It's not exactly black spots though. Some sort of 'clouded' parts in both eyes. I went to see the optician not too long ago, I wear glasses/contacts, and she noted nothing out of the ordinary, so it's something else

But yeah, it's mainly my (short-term) memory which annoys me the most of all things.

TheUnhivedMind - June 22, 2011 04:50 PM (GMT)

It sounds like you're suffering from a thyroid problem likely to be under active. If you have a test from a Doctor then this may still not show up although you're suffering. You must remember that the core of thyroid problems isn't just the thyroid it is dysfunction of the Spleen, Kidney and Liver. I can promote the wonderful herb Greater Celandine for brain fog especially from this thyroid angle and a quality tincture may start to clear it up within as little as a week or less maybe more depending on the quality. I had a great quality Greater Celandine and it removed my brain fog within two days from a thyroid problem bought about from oil pulling which is why I never promote oil pulling to anyone. What the Greater Celandine is great at, is increasings blood flow to the Liver whilst softening the Liver it also increase bile output from the Liver. This herb unfortunately is demonized by The Worshipful Company of Apothecaries through their medical quacks. Used correctly its perfectly safe and has been used by many herbalists Worldwide including the Chinese. This will go to your Lungs, Heart, Liver and Gallbladder directly whilst also aiding the Spleen and Kidneys. If you can combine its use with Artichoke root then you should do very well. Take this herb for two weeks then have up to one week off say four to six days as a break as it is a powerful herb.

When people have whats termed hypo-thyroid they suffer symptoms of Yang deficiency therefore you will feel cold more than an average person.

Do you urinate more frequently regardless of large amounts of fluids? It seems many people like yourself suffer with Yang problems with the Kidneys you see. Do you have less urges for sex or impotence problems? Do you have any problems with your knees and/or your lower back as in pain and/or weakness? I'd suggest the use of Cinnamon bark, Asian Ginseng and Saw Palmetto. When you take Ginseng you need a break every two months for at least one week unless its Siberian Ginseng.

Without proper healthy eating habits you're a lost cause my friend and will destroy yourself as you're seeing. You need to just eat real food which is quality meat, saturated fat, vegetables, fruits, nuts, grains and seeds only. You must not be eating any soy, vegetable oils, artifical sweeteners and/or preservatives. All food must be home made with proper ingredients. Your water must not contain hard levels of rock minerals and/or sweeteners and flavours. You need to eat foods to boost your organs such as your Spleen.

Your moods show me that you have a problem with the Liver, Kidneys and Spleen therefore you're attacking all these regions with your different emotions. You must alter these emotions to stop putting strains on these organs and network as these are very much connected with one another. Your Kidney dysfunction is so such that its affecting your mind as it feeds your brain you see or should.

Your problem with the mouth shows me you're having Spleen dysfunction. Your dark eyes shows me you have a dysfunction of balance between the son and mother being your Liver and Kidneys. This balance needs to be bought forth and toned whilst your emotions aided. Your eye problems will stem from your Liver dysfunction and the Greater Celandine is a good aid for the eyes just like the Goji berry which also aids the Kidneys, Liver, bones along with your brain. For your eyes you may find the Dr John Ray Christopher herbal eye wash formula of use which is a formula of red Raspberry leaf, Eyebright herb, Cayenne pepper, Goldenseal and Bayberry bark. But you must always work internally as well for proper correction of problems otherwise eventually the problems will come back even if you correct them topically and then stop topical treatments. Why? The source of the problem is still there which is usually Liver problems. If you have filth build up from phelgm then this is due to the Spleen dysfunction and lack of cleansing and control over phelgm. If you have rock mineral buildup then this needs to be addressed through diet. Your memory is your Kidney dysfunction. I would suggest you take Jujube Ziziphus dates daily and the herb called Astragalus to aid your Splenic function.

I would also suggest work on the Adrenal glands utilising adaptogenic herbs and a formula of Reishi mushroom, Nettle leaf, Olive leaf, Gotu Kola and Withania. Another good herb of use to you and loaded with much needed natural Iodine is black Walnut. You may also find Virgin Coconut oil of much use.

Cold - June 23, 2011 09:20 AM (GMT)

First, a big thank you for taking the time to write this, very much appreciated.

I would like to add that the doctor said I might be suffering from a neck problem, although I don't remember ever having problems with it. I included 2 more symptoms when I talked to him which are, tingling feeling in the fingers when I rest on my elbows, and like a cold breeze on my forearms/the feeling of a bit of numbness in my forearms when I'm in a car. So it would be wise to have my neck scanned I suppose. I think this can affect the memory as well.

And yes, I do urinate quite frequently, also, my sexual urge and impotence problems, it fluctuates. Most of the time it's alright, although I do have my days when I know something is amiss. And I have a bit of a weakness in my knees yes. It happens, but it's rare, that I would just "fall through" one of my knees, if you know what I mean.

TheUnhivedMind - June 24, 2011 12:47 AM (GMT)

I would suggest you have an intake of Vitamin B6 which if you wish to take this in supplement form then you want to have a B-complex so other B vitamins in the body aren't forced out of balance and you'd be looking at a daily treatment for a few months. Eat foods rich in B vitamins especially those with B6 present. I'd also promote you have your Vitamin B12 levels checked in case this has gone low also which can present the numbness you speak about. Yes you're talking about possible cervical compression. Due to your other conditions I've spoke about such as the Spleen, Liver tied with your Blood along with your cold issues this most likely may be the problem with your numbness. Remember Phlegm over a period of time not dealt with due to a dysfunctional Spleen will eventually create localized constipation which can also create numbness.

I was going to advise a chiropractor treatment as I usually do and forgot all about it. You should visit a chiropractor and have a complete checkup and alignment done to correct any subluxations C6 and T1 may be of importance here and I'd get them to work on all the rest focusing also on T2, T3, T5, T8, T10, T11 and finally L3. Do not use quacks for your neck and certainly do not have an x-ray unless a chiropractor really insists. A good chiropractor nine times out of ten won't use x-rays unless really needed or they're a financial crook out to make business whilst feeding the wicked Cancer industry run by The Worshipful Company of Barbers and The Worshipful Company of Apothecaries.

Question do you have more diffilcuties between 9-11pm? Or any other time you can think of thats common for more issues with yourself? You may want to check out Elecampane root out which is a good herb for aiding the heating system of the body which goes up your neck by the way. If this heating system is disturbed then your protective Wei Qi from your Lungs

will be weak and make you more prone to invasion of not only pathogens but evils such as wind etc. Try to increase your daily exercise whilst cutting right now on starchy foods. You should look into the flower Pollen (Bee Pollen) and Spirulina. More herbs of interest are Rosemary, Thyme, Juniper berry, Angelica root and Horseradish.

Your urination and week knees are further proof of Kidney dysfunction and along with everything else Kidney Yang dysfunction. You must start eating Goji berries daily for starters and my other recommendations for the Kidneys. Butterfish is an excellent food for your problems such as knees and numbness. Your body has become so cold the heating systems have shut down and now problems with dampness and all sorts sets in as Qi is cut off from areas as Qi travels and thrives on warmth. With your body it has difficulty going where it should as you're cutting it off. Take a regular warm bath for 20 minutes a day if possible and stay in warmth. You must not drink or eat any cold food or drink!! Everything you have should be steamed or cooked otherwise you'll just wreck the Spleen further and wreck your blood even more and digestive system. I strongly recommend you wear extra layers such as long Johns under your trousers to keep heat on the legs whilst in colder times and seasons and a thermal vest of sorts.

Cut down somewhat on Dairy and stick with just Eggs if any dairy intake is to be had, because these will promote dampness in your body whilst that Spleen is still dysfunction. Eat the Yolk only if you want heat and nutrients otherwise for a neutral effect eat yolk with the white fat. I'd also recommend Shrimp and Mutton two more excellent foods for you. Look at eating Longan fruit, red grapes, red cherries, pumpkin, butternut squash, moderate Honey and green onion. I'm sure if you follow my advice so far and make sure you're not loading your body with cooling foods as well as not eating physically cold food and drink then you should eventually wind the heat up over a period of time it may take a good while depending how low you are. My friend I understand these problems well as I've gone through them from very cold yin to very high yang I swung from the one to the other and both take a long time to correct making sure no mistakes are had.

Cold - June 25, 2011 03:27 PM (GMT)

I have the Goji berries (as a drink), saw palmetto and greater celandine.
For saw palmetto they advise 3 x 5 to 10 drops a day.
Greater celandine 3 x 10 drops a day.

So I should just do that?

Oh yeah, and we had some B-complex lying around, B1 B2 B6 B12, it's missing some, but I'm taking it anyway.

TheUnhivedMind - June 25, 2011 04:13 PM (GMT)

Don't trust Goji juices and drinks as first of all their pasteurized and then they probably haven't got anywhere near the nutrients they should or as claimed. Remember if it has a barcode and its a made up product don't bother. You must buy the neat dried Goji berries themselves and take 12-20 grams divided by two doses. Saw Palmetto would be 3ml a day if a 1:2 tincture. Greater Celandine is 2ml a day of a 1:3 tincture and should only be used for two weeks at a time then four to six days break. I've take 15ml a day of Greater Celandine with no problems but its not advised as its one of the more powerful herbs. Your B complex will do for now but try to get a better one if you want a supplement and ideally 50mg at least levels for a month or two before dropping down. Don't forget the other informations given. A tiny bit of raw Garlic three times a week for four weeks may be of use to you say half a clove at most. You might find oolong tea useful but just have one cup per day and see how you feel with that as it is far more powerful than people realize.

Cold - June 28, 2011 02:12 PM (GMT)

Tomorrow I will have in my possession cinnamon bark, artichoke and asian (or siberian) ginseng.
Btw, should I also buy milk thistle? Or is it of no real use to me?

TheUnhivedMind - June 28, 2011 03:55 PM (GMT)

Milk Thistle is basically the same as Artichoke root when it comes to the Liver except its warming where as Artichoke is cooling etc. Artichoke root is a sweet, bitter, salty and cooling herb which will go to the Liver, Gallbladder and Bladder meridians. It will also aid the digestive system, urinary and circulatory systems and aid against thyroid deficiency. It nourishes, restores, softens, dissolves and decongests.

The Siberian Ginseng is a pungent, bitter and neutral herb which will go to your Spleen, Liver, Kidney, chong, ren, yin wei, yin qiao and du meridians. It will also aid the Heart and circulation, nervous and immune systems, muscles, bladder, bones and endocrine system (hormones/thyroid). Siberian ginseng restores, raises, relaxes, calms and dissolves. You can use Siberian Ginseng for long periods of time without a break unlike all other forms of Ginseng.

The Cinnamon bark is a pungent, sweet, aromatic and dry herb which will go to your Heart, Lung, Spleen and Kidney meridians. This herb will also aid the circulation, vascular system, intestines, genitourinary organs. It stimulates, restores, astringes and solidifys.

If you want the dosages let me know and what type of herbal medicine you

have such as dried herb or alcohol tincture. If the later try to let me know the ratio of herb to alcohol and the alcoholic content strength in percentage used to extract the herb. You may find the old warm drink of Honey and Cinnamon of much use remembering on that the Honey will aid your middle burner of the chest area. You have to be careful when you have yang deficiency such as yourself because damp will set into the body and then eventually problems like osteoarthritis. What happens when you leave a house unheated for lengthy periods of time and its damp outside? The house gets damp now remember people in this yang deficient state may be eating a lot of damp mucus producing foods like dairy and thus be adding to the problem. One had to turn the body's heating system on and that includes less damp foods whilst making sure the Spleen is functioning as this is your gas light and electric pump from a heating boiler perspective.

Cold - June 28, 2011 08:26 PM (GMT)

I've been eating more and more fruit the last couple of days. Kiwis, green apples, pineapples, lemons.

I juice 2 lemons every day. What's your opinion on this fruit? IMHO, it's a gem. It's also good against cancer supposedly.

TheUnhivedMind - June 28, 2011 10:49 PM (GMT)

You're not understanding the Chinese knowledge my friend, yes fruit is good for you but you have to eat the right fruits for you and your problems. So lets say we have a fruit which promotes Kidney Yin/Cold/Water but you have a Yang/Warm/Fire deficiency in the the Kidney what do you think will happen? Yes the Yang deficiency will get worse along with the symptoms associated with that. In this case with you I'd go for dark red cherries. The Lemon is no good for you as its cooling and will cool your Liver, Lungs and Stomach which is a big wrong doing for you. Now can you see why some people complain they're doing healthy diets but still not aiding some of their illnesses? They need to know this sort of information. The Kiwi is cold too and goes to your stomach and bladder again a wrong doing for you.

For now I'd drop almost all the fruit your taking and just utilise the Pineapple and fruits like Longan, Orange peel, Tangerine, red Grapes, Apricots, Lychee, Peach, Plum, Figs and Strawberries. Under no circumstances do you take Bananas, Pears, Watermelon, Persimmon, Oranges or Tomatoes. You can also eat Butterfish, Oyster, Shark, Shrimp, Mutton, Chicken, Venison, Wild Boar, Salami, Duck, Pumpkin, Carp, Cod, Eel, Salmon, Mussel, Plaice, Trout, Tuna, Bone Marrow, Butter and Sweet Potato. But you must not take Rabbit, Clam or Crab. You should be fine with most nuts and I suggest the use of Coconut meat/oil which is warming and strengthens the Heart & Lung Qi. Walnuts would be good for warming your Kidneys and Lungs. Whilst the gem for the Kidneys is the Chestnut (not

water Chestnut), this is a powerful Kidney food promoting Kidney essence and Kidney strength which also goes to your Stomach and Spleen whilst feeding and strengthening your brain.

Cold - June 29, 2011 07:47 AM (GMT)

Heh, I just figured that as long as it's fruit, it's good for you, no matter what condition your body is in.
I feel silly now lol.

Thanks for the info.

> **QUOTE**
>
> Now can you see why some people complain they're doing healthy diets but still not aiding some of their illnesses?

Yep.

EDIT:

If I buy the Black Walnut Extra Strength, which is alcohol based, should I buy niacinamide also?

According to Clark's Regular Parasite Cleanse, taken from this thread, it says I should to counteract the toxicity of the alcohol.

> **QUOTE**
>
> Then take niacinamide 500 mg to counteract the toxicity of the alcohol. You could also feel a slight nausea for a few minutes. Walk in the fresh air or simply rest until it passes. You may add more water or honey or a spice to make it more palatable.

TheUnhivedMind - June 29, 2011 03:56 PM (GMT)

There is no need to use Vitamin B3 but if you wish to then its up to you but ideally any vitamin B put into the body singularly can put the rest out of balance and this is why we use complexes. The Black Walnut will have a cooling potential whilst being bitter and pungent. It dissolves, astringes, solidifys, stabilizes and stimulates. It will go to your Spleen, Kidneys and large intestines as well as the stomach, pancreas, skin, veins, bones and nerves.

Cold - July 1, 2011 08:09 AM (GMT)

I wonder, what makes a good B-complex. Because many vary in the amount of mg of Vitamin Bs they contain.

For example, these 2
http://www.orthovitaal.nl/ov-artikel.php?a...ntent=Y#content
http://www.thebetterhealthstore.com/NewCha...od-Complex.html

I've also read that too much of B6 can cause permanent nerve damage, or damage of something at least. Although I assume it's referring to insanely high dosages taken.

I quit the one I have now, because the box says it contains 250mg of pyridoxine chloride (B6), Wtf? Isn't this way too much?

And I don't know which Spirulina to buy, there are many brands.
http://www.voordeligvitaal.nl/search.php?s...query=spirulina

TheUnhivedMind - July 1, 2011 04:55 PM (GMT)

In order to cause the nerve damage you'd have to be taking between 2000-10,000mg a day my friend which obviously you wouldn't be doing. Some people take up to 500mg at max but most will take a supplement in the range of 50-100mg a day. All supplements should have equal levels when dealing with a B-complex in order to not alter the balance of these vitamins in the body. You can get B6 from Wheat germ, Liver, Fish, Cantaloupe, Cabbage, blackstrap Molasses, Rice, Eggs, Oats, Peanutes and Walnuts. Heres an example of a good B-complex supplement LINK

When buying Spirulina you want to buy the powder form over any capsules that may be being sold. Try to usually pay the better money which hopefully should get you a better quality.

Cold - July 1, 2011 05:50 PM (GMT)

One last question before I place my order, Astragalus root and Elecampane as a tincture or as a food? Or doesn't matter?

The place I'm ordering these from only have it as a food, so I hope that will do.

TheUnhivedMind - July 1, 2011 09:25 PM (GMT)

I think you mean dried herb right? If so then this is acceptable for tincture. If its dried herb you can do a decoction or even make a tincture.

Cold - July 2, 2011 12:01 PM (GMT)

What about Cayenne pepper? Isn't this beneficial to me also?

TheUnhivedMind - July 2, 2011 03:54 PM (GMT)

In small dosages for a small period of time.

14april2000 - June 20, 2011 07:10 PM (GMT)

Is there any benefits of doing it?

TheUnhivedMind - June 20, 2011 09:56 PM (GMT)

Over hyped my friend and they also make all sorts of claims about alkalinity. We don't want masses of alkalinity going into the stomach otherwise we end up with a lower stomach acid and then problems digesting our food eventually leading to Spleen damage if prolonged. If you hinder your digestion then you'll end up with immunity, weight, energy, muscular, mouth problems and more if other areas get a knock on effect. A normal water that is hexagonal energy increased is of far greater benefit.

This recipe site might be useful to you:

www.goneraw.com

Mark - January 20, 2010 08:02 AM (GMT)

Thanks.

craig-oxley - January 21, 2010 06:59 PM (GMT)

Good for the China Study. I think I read this a long time ago.

Keith - June 15, 2011 10:51 PM (GMT)

I'm pretty sure I remember the book saying ten to fourteen percent of ur food intake is meat u won't produce cancer. That's the cutoff though. So very little meat yes but none at all. Stick to 7-10 percent this was a 30 year study! That should count for something lol

TheUnhivedMind - June 16, 2011 02:05 AM (GMT)

Meat does not cause Cancer its all a lie and especially so if meat is eaten raw from a live kill thats safe from bacterial infection etc. The Chinese have been eating meat as have other long living cultures since time began. The Worshipful Company of Apothecaries desires people to be mind re-framed if intelligent to follow Veganism whilst the sheople can stay as they are and loading up with GMO etc. Eventually the veganism will deteriorate the follower and end up with the needing of the use of medical system controlled by The Worshipful Company of Apothecaries. Who do you think controls the medical system who's giving you all this so-called health advise via the media today? You know the Club of Rome's Global 2000 Report and what it means. Do you honestly believe they have you best interest at heart? Do you honestly believe that health today is anywhere near as good as in the past? Heres a clue it is NOT!

You'll see attacks against butter but butter is a wonderful food for your adrenal function which as many know is highly important for health. The problem today is that butter is not butter! Today most butters sold at the black pope's poison warehouses such as War*Wart are actually margarine as they're made up of 70% vegetable oil usually and you can bet shortly this figure will be raised. Then poor butter takes the blame for the negative side-effects of consuming dangerous vegetable oils which are known to kill the thyroid amongst other internal problems. This is the same with meat due to chemicals, hormones, antibiotics, colourings and glues etc.

So by all means eat meat but do so making sure its real meat thats untainted and eat it in balance like the Chinese do and use the proper herbal foods to aid in its use. I was a vegan for around ten years now I'm eating meat and taking Cod Liver Oil and I don't listen anymore to all the scaremongering mind-reframing nonsense. I've seen some well known herbalists push veganism whilst pushing massive intakes of Cayenne pepper and Garlic. All of which is totally bad advise indeed. If you do the Cayenne pepper and Garlic amounts promoted by Dr Richard Schulze you'll end up with serious illness stemming from the likes of Yin deficiency which believe me isn't good. I have much experience in all areas I speak of as I've practiced what I've preached and know all the pros and cons I assure you. Eat what you want when your body needs its for a while then eventually move to eating to the Chinese timing meaning no food after 19:00 hours and the largest meal between 09:00-11:00. Make sure you have a good mixture of foods which include meat, eggs, poultry (Duck and Chicken), nuts, fruits, vegetable and seeds. Eat in layers not mixed and do not mix certain foods

in one setting such as having meat then not long after eating a fruit as this is a no no.

View Full Version: Varicose veins

Title: Varicose veins

Alexandra - June 11, 2011 07:43 PM (GMT)

My husband has an issue with this and is thinking about some kind of surgery.

What can he do as an alternative to this?

TheUnhivedMind - June 12, 2011 10:21 PM (GMT)

You can use a salve made up of 2% Wheat Germ oil, 3% Echinacea, 5% St John's Wort oil and 9% Witch Hazel. You could also use topically simply Witchhazel slightly diluted or you can use simply a quality Comfrey cream. You can also utilise Clary Sage essential oil in a base oil such as sweet Almond oil on the area. Internally you should be taking Natural foods rich in Vitamin E (Wheatgerm, Avocado), B Vitamins, Vitamin C, Bromelain (Pineapples), Calcium, Copper, Iodine (Kelp) and Magnesium. If you want to thin the blood & aid the Heart I would suggest Ginkgo biloba leaf. I would also suggest the use of Hawthorn berry for the Heart etc. Heart work is important and a small amount of Cayenne, Garlic and Ginger for a period of time can do only good. Now you should be looking at herbs such as Horse chestnut seed, Buckwheat, Yarrow, Stone root and Gotu Kola for the Vein issue. You also want to look at aiding the Spleen as this may be deficient and I'd suggest Astragulus and Jujube dates.

View Full Version: COCONUT OIL

Title: COCONUT OIL

miguelk2 - June 9, 2011 02:14 PM (GMT)

Hi Craig, i`d like to buy coconut oil, but the delivery is so expensive because the store is in ee.uu, i found many places in internet but i want a godd one, do you know in europe any place to buy on internet please? thank`s for your time.

TheUnhivedMind - June 9, 2011 09:39 PM (GMT)

I know that here in the sovereign state of England we have Holland & Barrett who sell Virgin Coconut Oil and by the way the prices of it have risen from when I was regularly using it. I have no idea outside of the sovereign state of England where you can get it from.

Alexandra - June 10, 2011 05:50 AM (GMT)

Don't you have health food stores in Europe? We do here in the USA and I can get it there, or even at the local grocery store.

miguelk2 - June 10, 2011 06:59 AM (GMT)

yes we have, but in my province i don`t found anyone, in my country the stores i don`t trust in anyone, i`d like to find one with lot of acid lauric. <_<

Alexandra - June 10, 2011 12:00 PM (GMT)

All coconut oil has lauric acid. Get the extra virgin kind if you can find it.

View Full Version: urinary / tract infections

Title: urinary / tract infections

Wolveshater - June 5, 2011 12:39 PM (GMT)

From a mind you helped to open up Craig, he asks this below;

" Mom's been dealing with urinary / tract infections for a while. Can you help me with specifics for her. It's a real pain and she's just coming out of her indoctrination with doc - tors. "

I bet she is 70s, maybe older Craig.

TheUnhivedMind - June 6, 2011 10:36 PM (GMT)

Urinary tract problems usually indicate theres a Kidney problem and usually its tied to the levels of urea being produced or in this case the little levels of it being produced. If there isn't enough urea in the system being produced then the anti-bacterial level of the system is very low which gives rise to infection. Therefore my friend we need to raise her Kidney function which also means aiding the Spleen especially as this balances our Kidneys.

In the meantime she may get relief by using some sodium bicarbonate internally until she's corrected whilst using a heated salt pack over the area. A good formula I've come up with for this is a combination of Uva ursi leaf, Goldenrod, Cornsilk style, Plantain leaf, Echinacea and Licorice root. I suggest you do some research on these wonderful herbs especially the first four for this problem. There may also be acidity issues which always arise from a faulty Pancreas and Spleen and as we know the Spleen balances the Kidneys. The Pancreas has a job to produce the correct levels of sodium bicarbonate in the system and thus we have acidity issues. It would be interesting to see if this problem is occurring and to what level because if it evolves too much she'll see symptoms next of acid reflux dis-ease and Hiatus hernia thats if she doesn't already have them now.

So its less meats and no pig meat because remember theres a problem with

acidity along with a problem with the Kidneys not dealing properly with the protein thus the lack of Urea output. Uva Ursi from an antiseptic point of view is very good but there must be an akalinity balance in the system before its powers in this antiseptic area work properly. It will still aid the area via energetics regardless. Theres not be any spicy food taking or drinking of alcohol at all and finally less greasy foods. She wants wholemeal bread only not white bread. When she eats she must chew everything properly for aided alkalinity. She can also drink throughout the day a Linseed infusion which is made the night before by adding eight teaspoons of Linseed to 250ml of boiling water and letting steep overnight. A chiropractor may be of some use and have them focus on Lumbar 3 along with Thoracic 2, 3, 4, 5, 8, 9, 10 and 11. Once things start to get better over a few weeks then when your happy you simply start to use herbs like prepared Rehmannia for a real powerhouse healing of the Kidneys. One of the best foods for the Kidneys when she's a little better is black Sesame seed.

Wolveshater - June 7, 2011 12:02 AM (GMT)

Thanks, I'll pass it along.

View Full Version: What is your take on Marfan Syndrome?

Title: What is your take on Marfan Syndrome?

db45 - June 1, 2011 06:00 AM (GMT)

What is your take on Marfan Syndrome? I think I might have a few of the symptoms but I am not really that tall (5'10). Do a lot of people have it or are they trying to scare people?

If someone has it then what can they do about it? Any remedies to help?

Thanks for your help.

TheUnhivedMind - June 1, 2011 05:40 PM (GMT)

Looks to me like its very much to do with Kidney dysfunction more than anything and also Spleen dysfunction. You'd just have to strengthen all the areas. You'd want to study all the herbal knowledge on the Heart learning about herbs like Hawthorn berry, Lemonbalm, Motherwort, Bugleweed, Cayenne and Heart foods basically those rich in Magnesium and the very important natural vitamin E ideally tocotreniols. I'd suggest you find a good professional Chinese doctor and get their opinion. Don't be fooled by the internet with thinking you have a dis-ease because you can easily fall into the trap of believing you have something serious when in most cases you have something simple.

db45 - June 2, 2011 02:24 AM (GMT)

Ok, thanks Craig!

xtiml - June 2, 2011 10:15 AM (GMT)

If you had marfan syndrome you would know it and probably be a tall skinny retard to boot, you may have the syndrome called "neurotic minds focus somatically and compare symptoms to all manner of feared ills. relax max you only have a very curable mind melt. it is called "it dem damn jesuits"and I have the "its dem jooz" variety."

Title: Cyst above the right ovary

Menses - May 21, 2011 09:30 PM (GMT)

My wife's mom just went to the hospital can you help me by asking someone you know about how it is possible to reverse these ailments:

She has a cyst above the right ovary, which has produce blood and clots...
It has since infected the kidney's and given her anemia

- anonymous

TheUnhivedMind - May 22, 2011 05:20 PM (GMT)

I would promote to you the use of these herbs ideally in a combination formula; Burdock Root, Echinacea, Red Clover, Thuja and Yellow Dock. Do some study on these wonderful herbs but especially the Thuja, they're all specific for the regions you require. You might want to add a bit of Licorice root into the mix. The Yellow Dock is also a good source of natural Iron which you can also use the Nettle plant for. Nettle is another good herb for this condition. I'd also suggest she has an intake of fermented Cod Liver Oil with correct Vitamin A to D ratios of 10:1 maximum as she needs those vitamins. I would also recommend the use of unrefined Wheatgerm Oil. Look for foods rich in Zinc and B vitamins for her to take regular.

She needs work doing on the Spleen so you'd be looking at using foods like the Jujube date and herbs like Heolen or Astragulus. She must not have cold drinks or foods, only cooked foods and warm drinks in order to aid the Spleen which detests cold as it has to rewarm to dutchy pot stomach each time you chill it thus lowering it's Qi performance. The Spleen controls the digestive system and in her case you'll find its low and led to dampness and mucus build up. Therefore a mucusless diet would be wise for a few months at least until the Spleen is corrected. She should have no alcohol and less fat or greasy foods until the Spleen is working correctly. Remember I teach how the Spleen is your body's cleanser of filth.

You may find it very useful to slightly warm the Liver energetically via Milk Thistle herb or similar. She's most likely having blood stasis problems therefore you need to get the Qi flowing from the Liver correct and warming/ heat will do this. Burdock root is a good liver herb and needed more so in her case on the follicle side etc but its cooling rather than warming. Burdock supplies a level of Iron and Zinc which she needs. The Red Clover will also aid the clots as its a good thinner of the blood via its coumarins, plus what it does for this specific illness. When the problems are corrected she should look at regular usage of Dr Christopher's hormonal formulas. She should eat more green and yellow foods also more sour and sweet foods but not too much just in balance. I would also suggest a complete checkup by a chiropractor and any subluxations adjusted especially focusing on the third lumbar and ten/eleven thoracic. So either go your own route with what I've told you or seek help from a herbalist and chiropractor whilst presenting my information to them for verification.

Menses - May 22, 2011 10:19 PM (GMT)

Thanx

Menses - May 23, 2011 10:56 PM (GMT)

My "mother-in-law" wants to know if Dr. Schulze's formulas are high on your list in effectiveness but if there is better and cheaper outlet then please share (she is tight with money). The 3 formula's which she's interested in purchasing are as follows:

Detox formula: which contains many of the herbs you have spoken of. They include: Red Clover Blossom, Mojave Chaparral Herb & Resin, Oregon Grape Root, Burdock Root, Yellow Dock Root, Poke Root, Goldenseal Root, Fresh Garlic Bulb, Lobelia Herb & Seed, Habanero Pepper

Kidney formula: Herbal Ingredients: Uva Ursi Leaf, Juniper Berry, Horsetail Herb, Burdock Root, Corn Silk, Parsley Root

This is one formula which I personally think she may not need to include in her purchase. Reason being only the Burdock root is included of those you suggested but as you already read its already included in the aforementioned Detox Formula (remember fiat money is short to come by here).

Liver Formula: Milk Thistle Seed, Dandelion Root, Oregon Grape Root, Gentian Root, Wormwood Leaf, Mojave Chaparral Herb, Black Walnut Hull, Hawaiian Yellow Ginger Root, Garlic Bulb, Fennel Seed, Artichoke Leaf

Now as for the other suggestions you have made we have looked towards the late Dr.

John Christopher and his awesome research that you know all so well:

http://www.herballegacy.com/Cysts.html

This particular link has plenty of formulas to choose from, including an interesting choice with black walnut tincture in order to raise her potassium chloride. What are your thoughts on this choice Craig?

Also is the hormonal Changease that he proposes a good fit for her hormone problems?

Simply want a balance of quality and low as possible cost, etc. You should be made aware that we need to act quickly and purchase these from the Whole Food stores, herbdoc.com, etc. in order to get her back to tip top.

Thank you and keep up the great work!

View Full Version: What's the truth about Vitamin D3?

Title: What's the truth about Vitamin D3?

Phazon - May 19, 2011 08:04 AM (GMT)

I've heard that Vitamin D3 is actually poison, is this true?

What would you recommend for someone who doesn't seem to be able to absorb enough Vitamin D from the sun?

TheUnhivedMind - May 19, 2011 04:36 PM (GMT)

I would suggest to you that you get on a quality fermented Cod Liver Oil which hasn't had any synthetic poisons added and just quality neat oil. I suggest you take this via the neat oil and not in poisonous capsules if possible. I suggest you start with a teaspoon a day and see if you can hit the tablespoon a day. Remember from my last two videos that you need the correct Vitamin A to D ratio in the product which is easy to check. You also get Vitamin D with A in Eggs so if you're willing to eat the super food known as egg then do so but make sure they're free-range and ideally organic first. Keep away from synthetic vitamin D as this is another poison and certainly doesn't supply you with the needed Vitamin A or Vitamin K nor Zinc for that matter. The Cod Liver Oil gives you all of them correctly except the Zinc which I suggest you get from nuts (Coconut, Walnut, Almonds and Cashew), blackstrap molasses, Seeds (Sunflower and Pumpkin), buckwheat, barley, rye and brown rice. Remember the importance of synergistic reactions from my latest videos I spoke about, for example the orange having everything you need not just a single compound. I also believe that Vitamin D3 is an outright poison and don't believe the marketing hype which is all about currency and not health. Your body wants natural Vitamin D from food and/or the Sun and when this is available it should always been in conjunction with Vitamin A which also needs Vitamin K and so forth.

deadpeoplestuff - May 19, 2011 05:58 PM (GMT)

Vitamin D is created naturally, given sufficient levels of UVB exposure, and acts more

like a hormone. Deficiency can occur during the winter months (more time indoors and generally less sun exposure) The lack of D3 has been recognised as an issue in darker skin groups, again, during the winter months.

I would recommend reading/researching 'The Marshall Protocol' that has examined the potential downside of vitamin D (perspective)

That said, as UHM suggests, taking D/D3 from natural sources, along with plenty of time out of doors (UVB) is optimum. Whether or not our bodies even recognise the synthetic variants is also open to some debate..anyway

I would add Krill and/or a cold pressed oil, such as Udo's Blend to that list

TheUnhivedMind - May 19, 2011 09:20 PM (GMT)

In order for our bodies to produce Vitamin D in sunlight people need to being saturated fat and have an oily skin thus not wash for a while before exposure. If these are no present then Vitamin D levels will not be what you'd think. The only thing I know about Krill oil is that its a good chelator of aluminium but apart from that no idea. What I do know about is Cod Liver Oil and I know this has been used for eons unlike others and most others promoting these other oils have a financial interest and even try to attack Cod Liver Oil without true facts in order to peddle their wares.

Phazon - May 20, 2011 04:21 AM (GMT)

Thank you.

deadpeoplestuff - May 20, 2011 06:40 AM (GMT)

This is why you will find people coming out and talking about the 'lie' of Cholesterol - and the fact that our bodies require saturated (animal) fats. In moderation (balance) of course..

The reason I mentioned cold pressed oil, is that many natural oils are impaired/ damaged at a molecular level by heat - which is often used in the extraction process. In most cases, you will be able to establish whether or not an oil was 'cold pressed'

View Full Version: Swollen feet and ankles

Title: Swollen feet and ankles

miguelk2 - April 29, 2011 03:51 AM (GMT)

hi Craig, my father have that problem during long time, when he sleep the feet and ankles is ok, but the rest of the day is swollen, he have 79 years, he had problems with the heart, i thinking in clean his kidneys with herbs for 3 or 4 weeks, thank you.

TheUnhivedMind - April 29, 2011 05:22 PM (GMT)

It sounds like he has a problem stemming from his Spleen and Kidneys and the later balances his Heart. If the Spleen and Kidneys are down you can bet the Liver is down to. I wonder if he has any joint or ligament/tendon problems at all or other Liver related illness.

I would suggest he takes Hawthorn berry which aids the Heart, Spleen and Liver in one and its nice and neutral to boot. Have him take 6-16 grams decocted or 10-15ml of tincture per day. I recommend doing the decoction with Chinese Haw berry flakes which are dried and quite large if not then just use your local Hawthorn berries.

The other simple thing I will promote to do along with what I've just told you is for him to ingest one teaspoon or more a day of blackstrap Molasses. He can have this neat off the spoon or in warm water with a mix of lemon juice, the later aids the absorption of calcium within the blackstrap Molasses. What we're really after with the Molasses is the potassium content and the magnesium content all in raw plant form and fully assimilated by the body. The potassium will aid with any edema whilst you correct the Splenic function at the root of it all in conjunction with the Kidneys which by the way small levels of blackstrap will do wonders for the Spleen and Kidneys. Note the sweetness and connection to the Spleen and the blackness connection to the Kidneys. Why do you think it helps to grow hair and darken it? It aids the Kidneys which along with the Lungs control the hair and skin.

Finally for now I would suggest he has a high vitamin E intake in the form of

unrefined Wheatgerm oil or at least extra virgin Olive oil. He should look to eating avacados more and other foods rich in this vitamin. Its especially important when dealing with minute forms of whats called cholesterol because this is made up of I believe all 8 forms of vitamin E in other words all four tocopherols and all more importantly tocotreniols. Without vitamin E in the cholesterol and other areas it is used you'll get oxidisation helping to lead to plaques and free radical damage. In this radiation we're now within daily, vitamin E intake is very important. Try and get him on black Rice which is very powerful food riddled with powerful free radical scavengers and wonderful for the Kidneys.

You don't want to over cleanse like many promote you do, you want to nourish and build up the areas in a balanced fashion. If one has Kidney problems they most likely have Spleen issues because this balances the Kidneys and they balance the Heart. If the Kidneys are playing up you have may have a Lung issue because this organ powers the Kidneys. Therefore a simple Kidney cleanse isn't always the answer is it? Lets say now I had a drug or herb which works perfectly on your Kidney but no where else. He'd be on it for life unless we dealt with the root being Spleen or Lung etc. See what I'm saying? Its a hollistic approach to the problem and I no longer deal with the Western herbalism thinking because much of it is wrong still. We have to follow the Chinese way and we can use Western or Eastern herbs to do so but correctly and in balance therefore properly and affectively. You may get a result doing something a more negative way in Western Herbalism but what will it cause later on? For example lets take lots of Garlic and be super healthy for a few months maybe years but then find we are parched, dry as a bone inside and riddled with fire which has removed all our balancing Yin Qi from the body. Now we need to reserve it by going the opposite way until we get balance again which isn't easy. I know, I've been through it my friend! Let us know how he gets on and its a daily adventure. Get him to start earthing himself on a regular basis.

I might add to you that during sleep and lying flat resting that your Kidneys gets a natural boost and this can help with essence problems of the right mingmen kidney too. Also think about it, he either has more Qi force pushing down the fluids or lack of Qi pushing fluids up one of the two which need correcting which comes as a package with the rest. For instance to move Qi up we use warm, sweet and pungent foods. Downwards we use more salty, sour and bitter foods along with cold. Now remember how I've always taught about mucus problems? Well remember if we rebuild the Spleen function this aids in removing filth thus any localised constipation causing the problem.

View Full Version: Heart, Kidneys and Cancer issues

Title: Heart, Kidneys and Cancer issues

TheUnhivedMind - April 27, 2011 06:16 PM (GMT)

QUOTE

Hi,

My father in-law has a few health issues that I hope you can help with.

He has:

- a tumor on his adrenal gland

- he has heart and kidney disease with his heart working at 80% and kidneys at 50 %

- he is a little overweight

- his blood pressure is 240 over 140 which is quite high

He has been off and on the pills from the doctor and tries to avoid them because they make him feel worse.

Any help would be greatly appreciated,

Mark.

If his blood pressure is up I suggest his Kidneys aren't balancing the Heart correctly and this will also mean Spleen issues which if those two are down this brings the Liver down. In energetics his problems will be far worse. My best advise would be to seek a professional Chinese doctor who's good and should be able to perfectly know his individual health situation. His weight problem will stem from a damaged Spleen and remember that the Spleen is powered by the Heart but balanced by the Liver. I'd suggest for now he tries some Hawthorn berry either decocted or as a non-alcoholic tincture. You can either use your local Hawthorn berries if you're lucky to have some to pick nearby or just go to a Chinese supermarket and buy their dried Hawthorn berry flakes, they're much larger than our Hawthorn berries and cheap as chips. The Hawthorn will aid the Heart, Pericardium, Spleen, Stomach and Liver and its neutral to boot. He should be drinking Nettle tea

daily or taking Nettle soup for the Kidneys, Spleen, Liver, Lung, and its also neutral to boot.

I would also suggest you try to source some Reishi mushroom (Ganoderma/ Ling Zhi) whether in supplement or food form, the later is expensive. You want wild crafted though so you get the proper medicinal content. Look also at using the wonderful Olive leaf. You can utilize extra virgin Olive oil too for it's great natural vitamin E content which is highly needed. I would strongly recommend a daily intake of *unrefined* Wheatgerm oil at a tablespoon per day. Wheatgerm oil is a pure Heart food. An good intake of DHA Omega 3 will be of most use to the Heart and entire body which should also aid blood pressure issues.

He's to have no coffee or alcohol and make sure no other products have caffeine in them as this stimulates the adrenals (kidney glands). An intake of magnesium and zinc would be of use along with Potassium which I recommend from Blackstrap Molasses which will do the Kidneys some good to. Take 1 teaspoon to 1 tablespoon a day if he has no sugar problems. This will provide all the minerals needed in high amounts especially potassium, magnesium and zinc. I would recommend for a short period the use of a B-Complex 50mg supplement say for 1-2 months then just make sure the foods he eats are rich in B vitamins. The black Sesame seeds should be taken daily by frying them alone with no oils etc in a pan for 2 minutes from the popping start then cooling and eating. These are a great food for the Kidneys.

A tiny bit of Garlic now and then will aid but its very heating so use very sparingly but it does do wonders with problems like this. I would also recommend he drinks the correct levels of water a day following the recommendations of Dr Fereydoon Batmanghelidj which helps thin the blood down you see. Take his weight in pounds then half this figure but drink the new figure in fluid oz of water therefore a 200lb man would need 100 fluid oz's of water a day. A salt intake should be taken also but not dramatically. Batman always recommended a salt intake of 1/4 teaspoon per litre of water taken. In his case cut this down further as salt can play with the blood pressure negatively and positively, it aids the kidneys in small amounts but in large its damaging. Salt also helps lower rising Qi causing chest restraint, asthma etc and I know this for sure.

The Vitamin E will help lower the blood thickness if he wants to take a natural vitamin E supplement then he should take between 400-800 IU and make sure its the natural Vitamin E ideally the fat soluble version as they've been doing a lot of water ones recently which don't stay in the body for long. If he does the amazing Wheatgerm Oil then he don't need supplmenting or if he does Olive oil. Regular eating of Avocado is rich in vitamin E. The best vitamin E is tocotrienols and don't let anyone fob you off that tocopherol is better as they are not, especially for the heart. Unnatural synthetic junk Vitamin E supplements will be labeled DL- where

as natural is d-. Peanut oil also contains Vitamin E but Wheatgerm is the King of Kings for his condition. If the heart is a mitral or rheumatic problem then vitamin E supplementation isn't recommended.

Foods rich in CoQ10 would be wise or a supplement within the range of 150-300mg remembering the gut absorption is low so you won't be taking anywhere near that figure into the body and need high dosages. You may also like to research Ginkgo leaf which is neutral and works well on the Heart, circulation, Lung and Kidney. Just don't take Gingko long term on its own longer than two to three months, you must stop it and rest unless its part of a buffering prescription of herbs.

I would also recommend he eats plenty of good quality fresh whole Papaya fruits get them cheaper from the markets and or a small fresh pineapple a day for the proteolytic enzymes. I would also recommend he looks at my Mung bean protocol for attacking Cancer both on my site and on YT. Once the Spleen is rebuilt with the aid of Spleen herbs like Nettle, Reishi, Hoelen, Eggs, Chinese Red Dates (Jujube/Ziziphus) then this will aid the immune system thus helping to respond against the Cancer which needs to be exposed to the immune system as now its hiding well because it has the same negative polarity as the white cells which by the way in his case are low in activity at this moment. To expose the positive polarity you need those proteolytic enzymes and saponins like what the Mung bean provides. I would also look at the Astragalus root which is a great immune system boost like Reishi but it is a little warming, although its a great aid for the Spleen thus immunity and does contain saponins.

Finally a good intake of natural vitamin C from fruits would be wise. Have him eating a combination of colors, he wants yellow, black, green and red foods especially. He should be eating foods which cover all tastes such as sweet, salty, sour, bitter and pungent. EVERYDAY THIS MUST BE ADHERED TO! His body must be kept warm at all times thus allowing Qi movement, cold areas should be warmed via water bottle or bathing whatever you can do. Cold areas will show lack of circulation and if bad will be visible by blue color such as blue lips and certainly by him feeling the cold more. Cold stops Qi movement and causes stagnation. I guess one last excellent food I could recommend you is Bee Pollen known as Flower Pollen, this is a very powerful healing food.

Hosted for free by InvisionFree

View Full Version: Computer Radiation

Title: Computer Radiation

golden_oil - March 28, 2011 12:41 AM (GMT)

I have looked through your topics and do not see that this problem has been addressed.

For the past month, when I turn my head, I notice there is a gurgling sensation in the back of my head or brain. I realize now it's more than likely due to excess radiation due to my work at having sit at my computer daily for many hours, so I have researched that and am taking all necessary steps to reduce that exposure, including the use of a radiation filter plate.

Realizing that damage has likely already been done, would you give me a list of healing foods, herbs, etc., to reverse the problem?

golden_oil - March 28, 2011 11:50 AM (GMT)

I visited a computer shop to buy a radiation filter plate, but they had none and said radiation is no longer a problem with newer computers, of which mine is.

While there, a woman said you can buy eyeglasses with a filter designed for reading computers and said that would solve my problem, so will look into that.

TheUnhivedMind - March 28, 2011 02:52 PM (GMT)

I have no idea what monitors of today give off but you can bet its dangerous just like the old CRT even if its a different form of poison. The old CRT monitors like mine give off a lot of radiation that is correct. I suggest you simply buy yourself a quality earthing kit to plug into the mains or directly into the ground. This will shield you from everything including 50/60hz

signaling the lot. Theres no need for fancy priced gadgets that sit on monitors etc.

I wouldn't put anything in front of your eyes as you'll only end up hurting your natural eyesight. If you just eat quality foods rich in free radical scavengers and nutrition you don't have a care in the World if hooked up to Earth regular. Whilst you haven't got a earthing kit for now every so often go outside on the soil or grass barefoot for 10-15 minutes after working on the computer to release all that built up static and frequency muck from the system. May I remind you that the Earth's surface is one of the greatest givers of free electrons. In other words its one of the greatest free radical scavengers known (anti-oxidants) and its completely free. Our problem is we're always insulated. Remember the Japanese banned children wearing rubber soles at one time because of insulation issues on health.

When you speak of your head I would suggest that your first treatment should be to see a chiropractor soon. I can assure you that you'll have issues in your cervical spine somewhere between C1-C7 most people do very regular. I always did every three months. You may be surprised at what results you have from seeing a Chiropractor. You may have a localised constipation affecting fluids into and out of the head which in the future may cause you a serious illness if not corrected now.

golden_oil - March 30, 2011 05:14 PM (GMT)

Lots of extraordinary information here, so will look into all your suggestions.

Thanks for your time.

snooze - April 1, 2011 02:33 AM (GMT)

I think LCD are worse than CRT when it comes to that and more. Whats all this 3D tech I'm sure its bad for the eyes but it seems their pushing it now.

TheUnhivedMind - April 1, 2011 03:19 PM (GMT)

Well the burn in of your eyes isn't as bad if at all with the LCD/Plasma screens compared with the CRT. If you look at a monitor for a while you'll notice you have many horizontal lines across your sight. This must be a form of free radical damage because I managed to defeat this only when I took a serious pharmalogical dosage of Vitamin C. You'll find it also works for when looking at light bulbs and lessens the side effects. I just suggest you get an earthing kit and you don't have to worry about any of it. Most people don't realize and wouldn't believe that this technology was designed

as a weapon by the military and intelligence. They use these weapons to gather data and harm individuals. Just study the stress on the body and its ties to the adrenal glands.

View Full Version: Fluid buildup in lungs

Title: Fluid buildup in lungs

dorean - April 2, 2011 12:53 PM (GMT)

My mother was in hospital last few days being treated for retaining fluid and a large buildup of fluid in the lungs. She is feeling somewhat better now. Any particular foods that assist with this?

TheUnhivedMind - April 2, 2011 06:03 PM (GMT)

She needs to dramatically feed her Spleen up via herbal medicine, foods and acupuncture. Her Spleen isn't dealing with the fluids of her body correctly and she may also have Kidney issues also. The Kidneys, Spleen and Liver are very much tied to one another. Remember its the Spleen which powers her Lungs and its the Spleen which is supposed to balance the Kidneys. The next stage would be for her to have issues with the Heart and this balances the Lungs. Lung problems eventually go hand in hand with Heart problems and the same the other way around. I would strongly suggest she addresses her Lungs too keep an eye on her bowel functioning which is connected to the Lungs as is the Nose. I would say she had low Kidney Yang Qi.

I think she should visit a professional Chinese doctor and have a proper diagnosis of her issues as her whole Viscera system will need addressing and its offshoots like the Bladder and triple burner functions. A good doctor will be able to tell you exactly whats going on and what she needs. She should also be checked for Cancer of the Lung. Unfortunately our Lungs are being attacked daily by the aerosol program and pollutions purposely put into the fuels of carriages (vehicles) on the common ways (highways).

dorean - April 3, 2011 12:39 PM (GMT)

what herbs are particularly good for the spleen?

TheUnhivedMind - April 3, 2011 04:50 PM (GMT)

Depends on the problem if you have a heat problem in the location then you'd want herbs specific for the spleen meridian but cooling. If you had no problems with heat or cold but want to just boost the meridian to the spleen then you'd look for a neutral herb such as Ling Zhi which you may know as Ganoderma mushroom, then theres Poria cocos which you'll know as either Tuckahoe or Hoelen. You might want to look into the wonderful Flower pollen which you will know more so as Bee Pollen which is an amazing food going to every meridian and organ whilst being neutral and having every taste the body needs for health. Of course theres the other excellent neutral herb called Licorice root which also goes to the Spleen and is used in most Chinese prescriptions. A herb like Nettle is neutral to cooling on the Spleen.

You have herbs like Astragalus root also known as Huang Qi which are warming to the Spleen. You then have Honey which is a little warming for the Spleen. The Pu'er tea aids the Spleen function you'll find its either neutral or warming. Last but not least we have the Chinese Red dates I often speak about which you may know as Jujube or Ziziphus and these are warming to the Spleen. Remember that all yellow foods will aid the Spleen and naturally sweet foods too but don't go overboard otherwise you end up hindering the Spleen. All foods she has must be cooked, ideally by light steaming so that they're warm. She must never drink cold fluids or eat cold food from a fridge like an Apple. Cold damages Qi and in this case it will lower the temperature of the stomach which seriously hinders the Spleen. If you hurt the Spleen you're going to then find you have and/or either Lung and Kidney issues which quickly lead to Heart and Liver problems.

Heres a good formula for Spleen restoration by the Chinese:

Ginseng 3g
Astragalus 3g
Hoelen fungus 3g
Jujube date 2g
Ginger (fresh) 1.5g
Licorice root 1g
Costus 1g
Angelica Sinesis 2g
Polygala tenuifolia 2g
Euphoria longana 3g
Atractylodes macrocephala 3g

semperbry76 - April 26, 2011 03:52 AM (GMT)

Wow, good information Craig. My mother is going through the same issues dorean. I have tried to help her numerous times, with many different methods of her taking herbs or even tweeking her diet (even though she needs to completely change her food altogether) and she doesn't stick with it. I figure i'll keep on praying for her and the Lord will answer when He wants too. Hope your mother gets well dorean.

View Full Version: A good Spleen herb to take?

Title: A good Spleen herb to take?

TheUnhivedMind - April 24, 2011 04:42 PM (GMT)

QUOTE

I take the tonic herbs daily to help with my overall health, and they do help a lot. Exercise is very important, quite possibly the most important factor in health, but you can get more out of it• by eating right and living life in line with the natural laws. What would you consider to be the best herb for improving spleen function ?

Well ideally a herb to be taken regular should be a neutral herbs which isn't heating or cooling but neutral and if possible a floating Qi herb but we can't all be perfect so we'll at least go for neutrality of temperature so from a food point of view a whole egg (white/yolk) aids the Spleen and is neutral as is the herb, Jujube (Ziziphus jujuba/Da Zao/Chinese Red Date) also Hoelen (Poria cocos/Tuckahoe) and I'd take them with some Licorice root if possible. I take 12 Jujube dates per day. You may also wish to look into the wonderful Reishi mushroom (Ling Zhi/Ganoderma lucidum) as this is an excellent Spleen tonic and neutral to boot. Ganoderma is a powerful food/ herb which aids the body dramatically.

View Full Version: Violet Ray Device

Title: Violet Ray Device

dorean - March 22, 2011 11:20 PM (GMT)

I am looking for a Tesla violet ray device that will work in UK/Irelands electrical systems. I have heard of an american having great success treating hairloss and improving skin with one of these. Do you know if they are made in UK, or can recommend where I can get a good one.
